Εἷς μὲν οὖν τόπος τοῦ ἀσαφῶς, εἰ ὁμώνυμόν ἐστί τινι τὸ ῥηθέν. οἷον, ὅτι ἡ γένεσις, ἀγωγὴ εἰς οὐσίαν· ἢ ὅτι ἡ ὑγίεια, συμμετρία θερμῶν καὶ ψυχρῶν. ὁμώνυμος γὰρ ἡ ἀγωγή, καὶ ἡ συμμετρία. ἄδηλον οὖν, ὁπότερον βούλεται λέγειν τῶν δηλουμένων, ὑπὸ τοῦ πλεοναχῶς λεγομένου. Εἰ γὰρ κατὰ μηδένα τῶν τρόπων ἱκανῶς εἴρηται, δῆλον ὅτι οὐκ ἂν ὡρισμένος εἴη κατὰ τρόπον. 4 Ἄλλος, εἰ κατὰ μεταφορὰν εἴρηκεν· οἷον, εἰ τὴν ἐπιστήμην, ἀμετάπτωτον· ἢ τὴν γῆν, τιθήνην· ἢ τὴν σωφροσύνην, συμφωνίαν. πᾶν γάρ, ἀσαφές, τὸ κατὰ μεταφορὰν λεγόμενον. ἐνδέχεται δὲ καὶ τὴν μεταφορὰν εἰπόντα συκοφαντεῖν, ὡς οὐ κυρίως εἰρηκότα. οὐ γὰρ ἐφαρμόσει ὁ λεχθεὶς ὅρος. οἷον, ἐπὶ τῆς σωφροσύνης. πᾶσα γὰρ συμφωνία ἐν φθόγγοις. ἔτι, εἰ γένος ἡ συμφωνία τῆς σωφροσύνης, ἐν δύο γένεσιν ἔσται ταὐτὸν οὐ περιέχουσιν ἄλληλα. οὔτε D γὰρ ἡ συμφωνία τὴν ἀρετήν, οὔθ' ἡ ἀρετὴ τὴν συμφωνίαν περιέχει. 5 Ἔτι, εἰ μὴ κειμένοις ὀνόμασι χρῆται. οἷον Πλάτων, ὀφρυόσκιον, τὸν ὀφθαλμόν· ἢ τὸ φαλάγγιον, σηψιδακές· ἢ τὸν μυελόν, ὀστεογενές. πᾶν γὰρ ἀσαφές, τὸ μὴ εἰωθός. 6 Ἔνια δ' οὔτε καθ' ὁμωνυμίαν, οὔτε κατὰ μεταφοράν, οὔτε κυρίως εἴρηται. οἷον, ὁ νόμος, μέτρον, ἢ εἰκὼν τῶν φύσει δικαίων.

PRimus igitur locus *probandæ* obſcuritatis *eſt*, ſi homonymum ſit aliquod *verbum* quod *in definitione* dictum eſt. vt *ſi quis* generationem *definiet* deductionem ad ſubſtantiam: aut ſanitatem, ſymmetriam calidorum & frigidorum. nam & deductio & ſymmetria *ſunt verba* homonyma. itaque dubium *eſt*, vtrum dicere velit eorum quæ declarātur eo *verbo*, quod multis modis dicitur. 2 Idem contingit, ſi, cùm definitum multis modis dicatur, non adhibita diſtinctione dixerit *definitionem*: quia dubium *eſt*, vtrius definitionē tradiderit: & cauillari licet, quaſi definitio non omnibus aptetur, quorum definitionem tradidit. 3 Maximè autem tale *quidpiam* euenit, cùm homonymia latet. Fieri etiam poteſt, vt *aliquis*, cùm ipſe diſtinxerit *& expoſuerit* quot modis dicatur id quod in definitione continetur, ſyllogiſmum conficiat. nam ſi in nulla ſignificatione ſufficienter dicta eſt *definitio*: patet, *eo* modo definitum non fuiſſe. 4 Alius *locus eſt*, ſi *definitionem* dixit per tranſlationem, vt ſi *dixerit* ſcientiam *eſſe*, quæ labi non poteſt: aut terram, altricem: aut temperantiam, concentum. quicquid enim per tranſlationem dicitur, obſcurum *eſt*. Licet etiam *aduerſus* eum qui tranſlatione vſus eſt, calūniari, quaſi non propriè locutus ſit: quia dicta definitio non accommodabitur *rei definitæ*: vt in temperantia *perſpicere poſſumus*: omnis enim cōcentus *eſt* in ſonis. Præterea ſi concentus *ſit* genus tēperantiæ, idem erit in duobus generibus, quorum neutrum continet alterum: quia neque concētus virtutem, nec virtus concentum continet. 5 Præterea *obſcurè definit*, qui non poſitis nominibus vtitur: vt Plato *fecit*, *qui* oculum *definiuit* ciliumbrem: aut araneam, putrimordacem: aut medullam, oſſigenam. omne enim *verbum* inuſitatum, obſcurum *eſt*. 6 Quædam autem nec per homonymiam, nec per translationem, nec propriè dicuntur. vt ſi lex *definiatur* menſura, vel imago eorum quæ naturâ iuſta ſunt.

Quare ſi legẽ dicat propriè menſuram, vel imaginem eſſe, mentitur: quãdoquidem imago eſt, quæ per imitationem efficitur: quod in lege non reperitur. Quod ſi non propriè: patet, *eum* obſcurè locutũ eſſe, ac deteriùs quovis eorum quæ per tranſlationem dicuntur. 7 Præterea rectè *reprehenditur*, ſi ex data *definitione*, rei contrariæ definitio non *fiat* perſpicua. nã qui rectè *definitiones* tradunt, etiam contrarias adſignificant. 8 Aut ſi per ſe nõ appareat, cuius ſit definitio, *quæ data eſt*: ſed ſimilis ſit veterum pictorum operibus, quæ erant eiuſmodi, vt, niſi quis ſuperſcripſiſſet, cognoſci non poſſet, quid vnumquodque eſſet. 9 An igitur nõ dilucidè *aliquis definierit*, ex huiuſmodi locis videndum *eſt*.

De ſuperfluitate. Cap. III.

1 A verbo communi. Si parte detracta, reliqua ſit perfecta definitio. 3 Si pars definitionis non conueniat omnibus ſub definito contentis. 4 Si idem ſæpius dicatur, 5 aut vniuerſali particulare ſubiiciatur. 6 Epilogus.

Qvòd ſi plus dixerit in definitione, *quã debuerit*: primũ videre *oportet*, an aliquid adhibuerit, quod omnib. inſit: *id eſt*, vel ſimpliciter iis quæ ſunt, vel iis quæ *continentur* ſub eodem genere, ſub quo *ſunt* res definitę: quia neceſſe *eſt*, vt id ſuperuacuo dictum fuerit. quandoquidem opus eſt, vt genus ab aliis ſecernat, differentiam verò ab aliquo eorum quę *ſunt* in eodẽ genere. quod igitur omnibus ineſt, ſimpliciter a nulla re ſeiũgit. quod verò ineſt omnibus ſub eodem genere *contentis*, non ſeparat ab iis quæ *ſunt* in eodẽ genere. quare inane eſt eiuſmodi adiunctum. 2 Vel an ſit quidem proprium id quod adiunctum eſt: ſed eo detracto *nihilominus* reliqua definitio propria ſit, & eſſentiam declaret. vt in definitione hominis, ſi adiungatur ſciẽtiæ capax, ſuperuacaneum *eſt*. nam & eo dempto, reliqua definitio *eſt* propria, & eſſentiã declarat. Et vt vno verbo dicam, *id* omne ſuperuacuum *eſt*, quo ſublato, id quod reliquum eſt, perſpicuam facit rem definitam. Talis eſt etiam animæ definitio, ſi quidẽ eſt numerus ſeipſum mouens: etenim quod ſeipſum mouet, *eſt* anima, vt Plato definiuit. An *quod* dictum *eſt*, proprium quidem eſt, ſed non declarat eſſentiam numero ſublato? Vtro autem modo *res* habeat, difficile eſt explicare. Vtendum porrò eſt *hoc loco* in omnibus huiuſmodi *rebus*, quatenus expedit. *vt* cũ pituita definitur humor primus ex cibo incoctus. vnum. n. eſt *humor* primus, non multi. quare ſuperuacuum *eſt* illud adiunctũ, incoctus: cùm eo quoq; ſublato, reliqua futura ſit propria definitio: quia fieri nequit, vt ex cibo & hoc & aliud primũ ſit. An non ſimpliciter pituita eſt primũ ex cibo, ſed primũ eorum quæ ſunt incocta? quare adiiciendũ *eſt in definitione* illud *verbũ* incoctus. illo: n. modo ſi dicatur, non *erit* vera definitio: ſi quidem nõ omnium primũ eſt. 3 Præterea *videndum eſt*, an aliquid eorũ quæ *ſunt* in definitione, non omnibus iis conueniat, quæ *continẽtur* ſub eadem ſpecie. nã huiuſcemodi definitio deterior eſt iis, in quibus adhibetur quod omnibus rebus ineſt. illo enim modo *ſi definiatur, ſublato eo quod commune eſt*, reliqua oratio eſt propria, & tota eſt propria.

ſimpliciter. n. ſi ad propriũ addatur aliquid quod ſit verum, tota oratio fit propria. ſi quid autem eorum quę *ſunt* in definitione, nõ conuenit iis omnibus quæ *ſunt* ſub eadem ſpecie, fieri nequit vt tota oratio propria ſit: non. n. de re viciſſim dicetur: vt *hæc oratio*, animal pedeſtre bipes quatuor cubitorũ: neque. n. huiuſmodi oratio de re viciſſim dicitur: quia illud, quatuor cubitorum, non omnibus iis ineſt quæ *ſunt* ſub eadem ſpecie. 4 Rurſus *videndũ eſt*, an idem ſæpe dixerit: vt qui dixit cupiditatem *eſſe* appetitionẽ iucundi. omnis. n. cupiditas eſt rei iucundæ: quamobrem id quoque quod eſt idẽ atque cupiditas, erit rei iucundę. definitio igitur cupiditatis conſtituitur, appetitio iucundi: (nihil. n. refert, vtrum cupiditatem dicat, an appetitionem iucundi) quare horum vtrumque erit rei iucundę. An hoc non eſt abſurdũ? nam & homo eſt bipes, quare id quoque quod eſt idem atque homo, erit bipes. atqui idem quod homo, eſt animal pedeſtre bipes: itaque animal pedeſtre bipes, eſt bipes. Sed non ideo aliquid abſurdi accidit. non. n. animali pedeſtri bis bipes attribuitur, (ſic. n. bipes eidẽ bis attribueretur) ſed de animali pedeſtri bipede bipes dicitur. quapropter ſemel tantũ bipes attribuitur. Similiter *fit* etiam in cupiditate. non. n. appetitioni attribuitur eſſe rei iucundæ, ſed toti *orationi*. quocirca hic quoque ſemel attribuitur. non eſt autem res abſurda, ſi idem nomen bis pronuncietur, ſed ſi idẽ alicui ſæpius attribuatur. vt cum Xenocrates ait prudẽtiam eſſe definitiuam & contemplatiuam eorum quæ ſunt. nam *quæ* definitiua *eſt*, contemplatiua quędam eſt. quare bis eandem rẽ dicit, adiecto *verbo* Contemplatiua. Similiter *faciũt*, quicumque refrigerationem aiunt eſſe priuationem caloris naturalis. omnis. n. priuatio eſt rei naturâ inſitæ. quare ſuperuacaneum eſt addere *verbũ illud* Naturalis: ſed ſufficiebat dicere, priuationem caloris: quãdoquidem ex ipſo priuationis verbo apparet, rei naturalis *priuationem* dici. 5 Item *videndũ eſt*, an ad id quod vniuerſaliter dictum eſt, *aliquid* adiungatur *quod ſit* in parte. vt ſi quis æquitatem *definiat* imminutionem eorum quæ vtilia & iuſta ſunt. quod. n. iuſtum eſt, vtile quiddam *eſt*: proinde in eo quod eſt vtile, cõtinetur. ſuperuacaneum igitur eſt *illud verbum*, Iuſta. itaque cùm vniuerſale dixerit, particulare adiunxit. *Idem fit* etiam, ſi quis medicinam *definiat* ſcientiam eorum quæ ſalubria ſunt animali & homini: aut legem, ſimulachrum eorum quæ naturâ honeſta & iuſta ſunt. quod. n. iuſtum eſt, honeſtum quiddã eſt. quocirca ſæpius eandem rem dicit. 6 Vtrùm igitur rectè an non rectè definierit, ex his & eiuſmodi *aliis locis* videndum eſt.

2 *At* primùm ſi non ex prioribus & notioribus cō-fecit definitionem. cùm.n.definitio tradatur, eius quod dictum eſt, cognoſcēdi cauſâ: cognoſcamus autē, non ex quibuſvis, ſed ex prioribus & notioribus: (quemadmodum in demonſtrationibus *cōtingit*: ſic.n.omnis doctrina & diſciplina *ſe* habet) perſpicuum igitur *eſt*, eum qui non ex his definiuit, *re vera* non definiuiſſe. nam ſi definiuit, plures erunt eiuſdem *rei* definitiones. conſtat enim, eum qui ex prioribus & notioribus *definierit*, meliùs definiuiſſe. quare ambæ definitiones erunt eiuſdē *rei*. quod ita *eſſe* non videtur: quandoquidem vna eſt cuiuſque rei eſſentia, *qua eſt* id quod eſt. quocirca ſi plures erunt eiuſdem *rei* definitiones, eadem erit rei definitæ eſſentia, quæ vtrâque definitione declaratur. hæ verò *eſſentiæ* non ſunt eædem: quoniam & definitiones *ſunt* diuerſæ. Patet igitur, eum non definiuiſſe, qui non ex prioribus & notioribus definiuit. 3 Ergo non ex notioribus ſumptam eſſe definitionem, dupliciter accipi poteſt: nempe ſi ex ſimpliciter ignotioribus, vel *ex* iis quæ ſunt nobis ignotiora: quoniam vtroque modo *id fieri* accidit. Quod igitur prius *eſt*, id eo quod poſterius *eſt*, notius *eſt* ſimpliciter: vt punctum *eſt prius* linea, & linea plano, & planum ſolido: quemadmodum vnitas numero: quoniā prior *eſt* & principium omnis numeri. ſimiliterque elementum *eſt prius* ſyllaba. Nobis verò cōtra interdum accidit: quia ſolidum ſub ſenſum maximè cadit: planum autem, magis quàm linea: & linea magis quàm punctum. idcirco multi ea magis cognoſcunt, quæ *ſunt* eiuſmodi. hæc.n.cuiuſvis, illa verò exquiſitæ & excellentis cogitationis eſt diſcere. 4 Simpliciter igitur melius *eſt* conari vt ex prioribus poſteriora cognoſcantur: quoniam ad ſcientiam gignendam hoc magis eſt accommodatum. attamen apud eos qui ex talibus cognitionem adipiſci nequeunt, neceſſe *eſt* fortaſſe definitionem conficere ex iis quæ illis nota *ſunt*. Tales ſunt definitiones & puncti, & lineæ, & plani: omnes. n. ex poſterioribus priora declarant: illud. n. lineæ, illud plani, hoc ſolidi aiunt terminum eſſe. 5 Sed non eſt ignorādum, eos qui ita definiunt, non poſſe declarare quidditatem rei definitæ: niſi *fortè* idem ſit & nobis notius & ſimpliciter notius. ſiquidem oportet eum qui rectè definit, ex genere & differentiis definire: hæc autem ſunt *in* eorum *numero*, quæ ſunt notiora & priora, quàm ſpecies. ſecum enim aufert genus & differentia ſpeciem. quare hæc ſunt priora quàm ſpecies. Sunt etiam notiora: quia cognita ſpecie, neceſſe *eſt* & genus & differentiam cognoſci: etenim qui hominem cognoſcit, & animal & pedeſtre cognoſcit. cognito autē genere, vel differentiâ, non *eſt* neceſſe etiam ſpeciem cognoſci. itaque ſpecies ignotior *eſt*. 6 Prçterea qui re vera eiuſmodi definitiones eſſe aiunt, quæ ex vnicuique notis *conſtant*, iis accidit vt dicant eiuſdem *rei* multas eſſe definitiones. alia namque aliis, non eadem omnibus ſunt notiora. quare alia apud alium definitio tradenda erit: ſiquidem ex iis quæ cuique ſunt notiora, definitionem conficere oportet. Præterea iiſdem *hominibus* aliàs alia ſunt notiora. nam ab initio *notiora ſunt ea*, quæ ſub ſenſum cadunt. cùm autem tales effecti ſunt, vt exquiſitiùs res cognoſcere valeant, *tum* contrà *res habet*. quocirca ne apud eūdem quidem *hominē* ſemper eadē definitio tradenda *eſt ab* iis qui definitionem ex cuiq; notioribus tradendam eſſe aſſerunt.

A Patet igitur non eſſe ex talibus definiendum, ſed ex ſimpliciter notioribus. nam hoc tantùm modo vna & eadem definitio ſemper fiet. 7 Fortaſſis autẽ quod ſimpliciter notum *eſt*, non id eſt quod omnibus notum *eſt*, ſed quod *notum eſt* iis qui ratione bene conſtituta præditi ſunt: quemadmodũ & ſimpliciter ſalubre dicitur id quod ſalubre eſt iis quorum corpus bene affectum eſt. 8 Oportet igitur ſingula quæ ſunt eiuſmodi, accuratè explicare. qui verò diſputãt, *iis vti debent*, quatenus expedit. 9 Maximè autem in cõfeſſo eſt, definitionem euerti, ſi neque ex ſimpliciter notioribus, neque ex iis quæ *ſunt* nobis *notiora*, oratio cõfecta ſit. B 10 Vnus igitur locus *probandi* definitionem non eſſe ex notioribus, is eſt quẽ antea diximus, nẽpe cùm priora per poſteriora declarantur. 11 Alius autem *eſt*, ſi eius quod in quiete *conſiſtit*, & definitum *eſt*, definitio tradita ſit per id quod eſt indefinitum, & in motione *conſiſtit*. quod .n. manet & definitum eſt, prius & notius *eſt* eo quod indefinitum & in motu *eſt*. 12 *Ad probandum* autem *definitionem* non *eſſe* ex prioribus, tres ſunt loci. 13 Primus *eſt*, ſi oppoſitum per oppoſita definiuit: vt bonum per malum: quoniam oppoſita ſimul ſunt naturâ. quibuſdam autem etiam eſſe eadem amborum ſcientia videtur. quapropter alterum altero notius non *eſt*. Sed non eſt ignorandum, quædam C fortaſſe non poſſe aliter definiri: vt duplum *non poteſt definiri* ſine dimidio: & quæcumque per ſe ad aliquid referuntur. *in* his .n. omnibus idem eſt eſſentia, & ad aliquid quodam modo ſe habere. quare fieri nequit, vt ſine altero alterius notitia comparetur. proinde neceſſe eſt, vt in alterius definitione alterum quoque comprehẽdatur. Oportet igitur *ea* omnia quæ *ſunt* eiuſmodi, cognoſcere: his autem *locis* in his *rebus* vti, prout videbitur vtile eſſe. 14 Alius *locus eſt*, ſi *in definitione* adhibuit ipſum definitum. *Hoc* autem latet, cùm non vtitur ipſo rei definitæ nomine. vt ſi quis Solem definiat, aſtrũ die perſpicuum. nam qui die vtitur, etiam Sole vtitur. Vt autẽ huiuſcemodi *vitia* D deprehendantur, ſumenda eſt pro nomine definitio: velut, diem eſſe Solis lationẽ ſupra terram. patet enim, eum qui Solis lationem ſupra terram dixit, Solem dixiſſe: quare Sole vſus eſt, qui die vſus eſt. 15 Rurſus, ſi definiuit id quod in diuiſione ponitur, per id quod in eadem diuiſione collocatur. vt ſi impar *definiuit*, quod vnitate maius eſt quàm par. ſimul .n. naturâ ſunt ea, quæ in eiuſdem generis diuiſione ponuntur: impar autem & par in eadem diuiſione ponuntur, cùm ambo ſint numeri differentiæ. 16 Similiter, ſi ſuperius per inferiora definiuit: vt *ſi* parem numerum *dixit eſſe* eum qui bifariàm diuiditur: aut bonum *eſſe* habitum virtutis. E nam & illud, bifariàm, ſumptum eſt à duobus, quę paria ſunt: & virtus eſt bonum quiddã. quare hæc ſub illis ſunt. 17 Neceſſe autem *eſt*, vt is qui inferiori vtitur, etiam ipſo *definito* vtatur. nam & qui vtitur virtute, vtitur bono: quia virtus *eſt* bonum quiddã. & ſimiliter qui vtitur *verbo* bifariàm, vtitur pari: quia verbum, bifariàm, ſignificat in duo diuidi: duo verò, paria ſunt. 18 Vt igitur vniuerſaliter dicam, vnus eſt locus, non ex prioribus & notioribus confectam eſſe definitionem: cuius *loci* partes *ſunt* eæ quæ dictæ ſunt.

Loci à genere, & ab ijs ad quæ definitum refertur. Cap. v.

1 Si genus omiſſum ſit. 2 Si cùm definitum ad multa pertineat, vel non ad omnia ſit aptatum, 3 vel non ad melius, ſed ad deterius. 4 A locis generis. 5 Si poſitum ſit genus remotum non proximum.

SEcundus *locus eſt*, ſi, cùm res ſit in genere, non ſit poſita in genere. in *iis* autē omnibus eſt huiuſmodi peccatum, in quibus orationi non præponitur quid ſit: cuiuſmodi *eſt hæc* corporis definitio, id quod habet tres dimenſiones: aut ſi quis hominem definiat, id quod ſcit numerare. quia dictum non fuit, quid ſit id quod habet tres dimenſiones, aut quid ſit quod ſcit numerare. genus autē debet ſignificare quid ſit: & eorū quæ in definitione dicūtur, primum ſupponitur. 2 Præterea *alius locus eſt*, ſi, cùm ad multa res definita pertineat, non ad omnia aptetur. vt ſi *quis* grāmaticam *definiat*, ſcientiam ſcribendi quod profertur. deeſt enim, & legendi, quandoquidem non magis qui ſcribendi, quàm qui legendi *ſcientiam eſſe* tradidit *grammaticā* definiuit. quare neuter *definiuit*, ſed is *demum* qui ambo hæc dixit: quippe cùm eiuſdē rei plures definitiones eſſe non poſſint. In nonnullis igitur reuera *ita res ſe* habet, vt dictum fuit. in quibuſdam verò non *ita*: vt in iis, quæ non per ſe ad ambo pertinent. quemadmodum medicina *eſt ſcientia* morbum & ſanitatem efficiendi. nam huius per ſe dicitur, illius verò per accidens. ſimpliciter .n. alienū *eſt à* medicina, morbum efficere. quare non magis definiuit, qui ad ambo retulit, quā qui ad alterum: ſed fortaſſe deterius: quia & quiuis alius poteſt morbum efficere. 3 Præterea ſi nō ad melius, ſed ad deterius accōmodauit, cùm plura ſint ad quæ pertinet res definita. omnis .n. ſciētia, & omnis facultas videtur eius eſſe quod optimū eſt. 4 Rurſus, an id quod dictū eſt, non ſit poſitum in proprio genere, conſiderare *oportet* ex elementis ad genera pertinētibus, quemadmodum antea dictum fuit. 5 Præterea *peccat*, qui trāſiliens dicit genera: vt *qui* iuſtitiam *definit*, habitū æquabilitatis effectiuum, aut æqui diſtributiuum. nam virtutem trāſilit, qui ita definit. cùm igitur omittat genus iuſtitiæ, non dicit quidditatem: quādoquidem cuiuſque *rei* eſſentia *eſt* cum genere *coniuncta*. Hoc autem idem *eſt* ac *ſi dicatur* non in proximo genere poſuiſſe. nam qui in proximo poſuit, omnia ſuperiora dixit: quippe cùm omnia ſuperiora genera inferioribus attribuātur. Quocirca vel in proximo genere ponendum eſt *id quod definitur*, vel omnes differentiæ ſuperiori generi adiungi debent, per quas proximum genus definitur. ſic .n. nihil prætermiſſum erit: ſed oratione, loco nominis, inferius genus dictum erit. Qui verò dicit ſolum genus ſuperius, non dicit etiam inferius genus. etenim qui dicit plantam, non dicit arborem.

A Rurſus in differentiis ſimiliter conſiderandum *eſt*, an generis differentias dixerit. niſi n. propriis rei differentiis definierit; aut *ſi* omnino tale *quidpiam* dixerit, quod nullius rei poſſit eſſe differentia, vt animal, aut ſubſtantiam: patet, eum non definiuiſſe: quoniã hæc nullius *rei* differẽtiæ ſunt. 2 Videre etiam *oportet*, an ſit aliquid in diuiſione oppoſitum dictæ differentiæ. niſi.n.ſit, patet, eam quæ dicta eſt, non eſſe generis differẽtiam. Omne enim genus iis differẽtiis diuiditur, quæ ſibi inuicem in diuiſione opponuntur: vt animal pedeſtri & volucri, & aquatili, & bipede. 3 Aut ſi ſit quidẽ oppoſita *aliqua* differẽtia, non tamen verè dicatur B de genere. patet.n. neutram eſſe *eius* generis differentiam. omnes.n. differentiæ, quæ ſibi inuicem in diuiſione opponuntur, de proprio genere verè dicuntur. 4 Item ſi verè quidem dicatur *de genere*, ſed generi adiuncta non efficiat ſpeciem. cõſtat n. hãc non eſſe ſpecificam differentiam generis: quãdoquidem omnis ſpecifica differẽtia cum genere *coniuncta* ſpeciem efficit. quòd ſi hæc non ſit differentia, ne ea quidem, quæ dicta fuit, *differentia erit*: quoniam huic in diuiſione opponitur. 5 Præterea *peccauit*, ſi negatione diuiſit genus; vt *ij* qui lineam definiunt eſſe longitudinem latitudine carẽtem. quod nihil aliud ſignificat, quã non habere latitudinẽ. accidit igitur, vt genus ſit particeps ſpeciei: C quoniam omnis lõgitudo vel latitudine caret, vel latitudinem habet: quippe cùm de omni *re* aut affirmatio, aut negatio verè dicatur. quare & genus lineæ, quod eſt longitudo, vel latitudine carebit, vel latitudinẽ habebit. atqui longitudo carens latitudine, ſpeciei eſt definitio: itémque longitudo habens latitudinem: quia latitudinis expers, & latitudinem habens, ſunt differentiæ: ex differentia verò & genere conſtat ſpeciei definitio. quare genus recipiet ſpeciei definitionem. ſimiliterq; differentiæ *definitionem*: quãdoquidem dictarum differentiarum altera neceſſariò attribuitur generi. 6 Eſt autẽ dictus locus vtilis aduerſus eos qui ponũt ideas eſſe. nam ſi ſit ipſa longitudo, quomodo D generi attribuetur latitudine carere, aut latitudine vacare? oportet.n. de omni lõgitudine alterum eorum verè dici, ſi futurum eſt, vt de genere verè dicatur. hoc autem non contingit: cùm ſint lõgitudines quæ latitudine carẽt, & quæ latitudinem habent. Quare aduerſus eos ſolos vtilis eſt *hic* locus, qui genus aiunt vnũ eſſe numero. quod quidẽ ij tantùm faciunt, qui ideas ponunt: quoniã ipſam longitudinẽ & ipſum animal, genus eſſe inquiunt. 7 Fortaſſe autem in nõnullis neceſſe *eſt* negatione vti eum qui definiuit, vt in priuationibus. nam cæcum eſt, quod non habet viſum, quando ſecundùm naturam habere debet. 8 Nihil autẽ refert, E vtrùm negatione diuidatur genus, an huiuſmodi affirmatione, cui neceſſe *ſit* negationẽ in diuiſione opponi. vt ſi *quis* longitudinem quæ latitudinẽ habet, definierit. nam ei quod latitudinem habet, nihil aliud in diuiſione opponitur, quàm id quod latitudinem non habet: proinde rurſus negatione genus diuiditur. 9 Rurſus *videndũ eſt*, an ſpeciem tradiderit quaſi differentiam: quemadmodum ij qui conuitium definiunt, contumeliam cum irriſione. nam irriſio *eſt* contumelia quædam. quamobrem irriſio non *eſt* differentia, ſed ſpecies. 10 Præterea *videndum eſt*, an genus quaſi differentiam dixerit: vt virtutem *eſſe* habitum bonum vel probum: quandoquidem bonum, virtutis eſt genus. An bonum non *eſt* genus, ſed differentia? ſiquidem fieri non poteſt, vt idem

ſit in duobus generibus, quorum neutrum alterū contineat: quia nec bonum cōtinet habitum, nec habitus bonū. etenim nec omnis habitus *eſt* in bonis, nec omne bonum eſt habitus. quare non erūt ambo *virtutis* genera. ſi igitur habitus *eſt* virtutis genus: patet, bonum, non *eſſe* genus, ſed potiùs differentiam. Præterea habitus ſignificat quid ſit virtus: bonum autem, non quid ſit, ſed quale: videtur autē differentia quale quid ſignificare. 11 Videre etiam *oportet*, an data differētia non ſignificet quale quid, ſed hoc aliquid. omnis.n. differentia videtur quale quid declarare. 12 Conſiderare etiā *oportet*, an differentia per accidens inſit rei definitæ. nulla.n. differētia eſt *in* eorum *numero* quæ per accidens inſunt, quemadmodū nec genus: quia fieri nequit, vt differentia eidem inſit, & non inſit. 13 Præterea, ſi generi attribuatur differentia, vel ſpecies, vel aliquid ſpeciei ſubiectum: vtique nō definiuit: quia nihil horum quæ dixi, generi attribui poteſt. quippe cùm genus latiùs, quam *hæc* omnia, pateat. 14 Rurſus, ſi attribuatur genus differētiæ: non.n. differentiæ, ſed *iis* de quibus differētia *dicitur*, genus attribui videtur: vt animal homini, & boui, & aliis pedeſtribus animalibus, non ipſi differentiæ, quæ de ſpecie dicitur. nam ſi ſingulis differētiis genus attribuetur, certè multa animalia ſpeciei attribuentur: quandoquidem differentiæ ſpeciei attribuuntur. Præterea omnes differentiæ vel erunt ſpecies, vel indiuidua: ſiquidē ſint animalia. vnūquodque.n. animal aut eſt ſpecies, aut indiuiduum. 15 Similiter etiam conſiderandum *eſt*, an ſpecies, vel aliquid eorum quæ *ſunt* ſub ſpecie, differētiæ attribuatur. *hoc*.n fieri nequit: quia de pluribus differētia dicitur, quam ſpecies. Præterea accidet, vt differentia ſit ſpecies, ſi quæ ſpecies de ea dicatur. nam ſi *differentiæ* attribuitur homo, manifeſtum *eſt*, differētiam eſſe hominem. 16 Rurſus *vidēdum eſt*, an differentia nō ſit prior ſpecie. oportet.n. differētiam eſſe genere poſteriorem, ſpecie verò priorem. 17 Conſiderare etiam *oportet*, an alterius generis *ſit ea* differentia, quæ dicta *fuit*, quod neque *ab ea* contineatur, neq; *eam* contineat: quia non videtur eadem differentia eſſe duorum generum, quorum neutrum ſub altero cōtineatur. alioquin accidet etiam ſpeciem cādem in duobus generibus eſſe, quorum neutrum alterū continebit. nam ex vnaquaque differentia concluditur proprium genus: vt ex pedeſtri & bipede concluditur animal. quare ſi *de eo dicitur* vtrūque genus, de quo *dicitur* differentia: patet ſpeciem *eſſe* in duobus generibus, quorum neutrum ſub altero continetur. 18 An non impoſſibile *eſt* eandem differētiam eſſe duorum generum, quorum neutrum contineatur ſub altero: ſed adiiciendum *eſt*, nec vtrumque ſub eodem cōtinetur? nam pedeſtre animal & alatum animal, ſunt genera, quorum neutrum ſub altero cōtinetur, & eorum vtriuſque, bipes, eſt differentia. quare adiungendū *eſt*, nec vtrumque ſub eodē continetur. hæc.n. ambo ſub animali ſunt. 19 Patet etiam, non neceſſariò ex omni differentia concludi proprium genus: cùm accidat eandem eſſe duorū generum, quorum neutrū ſub altero continetur: ſed alterum tantùm *genus* neceſſariò cōcludi, & omnia quæ ſupra illud *ſunt*: quemadmodum ex bipede alatum vel pedeſtre animal cōcluditur. 20 Videre etiam *oportet*, an *eſſe* in aliquo, quaſi ſubſtantiæ differentiam tradiderit: quia non videtur ſubſtantia à ſubſtantia differre eo quod ſit alicubi,

A Idcirco & eos reprehẽdunt, qui pedeſtri & aquatili animal diuidunt: quaſi pedeſtre & aquatile ſignificent *eſſe* alicubi. An in his non rectè reprehẽdunt? quoniam aquatile & terrenum non ſignificant *eſſe* in aliquo, nec alicubi, ſed quale quid. nam etſi ſit in *loco* ſicco, æquè *erit* aquatile. ſimiliter ſi terrenum ſit in loco humido, terrenum erit, non aquatile. Verumtamen ſi quando differẽtia ſignificet eſſe in aliquo: manifeſtum erit, *eum* peccaſſe *qui definiuit*. 21 Item *videndum eſt*, an affectionẽ pro differẽtia tradiderit. omnis n. affectio, maior facta, eſſentiam *de ſtatu ſuo* dimouet: differentia verò nõ B *eſt* eiuſmodi: quin potiùs videtur differẽtia *id* ſeruare, cuius eſt differentia. & ſimpliciter fieri nequit, vt ſine propria differentia quidque ſit. niſi. n. ſit pedeſtre, non erit homo. 22 Et, vt ſimpliciter dicam, ſecundùm quæ variatur id quod habet, eorum nihil differẽtia illius *eſt*. nam omnia quæ ſunt eiuſmodi, ſi maiora fiant, eſſentiam *è ſtatu ſuo* dimouent. Quocirca qui talẽ aliquam differentiam tradidit, peccauit: quoniam omnino nõ variamur ſecundùm differentias. 23 *Peccauit* etiam, ſi cuius ad aliquid *relati* differentiam tradiderit, quæ ad aliud quidpiam non *referatur*. nam eorum quæ ad aliquid *referuntur*, etiam differentiæ *referuntur* ad C aliquid: quemadmodum & in ſcientia *perſpici poteſt*. dicitur enim contemplatiua, & actiua, & effectiua: quorum vnumquodq; ſignificat ad aliquid: eſt enim alicuius *rei* contemplatiua, & alicuius effectiua, & alicuius actiua. 24 Conſiderare etiam *oportet*, an is qui definit, *id* tradat, ad quod naturâ refertur vnumquodque eorum quæ *ſunt* ad aliquid. quibuſdam enim ad nihil aliud vti licet, quàm ad id, ad quod ſingula referuntur naturâ: vt aſpectu *vti* ſolùm *licet* ad cernendum, nonnullis verò & ad aliud quiddam *vti licet*: vt ſtrigili haurire aliquis poteſt. ſi quis tamẽ ſtrigilem definiuit, D inſtrumentum ad hauriendum, peccauit: quia non ad hoc eſt comparata. eius autem ad quod nata & comparata res eſt, definitio *hæc eſt*, *id* ad quod vtatur prudens quâ *eſt* prudens, & propria ſcientia quæ circa quamque rem *verſatur*. 25 Prꝗterea *videndum eſt*, an non ad primum accommodauerit, cùm ad plura pertineat: vt *ſi quis* prudentiam *definiat*, virtutem hominis, vel animæ: non, rationalis *facultatis*. nam prudentia primùm *eſt* virtus *facultatis* rationalis: etenim ſecundùm hanc & anima, & homo prudens eſſe dicitur. 26 Prætereà peccauit, niſi ſuſceptiuum ſit *id*, cuius res definita dicitur *eſſe* affectio, vel diſpoſitio, vel quiduis aliud. naturâ enim comparatum eſt, vt omnis E diſpoſitio & omnis affectio in eo gignatur, cuius eſt diſpoſitio vel affectio: quemadmodum & ſciẽtia *gignitur* in anima, cùm ſit diſpoſitio animæ. Interdum autem in huiuſmodi *rebus* peccant: vt qui dicunt ſomnum eſſe imbecillitatem ſenſus: & dubitationem, ęqualitatem contrariarum rationum: & dolorem, ſeparationem partium naturâ coniunctarum, vi *factam*. etenim nec ſomnus ineſt ſenſui, deberet autem *ineſſe*, ſi eſſet imbecillitas ſenſus: ſimiliter nec dubitatio ineſt contrariis rationibus: nec dolor ineſt partibus naturâ coniunctis: dolebunt enim res inanimæ, ſiquidem dolor eis aderit. Talis *eſt* etiam valetudinis definitio, ſi quidem eſt ſymmetria calidorum & frigidorum. neceſſe enim *eſt* valere res calidas & frigidas: quia ſingulorum ſymmetria in iis *rebus* ineſt, quorum eſt ſymmetria: itaque valetudo iis inerit. 27 Accidit prætereà, vt qui ſic definiunt, reducant id quod fit, ad effectiuum, vel contrà. non enim ſeparatio partium naturâ coniunctarum,

eſt dolor, ſed effectiuum doloris: nec imbecillitas ſenſus, eſt ſomnus: ſed alterum eſt effectiuum alterius: aut enim propter imbecillitatem ſomno opprimimur, aut propter ſomnum ſumus imbecilli. Similitérque cõtrariarum rationum æqualitas videri poteſt eſſe effectiuum dubitationis. cùm.n. in vtramque partem ratiocinamur, & ęquè videntur omnia vtroque modo fieri, tum dubitamus vtrum agamus. 28 Præterea ſecundùm omnia tempora inſpiciẽdum eſt, an alicubi diſcrepet, vt ſi *quis* immortale definierit, quod nũc eſt interitus expers. animal.n. quod nunc eſt interitus expers, nũc immortale erit. An in hoc nõ accidit? quoniam illud, nunc interitus expers eſſe, ambiguum *eſt*. aut.n. non interiiſſe nũc, ſignificat, aut non poſſe interire nunc, aut nunc eſſe eiuſmodi vt numquã intereat. Cùm igitur dicimus interitus expers nũc eſſe animal: non hoc dicimus, nunc tale eſſe animal, ſed quod numquam intereat. quod idem eſt atq; immortale. quare nõ accidit, vt nunc immortale ſit. Attamen ſi vbi accidat, vt id quod in definitione traditum eſt, nunc inſit, vel prius; id verò quod nomine *declaratur*, non inſit: certè non idem erit. Vtendum igitur eſt *hoc* loco, quemadmodum dictum eſt.

De verborum coniunctorum definitione. Cap. XI.

1 A detractione. 2 Si nomina cum nominibus commutentur: 3 & ignotiora pro notioribus accipiantur: 4 vel ſignificatio mutetur: 5 vel non differentiæ, ſed generis mutatio fiat.

SIn autem alicuius coniuncti definitio tradita fuerit, vidēdum eſt, detracta alterius partis definitione, an & reliqua ſit reliquæ *partis definitio*. ſi enim ſecus, manifeſtum *eſt*, ne totam quidem totius *definitionē eſſe*. vt ſi *quis* lineam finitam rectam definierit, extremum plani habētis extrema, cuius medium adiungitur extremis: ſi finitæ lineæ definitio eſt, extremum plani habentis extrema: recti eſſe oportet reliquam *definitionem, id eſt*, cuius medium adiungitur extremis. atqui *linea* infinita neque medium neque extrema habet, recta tamen eſt: quare non erit reliqua *oratio*, eius quod reliquum eſt, definitio. 2 Præterea *videndum eſt*, an, cùm compoſitum ſit id quod definitur, definitio tradita ſit totidem membris conſtans quot definitum. Totidem membris cōſtare dicitur definitio, quando quot ſunt compoſita, tot ſunt in definitione nomina & verba. neceſſe *eſt* enim in huiuſmodi *definitionibus* commutationem ipſorum nominum fieri, aut omnium, aut quorumdam: quandoquidem nihilo plura nomina nunc, quàm antea, dicta ſunt: oportet autem eum qui definit, orationem pro nominibus tradere maximè quidem omnium: ſin minùs, *ſaltem* plurimorum.

1 Si differentiæ definitio conueniat etiam alij rei. 2 Si res definita numeretur in iis quæ ſunt: definitione verò ſignificetur id quod non eſt. 3 Si definitio non ſpecialiter explicet id ad quos res definita refertur. 6 Si definitio non conueniat rei ſimpliciter, ſed rei perfectæ. 7 Si id quod per ſe eſt optabile, ſic definiatur quaſi propter aliud ſit optabile.

Σκοπεῖν δὲ καί, εἴ τινος ὁρισμὸν ἀποδιδούς, τάδε, ἢ τὸ ἐκ τούτων, ἢ τόδε μετὰ τοῦδε ὡρίσατο. CAP. ΙΓ. 2 Εἰ μὲν γὰρ τάδε, συμβήσεται ἀμφοῖν καὶ μηδετέρῳ ὑπάρχειν. οἷον, εἰ τὴν δικαιοσύνην, σωφροσύνην καὶ ἀνδρίαν ὡρίσατο. δύο γὰρ ὄντων, εἰ ἑκάτερος θάτερον ἔχει, ἀμφότεροι δίκαιοι ἔσονται, καὶ οὐδέτερος· ἐπεὶ ἀμφότεροι μὲν ἔχουσι δικαιοσύνην, ἑκάτερος δὲ οὐκ ἔχει. 3 Εἰ δὲ μήπω τὸ εἰρημένον σφόδρα ἄτοπον, διὰ τὸ καὶ ἐπ' ἄλλων συμβαίνειν τὸ τοιοῦτον (οὐδὲν γὰρ κωλύει ἀμφοτέροις ἔχειν μνᾶν, μηδετέρου ἔχοντος) ἀλλ' οὖν τότε, τἀναντία ὑπάρχειν τοῖς αὐτοῖς, παντελῶς ἄτοπον δόξειεν ἂν εἶναι. συμβήσεται δὲ τοῦτο, ἐὰν ὁ μὲν αὐτῶν, σωφροσύνην καὶ δειλίαν ἔχῃ· ὁ δέ, ἀνδρίαν καὶ ἀκολασίαν· * ἀμφότεροι γὰρ δικαιοσύνην καὶ ἀδικίαν ἕξουσιν. εἰ γὰρ δικαιοσύνη, σωφροσύνη καὶ ἀνδρία ἐστίν, ἡ ἀδικία, δειλία καὶ ἀκολασία ἔσται. 4 Ὅλως τε ὅσα ἐστὶν ἐπιχειρεῖν, ὅτι οὐ ταὐτόν ἐστι τὰ μέρη τε καὶ τὸ ὅλον, πάντα χρήσιμα πρὸς τὸ νῦν εἰρημένον. * γ. ἀμφ.

ἔοικε γὰρ ὁ οὕτως ὁριζόμενος, τὰ μέρη τῷ ὅλῳ τὰ αὐτὰ φάσκειν εἶναι. 5 Μάλιστα δὲ οἰκεῖοι γίνονται οἱ λόγοι, ἐφ' ὧν κατάδηλος ἡ τῶν μερῶν ἐστι σύνθεσις, καθάπερ ἐπ' οἰκίας, καὶ τῶν ἄλλων τῶν τοιούτων. δῆλον γὰρ, ὅτι τῶν μερῶν ὄντων, οὐδὲν κωλύει τὸ ὅλον μὴ εἶναι. ὥστε οὐ ταὐτὸν τὰ μέρη τῷ ὅλῳ. 6 Εἰ δὲ μὴ ταῦτα, ἀλλὰ τὸ ἐκ τούτων ἔφησεν εἶναι τὸ ὁριζόμενον, πρῶτον μὲν ἐπισκεπτέον, εἰ μὴ πέφυκεν ἕν τι γίνεσθαι ἐκ τῶν εἰρημένων. ἔνια γὰρ οὕτως ἔχει πρὸς ἄλληλα, ὥστε μηδὲν ἐξ αὐτῶν γίνεσθαι, οἷον γραμμὴ καὶ ἀριθμός. 7 Ἔτι, εἰ τὸ μὲν ὁριζόμενον, ἔν τινι πρώτῳ πέφυκε γίνεσθαι, ἐξ ὧν δὲ ἔφησεν αὐτὸ εἶναι, μὴ ἐν ἑνί τινι πρώτῳ πέφυκε γίνεσθαι, ἀλλ' ἑκάτερον ἐν ἑκατέρῳ. δῆλον γὰρ, ὅτι οὐκ ἂν εἴη ἐκ τούτων ἐκεῖνο. ἐν οἷς γὰρ τὰ μέρη, καὶ τὸ ὅλον ἀνάγκη ὑπάρχειν. ὥστε οὐκ ἐν ἑνὶ τὸ ὅλον πρώτῳ, ἀλλ' ἐν πλείοσιν. 8 Εἰ δὲ καὶ τὰ μέρη καὶ τὸ ὅλον ἐν ἑνί τινι πρώτῳ, σκοπεῖν, εἰ μὴ ἐν τῷ αὐτῷ,* ἀλλ' ἐν ἑτέρῳ τὰ μέρη, καὶ ἐν ἑτέρῳ τὸ ὅλον. 9 Πάλιν, εἰ τῷ ὅλῳ συμφθείρεται τὰ μέρη. ἀνάπαλιν γὰρ δεῖ συμβαίνειν, τῶν μερῶν φθαρέντων, φθείρεσθαι τὸ ὅλον· τοῦ δ' ὅλου φθαρέντος, οὐκ ἀνάγκη καὶ τὰ μέρη ἐφθάρθαι. 10 Ἢ, εἰ τὸ μὲν ὅλον, ἀγαθὸν ἢ κακόν· τὰ δὲ μέρη, μηδέτερα· ἢ ἀνάπαλιν, τὰ μὲν μέρη, ἀγαθὰ ἢ κακά· τὸ δ' ὅλον, μηδέτερον. οὔτε γὰρ ἐκ μηδετέρων ἀγαθὸν ἢ κακὸν γίνεσθαι δυνατόν, οὔτε ἐκ κακῶν ἢ ἀγαθῶν μηδέτερον. 11 Ἢ εἰ μᾶλλον μὲν θάτερον ἀγαθόν, ἢ θάτερον κακόν· τὸ δ' ἐκ τούτων, μὴ μᾶλλον ἀγαθόν, ἢ κακόν. οἷον, εἰ ἡ ἀναίδεια ἐξ ἀνδρείας καὶ ψευδοῦς δόξης. μᾶλλον γὰρ ἀγαθὸν ἡ ἀνδρεία, ἢ κακὸν ἡ ψευδὴς δόξα. ἔδει οὖν καὶ τὸ ἐκ τούτων, ἀκολουθεῖν τῷ μᾶλλον, καὶ εἶναι ἢ ἁπλῶς ἀγαθόν, ἢ μᾶλλον ἀγαθὸν ἢ κακόν. 12 Ἢ τοῦτο μὲν οὐκ ἀναγκαῖον, ἐὰν μὴ ἑκάτερον ᾖ καθ' αὑτὸ ἀγαθὸν ἢ κακόν. πολλὰ γὰρ τῶν ποιητικῶν, καθ' αὑτὰ μὲν οὐκ ἔστιν ἀγαθά, μιχθέντα δέ τισιν, γίνεται ἀγαθά.* τὰ δὲ ἀνάπαλιν, ἑκάτερον μὲν ἀγαθόν, μιχθέντα δέ, κακόν, ἢ οὐδέτερον. μάλιστα δὲ καταφανὲς τὸ νῦν ῥηθέν, ἐπὶ τῶν ὑγιεινῶν καὶ νοσωδῶν. ἔνια γὰρ τῶν φαρμάκων οὕτως ἔχει, ὡς ἑκάτερον μὲν εἶναι ἀγαθόν, ἐὰν δὲ ἄμφω δοθῇ μιχθέντα,* κακά. 13 Πάλιν, εἰ ἐκ βελτίονος καὶ* χείρονος, ὃν μὴ ἔστι τὸ ὅλον τοῦ μὲν βελτίονος χεῖρον, τοῦ δὲ χείρονος βέλτιον. 14 Ἢ οὐδὲ τοῦτο ἀναγκαῖον, ἐὰν μὴ καθ' αὑτὰ ᾖ τὰ ἐξ ὧν σύγκειται, ἀγαθά, ἐπὶ γὰρ τῶν μὴ καθ' αὑτὰ ἀγαθῶν, οὐδὲν κωλύει τὸ ὅλον μὴ γίνεσθαι ἀγαθόν, καθάπερ ἐπὶ τῶν ἀρτίως ῥηθέντων. 15 Ἔτι, εἰ συνώνυμον τὸ ὅλον θατέρῳ. οὐ δεῖ γάρ· καθάπερ οὐδ' ἐπὶ τῶν συλλαβῶν. οὐδενὶ γὰρ τῶν στοιχείων, ἐξ ὧν σύγκειται, ἡ συλλαβὴ συνώνυμός ἐστιν. 16 Ἔτι, εἰ μὴ εἴρηκε τὸν τρόπον τῆς συνθέσεως. οὐ γὰρ αὐτάρκες πρὸς τὸ γνωρίσαι, τὸ εἰπεῖν ἐκ τούτων.* οὐ γὰρ τὸ ἐκ τούτων, ἀλλὰ καὶ τὸ οὕτως ἐκ τούτων, ἑκάστου τῶν συνθέτων ἡ οὐσία, καθάπερ ἐπὶ οἰκίας. οὐ γὰρ ἂν ὁπωσοῦν συντεθῇ ταῦτα, οἰκία ἐστίν. 17 Εἰ δὲ τόδε μετὰ τοῦδε ἀποδέδωκε· πρῶτον μὲν ῥητέον, ὅτι τόδε μετὰ τοῦδε,* ἤτοι τόδε καὶ τόδε λέγεται, ἢ τόδε ἐκ τοῦδε. ὁ γὰρ λέγων μέλι μεθ' ὕδατος, ἤτοι μέλι καὶ ὕδωρ λέγει, ἢ τὸ ἐκ μέλιτος καὶ ὕδατος. ὥστ' ἂν ὁποτερῳοῦν τῶν εἰρημένων ταὐτὸν ὁμολογήσῃ εἶναι τὸ τόδε μετὰ τοῦδε, τὰ αὐτὰ ἁρμόσει λέγειν, ἅπερ πρὸς ἑκάτερον τούτων ἔμπροσθεν εἴρηται.

A nam qui ita definiuit, *is* dicere videtur idem eſſe partes ac totũ. 5 Maximè autem propriæ rationes *in iis* fiunt, in quibus perſpicua eſt partium cõpoſitio, vt in domo, & ceteris eiuſmodi *rebus*. patet n. nihil prohibere, quominus, cùm partes ſint, totum non ſit. itaque non idem *ſunt* partes, & totum. 6 Quòd ſi rem definitam dixerit eſſe, non has, ſed quod ex his *conſtat*: primùm conſiderare *oportet*, an naturâ comparatum nõ ſit, vt vnum fiat ex iis quæ dicta ſunt. quædam. n. ita ſunt affecta inter ſe, vt nihil ex eis fiat: velvti linea & numerus. 7 Deinde an naturâ comparatum ſit, vt id quod definitũ eſt, in vno aliquo primo *ſubiecto* inſit; neque naturâ B comparatum ſit, vt *ea* ex quibus ipſum *definitum* conſtare dixit, in vno primo ſubiecto inſint, ſed vtrumque in alio. patet enim, ex illis hoc non conſtare. in quibus. n. partes inſunt, neceſſe *eſt* etiam totum ineſſe. quocirca totum non erit in vno primo *ſubiecto*, ſed in pluribus. 8 Si verò & partes & totum in vno primo *ſubiecto inſint*: cõſiderare *oportet*, an nõ in eodem *inſint*: ſed in alio partes, in alio totum. 9 Rurſus, an ſimul cum toto intereant partes. nam contrà accidere oportet, vt partibus interẽptis, totum intereat. quod ſi totum interiit, non neceſſe *eſt* etiam partes interiiſſe. 10 Vel an totum *ſit* bonum aut malum; & partes, neutrum; vel cõtrà partes *ſint* bonæ vel malæ; totum autem, C neutrum etenim nec ex neutro bonum quidpiam aut malum fieri poteſt: neque ex bonis vel malis neutrum. 11 Vel an alterũ *ſit* magis bonum, quàm alterum malum: quod verò ex iis *conſtare dicitur*, non *ſit* magis bonum quàm malum: vt ſi impudentia *dicatur cõſtare* ex fortitudine & falſa opinione. nam fortitudo magis *eſt* bonum, quàm falſa opinio malum. ergo oportebat etiam id quod ex his *cõſtare dicitur*, ei quod magis *eſt*, conſequẽs eſſe, & vel ſimpliciter eſſe bonum, vel magis bonum quàm malum. 12 An hoc non *eſt* neceſſarium, niſi vtrumque ſit per ſe bonum, vel malum? multa. n. effectiua, *etſi* per ſe non ſunt bona, tamen ſi cum D quibuſdam coniungantur, fiunt bona, alia *ſunt* cõtrà, *quorũ* vtrumque eſt bonum: ſed ſi coniungantur, *quod efficitur*, *eſt* malum vel neutrum. Quod modò dixi, maximè perſpicuum *eſt* in iis quæ *ſunt* ſalubria vel inſalubria. quędam. n. pharmaca ita ſe habent, vt vtrumque ſit bonum: ſed ſi ambo mixta præbeantur, mala *ſint*. 13 Rurſus *videndum eſt*, an *aliquid videatur cõſtare* ex meliori & deteriori, quorum meliore totum non ſit deterius, deteriore autem melius. 14 An ne hoc quidẽ neceſſarium *eſt*, niſi eá ex quibus *totum* conſtat, ſint per ſe bona? in iis. n. quæ non *ſunt* per ſe bona, nihil vetat totum non effici bonum: quemadmodũ in iis quæ modò dixi, *perſpicere licet*. 15 Præterea *vidẽdum eſt*, an totũ E *ſit* alteri *parti* ſynonymũ. *id* n. *eſſe* non debet: quemadmodum ne in ſyllabis quidem. nam ſyllaba nulli elementorum ex quibus conſtat, ſynonyma eſt. 16 Præterea, an nõ expoſuerit modum cõpoſitionis. nõ ſatis. n rem explicat, qui dicit *rem* ex his *cõſtare*: quia non illud *ſolum*, ex his *conſtare*, ſed ita ex his *cõſtare*, *eſt* cuiuſq; rei compoſitæ eſſentia: vt in domo *perſpici poteſt*. neque. n. quocumque modo hæc cõponantur, domus eſt. 17 Sin autem *eſſe* hoc cũ illo tradiderit: primũ dicendum *eſt*, hoc cum illo dici, vel *quia eſt* hoc & illud, vel *quia eſt* hoc ex illis nam qui dicit mel cum aqua, *is* aut mel & aquam dicit, aut quod ex melle & aqua *conſtat*. Itaque vtrumvis horum fateatur idem eſſe atque hoc cum illo: eadem dici poterunt, quæ contra vtrumvis eorum paulo antè dicta ſunt.

18 Præterea diſtinguendũ eſt quot modis dicatur alterum cum altero, *&* conſiderandum, an nullo modo *ſit* hoc cum illo. Vtputà ſi dicatur alterum cũ altero, vel vt in aliquo eodem ſubiecto, quẽadmodum iuſtitia & fortitudo *ſunt* in anima, vel in eodem loco, vel in eodem tempore; nullo autem modo verũ ſit, quod in his dictum fuit: patet, nullius *rei* eſſe definitionẽ quæ tradita *eſt*: quia nullo modo hoc cum illo eſt. 19 Quòd ſi diſtinctione quot modis alterum cum altero dicatur, adhibita, verum ſit in eodẽ tempore vtrumque ineſſe: conſiderare *oportet*, an contingat non ad idem referri vtrumque: vt ſi *quis* fortitudinem definierit, audaciam cum recta cogitatione. cõtingit enim, vt *aliquis* audaciam habeat expoliandi, rectam autẽ cogitationem circa res ſalubres. ſed nondum fortis *eſt*, qui eodem tempore habet hoc cum illo. Præterea *non eſt fortis*, etiamſi ambo ad idem referãtur, velvti ad res medicas. nihil .n. prohibet quominus aliquis & audaciam & rectam cogitationẽ habeat circa res medicas. attamen ne hic quidẽ *eſt* fortis, qui hoc cum illo habet. Neque .n. ad diuerſa vtrũque eorum referri debet: neq; ad quamlibet eandem rẽ, ſed ad fortitudinis finem, velvti ad bellica pericula, aut ſi quid aliud, magis quã hoc, *eſt* finis. 20 Nonnullæ verò eorũ quę ita explicantur, nullo modo ſub dictam diuiſionem cadunt: velvti ira eſt dolor cum exiſtimatione contemptus. hoc .n. declarat, dolorẽ gigni ex huiuſmodi exiſtimatione. aliquid autem ex hoc gigni, non eſt idem atque eſſe hoc cum illo, ſecundùm vllum eorum modorum qui dicti fuerunt.

18 Ἔτι, διελόμενον ποσαχῶς λέγεται ἕτερον μεθ' ἑτέρου, σκοπεῖν, εἰ μηδαμῶς τόδε μετὰ τοῦδε. οἷον, εἰ λέγεται ἕτερον μεθ' ἑτέρου, ἢ ὡς ἔν τινι ταὐτῷ δεκτικῷ, καθάπερ ἡ δικαιοσύνη καὶ ἡ ἀνδρία ἐν ψυχῇ, ἢ ἐν τῷ τόπῳ τῷ αὐτῷ, ἢ ἐν τῷ χρόνῳ τῷ αὐτῷ· μηδαμῶς δ' ἀληθὲς ᾖ τὸ εἰρημένον ἐπὶ τούτων, δῆλον, ὅτι οὐδενὸς ἂν εἴη ὁ ἀποδοθεὶς ὁρισμός, ἐπεὶ οὐδαμῶς τόδε μετὰ τοῦδέ ἐστιν. 19. Εἰ δὲ τῶν διαιρεθέντων ποσαχῶς λέγεται ἕτερον μεθ' ἑτέρου, ἀληθὲς ᾖ τὸ ἐν τῷ αὐτῷ χρόνῳ ὑπάρχειν ἑκάτερον σκοπεῖν, εἰ ἐνδέχεται μὴ πρὸς τὸ αὐτὸ ἑκάτερον λέγεσθαι. οἷον, εἰ τὴν ἀνδρίαν ὡρίσατο, τόλμαν μετὰ διανοίας ὀρθῆς· ἐνδέχεται γὰρ τόλμαν μὲν ἔχειν τοῦ ἀποστερεῖν, ὀρθὴν δὲ διάνοιαν περὶ τὰ ὑγιεινά· ἀλλ' οὔπω ἀνδρεῖος, ὁ ἐν τῷ αὐτῷ χρόνῳ τόδε μετὰ τοῦδε ἔχων. ἔτι, εἰ καὶ πρὸς τὸ αὐτὸ ἄμφω λέγεται, οἷον πρὸς τὰ ἰατρικά· οὐδὲν γὰρ κωλύει καὶ τόλμαν τινὰ καὶ ὀρθὴν διάνοιαν ἔχειν πρὸς τὰ ἰατρικά· ἀλλ' ὅμως οὐδ' οὕτως ἀνδρεῖος, ὁ τόδε μετὰ τοῦδε ἔχων. οὔτε γὰρ πρὸς ἕτερον ἑκάτερον αὐτῶν δεῖ λέγεσθαι, οὔτε πρὸς ταὐτὸν τὸ τυχόν, ἀλλὰ πρὸς τὸ τῆς ἀνδρίας τέλος· οἷον, πρὸς τοὺς πολεμικοὺς κινδύνους, ἢ εἴ τι μᾶλλον τούτου τέλος. 20 Ἔνια δὲ τῶν οὕτως ἀποδεδομένων, οὐδαμῶς ὑπὸ τὴν εἰρημένην πίπτει διαίρεσιν. οἷον, εἰ ἡ ὀργή, λύπη ἐστὶ μεθ' ὑπολήψεως τοῦ ὀλιγωρεῖσθαι. ὅτι γὰρ διὰ τὴν ὑπόληψιν τὴν τοιαύτην ἡ λύπη γίνεται, τοῦτο βούλεται δηλοῦν. τὸ δὲ διὰ τοῦτο γίνεσθαί τι, οὐκ ἔστι ταὐτὸ τῷ μετὰ τούτου τόδε εἶναι, κατ' οὐδένα τῶν εἰρημένων τρόπων.

1 Si dixerit eſſe compoſitionem, nec expoſuerit qualis ſit compoſitio. 2 Si ſubiectum, cui duo inter ſe contraria conueniunt, per alterum tantum definiatur. 3 De parte euertenda, ſi aduerſus totam definitionem argumenta non ſuppetant. 4 De obſcura definitione explicanda. 5 Ab alia definitione. 6 Epilogus.

Rvrſus, ſi totũ dixit *eſſe* horum compoſitionẽ, vt animal *eſſe* compoſitionẽ animæ & corporis: primũ conſiderare *oportet*, an non dixerit, qualis compoſitio *ſit*: vt ſi *quis* carnem definiens, aut os, dixerit *eſſe* compoſitionem ignis & terræ & aëris. non .n. ſatis eſt cõpoſitionem dicere: ſed & qualis *ea ſit*, explicari debet. quandoquidem nõ ſi quovis modo hæc componãtur, caro fit: ſed ſi hoc modo cõponantur, caro: ſi illo modo, os. Quamquã neutrum eorum quæ dixi, videtur eſſe omnino idem quod compoſitio: quoniam omni cõpoſitioni diſſolutio *eſt* cõtraria: neutri autem eorum quæ dixi, quicquam *eſt contrariũ*. Præterea ſi æquè probabile *eſt*, omne cõpoſitum eſſe compoſitionem, vel nullum; vnumquodque autem animal, cùm ſit cõpoſitum, non eſt compoſitio: ne aliud quidem vllum cõpoſitum erit compoſitio. 2 Præterea ſi naturâ comparatum ſit, vt æquè in aliquo cõtraria inſint, & *aliquis* definierit per alterum *tantùm*: patet, eum non definiuiſſe. alioquin accidet, vt eiuſdẽ *rei* ſint plures definitiones. quid .n. ampliùs dixit, qui per hoc, quàm qui per illud definiuit; cùm naturâ cõparatum ſit, vt ambo in eodem æquè gignantur? Talis autem *eſt* animæ definitio, ſi quidem eſt ſubſtãtia ſcientiæ capax. æquè .n. eſt ignorãtiæ capax. 3 Quòd ſi cui aduerſus totam definitionem argumenta non ſuppetant, propterea quòd totum cognitum non ſit: contra partẽ aliquam *oportet* argumentari, ſi *quæ* ſit nota, nec videatur rectè tradita: euerſâ enim parte, etiam tota definitio euertitur.

Qvod ſi confirmare velimus, primùm ſcire oportet, neminē aut paucos eorum qui diſputant, definitionem ſyllogiſmo concludere, ſed omnes eam pro principio ſumere: quemadmodū *faciunt* qui circa geometriam, & *qui circa* numeros, & *qui circa* alias eiuſmodi diſciplinas *verſantur*. 2 Deinde *ſciendum eſt*, alius eſſe tractationis exquiſitè exponere, & quid ſit definitio, & quomodo definire oporteat. nunc verò, quod in vſum præſentem ſufficit, hoc tantùm dicendum *eſt*, ſyllogiſmo concludi poſſe definitionem & quidditatem. nam ſi definitio eſt oratio quæ declarat rei quidditatem: & oportet ea quæ in definitione attribuuntur, etiam in *quæſtione* quid eſt, rei ſola attribui: (attribuuntur autem in *quæſtione* quid eſt, genera & D differentiæ) perſpicuū *eſt*, ſi quis ſumpſerit ea tantummodo quæ in *quæſtione* quid eſt, rei attribuuntur, orationem quæ hæc ipſa continet, neceſſariò eſſe definitionem, quia non poteſt eſſe alia rei definitio: cùm nihil aliud in *quæſtione* quid eſt, rei attribuatur. Definitionē igitur ſyllogiſmo concludi poſſe perſpicuum *eſt*. 3 Ex quibus autem oporteat eam conſtruere, definitum fuit in aliis *libris* exquiſitiùs. *quod* verò ad propoſitam methodum *attinet*, hi loci vtiles ſunt. 4 Conſiderandum enim

eſt in cõtrariis,& aliis oppoſitis,& totas orationes, & per partes inſpiciendo. 5 Nam ſi oppoſita *oratio eſt* oppoſitæ *rei definitio*, etiam *orationem* eam quæ dicta eſt, *rei* propoſitæ *definitionem* eſſe neceſſe *eſt*. Quoniam autem contrariorum plures ſunt connexiones, ſuméda *eſt* ex contrariis ea quæ maximè videri poſſit cõtraria definitio. Totæ igitur orationes, quemadmodũ dictum eſt, conſiderandæ *ſunt*. 6 Per partes autem ſic: Primùm *oſtenditur* genus quod traditũ fuit, rectè traditum eſſe. ſi.n. contrarium *eſt* in contrario *genere*: quod autem propoſitũ fuit, non eſt in eodem: proculdubio erit in cõtrario: quia neceſſe *eſt* cõtraria vel in eodem genere, vel in cõtrariis generibus eſſe. Ac differẽtias quoque contrarias attribui cõtrariis cenſemus: vt albo & nigro. nam illud diſſipandi, hoc colligẽdi aſpectum vim habet. quare ſi contrario contrariç *differentiæ* attribuuntur: certè ei quod propoſitum eſt, traditæ differentiæ attribuentur. Quocirca cũ & genus & differentiæ rectè traditæ ſint, patet, eam, quæ data eſt, definitionem eſſe. 7 An non neceſſe *eſt* contrariis contrarias differẽtias attribui, niſi in eodem genere cõtraria ſint? quorum autẽ genera contraria *ſunt*, nihil prohibet eãdem differentiam de ambobus dici; velvti de iuſtitia & iniuſtitia: etenim illa *eſt* virtus, hæc *eſt* vitium animæ. quapropter illud *verbum*, animæ, *quod eſt* differentia, de ambobus dicitur: quoniã corporis quoque eſt virtus & vitium. 8 At certè hoc verũ *eſt*, contrariorũ vel contrarias vel eaſdem differẽtias eſſe. Si igitur contrario contraria attribuitur, huic verò non *itẽ*, patet, eã quæ dicta fuit, huic attribui. 9 Et vt vniuerſaliter dicam, cùm definitio conſtet ex genere & differentiis, ſi rei contrariæ definitio perſpicua ſit, etiam rei propoſitæ definitio perſpicua erit. Cũ enim contrarium vel in eodem genere, vel in cõtrario *ſit*, ſimilitérque differentiæ vel contrariæ contrariis, vel eædem attribuãtur: manifeſtum *eſt*, rei propoſitæ aut idẽ genus attribui, quod & contrariæ attribuitur, differentias verò contrarias vel omnes, vel quaſdam *tãtùm*, cùm reliquæ *ſint* eædẽ: aut contrà differentias eaſdem, genera autẽ contraria: aut vtraque cõtraria, *nempe* & genera & differentias. vtraque.n. eadem eſſe non poſſunt: alioqui eadẽ erit definitio contrariorum. 10 Prçterea *ducenda ſunt argumenta* à caſibus & coniugatis. neceſſe *eſt*.n. conſequentia eſſe genera generibus, ac definitiones definitionibus. vtputà ſi obliuio eſt abiectio ſciẽtiæ: etiam obliuiſci erit abiicere ſciẽtiam: & oblitum eſſe, abieciſſe ſcientiã. vno igitur quovis eorum, quæ dixi, conceſſo, neceſſe eſt etiã reliqua cõcedere. Similitérque ſi interitus *eſt* diſſolutio eſſentiæ: etiã interire *erit* diſſolui eſſentiã: & quod habet vim interimendi, habebit vim diſſoluendi. item ſi id quod habet vim interimendi, habet vim diſſoluendi eſſentiam, etiam interitus *erit* diſſolutio eſſentiæ. Similis *eſt* aliorum ratio. Quare vno quovis ſumpto, etiam reliqua omnia conceduntur. 11 Ex iis quoque *argui poteſt*, quæ ſimiliter ſunt affecta inter ſe. nam ſi ſalubre habet vim efficiendi ſanitatẽ: id etiam quod valet ad firmã corporis conſtitutionẽ, habebit vim efficiendi firmam corporis cõſtitutionem: & quod vtile eſt, vim habebit efficiẽdi bonum. quoniam vnũquodque eorum quæ dixi, ſimiliter affectum eſt ad proprium finem. quare ſi vnius eorũ definitio eſt, habere vim efficiẽdi finem, etiam vniuſcuiuſque reliquorũ hæc erit definitio. 12 Præterea *ducenda ſunt argumenta* ex eo quod magis,& ex eo quod æquè *eſt*, quot

1 ¶ Vtrùm problema faciliùs confirmetur, an refellatur. De definitione quæ faciliùs euertitur quàm confirmatur: cùm quia difficile eſt ſumere propoſitiones, ex quibus confirmatur: 2 tum etiam quia plura probanda ſunt, cùm confirmatur, quàm cùm refellitur, ſi quidem omnes partes definitionis confirmari debent, vnam reprehendi ſufficit. 3. præterea ſyllogiſmo vniuerſali tantùm confirmatur definitio, & particulari quoque refutatur. item reciprocari debet cum definito. 4 & ſoli definito conuenire. 5 De proprio, & de genere. 6 Proprium faciliùs reprehendi, quàm confirmari: quia omnes partes confirmari debent, vnam reprehendi ſatis eſt: 7 item quia proprium omni, & ſoli conuenire debet. 8 Genus faciliùs refelli, quàm probari: quia confirmari debet ſyllogiſmo vniuerſali, refelli autem poteſt etiam ſyllogiſmo particulari: 9 item quia non confirmatur, niſi probetur ineſſe vt genus: refellitur autem etſi ſimpliciter probetur non ineſſe. 10 Eorum quæ dicta ſunt, confirmatio à ſimili. 11 De accidente. 12 ¶ Collatio diuerſorum problematum. Definitionem facillimè reprehendi, quia multæ conditiones in ea requiruntur, 13 & quia loci aliorum problematum ad definitionem transferri poſſunt. 14 difficillimè autem confirmari. 15 De proprio. 16 De accidente, quod facillimè confirmatur, 17 & difficillimè euertitur. 18 ¶ Epilogus.

CAP. III.

C Ὅτι δὲ χαλεπώτερον, κατασκευάζειν ἢ ἀνασκευάζειν ὅρον, ἐκ τῶν μετὰ ταῦτα ῥηθησομένων φανερόν. καὶ γὰρ ἰδεῖν αὐτόν, καὶ λαβεῖν παρὰ τῶν ἐρωτωμένων τὰς τοιαύτας προτάσεις, οὐκ εὐπετές ἐστιν, ὅτι τῶν ἐν τῷ ἀποδοθέντι λόγῳ, τὸ μὲν, γένος· τὸ δὲ, διαφορά· καὶ ὅτι ἐν τῷ τί ἐστι, τὸ γένος μόνον, καὶ αἱ διαφοραὶ κατηγοροῦνται. ἄνευ δὲ τούτων ἀδύνατον ὁρισμοῦ γενέσθαι συλλογισμόν. εἰ γάρ τινα καὶ ἄλλα ἐν τῷ τί ἐστι τοῦ πράγματος κατηγορεῖται, ἄδηλον πότερον ὁ ῥηθεὶς, ἢ ἕτερος αὐτοῦ ὁρισμός ἐστιν· ἐπειδὴ ὁρισμός ἐστι λόγος, ὁ τὸ τί ἦν εἶναι σημαίνων. 2 Δῆλον δὲ καὶ ἐκ τῶνδε. ῥᾷον γὰρ, ἓν συμπεραίνεσθαι, ἢ πολλά. ἀναιροῦντι μὲν οὖν, ἀπόχρη πρὸς ἓν διαλεχθῆναι· ἓν γὰρ ὁποιονοῦν ἀνασκευάσαντες, ἀνῃρηκότες ἐσόμεθα τὸν ὅρον. κατασκευάζοντι δὲ, πάντα ἀνάγκη συμβιβάζειν ὅτι ὑπάρχει τὰ ἐν τῷ ὅρῳ.

Difficiliùs autem confirmari quā euerti definitionem, ex iis, quæ deinceps dicētur, perſpicuum *erit*. nā & ipſum *interrogantē* videre, & ab iis qui interrogantur, ſumere huiuſmodi propoſitiones, nō facile *eſt*: vtputà eorū, quæ in tradita definitione *cōtinentur*, aliud *eſſe* genus, aliud differentiam: & in *quæſtione* quid eſt, attribui tātummodo genus & differentiā. ſine his autem *propoſitionibus* non poteſt definitio ſyllogiſmo cōcludi. nam ſi & quędam alia rei attribuuntur in *quæſtione* quid eſt: non cōſtat, eáne quæ dicta eſt, an altera ſit eius definitio: quādoquidem definitio eſt oratio quidditatem declarans. 2 Sed & ex his manifeſtum *eſt*. facilius *eſt* enim, vnum concludere, quā multa. ac refellenti quidem ſufficit contra vnam *definitionis partem* diſputare. nam ſi vnam qualemcumque refutauerimus, euerſa erit definitio. confirmanti autem neceſſe *eſt ea* omnia coagmentare & probare ineſſe, quæ in definitione *poſita ſunt*.

3 Præterea

3 Præterea qui confirmat, vniuerſalem ſyllogiſmũ afferre debet. nam quibus nomẽ, *iis* omnibus etiã definitionẽ attribui oportet: & præterea viciſſim quibus definitio, etiam nomẽ, ſi propria futura eſt definitio quæ tradita eſt. Ei verò qui refellit, nõ *eſt* neceſſe probare vniuerſale: ſufficit.n. ſi probet definitionẽ de aliquo eorum quę ſub nomine *cõtinentur*, nõ verè dici. Sed & ſi vniuerſaliter refellere oporteat, ne ſic quidem reciprocatio *eſt* neceſſaria in refutatione. ſatis.n.eſt, eum qui refutat vniuerſaliter, oſtendere cuidam *eorum* quibus nomen attribuitur, definitionem nõ attribui. cõtrà autem nõ neceſſe *eſt* oſtendere, quibus definitio non attribuitur, ne nomen quidem *attribui*. 4 Præterea etſi omni *ei* conueniat quod ſub nomine *cõtinetur*, non tamen ſoli, euerſa erit definitio. 5 Similis eſt & proprij & generis ratio. vtraque. n. refellere, quàm confirmare, facilius eſt. 6 *Quod* quidem de proprio perſpicuum *eſt* ex iis quæ dicta ſunt: quia plerumque *verborum* coniũctione proprium traditur. itaque refellere licet *vel* vno *verbo* reprehẽſo: cum verò qui confirmat, omnia ſyllogiſmo cõcludere neceſſe *eſt*. 7 Ferè autem reliqua omnia, quæ ad definitionẽ *pertinent*, etiam ad proprium aptari poſſunt. nam qui confirmat, oſtẽdere debet *orationem* iis omnibus conuenire, quæ ſub nomine *continentur*. refellenti autem ſatis eſt oſtendere vni non cõuenire. ſed etſi omni conueniat, non tamẽ ſoli, ſic quoq; euerſum erit, quemadmodum & in definitione dicebatur. 8 De genere autẽ *hinc apparet*: quia cõfirmatur vno modo: *id eſt*, ſi probetur omni ineſſe: refellitur autem duobus. ſiue.n. probetur nulli *ineſſe*, ſiue alicui nõ ineſſe, euerſum erit quod initio *poſitum fuit quaſi genus*. 9 Præterea confirmanti non ſatis eſt probare ineſſe: ſed etiam vt genus ineſſe, probandum *eſt*. refellenti autẽ ſufficit probare alicui non ineſſe, vel nulli *ineſſe*. 10 Videtur autem, vt & in aliis facilius *eſt* corrũpere quàm efficere, ſic & in iis refellere quàm confirmare. 11 Quod verò ad accidens attinet, vniuerſale facilius refellitur, quàm confirmatur: nã confirmanti probandum *eſt* omni *ineſſe*: refellenti autem ſatis eſt probare vni non ineſſe. contrà particulare faciliùs cõfirmatur, quàm refellitur: quia confirmanti ſatis eſt probare cuidam ineſſe: refellenti autem probandum *eſt* nulli ineſſe. 12 Perſpicuum quoque *eſt*, cur omnium facillimũ *ſit* definitionem euertere. cùm.n. multa dicta ſint, *quæ in definitione ſeruari debent*, plurima data ſunt ad eã *euertendam*. ex pluribus autẽ citiùs fit ſyllogiſmus: quia veriſimile *eſt*, in multis magis quàm in paucis peccari. 13 Præterea ad definitionem *euertendã*, ex aliis quoque argumenta ſumi poſſunt. ſiue.n. oratio non ſit propria: ſiue id quod traditum eſt, non ſit genus: ſiue aliquid corũ quę in definitione *poſita ſunt*, non inſit, euertitur definitio. Ad alia verò *refutanda*, nec quæ ex definitionibus *exiſtunt*, nec cetera omnia argumenta ſumi poſſunt. nã ea ſola quæ ad accidens pertinent, communia ſunt iis omnibus quæ dicta fuerunt: quoniam vnumquodque eorũ quæ dicta ſunt, ineſſe debet. Quòd ſi genus non inſit vt propriũ, non ideo genus euerſum eſt. Similiter non *eſt* neceſſe proprium *ineſſe* vt genus: nec accidens *ineſſe* vt genus, vel vt proprium, ſed ineſſe dumtaxat. Quare non poſſunt argumenta ex aliis ad alia transferri, niſi ad definitionem. Patet igitur, facillimè omnium infirmari definitionem. 14 Difficillimè autem confirmatur. nam & cetera omnia concludi oportet: (nimirum ineſſe et omnia quæ dicta fuerunt, & genus eſſe quod traditum fuit, & propriam *eſſe* orationem) & præterea *probandum eſt* orationem declarare quid *res* ſit: idque præclarè

Simúlque eas quæ vtiles ſunt proponere, ſi *quis* illo modo ſumere nequeat, in promptu *eſt*. 6 Quæ verò præter has dictæ fuerunt, ſumendæ *ſunt* harum ipſarum cauſâ: ſingulis autem ita vtendum *eſt*. 7 Inducentẽ *oportet* à ſingularibus ad vniuerſalia, & *à* notis ad ignota *progredi*: notiora autẽ vel abſolutè, vel multis ſunt ea quæ ſub ſenſum *cadunt*. 8 Celantem autẽ *oportet* proſyllogiſmis *ea* probare, ex quibus concludẽdum eſt, quod ab initio *propoſitum fuit*: atque hæc quàm plurima. Quod quidem fiet, ſi quis non ſolum *propoſitiones* neceſſarias, ſed aliquam etiam ex iis quæ ad haſce vtiles ſunt, cõcludat. 9 Prætereà concluſiones dicere non *oportet*, ſed poſtea repẽtè concludere. ſic.n. maximè recedet à theſi initio *propoſita*. 10 Et, vt vniuerſaliter dicã, eum, qui celando percõtatur, ſic interrogare oportet, vt cùm totam orationem interrogauerit, & cõcluſionem dixerit, quæratur quid ita. hoc autem maximè fiet eo quẽ nunc diximus modo. Si.n. ſola vltima concluſio dicta fuerit, incertum erit quomodo efficiatur: propterea quòd is qui reſpondet, ex quibus colligatur, non prouiderit, cùm priores ſyllogiſmi in membra digeſti non fuerint. minimè autem in ſua membra digeritur ſyllogiſmus concluſionis, cùm non ponimus eius ſumptiones, ſed ea ex quibus *ſumptiones illæ* concluduntur. 11 Vtile etiam *erit*, non continentia ſumere axiomata, ex quibus ſyllogiſmi *conſtant*, ſed permiſcere, quæ ad hanc & quæ ad illam concluſionem pertinent. cùm enim propria *alicuius cõcluſionis* iuxta ſe ponuntur, magis apparet quid ex eis efficietur. 12 Oportet etiam, cùm fieri poteſt, definitione ſumere vniuerſalem propoſitionem, non in iis *de quibus agitur*, ſed in coniugatis. nam *qui reſpondẽt*, ſe ipſos paralogiſmo fallunt, cùm in coniugato ſumpta fuerit definitio, quaſi non concedant vniuerſale. vtputà ſi accipere oporteat, eum qui iraſcitur, appetere vindictam; & ſumatur ira eſſe appetitus vindictæ, quòd aliquis contempſiſſe videatur. patet enim, hoc ſumpto nos habituros eſſe vniuerſale, quod conſultò volumus. Cùm autẽ *definitio* proponitur in *iis* ipſis *de quibus agitur*, ſæpè accidit vt reſpondens abnuat: quia magis in eo, *de quo agitur*, obiectionem *paratam* habet: velvti, non omnem, qui iraſcitur, vindictam appetere: quia licèt parentibus iraſcamur, tamen vindictam non appetimus. Fortaſſe autem hæc obiectio vera non *eſt*: quoniam à quibuſdam ſatis vltionis *ſumimus*, ſi moleſtiâ tantùm *eos* afficiamus, & efficiamus vt *eos* pœniteat.

A habet tamen neſcio quam vim perſuadendi, vt non iniuriâ propoſitio negata eſſe videatur. ſed aduerſus iræ definitionem non æquè facile *eſt* obiectionem inuenire. 13 Præterea *ſic* proponere *debemus*, quaſi non propter id *de quo agitur*, ſed alius causâ proponamus. nam *qui reſpondent*, ea declinant quæ ad theſim *impugnandam vtilia ſunt*. 14 Et vt ſimpliciter dicam, quàm maximè incertũ efficere *debet is qui interrogat*, vtrũ id quod proponit, an oppoſitum, ſumere velit. cùm.n. eſt obſcurum, quid ad theſim *impugnandam* vtile *ſit*, magis quod ſibi videtur, ponunt. 15 Præterea per ſimilitudinis *collationem* interrogare *oportet*: quoniã B & vim habet ad perſuadẽdum, & magis latet quã vniuerſale: velvti, vt ſcientia & ignorantia contrariorum *eſt* eadem, ita etiam ſenſum contrariorum eundem *eſſe*: vel contrà, quia contrariorum ſenſus *eſt* idem, etiam ſcientiam *eſſe eandem*. hoc autẽ eſt ſimile inductioni, non tamen idem: illic.n. ex ſingularibus ſumitur vniuerſale: in ſimilibus verò id quod ſumitur, non eſt vniuerſale, ſub quo ſimilia contineantur. 16 Oportet etiam ipſum ſibi aliquando obiicere: quoniam ij qui reſpondent, non habent eos ſuſpectos, qui iuſtè argumẽtari videntur. 17 Vtile etiam *eſt*, ſi quis inſuper dicat, ſe id quod paſſim dici ſolet, proponere: quia non audẽt quod ſolitum eſt, mutare, niſi obiectionẽ habeant. IAm verò in diſſerendo vtendum *eſt* ſyllogiſmo apud dialecticos potiùs quã apud multos: cõtrà inductione apud multos potiùs. ſed de his antea quoque dictum fuit. 2 In quibuſdã autem is qui inducit, poteſt interrogãdo ſumere vniuerſale: in nonnullis *id* non facile *eſt factu*, quia non eſt omnibus ſimilitudinibus poſitum nomẽ commune. ſed cùm vniuerſale ſumere oportet, ita *eſt*, inquiunt, in omnibus talibus *rebus*. hoc autem definire, difficillimum *eſt*, quænam eorum quæ afferuntur, *ſint* talia, quæ non *talia*. ideóque ſępe ſe inuicem in diſputationibus circumueniũt; dum alij ſimilia eſſe aiunt ea quæ ſimilia non ſunt, alij verò ambigunt *& ſuſpicantur* ea quæ ſimilia ſunt, non eſſe ſimilia. Idcirco in *iis* omnibus quæ talia ſunt, danda eſt opera vt nomina imponantur: vt nec reſpondenti liceat ambigere, quaſi nõ ſimiliter dicatur id quod affertur: nec ei qui interrogat, calumniari *liceat*, quaſi ſimiliter dicatur. multa. n. quæ non ſimiliter dicuntur, ſimiliter dici videntur. 3 Cùm autem inductione in multis adhibita, nõ dat *alter* vniuerſale, tũc iure optimo poſtulatur obiectio. qui verò non dixit in quibus ita *ſit*, nõ iuſtè poſtulat in quibus non ita *ſit*. oportet. n. priùs inducere, ſic *deinde* obiectionem poſtulare. 4 Ac poſtulandum *eſt*, vt obiectiones afferãtur, non in eo ipſo quod propoſitum eſt, niſi vnum tantummodo ſit tale, vt ſolus binarius *eſt* numerorum parium primus. debet. n. is qui obiicit, in alia re obiectionem afferre, aut dicere hoc ſolum tale *eſſe*. 5 *Quod* autem ad eos *attinet*, qui vniuerſali obiiciunt, nec in eodem *genere* obiectionem afferunt, ſed in homonymo: (velvti aliquem habere poſſe non ſuum colorem, aut pedem, aut manum: quia pictor habere poſſit non ſuum colorem, & coquus non ſuum pedem) in iis quæ ſunt eiuſmodi, adhibita diſtinctione interrogare debemus. nã ſi homonymia lateat, rectè obiicere propoſitioni videbitur. 6 Quòd ſi nõ in homonymo, ſed in eodem *genere* obiiciens, impediat interrogationem, oportet *eo* detracto, in quo obiectio *locum habet*, reliquum vniuerſaliter proponere, donec ſumptũ fuerit quod vtile eſt. vt in obliuione, & eo quod eſt, oblitum eſſe, *intelligi poteſt*. non. n. concedunt, eum qui amiſit ſcientiam, oblitum eſſe: quia cùm res intercidit, ſcientiam quidem amiſit, non tamen oblitus eſt. dempto igitur eo in quo *locum habet* obiectio, reliquum dicendum *eſt*: velvti, ſi re permanente amiſit ſcientiam, *eum* oblitum eſſe. Similiter *faciendum eſt* aduerſus eos qui obiiciunt *huic propoſitioni*, maiori bono maius malum opponi. proferunt enim *hanc obiectionẽ*, valetudini, quæ eſt minus bonum quàm firma *corporis* conſtitutio, maius malum opponi: morbum enim eſſe maius malum infirma *corporis* conſtitutione. detrahendum igitur in his quoque *eſt id* in quo *tenet* obiectio: (*eo* enim detracto, faciliùs concedet) velvti, maiori bono opponi maius malum, niſi vnà *ſecum* inferat alterum, vt firma *corporis* conſtitutio ſanitatem.

A 7 Non ſolùm autem cùm obiicitur, hoc faciendum *eſt*, ſed etiam ſi ſine obiectione *propoſitionem* neget, quia tale aliquid prouideat. dempto enim *eo* in quo obiectio *afferri poteſt*, cogetur concedere: quia in eo quod reliquum *erit*, non prouidebit, in quo non ita *ſit*. Si verò non concedat: cùm ab eo poſtulabitur obiectio, non poterit *eam* afferre. Sũt autem eiuſmodi propoſitiones, *ea* quæ *ſunt* ex parte falſæ, ex parte veræ. in iis enim licet, detractione facta, quod reliquum *eſt*, verum relinquere. Quòd ſi cùm *interrogans* in multis propoſuerit, *alter* non obiiciat: poſtulandum *eſt*, vt concedat. dialectica enim propoſitio eſt, aduerſus quam cùm in B multis ita habeat, non eſt obiectio. 8 Cùm autem idem poteſt ſine impoſſibili & per impoſſibile cõcludi: *quod attinet ad eum*, qui non diſputat, ſed demonſtrat, nihil refert, vtrùm hoc, an illo modo concludat. qui verò diſputat, non debet vti ſyllogiſmo ducente ad impoſſibile: quia ſi abſque impoſſibili concludat, ambigi non poteſt: cùm autem impoſſibile concludent, niſi valde perſpicuè falſum ſit, non impoſſibile aiũt eſſe. quocirca non conſequuntur quod volunt, ij qui interrogant. 9 Oportet autem proponere, quæcumque in multis ita *ſe* habent: obiectio autem aut omnino non C eſt, aut non facilè cerni poteſt. cùm enim perſpicere nequeunt, in quibus non ita ſit: *tum id quod propoſitum eſt*, quaſi verum ſit, concedunt. 10 Non oportet autem concluſionem interrogare. alioquin abnuente *eo qui reſpondet*, non videtur factus eſſe ſyllogiſmus. ſæpe enim negant, etiamſi *aduerſarius* non interroget, ſed vt conſequens inferat: idque facientes, redargui non vidẽtur iis qui non perſpiciunt quid ſequatur ex iis quæ poſita fuerunt. cùm igitur ne dicens quidem *concluſionem* ſequi, interrogabit, alter autem negabit: omnino non videbitur factus eſſe ſyllogiſmus. 11 Neque verò omne vniuerſale videtur eſſe propoſitio dialectica. velut, quid eſt homo? aut, quot modis di- D citur bonum? propoſitio enim dialectica eſt, ad quam reſpondere licet, etiam; aut, non: ad eas autem quæ dictæ ſunt, non licet. idcirco huiuſmodi interrogationes non ſunt dialecticæ, niſi is *qui interrogat*, determinatione aut diuiſione facta dixerit, exempli gratiâ, hócne modo an illo bonum dicitur? nam ad huiuſmodi *interrogata* facilis *eſt* reſponſio, vel affirmando, vel negando. Cap. III.

1 De primis, & vltimis. 2 De his quæ ſunt proxima principiis. 3 De definitionibus. 4 Summa. 5 De definitione omiſſa. 7 Epilogus. 8 Si propoſitio difficiliùs probari poſſit, quàm theſis. 9 Epilogus.

EAſdē porrò hypotheſes difficile eſt impugnare, ac facile *eſt* ſuſtinere. Eiuſmodi autē ſunt, & quæ *ſunt* prima naturâ, & quæ vltima. nā prima, definitione indigent: vltima verò multis concluduntur, ſi quis continentiam *argumētorum* ſumere à primis velit. alioqui captioſæ argumentationes videntur: quia fieri nequit, vt aliquid demonſtretur, niſi ſumpto à propriis principiis initio, continuata *argumentorum* ſerie perueniatur ad vltima. Qui igitur reſpondent, nec definiri poſtulāt, nec, ſi interrogans definiat, animum aduertunt. atqui niſi perſpicuum fiat, quid tādem ſit, quod eſt propoſitum, haud facile *eſt* argumētari. maximè verò hoc in principiis contingit. nā cetera per hæc probantur: ipſa verò per alia *probari* non poſſunt: ſed neceſſe *eſt*, vt eiuſmodi omnia definitione innoteſcant. 2 Ea quoque difficiles aggreſſiones habēt, quæ valde propinqua principio *ſunt*. non poſſunt. n. aduerſus ea multæ rationes ſuppetere, cū inter ea & principium ſint pauca media, per quæ neceſſe *eſt* poſteriora probari. 3 Omnium autem definitionum hæ difficillimè impugnātur, in quibus adhibita ſunt eiuſmodi nomina: vt primū incertum ſit, vno, an pluribus modis dicātur: deinde non conſtet, vtrùm propriè, an per tranſlationem à definiente ſumātur. nam, quia ſunt obſcura, non habent aggreſſiones. quia verò ignoratur, an eo quòd per tranſlationem dicantur, talia ſint, reprehenſione vacant. 4 Omnino autem quodcumq; problema difficulter impugnatur, exiſtimandū *eſt* aut definitione egere; aut ex iis eſſe, quæ multifariā, vel per tranſlationem dicuntur; aut non longè *abeſſe* à principiis; aut propterea *difficultatem habere*, quòd non eſt primo *intuitu* nobis perſpicuum, ad quem dictorum modorum referatur hoc ipſum, quod affert dubitationem. cùm. n. modus eſt perſpicuus, patet vel definiēdum eſſe, vel diuidendū, vel medias propoſitiones ſuggerēdas; quia per has vltima probantur. 5 In multis etiam theſibus non ſcitè definitione tradita, haud facile *eſt* diſſerere & argumentāri: velvti, vtrùm vnum vni contrariū *ſit*, an plura. contrariis autem commodè definitis, facile *erit* colligere, poſſintne plura eorūdem eſſe contraria, necne. Eodem modo *ſe res habet* in aliis definitione indigentibus. 6 Quin & in mathematis nonnulla ob definitionis defectū videntur non facilè deſcribi: vtputà eam lineam, quę planum ad latus ſecat, ſimiliter cū lineam tum ſpatium diuidere. definitione autem prolata, perſpicuum *eſt* quod dicitur. nam eandem ſubtractionem habēt loca & lineæ: hæc autem eſt eius orationis definitio. Omnino autem elementa, poſitis quidem definitionibus, (vt quid linea, quid circulus) facilè probātur: verùm haud multa aduerſus vnūquodque eorum argumēta ſuppetunt, quia non multa ſunt media. quòd ſi non ponantur principiorū definitiones, difficile *eſt*, aut fortaſſis omnino impoſſibile, *aduerſus ea diſſerere*. Similis eſt eorum ratio, quæ in diſputationibus ſpectātur. 7 Non oportet igitur latēre, cùm difficilem aggreſſionē theſis habet, eam aliquo dictorum *modorum* affectam eſſe. 8 Cùm autem de axiomate ac propoſitione difficilius *eſt* diſſerere, quàm de theſi, dubitare aliquis poſſit, vtrùm *ſint* ponēda, quæ ſunt huiuſmodi, an non. quia ſi nō ponat, ſed de eo quoque diſſeri poſtulet, maius *onus* iniūget, quàm quod à principio poſitum *fuit*. ſin autē ponat, credet ex iis quæ minus habent fidei. Si igitur non oportet difficilius

C Quia verò ſunt indefinita, quæ *obſeruanda ſunt ab* iis qui exercitationis & periculi *faciendi* cauſa diſputant: (non.n. iidem ſcopi *propoſiti ſunt* docentibus vel diſcentibus, & contēdentibus: neque his ipſis, & iis, qui ſe ſemper inter ſe exercent inquiſitionis gratiâ. nam diſcēti ponenda ſemper *ſunt*, quæ videntur: etenim falſum nemo docere aggreditur. ex iis verò qui contendunt, interrogantē oportet videri omnino aliquid facere: reſpondentem autē, nihil videri pati. In dialecticis autem cōgreſſibus, nondū *à quoquā* diſtinctè expoſitum eſt, *quid ſit obſeruandū* iis, qui non contentionis, ſed periculi & inquiſitionis gratiâ diſputāt, & quò oporteat reſpondentem collimare, & quæ concedere, D & quæ non *concedere*, vt pręclarè, aut ſecus tueatur theſim.) Quoniā igitur nihil habemus ab aliis traditum, ipſi nonnihil dicere conemur. 2 Neceſſe igitur *eſt*, eum qui reſpondet, ſuſtinere diſputationē, poſita vel probabili, vel improbabili theſi, vel neutra: probabili, inquam, vel improbabili, aut ſimpliciter, aut definitè, vt certo cuidam, nempe vel ipſi *reſpondenti*, vel alij. 3 Nihil autem intereſt, quocumque modo ſit probabilis, vel improbabilis: idem enim modus erit bene reſpondendi, & dandi, vel non dandi, quod interrogatum eſt. 4 Si igitur improbabilis ſit theſis, neceſſe *eſt* concluſionem probabilem fieri: ſi verò *illa* probabilis, *hanc* improbabilem, ſemper enim oppoſitum theſi concludit qui interrogat. Sed ſi id quod ponitur, neque improbabile *ſit*, neque probabile:

concluſio quoque talis erit. 5 Quoniam autem is qui ſcitè ratiocinatur, ex probabilioribus & notioribus id quod in quæſtione poſitū eſt, demonſtrat: *hinc* apparet, ſi improbabile ſit ſimpliciter, quod poſitum eſt, reſpondentem non debere cōcedere, nec quod non videtur ſimpliciter, nec quod videtur quidem, ſed minùs videtur, quàm concluſio. nam cū improbabilis eſt theſis, probabilis *eſt* concluſio. quare oportet, quæ ſumpta ſunt, probabilia omnia eſſe, & *quidem* magis quàm quod propoſitū eſt, probabilia, ſi futurum eſt vt per notiora minùs notum concludatur. Itaque niſi quid eiuſmodi ſit ex interrogatis, non *eſt* ponendum reſpondenti. 6 Sin autem ſimpliciter probabilis *ſit* theſis: patet concluſionem *eſſe* ſimpliciter improbabilem. Ponenda ſunt igitur & quæcūque videntur: & ex iis quæ non videntur, ea quæ minùs ſunt improbabilia, quàm cōcluſio. *ſic* enim videri poteſt ſatis *commode* diſputatum. 7 Similiter etiam *fiat*, ſi nec improbabilis nec probabilis ſit theſis. etenim ſic quoque danda ſunt, quæcumque videntur: & ex iis quæ non vidētur, *ea* quæ magis *ſunt* probabilia concluſione. ſic.n. fiet, vt probabiliores argumentationes efficiātur. 8 Ergo ſi ſimpliciter probabile aut improbabile ſit, quod poſitū *eſt*: ad ea *reſpiciēdo* quæ ſimpliciter vidētur, comparatio facienda *eſt*. 9 Sin autem non ſimpliciter probabile vel improbabile ſit, quod poſitum *eſt*, ſed reſpondenti: ad ſe ipſum *reſpiciendo, & ita* quod videatur, aut non videatur, dijudicando, ponēdum *eſt*, aut non ponendum. 10 Quòd ſi alterius opinionē tueatur is, qui reſpondet, procul dubio ad illius mentem & ſententiā reſpiciens, debet ſingula ponere, & negare. Idcirco & qui alienas opiniones inferunt, (vtputà bonum & malum eſſe idem, vt Heraclitus ait) *ij* non concedunt, eidem ſimul non adeſſe cōtraria, non quòd hoc ſibi non videatur, ſed quia ſecundū Heraclitum ſic *eſt* dicendum. Hoc etiam faciunt, qui *ita diſputant, vt* alteri ab alteris theſes accipiāt: coniiciunt enim, quid theſeos auctor diceret. 11 Perſpicuum igitur *eſt*, quò collimare debeat reſpondens, ſiue ſimpliciter, ſiue alicui probabile *ſit*, quod *eſt* poſitum.

A liceat res ipſas per ſe in diſſerendo afferre, ſed nominibus vice rerũ vtamur, *tamquam* notis: id quod in nominibus euenit, etiã in rebus putamus euenire: quemadmodum in calculis accidit iis qui rationes ſubducunt. Hoc verò non eſt ſimile: nomina.n. ſunt finita, & orationum multitudo: res autem numero infinitæ ſunt: neceſſe igitur *eſt*, vt eadem oratio, vnúmque nomen plura ſignificet. ſicut igitur ibi, qui calculorum vſum non tenet, à ſcientibus circumueniuntur: eodem modo & in diſputationibus, qui nominum poteſtatis *ſunt* imperiti, paralogiſmis decipiuntur, & cùm ipſi diſputant, & cùm alios audiunt. Ergo & ob hanc cauſam, & ob eas quę *poſteriùs* dicentur, eſt tam ſyllogiſmus quã elenchus qui videtur, cùm non ſit. 6 Quãdo au- B tem nõnullis magis è re eſt videri ſapientes, quàm eſſe nec videri: (nam ſophiſtice eſt ſapientia quæ videtur, cùm *re vera* non ſit: & ſophiſta *eſt*, qui quęſtum captat ex *ea* ſapientia, quæ videtur *eſſe*, nec eſt) patet, his magis opus eſſe vt ſapientis officium facere videantur, quàm vt faciant, nec videantur. eſt autem (vt ſingula cum ſingulis conferam) officium in quaque re ſcientis, nec mentiri ipſum in iis quæ nouit, & poſſe *alium* mentientẽ patefacere: quorum alterum in rationis reddẽdæ, alterum in ſumẽdæ facultate *poſitum eſt*. Neceſſe *eſt* igitur, vt qui ſophiſticè cauillari volunt, dictarum argumentationum genus quærant: nam è re eſt: huiuſmodi namque facultas ſapientem videri faciet: quod *quidẽ* hi præeligunt. 7 Eſſe igitur eiuſmodi quoddam argumentationum genus, & huiuſcemodi facultatem *eos* expetere, quos vocamus ſophiſtas, manifeſtum eſt.

Πόσα δέ ἐστιν εἴδη τῶν λόγων τῶν σοφιστικῶν, καὶ ἐκ πόσων τὸν ἀριθμὸν ἡ δύναμις αὕτη συνέστηκε, καὶ πόσα μέρη τυγχάνει τῆς πραγματείας ὄντα, καὶ περὶ τῶν ἄλλων τῶν συντελούντων εἰς τὴν τέχνην ταύτην, ἤδη λέγωμεν. 2 Ἔστι δὴ τῶν ἐν τῷ διαλέγεσθαι λόγων γένη* τέτταρα, διδασκαλικοὶ, καὶ διαλεκτικοὶ, καὶ πειραστικοὶ, καὶ ἐριστικοί. διδασκαλικοὶ μὲν, οἱ ἐκ τῶν οἰκείων ἀρχῶν ἑκάστου μαθήματος, καὶ οὐκ ἐκ τῶν τοῦ ἀποκρινομένου δοξῶν συλλογιζόμενοι· δεῖ γὰρ πιστεύειν τὸν μανθάνοντα. διαλεκτικοὶ δὲ, οἱ ἐκ τῶν ἐνδόξων συλλογιστικοὶ ἀντιφάσεως. πειραστικοὶ δὲ, C οἱ ἐκ τῶν δοκούντων τῷ ἀποκρινομένῳ, καὶ* ἀναγκαίων εἰδέναι τῷ προσποιουμένῳ ἔχειν τὴν ἐπιστήμην. ὃν τρόπον δὲ, διώρισται ἐν ἑτέροις. ἐριστικοὶ δὲ, οἱ ἐκ τῶν φαινομένων ἐνδόξων, μὴ ὄντων δὲ, συλλογιστικοὶ, ἢ φαινόμενοι συλλογιστικοί. 3 Περὶ μὲν οὖν τῶν διδασκαλικῶν καὶ ἀποδεικτικῶν, ἐν τοῖς Ἀναλυτικοῖς εἴρηται· περὶ δὲ τῶν διαλεκτικῶν καὶ πειραστικῶν, ἐν τοῖς ἄλλοις· περὶ δὲ τῶν ἀγωνιστικῶν καὶ ἐριστικῶν νῦν λέγωμεν. C QVót verò ſint ſpecies argumentationum ſophiſticarum, & quot numero *ſint ea ex quibus* hæc facultas conſtat, & quot partes ſint huius tractationis, ac de aliis conducentibus ad hãc artem, iam dicamus. 2 Sunt igitur argumentationum, quarum in diſſerendo *eſt vſus*, genera quatuor, didaſcalicæ, dialecticæ, tentatiuæ, & litigioſæ. Didaſcalicæ *ſunt*, quæ ex propriis cuiuſque diſciplinæ principiis, non ex reſpondentis opinionibus concludunt; oportet.n. diſcentem credere. Dialecticæ verò, quæ ex probabilibus aptæ ſunt ad concludendam contradictionem. Tentatiuæ D autẽ, quæ ex iis quæ reſpondenti videntur, & quæ neceſſe eſt eum ſcire, qui ſibi ſcientiam arrogat. quo autem modo, definitum eſt in aliis *libris*. Litigioſæ verò, quæ ex iis quæ videntur probabilia, cùm *re vera talia* non ſint, aptæ ſunt ad concludendum, aut videntur aptæ ad conclud ẽdum. 3 Ergo de didaſcalicis & demonſtratiuis, in Analyticis dictum fuit: de dialecticis verò ac tẽtatiuis, in aliis *libris*: de contentioſis autem ac litigioſis nunc dicamus.

DE INVENTIONE,

TRACTATVS III.

De fallaciis in dictione conſiſtentibus. Cap. IV.

1 Reprehenſionum diuiſio, 2 & ſubdiuiſio. 3 De homonymia. 4 De amphibolia. 5 Communia de homonymia & amphibolia. 6 De compoſitione. 7 De diuiſione. 8 De accentu. 9 De figura dictionis.

MOdi autem elenchis redarguēdi duo ſunt: alij nāque ſunt in dictione, alij extra dictionem. 2 Sunt autem, quæ dictionis ratione *elenchū* videri faciunt, numero ſex: hæc verò ſunt, homonymia, amphibolia, compoſitio, diuiſio, accentus, & figura dictionis. Huius *rei* fides *fit* inductione & ſyllogiſmo: cùm *quia* ſi ſumatur alius quiſpiam *modus, ad aliquem ex his referri poterit*; tum etiam quia tot modis poſſumus hiſdē nominibus & orationibus non idem ſignificare. 3 Ex homonymia ſunt eiuſmodi argumentationes: velvti, eos qui ſciunt, μανθάνειν: quoniā ea quæ memoriter recitantur, grāmatici μανθάνουσι. nam *verbum* μανθάνειν eſt homonymū, *quod ſignificat* & intelligere, vtendo ſcientia, & acquirere ſcientiam. Rurſus mala *eſſe* bona, quoniam τὰ δέοντα *ſunt* bona: quæ verò *ſunt* mala, *ſunt* δέοντα, nā duplex eſt τὸ δέον: *nimirum* & quod neceſſarium *eſt*, quod & in malis ſæpe euenit: (eſt.n. malum quidpiam, neceſſarium) & bona quoque δέοντα eſſe dicimus. Præterea, eūdem ſedere ac ſtare, & ægrotare ac valere. nam qui ſurgebat, ſtat: & qui cōualeſcebat, valet: ſurgebat autem ſedēs, & conualeſcebat ægrotans: etenim ægrotantem quodvis facere aut pati, non vnum ſignificat, ſed interdum eum qui nunc ægrotat, vel ſedet: interdum verò *eum* qui ægrotabat priùs, *vel ſedebat*. Verumtamen conualeſcebat & ægrotans & ὁ ægrotans: valet autē, non ægrotās, ſed ὁ ægrotans, non *qui* nūc, ſed *qui* priùs. 4 Ex amphibolia *ducuntur* hę *rationes*, Velle capere me hoſtes. &, Nullum quod quiſpiam cognoſcit, hoc cognoſcit: nam & qui cognoſcit, & quod cognoſcitur, poteſt ceu cognoſcens ſignificari hac oratione. &, Nūquid quod quis videt, hoc videt? videt autem columnam: quare videt columna? &, Num quod tu dicis eſſe, hoc tu dicis eſſe? dicis autem lapidem eſſe: tu igitur dicis lapis eſſe? &, Num licet σιγῶντα dicere? duplex.n. hoc quoque eſt, σιγῶντα dicere, *quia* & eum ſilere *ſignificat*, qui dicit, & ea

A quæ dicuntur. 5 Sunt autem tres modi *argumentationum, quæ* ab homonymia & amphibolia *ſumũtur.* vnus, cùm oratio, vel nomen propriè multa ſignificat, vt aquila, & canis. alter, cùm ſoliti ſumus ita loqui. tertius, quando coniũctum plura ſignificat, ſeparatũ verò ſimpliciter *accipitur: vt ſcire* literas. ponatur.n. vtrũmque vnam rẽ ſignificare, & ſcire, (*inquam*) & literas: tamen ambo *ſimul iuncta* plures res *ſignificant, nempe* aut ipſas literas habere ſcientiam, aut literarum alium. Ergo amphibolia & homonymia his modis continentur. 6 Ad cõpoſitionem autem hæc *referuntur*, velvti, poſſe ſedentem ambulare, & non ſcribẽtem ſcribere. non.n. idem valet, ſi quis ſeparatim dixerit, & coniũctim, poſſe B ſedentem ambulare, & non ſcribentem ſcribere. atque hoc itidem ſi quis coniunxerit, non ſcribentem ſcribere: ſignificat.n. habere poteſtatẽ, vt non ſcribendo ſcribat. ſi verò non coniunxerit, habere poteſtatem quando non ſcribit, vt ſcribat. Ac, diſcit nunc litteras; ſiquidem didicit, quæ ſcit. Præterea, eum, qui vnum tantùm ferre poteſt, multa ferre poſſe. 7 Ad diuiſionem autem *hæc pertinent:* Quinque eſſe duo & tria, atque imparia & paria. & *quod eſt* maius, *eſſe* æquale: tantum enim *eſſe*, & etiamnum amplius. nam eadem oratio diuiſa, & coniuncta, non ſemper idem ſignificare videtur: velvti,

Cap. V.

1 De paralogiſmis extra dictionem. 2 De accidente. 3 De eo quod eſt ſimpliciter, vel κατά τι. 4 De ignorantia elenchi. 5 De petitione quæſiti ab initio propoſiti. 6 De conſequenti. 9 De non cauſa. 11 Si duæ interrogationes pro vna ſumantur.

A PAralogiſmorum autem, qui extra dictionem *conſiſtunt*, ſpecies ſunt ſeptē: vna ex accidente: ſecunda, *quia* ſimpliciter, vel non ſimpliciter, ſed quadamtenus vel alicubi, vel aliquādo, vel ad aliquid dicitur: tertia, ob elēchi ignorātiam: quarta, ex conſequenti: quinta, quia ſumitur, quod initiò *quæſitum fuit*: ſexta, quia nō cauſa vt cauſa ponitur: ſeptima, quia multę interrogationes pro vna accipiuntur. 2 Ex accidente igitur paralogiſmi ſunt, cùm quid in poſtulatū fuerit æquè rei atque accidenti ineſſe. cùm.n. multa eidem accidant, non *eſt* neceſſe & attributis & ſubiecto hæc omnia ineſſe: alioqui omnia erunt eadē, vt ſophiſtæ dicunt. velvti, ſi Coriſcus *eſt* diuerſus ab homine, ipſe à ſe ipſo diuerſus *erit*, quoniam homo eſt. aut ſi à Socrate *eſt* B diuerſus, Socrates autē *eſt* homo, diuerſum *eſſe* ab homine aiunt conceſſiſſe: propterea quòd à quo diuerſum eſſe dixit, ei accidit vt ſit homo. 3 Hi verò *ſunt* ex eo quod ſimpliciter tale dicitur, vel quadamtenus, non propriè; cùm id quod in parte dicitur, vt ſimpliciter dictū ſumitur. Velvti, *ſi quis colligat*, ſi id quod non eſt, opinabile eſt; id quod nō eſt, eſſe. non.n. idem *valent*, eſſe aliquid *tale*, & eſſe ſimpliciter. Aut rurſus, *ſi quis cōcludat*, id quod eſt, non eſſe, ſi non eſt aliquid eorum quæ ſunt: verbi gratiâ ſi non *eſt* homo. non.n. idem *valent*, nō eſſe aliquid *tale*, & ſimpliciter non eſſe. Videtur autem *vtrumque rectè colligi*, propter vicinitatem dictionis, C & exiguitatem diſcriminis, quod eſt inter eſſe aliquid & eſſe, necnon inter non eſſe aliquid & non eſſe. Similiter *paralogiſmi ducuntur* ex eo quod quadamtenus & ſimpliciter *dicitur*. Vtputà, ſi Indus, cū ſit totus niger, albus eſt dētes: albus igitur & non albus eſt. Aut, ſi ambo, quadātenus *inſunt*, cōtraria ſimul ineſſe. Porrò huiuſmodi *paralogiſmū* in nonnullis *orationibus* animaduertere cuivis facile *eſt*: vtputà ſi *quis*, cū ſumpſerit Æthiopem eſſe nigrū, roget, an *ſit* albus dētes: perfecta igitur interrogatione, arbitretur ſyllogiſticè diſputatū, *ac probatum Æthiopem eſſe* nigrum & non nigrum. In quibuſdā autē ſæpe latet: *nēpe* in quibus, cùm quadamtenus D dicitur, cōſequi videtur, *vt* etiā ſimpliciter *dicatur*: & in quibus non facile *eſt* perſpicere, vtrū propriè *ſit* attribuēdum: hoc autem *in iis* euenit, in quibus oppoſita pariter inſunt. nam aut ambo, aut neutrū ineſſe, *ſiue* attribui, dādum videtur. vtputà, ſi *totius cuiuſdam* dimidium *ſit* album, dimidium nigrum, vtrùm *id* album, an nigrū *eſt*? 4 *Hi* verò *paralogiſmi* fiunt, quia non eſt definitum, quid ſit ſyllogiſmus, vel quid elēchus, ſed omiſſa eſt definitio. Elēchus enim eſt cōtradictio vnius & eiuſdē, non nominis, ſed rei: ac nominis, nō ſynonymi, ſed eiuſdē: *quæ* ex conceſſis neceſſariò *colligitur*, non cōnumerato eo quod in principio *quæſitum fuit*: & *ſumitur* ſecundū idem, & ad idem, eodémque modo, & eodem tē- E pore. Eodem autē modo & mentiri de aliquo *contingit*. Nonnulli verò, aliquo horum prætermiſſo, videntur elēcho redarguere. vtputà idem eſſe duplum & nō duplum: quoniā duo vnius dupla *ſunt*, triū verò non dupla. aut ſi idem eſt eiuſdem duplū & non duplum, non tamen ſecūdùm idem, ſed ſecundùm longitudinem duplum, ſecūdùm latitudinem non duplum. aut ſi eiuſdem, & ſecundùm idē, & eodem modo ſed non ſimul. idcirco eſt ſpecie tantùm elēchus. Sed hic *paralogiſmus* & ad eos referri poteſt, qui in dictione *conſiſtunt*. 5 Qui autē ex eo *oriuntur* quòd ſumitur *quæſitū* initiò *propoſitū*, iiſdē & tot modis fiūt, quot modis accidit *id* quod ab initio *quæſitum eſt*, peti. videntur autem redarguere: quia diſcerni non poteſt, quod *eſt* idem, & quod diuerſum.

A 6 Propter conſequens elenchus *videtur*, quia *nonnulli* putant reciprocari conſecutionẽ. quando.n. ſi illud ſit, neceſſariò hoc eſt, etiã putant, ſi hoc ſit, alterũ neceſſariò eſſe. vnde etiam in opinione ex ſenſu deceptiones fiunt. ſępe.n. fel pro melle accipimus, quia melli conſequens eſt flauus color: & quoniam accidit, vt terra cũ pluit, madefiat: etiam pluiſſe exiſtimamus, ſi madida ſit *terra*. ſed hoc nõ *eſt* neceſſarium. 7 Oratoriæ quoq; demonſtrationes, quæ à ſigno *ducuntur*, ex conſequentibus ſunt. nam volentes oſtendere mœchũ eſſe, conſequens ſumũt, *nimirum* accuratiùs eſſe comptũ, aut noctu oberrantem conſpici. multis autem hæc inſunt, B *quibus* attributum non ineſt. 8 Similiter *accidit* in *probationibus* ſyllogiſticis: cuiuſmodi *eſt* illa Meliſſi ratio, *qua probare nititur* vniuerſum eſſe infinitum, ſumptis *his principiis*, Vniuerſitatem eſſe ingenitã: (ex eo namque, quod nõ eſt, fieri nihil poſſe) quod autem genitum *eſt*, ex principio genitũ eſſe. quare ſi vniuerſum nõ eſt genitum, principium non habet: proinde *eſt* infinitũ. Atqui neceſſe non *eſt* hoc euenire. non.n. ſi quicquid genitum eſt, principiũ habet; etiam ſi quid principium habet, genitũ eſt: quemadmodum nec ſi febricitans *eſt* calidus, neceſſe *eſt* etiam calidũ febricitare. 9 Ex eo autem, quòd non cauſa, *accipitur* pro cauſa, *paralogiſmus eſt*, cùm adſumpta fuerit non cauſa, quaſi ob eam fiat C elenchus. Hoc autem accidit in ſyllogiſmis *ducentibus* ad impoſſibile: quoniam in his neceſſe *eſt* refellere aliquid eorum quæ poſita fuerũt. ſi igitur numeratũ ſit in neceſſariis interrogationibus ante concluſionẽ eueniẽs illud impoſſibile, ſæpe videbitur ob id fieri elenchus: verbi gratiâ, non idem eſſe animam & vitam: quia ſi interitui ortus *eſt* cõtrarius, etiam cuidam interitui erit quidam ortus contrarius: atqui mors *eſt* interitus quidam, & vitæ cõtraria: quare vita *eſt* ortus: & viuere *eſt* oriri: ſed hoc *eſt* impoſſibile: non *ſunt* igitur idem anima & vita. *Hoc* verò non eſt concluſum ſyllogiſmo: quoniam euenit impoſſibile, etiam ſi quis non aſſerat vitam *eſſe* idem atque animam: ſed tantùm, morti, D quæ eſt interitus, vitam *eſſe* contrariam; interitui autem ortũ. Ergo huiuſcemodi argumentationes non ſunt ad concludẽdũ ineptæ omnino, ſed propoſitum non concludunt. atque eiuſmodi *vitium* plerũq; nõ minùs ipſos interrogantes latet. 10 Ex conſequẽte igitur, & ex nõ cauſa argumẽtationes eiuſmodi ſunt. 11 Hæ verò ex eo quòd duæ interrogationes pro vna accipiũtur, cũ latet plures eſſe, & quaſi vna ſit *interrogatio*, datur vna reſpõſio. Sanè quaſdã facile *eſt* animaduertere multas *eſſe*, nec dandã eſſe reſponſionẽ *vnam*: veluti, vtrũ terra eſt mare, an cœlũ? in nonnullis autẽ, minùs *perſpicitur*: & quaſi vna ſit *interrogatio*, reſponſionẽ dant: ac re- E darguũtur elencho: aut aſſentiuntur. quia non reſpondent quod rogatum eſt, & redargui videntur. velvti, Num hic & hic eſt homo? quare ſi quis hũc & hunc verberet, hominẽ, non homines, verberabit. Aut rurſum, Quorum alia ſunt bona, alia non bona; hæc omnia *ſuntne* bona, an non bona? vtrũvis enim dixerit, fieri poteſt, vt *aut in* elenchũ *incidere*, aut quod videtur falſum, dicere videatur. nã ſiue dicatur aliquid eorum, quę non *ſunt* bona, eſſe bonum, ſiue *aliquid* eorum, quæ *ſunt* bona, nõ *eſſe* bonum: falſum *dicitur*. Interdum verò aſſumptis quibuſdam etiam verus elenchus fieri poteſt. velvti, ſi quis conceſſerit, æquè vnum ac multa dici alba, & nuda, & cæca. nam ſi cæcum *eſt*, quod non habet

aſpectum, cùm ſit naturâ comparatum vt habeat: etiam cæca erunt, quę non habent, cũ naturâ ſint comparata vt habeant. quãdo igitur aliud habet, aliud non habet: ambo videbunt, aut cæca erunt: quod *eſt* impoſſibile.

A ὄψιν, πεφυκὸς δὲ ἔχειν· καὶ τυφλὰ ἔσται τὰ μὴ ἔχοντα, πεφυκότα δὲ ἔχειν. ὅταν οὖν τὸ μὲν, ἔχῃ, τὸ δὲ, μὴ ἔχῃ· τὰ ἄμφω ἔσται ἢ ὁρῶντα, ἢ τυφλά· ὅπερ ἀδύνατον.

Reductio omnium fallaciarum ad ignorationem elenchi

De fallaciis in dictione conſiſtentibus. 4 De fallacia accidentis. 5 De fallacia ſecundùm quid. 6 De ignoratione elenchi. 7 De petitione quæſiti propoſiti. De non cauſa. 8 De fallacia conſequentis. 9 De pluribus interrogationibus. 10 ¶ Epilogus.

AVt igitur ſic diuidendi ſunt, qui videntur ſyllogiſmi, & elenchi: aut omnes reuocandi ad ignorantiam elenchi, hac pro principio ſumpta. licet.n. omnes dictos modos reſoluere in elẽchi definitionem. 2 Ac primũ, ſi ſint inepti ad concludẽdum. oportet.n. ex iis quæ poſita *ſunt*, effici concluſionem, adeo vt neceſſariò dicatur, non *effici tãtùm* videatur. 3 Deinde & ſecundùm partes definitionis. Nam eorum *paralogiſmorũ*, qui in dictione *cernũtur*, nonnulli ex duplici *ſignificatione* oriuntur: cuiuſmodi eſt homonymia, & *ambigua* oratio, & *dictionis* figura ſimilis. ſolẽt.n. *hæc* omnia, quaſi hoc aliquid ſignificantia *vſurpari*. Compoſitio verò & diuiſio, & accentus *ideò captionẽ efficiunt*, quòd non eadem eſt oratio, vel nomen *eſt* diuerſum: oportebat autem & hoc *idẽ eſſe*, quemadmodũ res eadem *eſt*, ſi futurus eſt elenchus, aut ſyllogiſmus, vtputà ſi tunica *concludi debet*: non *oportet* veſtem concludere, ſed tunicam. quamvis.n. id verum *ſit*, tamen non eſt ſyllogiſmo concluſum: ſed adhuc interrogatione eſt opus, *vt* idem ſignificare *aſſumatur*, erga quærentem quid ita? 4 *Paralogiſmi* autem, qui ex accidente *ſumuntur*, definito ſyllogiſmo fiunt manifeſti. oportet.n. eandem eſſe definitionem elenchi, præterquam quòd adiungitur contradictio: nã elenchus *eſt* ſyllogiſmus contradictionis. quare ſi non eſt ſyllogiſmus accidentis, non fit elenchus. non.n. ſi, cùm ea ſunt, neceſſe *eſt* hoc eſſe, hoc autem eſt album, neceſſe *eſt* album eſſe, propter ſyllogiſmũ. nec ſi triangulum duobus rectis æquales *angulos* habet: ei autem accidit, vt ſit figura, vel primum, vel principium: *conſequens eſt*, vt figura, vel principium, vel primum ſit tale. non.n. *de eo demõſtratio ſit*, quà *eſt* figura, nec quà primum, ſed quà triãgulum *eſt*. Similiter & in aliis *ſe res habet*. Quapropter ſi elenchus *eſt* ſyllogiſmus quidam: qui ex accidente *eſt*, elenchus eſſe nequit. Sed hinc & artifices & omnino docti ab indoctis redarguuntur: quoniã ex accidente ſyllogiſmos faciunt adverſus ſcientes: hi verò, cùm diuidere non valeãt, aut rogati dant, aut non dantes videntur dediſſe. 5 *Ex eo* verò, quod quadamtenus, vel ſimpliciter *dicitur*, *ducti paralogiſmi in eo verſantur*, quòd nõ de eodem *accipitur* affirmatio & negatio. eius.n. quod quadãtenus *eſt* album, id quod quadamtenus non eſt album, negatio *eſt*. ſi igitur, dato eſſe quadamtenus album, *alius* quaſi ſimpliciter dictum accipiat, non efficit elẽchum, ſed *efficere videtur*, quoniam ignoratur quid ſit elenchus. 6 Maximè autem omniũ perſpicui ſunt, qui ſuprà dicti ſunt ex elenchi definitione: ideóque ſunt ita appellati. nam ob definitionis defectionem fit vt elenchus videatur: &, ſi diuidantur *paralogiſmi*, *ſicut nunc diuiſimus*, *hoc* omnibus commune ponendum *eſt*, definitionis (inquam) defectio.

CAP. V.

* γ. εἰ ἀσυμ.

7 Οἵ τε παρὰ τὸ λαμβάνειν τὸ ἐν ἀρχῇ, καὶ τὸ ἀναίτιον ὡς αἴτιον τιθέναι, δῆλοι διὰ τοῦ ὁρισμοῦ. δεῖ γὰρ τὸ συμπέρασμα τῷ ταῦτα εἶναι συμβαίνειν, ὅπερ οὐκ ἦν ἐν τοῖς ἀναιτίοις. καὶ πάλιν μὴ ἀριθμουμένου τοῦ ἐξ ἀρχῆς, ὅπερ οὐκ ἔχουσιν οἱ παρὰ τὴν αἴτησιν τοῦ ἐν ἀρχῇ. 8 Οἱ δὲ παρὰ τὸ ἑπόμενον, μέρος εἰσὶ τοῦ συμβεβηκότος· τὸ γὰρ ἑπόμενον συμβέβηκε· διαφέρει δὲ τοῦ συμβεβηκότος, ὅτι τὸ μὲν συμβεβηκός, ἔστιν ἐφ᾽ ἑνὸς μόνου λαβεῖν οἷον, ταὐτὸν εἶναι τὸ ξανθὸν καὶ τὸ μέλι, καὶ τὸ λευκὸν καὶ κύκνον· τὸ δὲ παρὰ τὸ ἑπόμενον, ἀεὶ ἐν πλείοσι· τὰ γὰρ ἑνὶ καὶ ταὐτῷ ταὐτὰ, καὶ ἀλλήλοις ἀξιοῦμεν εἶναι ταὐτά. διὸ γίνεται ὁ παρὰ τὸ ἑπόμενον ἔλεγχος. ἔστι δ᾽ οὐ πάντως ἀληθές. οἷον, ἂν ἡ λευκὸν κατὰ συμβεβηκός· καὶ γὰρ ἡ χιὼν καὶ ὁ κύκνος τῷ λευκῷ ταὐτόν. ἢ πάλιν, ὡς ἐν τῷ Μελίσσου λόγῳ, τὸ αὐτὸ λαμβάνει εἶναι τὸ γεγενῆσθαι καὶ ἀρχὴν ἔχειν. ἢ τὸ ἴσοις γίνεσθαι καὶ ταὐτὸ μέγεθος λαμβάνειν. ὅτι γὰρ τὸ γεγονὸς ἔχει ἀρχὴν, καὶ τὸ ἔχον ἀρχὴν, γεγενῆσθαι ἀξιοῖ· ὡς ἄμφω ταὐτὰ ὄντα, τῷ ἀρχὴν ἔχειν, τὸ γεγονὸς, καὶ τὸ πεπερασμένον. ὁμοίως δὲ καὶ ἐπὶ τῶν ἴσων γινομένων, εἰ τὰ τὸ αὐτὸ καὶ ἓν μέγεθος λαμβάνοντα, ἴσα γίνεται· καὶ τὰ ἴσα γινόμενα, ἓν μέγεθος λαμβάνει, ὥστε τὸ ἑπόμενον λαμβάνει. ἐπεὶ οὖν ὁ παρὰ τὸ συμβεβηκὸς ἔλεγχος, ἐν τῇ ἀγνοίᾳ τοῦ ἐλέγχου· φανερὸν ὅτι καὶ ὁ παρὰ τὸ ἑπόμενον. ἐπισκεπτέον δὲ τοῦτο καὶ ἄλλως. 9 Οἱ δὲ παρὰ τὸ τὰ πλείω ἐρωτήματα ἓν ποιεῖν, ἐν τῷ μὴ διαρθροῦν ἡμᾶς, ἢ μὴ διαιρεῖν τὸν λόγον τῆς προτάσεως. ἡ γὰρ πρότασίς ἐστιν ἓν καθ᾽ ἑνός. ὁ γὰρ αὐτὸς ὅρος ἑνὸς μόνου, καὶ ἁπλῶς τοῦ πράγματος· οἷον, ἀνθρώπου, καὶ ἑνὸς μόνου ἀνθρώπου. ὁμοίως δὲ καὶ ἐπὶ τῶν ἄλλων. εἰ οὖν μία μόνη πρότασις, ἡ ἓν καθ᾽ ἑνὸς ἀξιοῦσα· καὶ ἁπλῶς ἔσται πρότασις, ἡ τοιαύτη ἐρώτησις. ἐπεὶ δ᾽ ὁ συλλογισμὸς, ἐκ προτάσεων· ὁ δὲ ἔλεγχος, συλλογισμός· καὶ ὁ ἔλεγχος ἔσται ἐκ προτάσεων. εἰ οὖν ἡ πρότασις, ἓν καθ᾽ ἑνός· φανερὸν ὅτι καὶ οὗτος ἐν τῇ τοῦ ἐλέγχου ἀγνοίᾳ· φαίνεται γὰρ εἶναι πρότασις, ἡ οὐκ οὖσα πρότασις. εἰ μὲν οὖν δέδωκεν ἀπόκρισιν, ὡς πρὸς μίαν ἐρώτησιν, ἔσται ἔλεγχος· εἰ δὲ μὴ δέδωκεν, ἀλλὰ φαίνεται, φαινόμενος ἔλεγχος. 10 Ὥστε πάντες οἱ τρόποι πίπτουσιν εἰς τὴν τοῦ ἐλέγχου ἄγνοιαν· οἱ μὲν οὖν παρὰ τὴν λέξιν, ὅτι φαινομένη ἀντίφασις, ὅπερ ἦν ἴδιον τοῦ ἐλέγχου· οἱ δ᾽ ἄλλοι, παρὰ τὸν τοῦ συλλογισμοῦ ὅρον.

A 7 *Sed & hi*, qui ex eo *ducuntur*, quòd ſumitur *quæſitũ* initio *propoſitum*, *& qui ex eo* quòd ponunt non cauſam pro cauſa, per *elenchi* definitionem *ſunt* manifeſti. oportet. n. concluſionẽ euenire, eo quòd illa ſint, *quæ fuerunt poſita*: quod certè non eſt in non cauſis. rurſus non connumerato eo quod ab initio *quæſitum fuit*: quod *requiſitum* non habent, qui propter petitionẽ *quæſiti* initiò *propoſiti* peccat. 8 Qui verò ex conſequente *ducũtur*, accidentis pars ſunt, nã conſequens accidit: ſed *eo* differt ab accidente, quòd licet in vno tãtùm accidens ſumere: vt puta idem eſſe flauum & mel, necnon album & cycnũ: B quod verò ex accidẽte *ducitur*, ſemper in pluribus *cernitur*. nam quæ vni & eidem *ſunt* eadem, etiam inter ſe eadem eſſe poſtulamus: vnde oritur elenchus, qui ex conſequente *appellatur*. *Id* autem non eſt omnino verum: velut ſi album ſit ex accidẽte: etenim nix & cycnus, quod ad alborẽ, idem *ſunt*. aut rurſus vt in Meliſſi ratione: *qui* idẽ eſſe ſumit Factum eſſe, & Principium habere. aut *idem eſſe*, Fieri æqualia, & Eãdem magnitudinem accipere. nam quia quod factum eſt, principium habet: & quod principium habet, factum eſſe poſtulat ſibi concedi: quaſi hæc duo, factum & finitum, eadem ſint, propterea quòd *vtraque* principium habent. C ſimiliter & in iis quæ æqualia fiũt, ſi ea quæ vnam & eãdem magnitudinem accipiunt, æqualia fiũt: *viciſſim* etiam, quæ æqualia fiũt, vnam magnitudinem accipiunt. Itaque conſequens ſumit. Quoniam igitur elenchus ex accidente *ductus*, in ignorantia elẽchi *cernitur*: apparet eodem referri etiam *elenchum* ex conſequente. *Eſt* autem hoc & alio modo conſiderandum. 9 Qui verò *ex eo ducuntur*, quòd ex pluribus interrogationibus vna fit, in eo *conſiſtunt*, quòd non articulatim ſeu non diſtinctè expendimus definitionem propoſitionis. nam propoſitio eſt vnũ de vno. *eſt*. n. eadem definitio vnius D tantùm, & ſimpliciter rei: vt hominis, & vnius tantùm hominis. ſimilitérque in aliis *res habet*. ſi igitur vna tãtùm propoſitio *eſt*, quæ vnum de vno poſtulat: etiam ſimpliciter propoſitio erit interrogatio eiuſmodi. quia verò ſyllogiſmus ex propoſitionibus *conſtat*, elenchus autem *eſt* ſyllogiſmus, etiam elenchus erit ex propoſitionibus. Quocirca ſi propoſitio *eſt* vnum de vno, apparet etiam hunc in elenchi ignorantia *verſari*: videtur. n. eſſe propoſitio, quæ non eſt propoſitio. Itaque ſi reſpõſionem dedit quaſi ad vnã interrogationẽ, erit elenchus. ſi non dedit, ſed videtur *dediſſe*, videbitur elenchus. 10 Quare omnes modi cadunt in elenchi ignorantiam: illi quidem, qui in dictione *conſiſtunt*, quia videtur contradictio, quod erat proprium elenchi: reliqui autem propter ſyllogiſmi definitionem.

Rationes deceptionum. Cap. VII.

1 De homonymia, & amphibolia. 2 De compoſitione, & diuiſione. 3 De non accentu. 4 De figura dictionis. 6 De accidente. 7 De conſequente. 8 De ignorantia elenchi. De eo quod eſt non ſimpliciter. 9 De petitione quæſiti in initio propoſiti. De non cauſa. De pluribus interrogationibus.

CAP. VI.

Ἡ δ᾽ ἀπάτη γίνεται, τῶν μὲν παρὰ τὴν ὁμωνυμίαν, καὶ τὸν λόγον, τῷ μὴ δύνασθαι διαιρεῖν τὸ πολλαχῶς λεγόμενον. ἔνια γὰρ οὐκ εὔπορον διαιρεῖν οἷον τὸ ἓν, καὶ τὸ ὂν, καὶ τὸ ταὐτόν. 2 Τῶν δὲ παρὰ τὴν σύνθεσιν, καὶ διαίρεσιν, τῷ μηδὲν οἴεσθαι διαφέρειν συντιθέμενον, ἢ διαιρούμενον τὸν λόγον, καθάπερ ἐπὶ τῶν πλείστων. 3 Ὁμοίως δὲ καὶ ἐπὶ τῶν παρὰ τὴν προσῳδίαν. οὐ γὰρ ἄλλο δοκεῖ σημαίνειν ἀνιέμενος, καὶ ἐπιτεινόμενος ὁ λόγος, ἐπ᾽ οὐδενός, ἢ οὐκ ἐπὶ πολλῶν.

E Porrò nos fallunt *paralogiſmi*, qui ex homonymia, & *qui* ex *ambigua* oratione *ducuntur*: quia non poſſumus diſtinguere, quod multifariàm dicitur. quorũdam. n. diſtinctio non eſt in promptu: vt Vnius, & Entis, & Eiuſdem. 2 Qui verò ex compoſitione, ac diuiſione: quia nihil putamus intereſſe inter coniunctam & diuiſam orationem, ſicut in plurimis *accidit*. 3 Similis ratio *eſt* eorum qui ex accentu *ducuntur*: aut enim in nulla re, aut *ſaltem* non in multis videtur idem ſignificare contentus & remiſſus ſermo.

4 Qui autem ex figura *dictionis*, propter dictionis A ſimilitudinem. nã difficile *eſt* diſcernere, quæ eodem, & quæ diuerſo modo dicuntur: (ferè.n.qui poteſt hoc facere, prope eſt vt verum perſpiciat, maximè autem ſcit annuere) quicquid.n.alicui attribuitur, exiſtimamus *eſſe* hoc aliquid, & quaſi vnum accipimus. nam vni & ſubſtantiæ maximè videtur conſequẽs eſſe hoc aliquid, & ens. 5 Quocirca inter eos *paralogiſmos*, qui in dictione *conſiſtunt*, hic *fallendi* modus *eſt* ponendus. primũ quia magis decipimur conſiderantes cum aliis, quàm apud noſmet ipſos: nam cõſideratio cum aliis per ſermonem *inſtituitur*: apud noſmet ipſos autem nõ B minùs *fit* per rẽ ipſam. Deinde & per noſmetipſos vt fallamur accidit, cùm in *rebus* conſiderãdis ſermo adhibetur. Præterea deceptio *eſt* ex ſimilitudine: ſimilitudo autem ex dictione. 6 *Paralogiſmi* verò ex accidente *fallunt*: quia non poſſumus diiudicare, quod *eſt* idẽ vel diuerſum, & quod eſt vnũ vel multa: nec quibus attributis omnia eadem ac rei accidant. 7 Similis ratio eſt eorum, qui ex conſequenti ducuntur. nam conſequens *eſt* pars quædam accidentis. Præterea & in multis videtur, & poſtulatur ita, ſi illud ab hoc non ſeparatur, neque hoc ab illo ſeparari. 8 Qui verò ex defectione de- C finitionis *ſumuntur*, & qui ex eo quod quodãmodo vel ſimpliciter dicitur, propter *diſcriminis* exiguitatem fallunt. vniuerſaliter.n.concedimus, quaſi hæc nihil adſignificent, aliquod; quadamtenus, ſimpliciter, quodammodo, nũc. 9 Similis eſt ratio eorum, qui ſumunt *quæſitum* initiò *propoſitum*, & nõ cauſarum, & eorum, qui multas interrogationes faciunt quaſi vnam. in omnibus.n.propter exiguitatem captio *eſt*: quia *ſcilicet* non expendimus accuratè definitionem propoſitionis, & ſyllogiſmi, ob antè dictam cauſam.

A (ſi quidem adiungere contradictionem oportet) quandoque in vtriſque, ſi ſit fucatus elenchus. Eſt autẽ *cauſa* huius *captionis*, σιγῶντα λέγειν, in cõtradictione, non in ſyllogiſmo. huius autem, Quę quis non habet, dare põteſt, in vtriſque. huius autẽ, Homeri poëſim eſſe figurã, quia *ſit* circulus, in ſyllogiſmo. qui verò in neutro *peccat*, verus *eſt* ſyllogiſmus. 7 Sed, *vt eò reuertamur*, vnde oratio profecta eſt, argumẽtationes mathematicæ ad ſententiamne pertinent, an non? Ac ſi cui triangulũ multa videatur ſignificare, ac *de eo* cõceſſerit, non quatenus eſt figura, de qua concluditur, quòd *eius anguli ſint* duo recti, éſtne ad illius ſententiam hæc diſputatio, an non? 8 Præterea, ſi nomẽ multa ſignificat, hic verò B nec intelligit, nec putat *multiplicẽ eſſe ſignificationẽ*: quomodo hæc diſputatio non ſpectat ad ſententiam? Aut quo *tandem* modo interrogare oportet, niſi *vt* eum qui diuiſionẽ conceſſit, poſtea interroget aliquis, *verúmne* ſit σιγῶντα λέγειν, necne, an partim non *ſit*, partim ſit? Si quis igitur conceſſerit nullo modo, *contrà* autem alius diſputauerit: nónne erit adverſus ſententiam diſputatũ? Atqui hæc diſputatio videtur ad eas referẽda, quæ ex nomine *oriũtur*. Non eſt igitur *proprium* quoddam genus argumentationum, quod ad ſentẽtiam pertinet. 9 Sed quædam ad nomen ſpectãt: nec tales ſunt omnes non *dico*, qui *ſunt* veri elenchi, ſed ne quidem qui C videntur elenchi: ſunt. n. & qui extra dictionem elenchi videntur: vt qui *ducitur* ex accidẽte, & alij *nonnulli*. 10 Quòd ſi quis putet diſtingui *hoc modo oportere*, alio σιγῶντα λέγειν, partim hoc, partim illo modo: primùm quidem abſurda eſt hæc opinio: quia quod interrogatur, interdum non videtur multis modis accipi: nõ poteſt autem *quis* diuidere, quod non putat *eſſe multiplex*. Deinde docere quid aliud erit? nam declarabit, quomodo *res* habeat, ei qui neque cõſiderabat, neque ſciebat, neque ſuſpicabatur aliter accipi. Nam & in his quæ nõ ſunt duplicia, quid vetat hoc facere? *velut*, Súntne æquales vnitates binariis in quaternario? binarij verò partim hoc, partim illo modo inſunt. &, Contrariorum *éſtne* vna ſcientia, an non? contrariorum autem alia ſunt cognita, alia ignota. CAP. XI.

ἜΤι, τὸ φάναι ἢ ἀποφάναι ἀξιοῦν, οὐ δεικνύντος ἐστὶν, ἀλλὰ πεῖραν λαμβάνοντος. ἡ γὰρ πειραστικὴ, ἐστὶ διαλεκτική τις· διὸ καὶ περὶ πάντων ἐπισκοπεῖ καὶ θεωρεῖ, οὐ τὸν εἰδότα, ἀλλὰ τὸν ἀγνοοῦντα, καὶ προσποιούμενον. 2 Ὁ μὲν οὖν κατὰ τὸ πρᾶγμα θεωρῶν τὰ κοινὰ, διαλεκτικός ἐστιν. ὁ δὲ τοῦτο φαινομένως ποιῶν, σοφιστικός. 3 Καὶ συλλογισμὸς ἐριστικὸς καὶ σοφιστικός ἐστιν, εἷς μὲν, ὁ φαινόμενος συλλογισμὸς, περὶ ὧν ἡ διαλεκτικὴ πειραστική ἐστι, κἂν ἀληθὲς ᾖ τὸ συμπέρασμα· τοῦ γὰρ διά τι ἀπατητικός ἐστι· καὶ ὅσοι μὴ ὄντες κατὰ τὴν ἑκάστου μέθοδον παραλογισμοί, δοκοῦσιν εἶναι κατὰ τὴν τέχνην.

D AD hæc, poſtulare vt affirmetur vel negetur, non eſt demõſtrantis, ſed periculum facientis. nã piraſtice eſt dialecticæ pars: ideóq; de omnibus diſpicit, atque examinat, non cum qui ſcit, ſed eũ qui ignorat, & *ſcire ſe* fingit. 2 Qui igitur reuera conſiderat cõmunia, dialecticus eſt. qui verò hoc facere videtur, ſophiſta. 3 Porrò ſyllogiſmus litigioſus & ſophiſticus eſt *in duplici differẽtia*. Vnus *autem eſt*, qui videtur ſyllogiſmus, de *iis*, *in* quibus dialectica piraſtice verſatur, etiamſi vera ſit concluſio: quia in cauſa tradẽda fallit. *In altero genere ſunt* paralogiſmi, qui, cùm non ſint ſecundùm cuiuſq; methodum, *tamen* videntur ſecundùm artem eſſe.

Nam falſæ deſcriptiones non ſunt litigioſæ: (quia ſunt paralogiſmi ſecundùm ea quæ arti ſubiiciuntur) ne quidē ſi quæ ſit falſa deſcriptio *pertinens* ad veram *cōcluſionem*: vt *falſa deſcriptio* Hippocratis, & tetragoniſmus, qui per lunulas *fit*. ſed vt Bryſo quadrauit circulum, etiamſi circulus quadretur, quia tamen non *eſt* ſecundū rem, ideo *eſt* ſophiſticus. Quare & qui de his videtur ſyllogiſmus *eſt* argumentatio litigioſa: & qui videtur ſecundùm rē ſyllogiſmus, quamvis ſit ſyllogiſmus, *eſt* litigioſa argumentatio: quia videtur ſecundùm rem eſſe: proinde *eſt* fallax & iniuſtus. vt. n. iniuſtitia, quæ in certamine *cōmittitur*, ſpeciem quandam *æquitatis* habet, & eſt iniuſta quędā pugna: ſic ſtudioſa contradictio *eſt* iniuſta pugna litigioſa. nā & illic, qui omnino vincere præeligunt, omnia tentāt: & hîc, qui *ſunt* contentioſi. 4 Et *ij* quidē, qui ipſius victoriæ gratiâ tales *ſunt*, litigioſi homines & litiū amatores eſſe videntur: qui vero gloriæ causâ ad lucrū *conducentis*, ſophiſtæ. eſt. n. ſophiſtice, vt *ſuprà* diximus, facultas quædam lucrum captans ex ea quæ videtur ſapientia. Idcirco fucatam demonſtrationem expetunt: & iiſdem argumētationibus vtuntur litigioſi & ſophiſtæ, non tamen eorumdem finium gratiâ. eadēque argumentatio erit & ſophiſtica & litigioſa, ſed non eâdem ratione: verū quâ victoriæ fucatæ *cauſa adhibetur*, litigioſa *eſt*: quâ verò *vt* ſapientiæ *opinio comparetur*, ſophiſtica. etenim ſophiſtice eſt ſapiētia quædam, quæ videtur, cùm non ſit. 5 Litigioſus autem eſt quodāmodo ſic affectus ad dialecticū, vt pſeudographus ad geometricum. nā *litigioſus* ex iis vitioſe concludit, in quibus verſatur dialectica: quomodo & pſeudographus *affectus eſt* ad geometram. ſed hic quidem nō *eſt* litigioſus, quia ex principiis & concluſionibus arti ſubiectis falsò deſcribit: cū verò qui dialecticę ſubiicitur, quod ad alia litigioſum eſſe conſtat. Exēpli causâ, quadratio *circuli*, quæ per lunulas *fit*, nō *eſt* litigioſa: Bryſonis autē *quadratio eſt* litigioſa. & illam quidem referre non licet, niſi ad geometriam tantùm, quoniam eſt ex principiis propriis *geometriæ*: hanc verò adverſus multos *trāsferre licet*, qui *ſcilicet* non norūt, quid in quaque *re* fieri poſſit, & quid fieri non poſſit: quia congruet. Vel vt Antipho quadrauit. vel ſi quis neget melius eſſe poſt cœnam deambulare, propter Zenonis rationem: non *eſt ratio* geometrica, quia *eſt* cōmunis. Si igitur eodem planè modo affectus eſt litigioſus ad dialecticum, quo pſeudographus ad geometram, non erit in illis litigioſus. 6 Iam verò non verſatur dialecticus in genere aliquo definito: nec *eſt* cōparatus ad quidpiam demōſtrandum: nec *eſt* talis, qualis vniuerſalis *philoſophus*: quia nec ſunt omnia in vno aliquo genere: nec, ſi eſſent, fieri poſſet vt res omnes ſub iiſdē principiis continerentur. 7 Quocirca nulla earum artium, quæ naturam aliquam demōſtrant, percontatrix *eſt*, quia non poteſt vtravis pars *contradictionis* concedi: ſyllogiſmus. n. ex vtriſque non fit. Dialectica verò eſt percontatrix. *quæ* ſi demonſtraret, etſi non omnia, at certè prima *pronunciata*, & propria principia non rogaret. nam *adverſario* non concedente, non haberet ampliùs ex quibus adverſus obiectionem diſſereret. 8 Sed eadem *eſt* etiam piraſtica. nam piraſtice talis non eſt, qualis geometria, ſed quam habere etiam indoctus aliquis poſſit: fieri enim poteſt, vt periculum faciat, qui rem non nouit, de eo qui *eſt æquè* imperitus: ſiquidem concedit, non ex quibus nouit, nec ex propriis, ſed ex conſequentibus: quæ talia ſunt, vt qui ea norit, eum artem neſcire nihil vetet: qui verò non norit, *eum* neceſſe *ſit artem* ignorare.

CAP. XII.

C ΠΕρὶ δὲ τοῦ ψευδόμενόν τι δεῖξαι, καὶ τὸν λόγον εἰς ἄδοξον ἀγαγεῖν, (τοῦτο γὰρ ἦν δεύτερον τῆς σοφιστικῆς προαιρέσεως) πρῶτον μὲν ἐκ τοῦ πυνθάνεσθαί πως, καὶ διὰ τῆς ἐρωτήσεως συμβαίνει μάλιστα. τὸ γὰρ πρὸς μηδὲν ὡρισμένον κειμένον ἐρωτᾶν, θηρευτικόν ἐστι τούτων· εἰκῇ γὰρ λέγοντες, ἁμαρτάνουσι μᾶλλον· εἰκῇ δὲ λέγουσιν, ὅταν* μηδὲν ἔχωσι προκείμενον. 2 Τό, τε ἐρωτᾶν πολλά, κἂν ὡρισμένον ᾖ πρὸς ὃ διαλέγεται, καὶ τὸ τὰ δοκοῦντα λέγειν ἀξιοῦν, ποιεῖ τινα εὐπορίαν τοῦ εἰς ἄδοξον ἀγαγεῖν, ἢ ψεῦδος· ἐάν τε ἐρωτώμενος φῇ ἢ ἀποφῇ τούτων τι, ἄγειν πρὸς ἃ ἐπιχειρήματος εὐπορεῖ. δύναται δὲ νῦν ἧττον κακουργεῖν διὰ τούτων, D ἢ πρότερον· ἀπαιτοῦνται γὰρ τί τοῦτο πρὸς τὸ ἐν ἀρχῇ. 3 Στοιχεῖον δὲ τοῦ τυχεῖν ἢ ψεύδους τινός, ἢ ἀδόξου, τὸ πρὸς μηδεμίαν εὐθὺς ἐρωτᾶν θέσιν, ἀλλὰ φάσκειν ἐρωτᾶν* μαθεῖν βουλόμενον· χώραν γὰρ ἐπιχειρήματος ἡ σκέψις ποιεῖ. 4 Πρὸς δὲ τὸ ψευδόμενον δεῖξαι, ἴδιος τόπος ὁ σοφιστικός, τὸ ἄγειν πρὸς τοιαῦτα, πρὸς ἃ εὐπορεῖ λόγων. ἔσται δὲ καὶ καλῶς καὶ μὴ καλῶς τοῦτο ποιεῖν, καθάπερ ἐλέχθη πρότερον. 5 Πάλιν, πρὸς τὸ παράδοξα λέγειν, σκοπεῖν ἐκ τίνος γένους ὁ διαλεγόμενος· εἶτα ἐπερωτᾶν, ὃ τοῖς πολλοῖς οὗτοι λέγουσι παράδοξον· ἔστι γὰρ ἑκάστοις τι τοιοῦτον. στοιχεῖον δὲ τούτων, τὸ τὰς ἑκάστων εἰληφέναι θέσεις ἐν ταῖς προτάσεσι.

QVod verò ad id vt *aliquis* falſum quidpiā dicere oſtēdatur, ac diſputatio ad inopinabile ducatur: (hoc. n. erat, quod ſophiſtæ ſecundo loco præeligebant) primū ex certo percontandi modo, & per interrogationem *id* maximè accidit. ad nullam. n. rem propoſitam accōmodata interrogatio, ad hæc inueſtiganda valet: nam temere dicentes magis peccant: temere autem dicunt, cùm nihil propoſitum habent. 2 Item multa interrogare, etiam cùm definitum eſt id cōtra quod diſſeritur, ac poſtulare vt dicat *reſpōdens*, quid ſibi in ſingulis videatur, copiam quandam *argumentorū* præbet *ac facultatem* ducendi ad inopinabile, aut falſum; & ſiue interrogatus aliquid ex his affirmet, ſiue neget, ducendi *ad ea* adverſus quæ argumentorum copia ſuppetat. Sed nūc minùs licet per hæc cauillari, quā olim: quia *nunc reſpondentes* quærunt, quid hoc ad *quæſitum* initiò *propoſitum pertineat*. 3 Eſt autem elemētum perueniendi ad falſum quidem, vel inopinabile, ſi quis non interroget confeſtim adverſus vllam theſim, ſed dicat *ſe* diſcendi ſtudio interrogare: locum. n. argumēto hæc conſideratio facit. 4 Ad hoc autē vt quis mendacij coarguatur, proprius eſt hic ſophiſticus locus, ad ea *ſcilicet adverſarium* ducere, adverſus quæ argumētorum copia ſuppetat. Licebit autem & rectè & vitiosè hoc facere, vt ſuprà dictū fuit. 5 Rurſus, ad hoc vt paradoxa dicantur, videre *oportet*, ex quo *philoſophorum* genere ſit qui diſputat: deinde interrogare, quod hi *qui in eo genere philoſophantur*, præter multorum opinionem dicunt. nam ſingulis quibuſque eſt aliquid tale. Horum elemētum eſt, ſumere ſingulorū theſes in propoſitionibus.

6 Sed horũ ſolutio conueniẽs affertur, vt pateſiat A non ex argumẽtatione euenire quod *eſt* inopinabile: ſemper autem hoc vult, qui contẽdit. 7 Præterea *arguendum eſt* ex voluntatibus, & ex apparentibus opinionibus: quia non eadẽ volunt, ac dicũt: ſed ſermonibus honeſtiſſimis vtuntur: ea verò volũt, quæ videntur prodeſſe. velvti mori honeſtè potiùs quã iucunde viuere, aiunt oportere: & in paupertate iuſtè viuere potiùs, quã ditari turpiter: ſed contraria volunt. Qui igitur volũtatibus conſentanea dicit, ad apparentes opiniones ducẽdus *eſt*: qui verò his *cõſentanea*, ad *voluntates* occultas: vtroque.n. modo neceſſe *eſt* paradoxa dicere: quia vel apparentibus, vel occultis opinionibus contraria B dicent. 8 Latiſſimè autem patet locus ad efficiendum vt paradoxa dicãtur, (ſicut Callicles in Gorgia dicẽs inducitur, & veteres omnes euenire putabant) ex natura, & lege. contraria nãque eſſe naturam & legem inquiunt: ac iuſtitiam ſecundùm legem quidem eſſe rem honeſtã, ſecundùm naturam verò non *eſſe* rem honeſtam. oportet igitur ei qui ſecundùm naturã loquitur, ſecundùm legem occurrere: cum verò qui legi conſentanea *dicit*, ad naturam ducere. vtrouis.n. modo eſſe dicãtur, inopinabile *eſt*. vocabãt autem illi ſecundùm naturam, quod verum *eſt*: ſecundùm legem autẽ, quod multitudini videtur. Quare patet eos quoque, vt qui nunc *diſputant*, conatos fuiſſe aut elencho re- C darguere, aut ad paradoxa dicẽda cogere reſpondẽtem. 9 Quædam autem interrogationes vtrimque reſponſionem opinionibus non cõgruentem habent: velvti, vtrùm ſapientibus, an patri parẽre oportet? &, *Suntne* facienda quæ proſunt, an quæ *ſunt* iuſta? & Pati*ne* iniuriam, *eſt* optabilius, an facere? 10 Oportet autem ducere ad ea quæ multitudini & *ad ea quæ* ſapientibus *ſunt* contraria: nẽpe ſi quis *ita* dicat vt ij qui in diſputationibus *verſantur*, ad multitudini *contraria duci debet*: ſin autem vt multitudo, ad iis *contraria*, qui in diſputationibus *verſantur*. hi namque aiũt eum qui beatus *eſt*, iuſtũ eſſe: multitudini autẽ inopinabile videtur, regem non eſſe beatum. 11 Hoc autẽ modo inopinabilia colligere, idem eſt, quod ad naturæ & legis repugnãtiam ducere. lex enim *eſt* multitudinis opinio: ſapientes verò ſecundùm naturam & ſecundùm veritatem loquuntur. 12 Ac paradoxa quidem ex his locis quærere oportet.

A 6 Λύσις δὲ τούτων ἡ προσήκουσα φέρεται, τὸ ἐμφανίζειν, ὅτι οὐ διὰ τὸν λόγον συμβαίνει τὸ ἄδοξον· ἀεὶ δὲ τοῦτο βούλεται ὁ ἀγωνιζόμενος. 7 Ἔτι δὲ καὶ ἐκ τῶν βουλήσεων, καὶ ἐκ τῶν φανερῶν δοξῶν. οὐ γὰρ ταὐτὰ βούλονταί τε, καὶ φασίν· ἀλλὰ λέγουσι μὲν τοὺς εὐσχημονεστάτους τῶν λόγων, βούλονται δὲ τὰ φαινόμενα λυσιτελεῖν. οἷον, τεθνάναι καλῶς μᾶλλον, ἢ ζῆν ἡδέως φασὶ δεῖν· καὶ πένεσθαι δικαίως μᾶλλον, ἢ πλουτεῖν αἰσχρῶς· βούλονται δὲ τἀναντία. τὸν μὲν οὖν λέγοντα κατὰ τὰς βουλήσεις, εἰς τὰς * φανερὰς δόξας ἀκτέον· τὸν δὲ κατὰ ταύτας, εἰς τὰς ἀποκεκρυμμένας· ἀμφοτέρως γὰρ ἀναγκαῖον παράδοξα λέγειν· ἢ γὰρ πρὸς τὰς φανερὰς, ἢ πρὸς τὰς ἀφα- B νεῖς δόξας, ἐροῦσιν ἐναντία. 8 Πλεῖστος δὲ τόπος ἐστὶ τοῦ ποιεῖν παράδοξα λέγειν, (ὥσπερ καὶ ὁ Καλλικλῆς ἐν τῷ Γοργίᾳ γέγραπται λέγων, καὶ οἱ ἀρχαῖοι δὲ πάντες ᾤοντο συμβαίνειν) παρὰ τὸ κατὰ φύσιν, καὶ κατὰ τὸν νόμον. ἐναντία γὰρ εἶναι φύσιν καὶ νόμον φασί· καὶ τὴν δικαιοσύνην, κατὰ τὸν νόμον μὲν, εἶναι καλὸν· κατὰ φύσιν δὲ, οὐ καλὸν. δεῖ οὖν, πρὸς μὲν τὸν εἰποντα κατὰ φύσιν, κατὰ νόμον ἀπαντᾶν· πρὸς δὲ τὸν κατὰ νόμον, ἐπὶ τὴν φύσιν ἄγειν. ἀμφοτέρως γὰρ εἶναι λέγειν, παράδοξον. ἦν δὲ, τὸ μὲν κατὰ φύσιν, αὐτοῖς, τὸ ἀληθές· τὸ δὲ κατὰ νόμον, τὸ τοῖς πολλοῖς δοκοῦν. ὥστε δῆλον, ὅτι κἀκεῖνοι, καθάπερ καὶ οἱ νῦν, ἢ ἐλέγξαι, ἢ παράδοξα λέγειν τὸν ἀποκρινόμενον ἐπε- C χείρουν ποιεῖν. 9 Ἔνια δὲ τῶν ἐρωτημάτων ἔχει ὃ ἀμφοτέρως ἄδοξον εἶναι τὴν ἀπόκρισιν. οἷον, πότερον τοῖς σοφοῖς ἢ τῷ πατρὶ δεῖ πείθεσθαι, καὶ, τὰ συμφέροντα πράττειν, ἢ τὰ δίκαια, καὶ, ἀδικεῖσθαι αἱρετώτερον, ἢ ἀδικεῖν; 10 Δεῖ δὲ ἄγειν εἰς τὰ τοῖς πολλοῖς καὶ σοφοῖς ἐναντία· ἐὰν μὲν λέγῃ τις ὡς οἱ περὶ τοὺς λόγους, εἰς τὰ τοῖς πολλοῖς· ἐὰν δὲ, ὡς οἱ πολλοὶ, ἐπὶ τὰ τοῖς ἐν λόγοις. φασὶ γὰρ οἱ μὲν, ἐξ ἀνάγκης τὸν εὐδαίμονα, δίκαιον εἶναι· τοῖς δὲ πολλοῖς ἄδοξον τὸ, βασιλέα μὴ εὐδαιμονεῖν. 11 Ἔστι δὲ τὸ οὕτως ἄδοξα συνάγειν, τὸ αὐτὸ τῷ εἰς τὴν κατὰ φύσιν καὶ κατὰ τὸν νόμον ὑπεναντίωσιν ἄγειν· ὁ μὲν γὰρ νόμος, δόξα τῶν πολλῶν· οἱ δὲ σοφοὶ, κατὰ φύσιν καὶ κατ' ἀλήθειαν λέγουσιν. 12 Καὶ τὰ μὲν παράδοξα, ἐκ τούτων δεῖ ζητεῖν τῶν τόπων.

Σολοικισμὸς δὲ, οἷον μέν ἐστιν, εἴρηται πρότερον. 2 Ἔστι B δὲ τοῦτο, καὶ ποιεῖν, καὶ μὴ ποιοῦντα, φαίνεσθαι· καὶ ποιοῦντα, μὴ δοκεῖν· καθάπερ Πρωταγόρας ἔλεγεν, εἰ ὁ μῆνις, καὶ ὁ πήληξ ἄρρεν ἐστίν. ὁ μὲν γὰρ λέγων οὐλομένην, σολοικίζει μὲν κατ᾽ ἐκεῖνον, οὐ φαίνεται δὲ τοῖς ἄλλοις. ὁ δὲ οὐλόμενον, φαίνεται μὲν, ἀλλ᾽ οὐ σολοικίζει. 3 Δῆλον οὖν ὅτι καὶ* τέχνη τις δύναται τοῦτο ποιεῖν. διὸ πολλοὶ τῶν λόγων οὐ συλλογιζόμενοι σολοικισμὸν, φαίνονται συλλογίζεσθαι, καθάπερ ἐν τοῖς ἐλέγχοις. 4 Εἰσὶ δὲ σχεδὸν πάντες οἱ φαινόμενοι σολοικισμοὶ, παρὰ τὸ τόδε· καὶ ὅταν ἡ πτῶσις, μήτε C ἄρρεν, μήτε θῆλυ δηλοῖ, ἀλλὰ τὸ μεταξύ. τὸ μὲν γὰρ οὗτος, ἄρρεν σημαίνει· τὸ δὲ αὕτη, θῆλυ· τὸ δὲ τοῦτο, θέλει μὲν τὸ μεταξὺ σημαίνειν, πολλάκις δὲ σημαίνει κἀκείνων ἑκάτερον. οἷον, τί τοῦτο; Καλλιόπη, ξύλον, Κορίσκος. τοῦ μὲν οὖν ἄρρενος καὶ τοῦ θήλεος διαφέρουσιν αἱ πτώσεις ἅπασαι· τοῦ δὲ μεταξὺ, αἱ μὲν, αἱ δὲ, οὔ. δοθέντος δὴ πολλάκις τούτου, συλλογίζονται ὡς εἰρημένου, τοῦτον. ὁμοίως δὲ καὶ ἄλλην πτῶσιν ἀντ᾽ ἄλλης. ὁ δὲ παραλογισμὸς γίνεται διὰ τὸ κοινὸν εἶναι τὸ τοῦτο, πλειόνων πτώσεων. τὸ γὰρ τοῦτο, σημαίνει, ὁτὲ μὲν οὗτος, ὁτὲ δὲ τοῦτον. δεῖ δὲ ἐναλλὰξ σημαίνειν, μετὰ μὲν τοῦ ἐστὶ, τὸ οὗτος· μετὰ δὲ τοῦ εἶναι, τὸ τοῦτον· οἷον, *ἔστι Κορίσκος, εἶναι Κορίσκον. καὶ ἐπὶ τῶν D θηλέων ὀνομάτων ὡσαύτως· καὶ ἐπὶ τῶν λεγομένων μὲν σκευῶν, ἐχόντων δὲ θηλείας ἢ ἄρρενος κλῆσιν. ὅσα γὰρ εἰς τὸ ο καὶ τὸ ν τελευτᾷ, ταῦτα μόνα σκεύους ἔχει κλῆσιν· οἷον, ξύλον, σχοινίον. τὰ δὲ μὴ οὕτως ἄρρενος, ἢ θήλεος· ὧν ἔνια φέρομεν ἐπὶ τὰ σκεύη· οἷον, ἀσκὸς μὲν, ἄρρεν τοὔνομα· κλίνη δὲ, θῆλυ. διόπερ καὶ ἐπὶ τῶν τοιούτων ὡσαύτως καὶ τὸ ἐστὶ, καὶ τὸ εἶναι, διοίσει. 5 Καὶ τρόπον τινὰ ὅμοιός ἐστιν ὁ σολοικισμὸς τοῖς παρὰ τὸ τὰ μὴ ὅμοια, ὁμοίως λεγομένοις ἐλέγχοις. ὥσπερ γὰρ ἐν ἐκείνοις ἐπὶ τῶν πραγμάτων συμβαίνει ἐλέγχειν, οὕτως ἐν τούτοις ἐπὶ τῶν ὀνομάτων συμπίπτει σολοικίζειν. ἄνθρωπος γὰρ καὶ λευκὸν, καὶ πρᾶγμα, καὶ ὄνομά ἐστι. 6 Φανερὸν E οὖν ὅτι τὸν σολοικισμὸν πειρατέον ἐκ τῶν εἰρημένων πτώσεων συλλογίζεσθαι. 7 Εἴδη μὲν οὖν ταῦτα τῶν ἀγωνιστικῶν λόγων, καὶ μέρη τῶν εἰδῶν, καὶ τρόποι οἱ εἰρημένοι.

B Solœciſmus autē cuiuſmodi ſit, dictū eſt antea. 2 Sanè vſu venire poteſt, vt *quis ſolœciſmū* faciat: & vt non faciens, videatur facere: & vt faciens, nō videatur facere, quemadmodū Protagoras dicebat, ſi μῆνις & πήληξ maſculū eſt. nam qui dicit οὐλομένην, ſecundū eum committit ſolœciſmum, aliis autem *committere* nō videtur: qui verò *dicit* οὐλόμενον, videtur quidem *cōmittere*, non tamē committit ſolœciſmū. 3 Patet igitur, etiam artē quandā poſſe hoc facere. Ideo multæ argumentationes non concludentes ſolœciſmū, videntur *eum* concludere, ſicut in elēchis *contingebat*. 4 Sunt autem ferè omnes, qui ſo- C lœciſmi videntur, ex *articulo* Hoc: & quando caſus nec maſculum, nec feminā ſignificat, ſed interiectūm *medium*. nā Hic, maſculum ſignificat: Hæc, feminam: ſed Hoc, debet quidē *medium iis* interiectum ſignificare, verumtamen ſæpe alterutrum eorum ſignificat: velvti, Quid *eſt* hoc? Calliope, lignū, Coriſcus. Maſculini igitur & feminini *generis* caſus omnes differunt: eius verò quod *eſt* interiectum, alij *differunt*, alij non. Itaque ſæpe, cū datum ſit Hoc, *perinde* concludunt ac ſi dictum fuiſſet, Hunc. Similiter & alium caſum pro alio *accipiunt*. Paralogiſmus autem propterea fit, quòd *articulus* Hoc, multis caſibus eſt cōmunis. nam Hoc, modò D ſignificat hic, modò hunc. opus autē eſt, vt mutatis vicibus ſignificet, cum *verbo* Eſt, hic; cum *verbo* Eſſe, hūc: vt, Eſt Coriſcus, Eſſe Coriſcum. Eadem *eſt* ratio fœmininorū nominum: & eorum, quæ cū appellētur σκεύη, *id eſt vaſa*, fœmineam aut maſculā habent inflexionem. nam quæ in ο, & ν terminātur, hæc ſola vaſis inflexionē habent: vt ξύλον, σχοινίον. quæ verò non ita *terminātur*, maris aut feminæ *inflexionem habent*: quorum nōnulla referimus inter σκεύη vt ἀσκὸς, *eſt* nomen maſculinū. κλίνη verò, femininū. Idcirco etiam in his *verbum* Eſt, & *verbum* Eſſe, eodem modo differentiam conſtituent. 5 Ac ſimilis quodammodo eſt ſolœciſmus elenchis, qui ex eo E appellantur, quòd non ſimilia ſimiliter *accipiuntur*. vt.n. illic in rebus fit elenchus: ita hic in vocabulis committitur ſolœciſmus. homo.n. & album, tam res quàm vocabulum eſt. 6 Apparet ergo, nitendum eſſe, vt ſolœciſmus ex dictis caſibus concludatur. 7 Sunt igitur hæ ſpecies contentioſarum argumentationum, & partes ſpecierum, & modi, qui commemorati ſunt.

DE DISPOSITIONE, ET INTERROGANDI RATIONE,

TRACTATVS IV.

Cap. XV.

1 Protheſis. 2 De longitudine orationis. 3 De celeritate interrogationis. 4 De ira & altercatione. 5 De ordine interrogationum turbato. 6 De locis occultationis. 7 De interrogatione ex contrario, vel ex æquali. 8 Ne interrogetur vniuerſale conceſsis particularibus. 9 De interrogatione ſimilitudinis, cùm non eſt aliquod nomen commune. 10 De interrogatione contrariorum. 11 Si extremum proponatur quaſi rectè probatum & concluſum. 12 Si propoſito paradoxo petatur reſponſio. 13 Si quis dicat contraria iis quæ probat, aut probare debet. 14 A diſtinctione. 15 Si argumentum imperfectum deſeratur, & ad alia traducatur diſputatio. 16 Vt argumenta ad aliud dirigantur. 17 De probatione propoſitionis acceptæ. 18 An concluſio ſit interroganda, & quomodo. 19 Epilogus.

AD celãdum autem non parum refert, ſi quẽdam in modum diſponatur, quæ ad interrogationem pertinent, quemadmodũ & in dialecticis: quare deinceps poſt ea quæ cõmemorata fuerunt, hæc primùm dicẽda ſunt. 2 Valet autem ad elencho redarguendũ prolixitas *orationis*. quia difficile *eſt* multa ſimul conſpicere. Ad prolixitatem autem elementis antea cõmemoratis vtendũ *eſt*. 3 Item celeritas, quia tardiores minùs proſpiciunt. 4 Prçterea ira & altercatio. nam perturbati minùs poſſunt omnia obſeruare. Elementa verò ad iram *excitandam ſunt*, ſi quis volũtatem iniuſtè & omnino impudenter agendi præ ſe ferat. 5 Præterea interrogationum permutato ordine poſitio: ſiue ad idem *probandum* habeat quis multas argumẽtationes, ſiue *ad oſtendendum* ita *eſſe*, & non ita *eſſe*. fit. n. *hac ratione*, vt adverſarius à multis, aut à contrariis ſimul cauere ſibi debeat. 6 Et omnino quæcumq; ad occultationem valere antea diximus, conferũt etiam ad contẽtioſas argumentationes. nã occultatio eſt latẽdi gratia; latêre autem fallendi *cauſa*. 7 Sed adversùs abnuentes quæcunque putant ad argumẽtationem *facere, aut* per negationem interrogãdum quaſi contrarium ſumere velit, *qui interrogat*: aut ſaltem ex æquo *vtraque cõtradictionis pars* in interrogationem deducenda: quia cùm incertũ eſt, quid *interrogator* ſumere velit, minùs moroſos ſe præbent, *qui reſpondent*. 8 Cùm autem per partes cõcedit aliquis ſingula, inducẽdo vniuerſale: ſæpe non eſt interrogãdum, ſed *eo* vt conceſſo vtendũ. interdũ. n. & ipſi *reſpondentes* ſe conceſſiſſe putant, & audientibus videntur ob inductionis cõmemorationẽ, ceu non fruſtra *ſint* interrogata *ſingularia*. 9 Sed in quibus non ſignificatur nomine *aliquo* vniuerſale, ſimilitudine vtendũ *eſt*, prout expedit. ſæpe. n. ſimilitudo latet. 10 Iam verò vt propoſitio ſumatur, per collationẽ contrarij percontari oportet. velvti, ſi oporteat ſumere, omnibus in rebus patri eſſe obtemperãdum, *ſic interrogetur*, vtrùm in omnibus oportet obtemperare parentibus, an in omnibus repugnare? Et *ſi oporteat ſumere obtemperãdum* ſæpius, *ita interrogetur*, vtrùm multa concedẽda *ſunt*, an pauca? magis. n. ſi quidem *obſequi parẽtibus* neceſſe *eſt*, multa videbuntur eſſe *concedẽda, quã pauca*. cùm. n. contraria inter ſe componuntur, & magna & maiora videntur hominibus, & deteriora, & meliora. 11 Vt autem elencho *aliquis* conuictus videatur, vehemẽter ac ſæpe facit impoſtura illa maximè ſophiſtica, cùm qui nihil ſyllogiſticè propoſuerunt, extremũ non interrogant, ſed concludendo dicunt, quaſi facto ſyllogiſmo, non igitur hoc, & hoc. 12 Eſt etiam hoc ſophiſticum, poſito paradoxo, poſtulare, vt quid videatur, reſpondeatur, propoſito eo quod ab initio viſum fuit, atque horum inter-

A rogationē ſic inſtituere, vt tibi videtur: neceſſe *n. eſt*, ſi interrogatio *in eorum numero* ſit, ex quibus ſyllogiſmus *extruitur*, aut elenchum, aut paradoxum confici, aut ſpeciem *habere* elenchi: elenchum, ſi concedat: inopinabile, ſi neque concedat, neque *ſibi* videri dicat: ſpeciem elenchi, ſi non concedat, fateatur tamē *ſibi* videri. 13 Prætereà, vt in rhetoricis, *ita* etiam in elenchicis ſimiliter animaduertenda *ſunt* ea quæ repugnāt vel iis quæ ab ipſo *reſpōdente* dicta ſunt, vel iis quos *ipſe* fatetur rectè loqui aut agere: necnon iis, qui videntur tales, aut ſimilibus, *iiſque* aut plurimis, aut omnibus. 14 Sicut autem qui reſpōdent, ſæpenumero, quando elencho redarguuntur, diſtinctionem adhibent, ſi futurum eſt, vt elencho redarguantur: *ita* etiam B interrogantibus vtendum *eſt* hoc *præſidio* cōtra obiicientes, *vt* ſi illo modo contingit, hoc modo non *cōtingit*, illo modo ſe accepiſſe *dicant*: vt etiā Cleophon facit in Mandrobulo. 15 Oportet etiam recedendo à *capta* diſputatione, reliquas argumentationum *partes* præcidere: ac reſpōdentem oportet, cùm præſentiat, antè occurrere & prædicere. 16 Nonnūquam etiam argumentandum *eſt* cōtra aliud *quiddam* ab eo quod dictū *eſt*, *diuerſum*, illud ſumendo, ſi quis nō habeat argumenta cōtra propoſitum *problema*, quod quidem Lycophron fecit, cùm propoſitum problema eſſet lyræ encomium. C 17 Sed adverſus eos, qui requirunt vt contra certum quid argumenta dirigantur, (quia videtur opus eſſe, vt explicetur, in quo culpetur: quibuſdā autem expreſſis, faciliùs caueri poteſt) dicendum eſt, quod vniuerſaliter accidit in elenchis, *nos ſcilicet inſtituiſſe probare* contradictionem: *nempe*, quod ille affirmauit, eſſe negandum: aut, quod negauit, affirmandū: non autem *dicendum*, *nos inſtituiſſe probare*, quòd cōtrariorum *ſit* eadem ſcientia, vel non eadem. 18 Non oportet autem concluſionem in modum propoſitionis interrogare. nonnulla verò ne quidem interrogari debent: ſed his vt conceſſis vtendum. 19 Ex quibus igitur *locis* interrogationes eruantur, & quomodo *ſit* interrogandum in contentioſis congreſſibus, dictum eſt.

LIB. II. CAP. I. Περὶ δὲ ἀποκρίσεως, καὶ πῶς δεῖ λύειν, καὶ τί, καὶ πρὸς τίνα χρῆσιν οἱ τοιοῦτοι τῶν λόγων ὠφέλιμοι, μετὰ ταῦτα λεκτέον. 2 Χρήσιμοι μὲν οὖν εἰσι πρὸς φιλοσοφίαν, διὰ δύο. 3 Πρῶτον μὲν γὰρ ὡς ἐπὶ τὸ πολὺ γινόμενοι παρὰ τὴν λέξιν, ἄμεινον ἔχειν ποιοῦσι πρὸς τὸ ποσαχῶς ἕκαστον λέγεται, καὶ ποῖα ὁμοίως, καὶ ποῖα ἑτέρως ἐπὶ τῶν πραγμάτων συμβαίνει, καὶ ἐπὶ τῶν ὀνομάτων. 4 Δεύτερον δέ, πρὸς τὰς καθ' ἑαυτὸν ζητήσεις· ὁ γὰρ * ὑφ' ἑτέρου ῥᾳδίως παραλογιζόμενος, καὶ τοῦτο μὴ αἰσθανόμενος, κἂν αὐτὸς ὑφ' αὑτοῦ τοῦτο πάθοι πολλάκις. 5 Τρίτον δὲ καὶ τὸ λοιπὸν ἔτι, πρὸς δόξαν, τὸ περὶ πάντα γεγυμνάσθαι δοκεῖν, καὶ μηδενὸς ἀπείρως ἔχειν. τὸ γὰρ κοινωνοῦντα λόγων, ψέγειν λόγους, μηδὲν ἔχοντα διαιρεῖν περὶ τῆς φαυλότητος

Quare ſi *quid* nobis manifeſtũ ſit, ſed meditationis expertes ſimus, tẽpore ſæpe deſtituimur. 8 Interdum autem accidit, vt in deſcriptionibus *mathematicis*, (etenim cùm eas reſoluerimus, quandoque rurſus componere nequimus) ita etiam in elenchis: nam cognoſcentes, vnde argumentationis connexus eueniat, argumentationem illam diſſoluere non valemus.

Etenim ſi elenchus eſt contradictio non homonyma, *quæ* ex nõnullis *ſumptionibus colligitur*: nulla vtique diſtinctione opus eſt adverſus ambigua; & homonymiam: quoniam *is qui talia interrogat*, non facit ſyllogiſmum. verùm nõ alia de cauſa diſtinctio eſt præmittẽda, niſi quia concluſio ſpeciem quandam elenchi præ ſe fert. non *eſt* igitur cauendũ, ne redarguamur, ſed ne videamur *redargui*. 2 Quandoquidem interrogationes ambiguæ, vel propter homonymiam *multiplices*, & eiuſmodi aliæ captiones, etiam verum elenchum obſcurãt. & ſitne aliquis elẽcho conuictus nécne, incertum reddunt. Cùm.n. ad extremum, facta cõcluſione, liceat *reſpondenti* dicere, non quod *ipſe* affirmauit, negaſſe interrogantem; ſed homonymos vel ambiguè interrogaſſe; ideóque aliud ſe affirmaſſe, aliud ſumpſiſſe interrogantem, ac negaſſe in concluſione: etſi maximè ad idem retulit: incertũ *eſt*, an ſit conuictus elencho: quia incertũ eſt, an nunc verum dicat. Quòd ſi *interrogans* diſtinctione adhibitâ interrogaſſet homonymũ, vel ambiguum, non obſcurus eſſet elenchus. 3 Et quod litigioſi *interrogatores* nũc minùs requirunt, olim magis *requirebant*, vt *ſcilicet* interrogatus reſponderet aut Etiam, aut Non: *id* certè fieret. Nunc verò, quia non ſcitè interrogant, qui percontantur, neceſſe *eſt*, vt interrogatus adiiciat aliquid reſponſioni, quo vitium interrogationis corrigat. nam ſi *interrogans* diſtinxiſſet ſufficienter, neceſſe *eſſet*, vt reſpondens, vel Etiam, vel Non, diceret.

4 Εἰ δέ τις ὑπολήψεται τὸν κατὰ τὴν ὁμωνυμίαν ἔλεγχον εἶναι, τρόπον τινὰ οὐκ ἔσται διαφυγεῖν τὸ ἐλέγχεσθαι τὸν ἀποκρινόμενον. ἐπὶ γὰρ τῶν ὁρατῶν, ἀναγκαῖον ὃ ἔφησεν ἀποφῆσαι ὄνομα, καὶ ὃ ἀπέφησε, φῆσαι. 5 Ὡς γὰρ διορθοῦνταί τινες, οὐδὲν ὄφελος. οὐ γὰρ Κορίσκον φασὶν εἶναι μουσικὸν καὶ ἄμουσον. ἀλλὰ τοῦτον τὸν Κορίσκον, μουσικὸν· καὶ τοῦτον τὸν Κορίσκον, ἄμουσον. ὁ γὰρ αὐτὸς ἔσται λόγος, τὸ, τὸν Κορίσκον, τῷ, τοῦτον τὸν Κορίσκον, μουσικὸν εἶναι· ὅπερ ἅμα φησί τι καὶ ἀποφησιν. ἀλλ' ἴσως οὐ ταὐτὸ σημαίνει· οὐδὲ γὰρ ἐκεῖ τοὔνομα· ὥστε οὐδέν τι διαφέρει. 6 Εἰ δὲ τῷ μὲν, τὸ ἁπλῶς λέγειν ἀποδώσει· τῷ δὲ, προσθήσει τὸ τινὰ, ἢ τόνδε· ἄτοπον· οὐδὲν γὰρ μᾶλλον θατέρῳ· ὁποτέρῳ γὰρ, οὐδὲν διαφέρει. 7 Οὐ μὴν ἀλλ' ἐπεὶ ἄδηλος μέν ἐστιν ὁ μὴ διωρισμένος τὴν ἀμφιβολίαν, πότερον ἐλήλεγκται, ἢ οὐκ ἐλήλεγκται (δέδοται γὰρ ἐν τοῖς λόγοις τὸ διελεῖν) φανερὸν ὅτι τὸ μὴ διορίσαντα δοῦναι τὴν ἐρώτησιν, ἀλλὰ ἁπλῶς, ἁμάρτημά ἐστιν. ὥστε κἂν εἰ μὴ αὐτὸς, ἀλλ' ὅ γε λόγος ἐληλεγμένῳ ὅμοιός ἐστι. 8 Συμβαίνει μέντοι πολλάκις ὁρῶντας τὴν ἀμφιβολίαν, ὀκνεῖν διαιρεῖσθαι διὰ τὴν πυκνότητα τῶν τὰ τοιαῦτα προτεινόντων, ὅπως μὴ πρὸς ἅπαν δοκῶσι δυσκολαίνειν. εἶτ', οὐκ ἂν οἰηθέντων παρὰ τοῦτο γενέσθαι τὸν λόγον, πολλάκις ἀπήντησε* παράδοξον. 9 Ὥστε, ἐπεὶ δέδοται διαιρεῖν, οὐκ ὀκνητέον, καθάπερ ἐλέχθη πρότερον. 10 Εἰ δὲ τὰ δύο ἐρωτήματα μὴ ἕν τις ποιεῖ ἐρώτημα, οὐδ' ἂν ὁ παρὰ τὴν ὁμωνυμίαν καὶ ἀμφιβολίαν ἐγίνετο παραλογισμὸς, ἀλλ' ἢ ἔλεγχος, ἢ οὔ. τί γὰρ διαφέρει ἐρωτῆσαι, εἰ Καλλίας μὲν καὶ Θεμιστοκλῆς μουσικοί εἰσιν; ἢ, εἰ ἀμφοτέροις ἓν ὄνομα ἦν, ἑτέροις οὖσιν; εἰ γὰρ πλείω δηλοῖ ἑνὸς, πλείω ἠρώτησεν. εἰ οὖν μὴ ὀρθὸν, πρὸς δύο ἐρωτήσεις μίαν ἀπόκρισιν ἀξιοῦν λαμβάνειν ἁπλῶς, φανερὸν ὅτι οὐδενὶ προσήκει τῶν ὁμωνύμων ἀποκρίνεσθαι ἁπλῶς, οὐδ' εἰ κατὰ πάντων ἀληθὲς, ὥσπερ ἀξιοῦσί τινες. οὐδὲν γὰρ τοῦτο διαφέρει, ἢ εἰ εἴρετο, Κορίσκος καὶ Καλλίας πότερον οἴκοι εἰσὶν, ἢ οὐκ οἴκοι; εἴτε παρόντων ἀμφοῖν, εἴτε μὴ παρόντων· ἀμφοτέρως γὰρ πλείους αἱ προτάσεις. οὐ γὰρ, εἰ ἀληθὲς εἰπεῖν, διὰ τοῦτο μία ἡ ἐρώτησις. ἐγχωρεῖ γὰρ καὶ μυρία ἕτερα ἐρωτηθέντα ἐρωτήματα, ἅπαντα ναὶ, ἢ οὔ, ἀληθὲς εἶναι λέγειν· ἀλλ' ὅμως οὐκ ἀποκριτέον μιᾷ ἀποκρίσει· ἀναιρεῖται γὰρ τὸ διαλέγεσθαι. τοῦτο δ' ὅμοιον, ὡς εἰ καὶ τὸ αὐτὸ ὄνομα τεθείη τοῖς ἑτέροις. εἰ οὖν μὴ δεῖ πρὸς δύο ἐρωτήσεις μίαν ἀπόκρισιν διδόναι, φανερὸν ὅτι οὐδ' ἐπὶ τῶν ὁμωνύμων τὸ ναὶ, ἢ οὒ λεκτέον. 11 Οὐδὲ γὰρ ὁ εἰπὼν ἀποκέκριται, ἀλλ' εἴρηκεν. ἀλλ' ἀξιοῦταί πως ἐν τοῖς διαλεγομένοις, διὰ τὸ λανθάνειν τὸ συμβαῖνον. 12 Ὥσπερ οὖν εἴπομεν, ἐπειδήπερ οὐδ' ἔλεγχοί τινες ὄντες, δοκοῦσιν εἶναι· κατὰ τὸν αὐτὸν τρόπον, καὶ λύσεις δόξουσιν εἶναι, οὐκ οὖσαι λύσεις· ἃς δή φαμεν ἐνίοτε μᾶλλον δεῖν φέρειν, ἢ τὰς ἀληθεῖς ἐν τοῖς ἀγωνιστικοῖς λόγοις, καὶ τῇ πρὸς τὸ διττὸν ἀπαντήσει. 13 Ἀποκριτέον δὲ, ἐπὶ μὲν τῶν δοκούντων, τὸ ἔστω, λέγοντα· καὶ γὰρ οὕτως ἥκιστα γίνοιτ' ἂν παρεξέλεγχος· ἂν δέ τι παράδοξον ἀναγκάζηται λέγειν, ἐνταῦθα μάλιστα προσθετέον τὸ δοκεῖν. οὕτω γὰρ οὔτε ἔλεγχος, οὔτε παράδοξον ἂν γίνεσθαι δόξειεν.

* γ. παρὰ δόξαν.

A 4 Si quis autem exiſtimet eum eſſe elenchum, qui ſecundùm homonymiam fit: nullo modo licebit reſpondenti effugere, quominùs elencho redarguatur. in iis.n. quæ cernuntur *oculis*, neceſſe *eſt* negare nomẽ quod affirmauit, aut affirmare quod negauit. 5 Vt.n. corrigunt nonnulli, nihil prodeſt. aiunt.n. *hi*, non Coriſcum eſſe muſicum, & immuſicum: ſed hunc Coriſcum eſſe muſicum, & hunc Coriſcum immuſicum. Nam eadem erit oratio, Coriſcum *eſſe muſicum*, & hunc Coriſcũ eſſe muſicum: quod quidem ſimul affirmat & negat, *qui reſpondet*. Sed fortaſſe non *vnũ & idem* ſignificat *verbum illud Hic Coriſcus*: quia nec illic *nomen* Coriſcus B *vnã habebat ſignificationem*. itaque, *vtrùm Coriſcus, an Hic Coriſcus dicatur*, nihil intereſt. 6 Sin autem illi ſimpliciter loquẽdo attribuet, huic verò aliquem, vel hunc adiunget, abſurdum *erit*: quia non magis alteri inerit, *quàm alteri*: vtrius.n. *attribuatur*, nihil intereſt. 7 Verumenimuero quoniam incertũ eſt, an is qui non diſtinxit amphiboliam, ſit conuictus elencho, necne: (in diſputationibus namque conceſſum eſt diſtinguere:) apparet, eũ, qui nõ diſtinguit, ſed ſimpliciter concedit interrogationẽ, peccare. quocirca ſi non ipſe *reſpondens*, at certè *eius* oratio elencho refutatæ ſimilis eſt. 8 Sæpe autem accidit, vt qui ambiguitatem vident, diſtinguere cunctentur propter frequentiam eorum, qui talia C proponunt, ne in omnibus videantur tergiuerſari: deinde, *ipſis* non putantibus ex eo pendêre argumentationem, incidit paradoxum. 9 Quare, cùm ſit conceſſum diſtinguere, non *eſt* cunctandum, vt antea dictum fuit. 10 Niſi verò duas interrogationes pro vna quis acciperet, non fieret ex homonymia vel amphibolia paralogiſmus, ſed aut *eſſet verus* elenchus, aut ne *quidem ſpeciem elenchi præ ſe ferret*. quid.n. intereſt, vtrũ interrogetur, ſintne Callias & Themiſtocles muſici, an *ſub vno communi nomine*, ſi ambobus inter ſe differentibus vnum ſit nomen commune? nam ſi *nomen illud cõmune* plura ſignificat, quàm vnum: *certè qui conſt vſus*, plura in- D terrogauit. Si igitur non rectè petitũr, vt ad duas interrogationes vna reſpõſio ſumatur ſimpliciter: apparet, ad nihil homonymum reſpondẽdum eſſe ſimpliciter, ne quidem ſi in omnibus verum *ſit*, vt nonnulli putant. hoc.n. idem valet, ac ſi interrogaretur, vtrùm Coriſcus & Callias ſint domi, an non *ſint* domi: ſiue adſint ambo, ſiue nòn adſint: quoniam vtroq; modo propoſitiones plures ſunt. non enim, ſi verè dicitur, propterea interrogatio vna *eſt*. nam poſſunt ſexcentæ diuerſæ interrogationes alicui proponi, ad quas omnes verè poſſit reſpondere Etiam, aut Non: verumtamen non *eſt ad illas omnes* vna danda reſponſio: *ſic*.n. tollitur diſputatio. hoc verò perinde eſt, ac ſi *rebus* diuerſis E idem nomen poſitum eſſet. Ergo ſi non oportet ad duas interrogationes vnam reſpõſionem dare: perſpicuum *eſt*, etiam in homonymis non *eſſe* dicendum Etiam, vel Non. 11 Non.n. qui *id* dixit, reſpõdit, ſed locutus eſt. *Hoc* tamen probatur quodammodo in diſſerẽtibus: quia non apparet, quod inde ſequitur. 12 Sicut igitur diximus: quia videtur quidã elenchi eſſe, qui non ſunt: eodem modo etiam ſolutiones *quædam* videbuntur eſſe, quæ nõ erunt: quas ſcilicet dicimus interdum eſſe afferẽdas potiùs, quàm veras, in contentioſis diſputationibus, & cùm *paralogiſmo* ex duplicitate *ducto* occurritur. 13 Porrò autem in reſpondendo ad ea quæ *vera* videntur, dicẽdum, Eſto: ſic enim minimè fiet parexelenchus. At ſi *quis* aliquod paradoxum cogatur dicere, hìc maximè adiungendum *reſpõſioni verbum* Videri. ſic.n. neque elenchus, neque paradoxum effici videbitur.

14 Quia

14 Quia verò manifeſtũ *eſt*, quomodo poſtuletur *quæſitum* initio *propoſitum*: ac omnes id *poſtulari* putant, ſi *quæſito* proximum ſit *quod petitur*: *idcirco* tollenda ſunt, non concedenda nonnulla, quaſi *quæſitum* initio *propoſitum interrogator* petat: & cùm tale quid poſtulat aliquis, quod neceſſariò quidem cõſequitur ex theſi, falſum autẽ eſt, vel inopinabile; dicendum *eſt eſſe* idem *quod quæſitum*. nam quæ neceſſariò conſequuntur, ipſius theſis *partes* vidẽtur. 15 Præterea, cùm vniuerſale non nomine, ſed *ſimilitudinis* collatione ſumptum fuerit: dicendum *eſt*, *aduerſarium*, non vt datũ fuit, nec vt *ipſe* propoſuit, *id* ſumere *in concluſione*: quia propter hoc ſæpe fit elenchus. 16 Qui verò his *reſponſionibus* excluduntur, ad *id* confugere debẽt, *vt* non rectè probatum eſſe *contẽdant*, occurrendo ſecundùm traditã *ſyllogiſmi & elechi* definitionem. 17 Sanè cùm nomina propriè accipiuntur, neceſſe *eſt* reſpõdere vel ſimpliciter, vel per diſtinctionẽ. 18 Sed *quod ad ea* quæ *tacitè* ſubintelligentes ponimus: veluti, quæ non perſpicuè, ſed deminutè interrogantur: hinc ſæpe accidit elenchus. vtputà, Quod eſt Athenienſiũ, eſtne poſſeſſio Athenienſium? vtique. ſimiliter autem & in aliis *dicendum*: at, n. *nonne* homo (*vt Græci loquuntur*) eſt animalium? etiam. homo igitur *eſt* animalium poſſeſſio. nam hominem ideo *Græca phraſi* dicimus eſſe animalium, quia eſt animal: & Lyſandrum *eſſe* Lacedæmoniorum, quia *eſt* Lacedæmonius. Patet igitur, vbi obſcurum eſt quod proponitur, non *eſſe* concedẽdum ſimpliciter. 19 Cùm autem duo ſunt *ita inter ſe affecta*, *vt* ſi alterũ ſit, alterũ quoque neceſſariò eſſe videatur: *contrà* verò ſi hoc ſit, non *ſit* neceſſariò *&* illud: *ſiue* qui interrogatur, vtrum *eorũ eſſe putet*, *id* dare debet, quod minùs *latè patet*: quia difficilius *eſt* cõcludere ex multis. 20 Si quis autem inde argumentetur, quod alteri *eſt aliquid* contrarium, alteri nõ eſt: *etiamſi* ratio vera ſit, *tamen* dicere *oportet eſſe quidẽ etiam* alterius contrarium, ſed nomẽ *ei* non eſſe poſitum. 21 Quia verò ex iis quæ multi dicũt, nonnulla *ſunt eiuſmodi*, *vt* ſi quis *illa* non admittat, *eum* falsò reſpondere autumẽt: quædam verò *talia* non *ſunt*, vt ea de quibus in vtramque partem ſunt opiniones *contrariæ*: (vtrũ enim corruptibilis, an incorruptibilis ſit animantium anima, non eſt exploratum multis) in quibus igitur incertũ eſt, vtro modo dici ſoleat, quod *ita* proponitur, *vt quæratur* vtrum *reſpondenti videatur*, quales *ſunt*, quæ ſentẽtiæ *appellantur*: (nam ſententias appellãt & veras opiniones, & vniuerſas enunciationes, vt, diameter non habet cõmunem menſuram) & præterea de cuius veritate in vtramque partem ſunt opiniones: in his (*inquam*) *omnibus* nomina transferens, maximè latẽre poterit. nam quia incertum eſt, vtro modo veritas habeat, non videbitur ſophiſticè cauillari: & quia in vtramque partem ſunt opiniones, non videbitur falsò reſpondere: translatio verò efficiet, ne oratio poſſit elencho redargui. 22 Præterea quaſcumque interrogationes quis præſenſerit, *illas*, *antequam dicantur*, debet obiicere, ac prædicere: ſic enim maximè percontantem impediet.

1 Multiplicem ſignificationem vel in concluſione ineſſe, vel in propoſitionibus. 2 Quomodo captio ſoluenda ſit, cùm multiplicitas ineſt in concluſione, 3 vel in propoſitionibus. 4 Generale præceptum, vt multiplicitas ſtatim diſtinguatur, 6 & vt reſpondens dicat ſophiſtam non probaſſe contrarium re ipſa, ſed verbo tenus.

C Τῶν μὲν οὖν παρὰ τὴν ὁμωνυμίαν καὶ τὴν ἀμφιβολίαν ἐλέγχων, οἱ μὲν ἔχουσί τι τῶν ἐρωτημάτων πλείω σημαῖνον· οἱ δὲ, τὸ συμπέρασμα πολλαχῶς λεγόμενον. οἷον, ἐν μὲν τῷ σιγῶντα λέγειν, τὸ συμπέρασμα διττόν. ἐν δὲ τῷ μὴ συνεπίστασθαι τὸν ἐπιστάμενον, (ὡς ἐπὶ τοῦδε, ὁ ἐπιστάμενος λέγειν, ἢ πράττειν, καὶ ἐκεῖνο συνεπίσταται ὃ λέγει, ἢ πράττει· οὗτος δὲ ἐπίσταται λέγειν ἰαμβεῖα· οὗτος ἄρα συνεπίσταται καὶ τὰ ἰαμβεῖα) ἓν τῶν ἐρωτημάτων, * ἀμφίβολον. καὶ τὸ διττὸν, ὁτὲ μὲν ἔστι, ὁτὲ δὲ οὐκ ἔστι· ἀλλὰ σημαίνει τὸ διττὸν, τὸ μὲν, ὄν· τὸ δὲ, οὐκ ὄν. 2 Ὅσοις μὲν οὖν ἐν τῷ τέλει τὸ πλεοναχῶς, ἂν μὴ προσλάβῃ τὴν ἀντίφασιν, οὐ γίνεται ἔλεγχος· οἷον, ἐν τῷ τυφλὸν ὁρᾶν· ἄνευ γὰρ ἀντιφάσεως οὐκ ἦν ἔλεγχος. D 3 Ὅσοις δὲ ἐν τοῖς ἐρωτήμασιν, οὐκ ἀνάγκη προαποφῆσαι τὸ διττόν· οὐ γὰρ πρὸς τοῦτο, ἀλλὰ διὰ τοῦτο ὁ λόγος. 4 Ἐν ἀρχῇ μὲν οὖν τὸ διπλοῦν, καὶ ὄνομα, καὶ λόγον οὕτως ἀποκριτέον, ὅτι ἔστιν ὡς ναὶ, ἔστι δ᾽ ὡς οὔ. ὥσπερ τὸ σιγῶντα λέγειν, ὅτι ἔστιν ὡς ναὶ, ἔστι δ᾽ ὡς οὔ. καὶ τὰ δέοντα πρακτέον ἔστιν ἃ, ἔστι δὲ ἃ οὔ· τὰ γὰρ δέοντα λέγεται πολλαχῶς. ἐὰν δὲ λάθῃ, ἐπὶ τέλει προστιθέντα τῇ ἐρωτήσει, διορθωτέον· ἔστιν ἄρα σιγῶντα λέγειν; οὔ· ἀλλὰ τόνδε σιγῶντα. 5 Καὶ ἐν τοῖς ἔχουσι δὲ τὸ πλεοναχῶς ἐν ταῖς προτάσεσιν, ὁμοίως. οὐκ ἄρα συνεπίστανται, ὅ, τι ἐπίστανται; ναί· ἀλλ᾽ οὐχ οἱ οὕτως ἐπιστάμενοι· οὐ γὰρ ταὐτόν ἐστιν, ὅτι οὐκ ἔστι συνεπίστασθαι, καὶ ὅτι τοὺς ὡδὶ ἐπισταμένοις οὐκ ἔστιν. 6 Ὅλως τε μαχητέον, κἂν ἁπλῶς συλλογίζηται, ὅτι οὐχ ὃ ἔφησεν ἀπέφησε πρᾶγμα, ἀλλὰ ὄνομα. ὥστε οὐκ ἔλεγχος.

* χ.ά. & διττόν.

Elenchorum igitur, qui ex homonymia & amphibolia *ducuntur*, alij habēt aliquam interrogationem plura ſignificantem, alij concluſionem multifariàm acceptam. vt in *captione illa*, σιγῶντα λέγειν, concluſio duplex *eſt*. in *hac* verò, eum qui ſcit, non ſimul ſcire, (vt in hac *argumētatione*, Qui ſcit dicere, aut facere, illud quoque ſimul ſcit, quod dicit, aut facit: atqui hic ſcit dicere *carmina* iambica: hic igitur ſimul ſcit etiam iābica) vna interrogatio *eſt* ambigua. ac quod duplex *eſt*, aliàs eſt *verum*, aliàs non eſt *verum*: quod .n. *eſt* duplex, partim ſignificat quod eſt, partim quod non eſt. 2 Quibus igitur in fine *ineſt* multiplicitas, niſi *opponens* adſumpſerit contradictionem, non fit elenchus: vt in *captione illa*, cæcum videre: quia ſine contradictione non erat elenchus. 3 Quibus verò *multiplicitas ineſt* in interrogationibus, *in his* non *eſt* neceſſe priùs negare quod duplex *eſt*: quia non ad hoc, ſed ex hoc *extruitur* argumētatio. 4 Initiò igitur, *cùm* duplex *eſt* nomen & oratio, ſic reſpondēdum, partim eſſe, partim non eſſe. vtputà σιγῶντα λέγειν, vno modo eſſe verum, altero falſum. & facienda *eſſe* τὰ δέοντα, de his verè *dici*, de illis falſò: quia τὰ δέοντα multis modis dicuntur. Sin *ab initio multiplicitas* lateat, ad extremum adiectione interrogatio *eſt* corrigenda: Eſt igitur *verū*, σιγῶντα λέγειν. minimè: ſed τόνδε σιγῶντα. 5 Sed & in iis quæ multiplicitatem habēt in propoſitionibus, ſimiliter *eſt faciendum*: *velvti*, Non igitur ſimul ſciunt, quod ſciunt. vtique: ſed non qui ita ſciunt. neque enim *hæc* idem valent: non accidere, vt *qui ſciunt*, ſimul ſciant: & non accidere, vt qui ita ſciunt, *ſimul ſciant*. 6 Et omnino pugnare debet *Reſpondens*, etiamſi *aduerſarius* ſimpliciter concluſerit, *ac dicere* non rem à ſe affirmatam, ſed nomen *eum* negaſſe: ideóque non *eſſe* elenchum.

Cap. XX.

1 Generale præceptum vt dicatur id quod concluſioni ſophiſticæ repugnat. 2 Exemplum vnum, & alterum. 3 Collatio huius fallaciæ cum amphibologia. 4 Eos errare, qui omnes locos ſophiſticos referunt ad multiplicitatem. 5 Ratio ſoluendi ſophiſmatis. 6, 7, 8, 9, 10 Varia exempla. 11 Praua quorumdam ſolutio 12 reiicitur.

PErſpicuum etiam *eſt*, quomodo ſoluendæ ſint *argumentationes*, quæ ex compoſitione & diuiſione *ducuntur*. nã ſi diuiſa & cõpoſita oratio diuerſam habet ſignificationem, *in ſolutione eſt* dicendum, quod concluſioni repugnat. 2 Sunt autem omnes eiuſmodi argumẽtationes ex cõpoſitione & diuiſione: Num quo tu vidiſti hunc vapulantẽ, eo hic vapulauit? & quo vapulauit, eo tu vidiſti? 3 Habet ſane *hæc fallacia* aliquid ambiguæ interrogationis: ſed nihilominus eſt ex compoſitione. neque.n. duplex eſt, quod *ſumitur* ex diuiſione: quia non eadem oratio efficitur, *cùm eſt* diuiſa, *quæ antè erat cõiuncta*. niſi & ὄρος & ὅρος, cum accentu prolata, accipiuntur diuerſis modis; ſed in ſcriptis idem *eſt* nomen, quando iiſdem elementis ſcriptum eſt, & eodem modo. & illic igitur notæ eædem fiunt: ſed quæ pronuntiantur, *ſunt* diuerſa. Quare duplex non *eſt*, quod ex diuiſione *ſumitur*. 4 Perſpicuum quoque *eſt*, non omnes elenchos *ſumi* ex multiplicitate, vt nonnulli autumãt. 5 Diſtinguere igitur debet, qui reſpondet. non.n. idẽ *valet*, ſi quis dicat *aliquem* videre oculis, vapulantẽ: & ſi dicat videre, oculis vapulantem. *6 Huc referatur* & Euthydemi ratio, Nũ vidiſti tu nunc ſtantes in Piræo triremes in Sicilia exiſtens? 7 Et rurſus, Num poteſt bonus cùm ſit ſutor prauus eſſe? atqui poteſt aliquis, cùm ſit bonus ſutor, prauus eſſe: proinde ſutor prauus. 8 *Item*, Num quorũ bonæ *ſunt* ſciẽtiæ, *ea ſunt* bona mathemata? ſed mali bonum *eſt* mathema: malum igitur *eſt* bonum mathema. atqui malum, & mathema *eſt*, & malum: malum igitur *eſt* malum mathema. 9 Numquid verè dicitur nunc te natum eſſe? natus igitur es nunc. An aliud ſignificat diuiſum, *quàm coniunctum*? verè.n. dicitur nunc, te natũ eſſe: ſed non verè dicitur, nunc te natũ eſſe. 10 Nũ quomodo potes, & quę potes, hęc & eo modo vtique feceris? atqui non pulſans citharam, præditus es facultate pulſandi citharam: ergo citharã pulſaueris citharã non pulſans. An non hac præditus eſt facultate, vt non pulſans pulſet citharam: ſed quando *hoc* non facit, *habet facultatem* faciendi? 11 Soluunt autem nonnulli & aliter hoc *ſophiſma*. nã ſi *reſpondens* conceſſit *ſe facturum* quomodo facere poteſt: negant *inde* ſequi, vt non pulſans citharam pulſet: quia non quocumque modo facere poteſt, conceſſit ſe facturum: nec idem valet, quomodo poteſt, & quocumque modo poteſt facere. 12 Sed apparet *eos* non rectè ſoluere. nam argumentationum, quæ ex eodem *loco* ſumuntur, eadem *eſt* ſolutio: hæc verò non conueniet omnibus *eiuſdem generis argumentationibus*, nec quovis modo interrogatis: ſed eſt ad interrogantem, non ad argumentationem *accommodata ſolutio*.

A Φανερὸν δὲ καὶ τοὺς παρὰ τὴν σύνθεσιν καὶ διαίρεσιν πῶς λυτέον· ἐὰν γὰρ διαιρούμενος καὶ συντιθέμενος ὁ λόγος, ἕτερον σημαίνῃ, συμπεραινομένου τοὐναντίον λεκτέον. 2 Εἰσὶ δὲ πάντες οἱ τοιοῦτοι λόγοι, παρὰ σύνθεσιν καὶ διαίρεσιν· ἆρ' ᾧ εἶδες σὺ τοῦτον τυπτόμενον, τούτῳ ἐτύπτετο οὗτος; καὶ ᾧ ἐτύπτετο, τούτῳ σὺ εἶδες; 3 Ἔχει μὲν οὖν τι καὶ τῶν ἀμφιβόλων ἐρωτημάτων· ἀλλ' ἔστι παρὰ σύνθεσιν· οὐ γὰρ ἐστὶ διττόν, τὸ παρὰ τὴν διαίρεσιν· οὐ γὰρ ὁ αὐτὸς λόγος γίνεται διαιρούμενος· εἴπερ μὴ καὶ τὸ ὄρος καὶ ὅρος τῇ προσῳδίᾳ λεχθέντα, σημαίνει ἕτερον. ἀλλ' ἐν μὲν τοῖς γεγραμμένοις ταὐτὸν ὄνομα, ὅταν ἐκ τῶν αὐτῶν στοιχείων γεγραμμένον ᾖ, καὶ ὡσαύτως. κἀκεῖ δὲ τὰ παράσημα ποιοῦνται· τὰ δὲ φθεγγόμενα, οὐ ταὐτά. ὥστε οὐ διττόν, τὸ παρὰ διαίρεσιν. 4 Φανερὸν δὲ καί, ὅτι οὐ πάντες οἱ ἔλεγχοι παρὰ τὸ διττόν, καθάπερ τινές φασι. 5 Διαιρετέον οὖν τῷ ἀποκρινομένῳ. οὐ γὰρ ταὐτόν, εἰπεῖν ἰδεῖν τοῖς ὀφθαλμοῖς, τυπτόμενον· καὶ τὸ φάναι ἰδεῖν, τοῖς ὀφθαλμοῖς τυπτόμενον. 6 Καὶ ὁ Εὐθυδήμου λόγος, ἆρ' οἶδας σὺ νῦν οὔσας ἐν Πειραιεῖ τριήρεις, ἐν Σικελίᾳ ὤν; 7 Καὶ πάλιν, ἆρ' ἐστὶν ἀγαθὸν ὄντα σκυτέα μοχθηρὸν εἶναι; εἴη δ' ἄν τις, ἀγαθὸς ὢν σκυτεύς, μοχθηρός· ὥστε σκυτεὺς μοχθηρός. 8 Ἆρ' ὧν αἱ ἐπιστῆμαι σπουδαῖαι, σπουδαῖα τὰ μαθήματα; τοῦ δὲ κακοῦ σπουδαῖον τὸ μάθημα· σπουδαῖον ἄρα μάθημα, τὸ κακόν. ἀλλὰ μὴν τὸ κακόν, καὶ μάθημα, καὶ κακόν. ὥστε κακὸν μάθημα, τὸ κακόν. 9 Ἆρ' ἀληθὲς εἰπεῖν νῦν ὅτι σὺ γέγονας; γέγονας ἄρα νῦν. ἢ ἄλλο σημαίνει διαιρεθέν; ἀληθὲς γὰρ εἰπεῖν νῦν, ὅτι γέγονας· ἀλλ' οὐ, νῦν σὺ γέγονας. 10 Ἆρ' ὡς δύνασαι, καὶ ἃ δύνασαι, οὕτως καὶ ταῦτα ποιήσαις ἄν; οὐ κιθαρίζων δὲ ἔχεις δύναμιν τοῦ κιθαρίζειν· κιθαρίσαις ἂν ἄρα οὐ κιθαρίζων. ἢ οὐ τούτου ἔχει τὴν δύναμιν τοῦ οὐ κιθαρίζων κιθαρίζειν· ἀλλ' ὅτε οὐ ποιεῖ, τοῦ ποιεῖν; 11 Λύουσι δὲ τοῦτό τινες καὶ ἄλλως. εἰ γὰρ ἔδωκεν ὡς δύναται ποιεῖν, οὔ φασι συμβαίνειν μὴ κιθαρίζοντα κιθαρίζειν. οὐ γὰρ πάντως ὡς δύναται ποιεῖν, δεδόσθαι ποιήσειν· οὐ ταὐτὸν δ' εἶναι τὸ ὡς δύναται, καὶ πάντως ὡς δύναται ποιεῖν. 12 Ἀλλὰ φανερόν, ὅτι οὐ καλῶς λύουσι. τῶν γὰρ παρὰ ταὐτὸ λόγων ἡ αὐτὴ λύσις· αὕτη δ' οὐχ ἁρμόσει ἐπὶ πάντας, οὐδὲ πάντως ἐρωτωμένους· ἀλλ' ἔστι πρὸς τὸν ἐρωτῶντα, οὐ πρὸς τὸν λόγον.

Cap. XXI.

1 Hanc captionem rarò fieri. Exemplum. 2 Solutio.

Παρὰ δὲ τὴν προσῳδίαν, λόγοι μὲν οὐκ εἰσὶν, οὔτε τῶν γεγραμμένων, οὔτε τῶν λεγομένων, πλὴν εἴ τινες ὀλίγοι γένοιντ᾽ ἄν, οἷον οὗτος ὁ λόγος· ἆρά γέ ἐστι τὸ οὗ καταλύεις οἰκία; ναί. οὐκοῦν τὸ οὐ καταλύεις, τοῦ καταλύεις ἀπόφασις; ναί. ἔφησας δὲ εἶναι τὸ οὗ καταλύεις, οἰκίαν· ἡ οἰκία ἄρα, ἀπόφασις. 2 Ὡς δὴ λυτέον, δῆλον· οὐ γὰρ ταὐτὸ σημαίνει, τὸ μὲν, ὀξύτερον· τὸ δὲ, * βαρύτερον ῥηθέν.

Ex accentu verò argumentationes non ſunt, neque in ſcriptis, neque in pronuntiatis: niſi paucæ quædam fiant, vt hæc argumentatio: Eſtne τὸ οὗ καταλύεις, domus? certè. nónne τὸ οὐ καταλύεις, negatio τοῦ καταλύεις? etiam. dixeras autẽ τὸ οὗ καταλύεις, domum: domus igitur *eſt* negatio. 2 Quomodo autem ſoluendæ *ſint huiuſmodi captiones*, manifeſtum *eſt*: quoniam illud οὐ, non idem ſignificat, cùm acutiùs, & cùm grauiùs profertur.

* γρ. βεβαρύτερον inepte. Malim autem, ὀξύτερον τι & βαρ. τι. appellat ὀξύτερον τι οὐ, vt libro priore cap. 3. βαρύτερον τὸ οὐ. ſemper enim Ariſtoteles [illegible] vocat τὴν περισπωμένην.

De ſolutione captionum, quæ ducuntur ex figura dictionis. Cap. XXII.

1 De ratione ſoluendi hæc ſophiſmata. 2 Exemplum primum, 3 ſecundum. 4 Impugnatur praua ſolutio. 5 Exemplum tertium, 6 quartum, 7 quintum, ſextum. 8, 9, 10, 11, Impugnantur praue quædam ſolutiones. 12 Exemplum ſeptimum, 13 octauum, 14 nonum, 15 decimum, 16 vndecimum, 17 duodecimum.

Δῆλον δὲ, καὶ τοῖς παρὰ τὸ ὡσαύτως λέγεσθαι τὰ μὴ ταὐτὰ, πῶς ἀπαντητέον· ἐπείπερ ἔχομεν τὰ γένη τῶν κατηγοριῶν. ὁ μὲν γὰρ ἔδωκεν ἐρωτηθεὶς, μὴ ὑπάρχειν τι τῶν ὅσα τί ἐστι σημαίνει· ὁ δὲ, ἔδειξεν ὑπάρχον τι τῶν πρός τι, ἢ ποσῶν, δοκούντων δὲ τί ἐστι σημαίνειν, διὰ τὴν λέξιν. 2 Οἷον, ἐν τῷδε τῷ λόγῳ· ἆρ᾽ ἐνδέχεται τὸ αὐτὸ ἅμα ποιεῖν τε καὶ πεποιηκέναι; οὔ. ἀλλὰ μὴν ὁρᾶν γέ τι ἅμα καὶ ἑωρακέναι τὸ αὐτὸ, καὶ κατὰ τὸ αὐτὸ ἐνδέχεται. 3 Ἆρα ἐστί τι τῶν πάσχειν, ποιεῖν τι; οὔ. οὐκοῦν τὸ τέμνεται, καίεται, αἰσθάνεται, ὁμοίως λέγεται· καὶ πάντα πάσχειν τι σημαίνει· πάλιν δὲ τὸ λέγειν, τρέχειν, ὁρᾶν, ὁμοίως ἀλλήλοις λέγεται· ἀλλὰ μὴν τό γ᾽ ὁρᾶν, αἰσθάνεσθαί τι ἐστὶν· ὥστε καὶ πάσχειν τι ἅμα καὶ ποιεῖν. 4 Εἰ δέ τις ἐκεῖ δοὺς μὴ ἐνδέχεσθαι ἅμα τὸ αὐτὸ ποιεῖν τε καὶ πεποιηκέναι, τὸ ὁρᾶν καὶ ἑωρακέναι φαίη ἐγχωρεῖν, οὔπω ἐλήλεγκται, εἰ μὴ λέγει τὸ ὁρᾶν, ποιεῖν τι, ἀλλὰ πάσχειν· προσδεῖ γὰρ τούτου τοῦ ἐρωτήματος· ἀλλ᾽ ὑπὸ τοῦ ἀκούοντος ὑπολαμβάνεται δεδωκέναι· ὅτε τὸ τέμνειν, ποιεῖν τι· καὶ τὸ τετμηκέναι, πεποιηκέναι τι, ἔδωκε· καὶ ὅσα ἄλλα ὁμοίως λέγεται. τὸ γὰρ λοιπὸν αὐτὸς προστίθησιν ὁ ἀκούων, ὡς ὁμοίως λεγόμενον· τὸ δὲ, λέγεται μὲν οὐχ ὁμοίως, φαίνεται δὲ διὰ τὴν λέξιν. τὸ αὐτὸ δὲ συμβαίνει, ὅπερ ἐν ταῖς ὁμωνυμίαις· οἴεται γὰρ ἐν τοῖς ὁμωνύμοις ὁ ἀγνοῶν τοὺς λόγους, ὃ ἔφησεν ἀποφῆσαι πρᾶγμα, οὐκ ὄνομα· τὸ δὲ, ἔτι προσδεῖ ἐρωτήματος, εἰ ἐφ᾽ ἓν βλέπων λέγει τὸ ὁμώνυμον· οὕτως γὰρ δόντος, ἔσται ἔλεγχος. 5 Ὅμοιοι δὲ καὶ οἵδε οἱ λόγοι τούτοις. * εἰ ὅ τις ἔχων, ὕστερον μὴ ἔχει, ἀπέβαλεν; ὁ γὰρ ἕνα μόνον ἀποβαλὼν ἀστράγαλον, οὐχ ἕξει δέκα ἀστραγάλους. ἢ, ὃ μὲν μὴ ἔχει, πρότερον ἔχων, ἀποβέβληκεν; ὅσον δὲ μὴ ἔχει, ἢ ὅσα, οὐκ ἀνάγκη τοσαῦτα ἀποβαλεῖν; ἐρωτήσας οὖν ὃ ἔχει, συνάγει ἐπὶ τοῦ ὅσα· τὰ γὰρ δέκα, ποσά. εἰ οὖν ἤρετο ἐξ ἀρχῆς, ὅσα τις μὴ ἔχει, πρότερον ἔχων, ἆρά γε ἀποβέβληκε τοσαῦτα; οὐδεὶς ἂν ἔδωκεν, ἀλλ᾽ ἢ τοσαῦτα, ἢ τούτων τι. 6 Καὶ ὅτι δοίη ἂν ὃ μὴ ἔχει. οὐ γὰρ ἔχει μόνον ἕνα ἀστράγαλον. ἢ οὐ δέδωκεν, ὃ οὐκ εἶχεν, ἀλλ᾽ ὡς οὐκ εἶχε, τὸν ἕνα. τὸ γὰρ μόνον, οὐ τόδε σημαίνει, οὐδὲ τοιόνδε, οὐδὲ ποσόνδε τι, ἀλλ᾽ ὡς ἔχει πρός τι, οἷον, ὅτι οὐ μετὰ ἄλλου. ὥσπερ οὖν, εἰ ἤρετο,

* γρ. ἅ τις ἔχων

Patet etiam, quomodo *ſit* occurrendum argumẽtationibus ex eo *ductu*, quòd eodem modo dicuntur, quæ non eadem *ſunt*: quãdoquidem tenemus genera categoriarum. nam ille quidem interrogatus conceſſit non eſſe quidpiam eorũ quæ eſſentiam ſignificant: hic verò probauit eſſe quidpiam eorum quæ *referuntur* ad aliquid, vel *ſunt in* quãtorum *numero*, ac vidẽtur eſſentiam ſignificare propter *ſimilem* dictionem. 2 Vt in hac argumẽtatione: Acciditne idem ſimul facere & feciſſe? nequaquam. atqui eãdem rem & ſecundùm idem ſimul videre & vidiſſe contingit. 3 Eſtne aliquid facere & pati? minimè. quin hęc, τέμνεται, καίεται, αἰσθάνεται, *id eſt, ſecatur, vritur, ſentit*, ſimiliter efferuntur, & omnia pati quiddam ſignificant. rurſus λέγειν, τρέχειν, ὁρᾶν, *id eſt, dicere, currere, videre*, ſimili inter ſe modo dicuntur. atqui τὸ ὁρᾶν, *id eſt, videre*, eſt αἰσθάνεσθαί τι, *id eſt, ſpecies quædã eſt ſentire*: proinde ſimul *eſt* & facere & pati. 4 Si quis autem illic, cùm conceſſerit non poſſe *aliquem* ſimul eandem rem facere & feciſſe, fateatur *aliquem* poſſe videre & vidiſſe: nondũ eſt conuictus elencho, ſi videre non dicat eſſe facere quiddã, ſed pati: quoniam opus eſt etiã hac interrogatione. ſed auditores exiſtimant *eũ hoc* conceſſiſſe, quãdo conceſſit, ſecare, eſſe facere quiddã: & ſecuiſſe, feciſſe quiddã: & quæcumque alia ſimiliter dicuntur. reliquũ .n. ipſe auditor ſupplet, quaſi ſimiliter dicatur. ſed hoc non ſimiliter dicitur, verùm *ita* videtur propter *ſimilem* dictionem. Idem autem hîc accidit, quod in homonymiis. nam qui verborum vim ignorat, in homonymis putat, quã rem affirmauit *reſpondens*, eam negaſſe *opponentem*, non *tãtùm* nomen: cùm tamen inſuper ſit opus interrogatione, an ad vnã rem reſpiciẽs vtatur *verbo* homonymo: hoc .n. conceſſo, erit elenchus. 5 His *quas expoſui*, ſimiles ſunt hæ quoque argumẽtationes *quæ ſequuntur*: Nũ quod quis habens, poſtea non habet, amiſit? nã qui vnum modò talum amiſit, nõ habebit decẽ talos. An quod non habet, cũ priùs haberet, amiſit: quantũ verò, aut quod non habet, non *eſt* neceſſe tot *eũ* amiſiſſe? cùm igitur in interrogatione dixerit quot habet, in concluſione ponit tot: nam decem *ſunt* aliquot. Si igitur interrogaſſet ab initio, Quot aliquis non habet, cũ priùs haberet, tótne amiſit? nemo cõcederet: ſed, vel tot vel horum quidpiam. 6 Item *captio, quæ concluditur* poſſe aliquem dare, quod non habet: quia non habet vnum ſolum talum. An *qui dedit vnum ſolum talum*, non dedit quod non habebat, ſed quomodo non habebat, *nempe* vnum? nam *illa dictio* SOLVM, non ſignificat hoc, nec quale, nec quantum, ſed quomodo refertur ad alterum: velvti, non *haberi vnà* cum alio. *perinde* igitur *eſt*, ac ſi *quis* interrogaſſet,

Quod quis nõ habet, poteſtne dare? *altero* verò negante *hoc fieri poſſe*, quæreret, an poſſit aliquis dare citò, non habens citò: atq; *illo* aſſentiente, concluderet dare aliquem poſſe, quod non habet. perſpicuúmq; *eſt, eum* non *rectè* cõcluſiſſe: quia citò *dare*, non eſt hoc dare, ſed ita dare: vt verò quis non habet, dare poteſt: verbi gratiâ, libenter habens, dare poteſt grauatè. 7 *Expoſitis captionibus* hæ quoq; ſimiles ſunt: Nũ *ea*, quã non habet, manu verberare poteſt? aut, *Num eo*, quem non habet, oculo videre poteſt? quia non habet vnum tãtùm. 8 *Huiuſmodi captiones* ſoluunt nõnulli, dicentes & vnum ſolum ſine oculum, ſiue aliud quodvis habere eũ qui plura habet. 9 Alij verò *aiunt* & accepiſſe *quempiam*, quod habet. dedit.n. alter vnum ſolum calculum: & hic habet (inquiunt) vnum ſolum ab illo calculum. 10 Alij autem, ſtatim interrogationẽ tollentes, *affirmant* fieri poſſe vt *quis* habeat, quod nõ accepit: velvti, qui vinum accepit dulce, *ſi* corruptũ *ſit* inter accipiendum, habeat acidum. 11 Verùm, vt antea dictum fuit, omnes hi non ad argumẽtationem, ſed ad hominẽ ſolutionem accommodãt. nam ſi eſſet hæc ſolutio, *quam afferunt*: qui contrarium daret, ſoluere non poſſet: ſicut in aliis *quoque captionibus vſuvenit*. vtputà ſi ſolutio eſt, *quia* partim eſt, partim non *eſt*: ſi ſimpliciter conceſſerit, concluditur: ſin autẽ non concluditur, non poteſt *ea* eſſe ſolutio. in *captionibus* verò *paulò* antè dictis, conceſſis omnibus, negamus fieri ſyllogiſmum. 12 Præterea hæ quoque in huiuſmodi argumẽtationum *numero* ſunt: Num quod ſcriptum eſt, ſcripſit aliquis? ſcripta autem eſt, nunc te ſedere, falſa oratio: ſed vera erat, quando ſcribebatur: ſimul igitur ſcribebatur falſa & vera. nam verã aut falſam orationem, opinionémve eſſe, non hoc, ſed tale ſignificat. eadem namque ratio *eſt* etiam opinionis, *quæ orationis*. 13 Item, Num quod diſcit diſcẽs, hoc eſt quod diſcit? diſcit autem quis *τὸ βραδὺ, ταχύ, id eſt, tardum, celeriter*. non.n. *oppones* dixit, quod quis diſcit, ſed quomodo diſcit. 14 Et, nũ quod quis perambulat, calcat? perambulat autem totum diem. An non dixit, quod *quis* perambulat, ſed quando perambulat? 15 Neque cùm *dicimus*, Calicem bibit, *indicamus*, quòd bibit, ſed ex quo. 16 Item, Nũ quod quis nouit, inueniens vel diſcens nouit? quorũ autem alterum inuênit, alterum didicit: *his, ſi* ambo *ſimul accipiantur*, neutrum *conuenit*. An hîc omne *accipitur*, ibi verò nõ omne. 17 Item, Eſſe quemdam tertium hominem præter ipſum *hominẽ*, & ſingulos *homines*. Nam homo, & quicquid cõmune *eſt*, non hoc aliquid, ſed quale quidpiam, vel ad aliquid, vel quomodo, vel eiuſmodi quidpiam ſignificat. Idem *contingit* in *quæſtione*, vtrùm Coriſcus & Coriſcus muſicus *ſint* eadem res, an diuerſa. nam alterũ hoc aliquid: alterũ, quale ſignificat. Quare nõ licet hoc exponere. Neque verò expoſitio tertium hominem facit: ſed *illa* conceſſio, *id quod eſt cõmune*, eſſe id ipſum quod hoc aliquid. *ſic.n. fit vt* hoc aliquid eſſe, non ſit id ipſum quod Callias, & ſit id ipſũ quod homo. Nec, ſi quis dicat id quod exponitur, nõ eſſe id ipſum quod hoc aliquid, ſed id ipſum quod quale, quicquam refert: erit enim *nihilominus* præter multos vnum aliquid, vt homo. Apparet igitur, non eſſe concedendum, hoc aliquid eſſe, quod communiter multis attribuitur: ſed vel quantum, vel quale, vel ad aliquid, vel huius generis *aliud* quidpiam ſignificare.

Quod verò ad captiones, quæ ex accidente *ducūtur*, vna & eadem *eſt* omnium ſolutio. nam quia incertum *eſt*, quādo dicendum *ſit* de re, quod accidēti ineſt: ac in nonnullis quidē hoc videtur, & *vulgò* concedūt, in aliis vero negant eſſe neceſſarium: dicēdum *eſt* igitur, accōmodatā ad omnes *eadē ſolutione*, non eſt neceſſarium. Oportet autem habere *in prōptu* exemplū, quod proferatur. 2 Sunt autem omnes hæ argumentationes ex accidente, Sciſne quod ſum interrogaturus? Noſtin' eum qui accedit? aut, qui abſcōſus eſt? Num hæc ſtatua tuū eſt opus? Numquid hic canis tuus *eſt* pater? Numquid pauca paucis vicibus *accepta*, pauca *ſunt*? Perſpicuum .n. *eſt*, in his omnibus non neceſſe *eſſe*, vt quod de accidēte *verè dicitur*, etiam de re *ipſa* verè dicatur. nam in iis ſolis quæ ſecundùm eſſentiam indifferentia & vnum ſunt, omnia videntur eadem ineſſe. ei verò quod *eſt* bonum, non idem eſt, eſſe bonum, & fore interrogādum. neque ei qui accedit, vel abſconſus eſt, idem eſt, accedēte m, abſconſum eſſe, & Coriſcū *eſſe*. Itaque non, ſi Coriſcū noui, eum verò qui accedit, non noui: *propterea* eūdem noui & nō noui. Neque, ſi hoc eſt opus, meūque eſt, *ideo* meū eſt opus: ſed vel poſſeſſio, vel res, vel aliud quodvis. Eodē modo & in aliis *ſe res habet*. 3 Soluunt autem *has captiones* nōnulli diſtinguendo interrogationem: aiunt. n. fieri poſſe, vt eadē res ſciatur & ignoretur, non tamen ſecundùm idem. cùm igitur eum qui accedit, non cognoſcant, Coriſcū verò cognoſcant, idē *ſe* cognoſcere & ignorare fatentur, non tamen eodem modo. 4 Atqui primùm quidem, ſicuti iam diximus, oportet earū argumētationum, quæ ex eodem *ducuntur*, eādem eſſe correctionem: hæc autem nō e[illegible]

ſi quis non ex *verbo* Cognoſcere, ſed ex *verbo* Eſſe, aut Modo quodã affectum eſſe, idem axioma ſumat. velvti, Si hic eſt pater, & eſt tuus. Vt.n. in quibuſdam id verum ſit, idémque poſſit ſciri & ignorari: at certè huc dicta *ſolutio* nullo modo quadrat. 5 Cæterùm nihil vetat eandem argumentationem pluribus vitiis laborare: attamen non cuiuſcumq; peccati patefactio, ſolutio eſt. nam fieri poteſt, vt quis oſtẽdat falſum eſſe concluſum: vnde autem, non oſtendat: vtputà *ſoluens* argumẽtationem Zenonis, *qua concluditur* nihil poſſe moueri. Quapropter & ſi quis *reſpondens* nitatur argumẽtando ducere tamquam ad impoſſibile, peccat, etiãſi decies millies cõcludat: quia non eſt hæc ſolutio. erat.n. ſolutio, patefactio falſi ſyllogiſmi, *oſtẽdens* cur falſus *ſit*. Si igitur *opponẽs* nihil concluſit: ſiue verum, ſiue falſum conetur argumẽtatione colligere: eius *rei* declaratio, ſolutio eſt. 6 An fortaſſis hoc in quibuſdã vſuuenire nihil prohibet: ſed in his *captionibus* neque hoc videri poteſt. nam & Coriſcũ nouit *eſſe* Coriſcum: & eum qui accedit, eſſe eũ qui accedit. Sed cõtingit idem ſcire ac *neſcire*: velvti, album *eſſe*, ſcire: muſicũ verò *eſſe*, ignorare: ſic.n. idẽ nouit, & non nouit: non tamen ſecundũ idem. verùm *hic &* id quod accedit & Coriſcum ſcit *eſſe* id quod accedit, & *eſſe* Coriſcũ. 7 Similiter vt ij quos diximus, peccant & qui *ita* ſoluunt *captionẽ*, dicentes omnem numerum & multum & paucum *eſſe*. etenim ſi, cũ nihil concludatur, hoc prætermiſſo, verũ concluſum eſſe fateantur, (omnem.n. numerum & multũ *eſſe*, & paucũ) *profectò* peccant. 8 Sũt etiam, qui ex duplicitate diſſoluunt hos ſyllogiſmos, *quibus* concluditur tuũ eſſe patrem, aut filiũ, aut ſeruum. 9 Atqui perſpicuũ *eſt*, ſi ex multiplicitate videtur ſumi elẽchus, opus eſſe vt nomen vel oratio propriè multorum dicatur: hunc verò eſſe huius filiũ, nemo dicit propriè, ſi dominus eſt filij: ſed ex accidente eſt hæc compoſitio: Eſtne hoc tuum? etiam. hoc autẽ eſt filius: hoc igitur eſt tuus filius: quoniam accidit, vt ſit & tuus & filius, nõ tamen tuus filius. 10 *Huic ſimilis eſt & captio, qua concluditur* aliquod bonum eſſe τῶν κακῶν, *id eſt, malorũ*: quia prudẽtia eſt ſcientia malorum. Sed hoc eſſe horũ, non dicitur multifariàm, ſed *tantùm* poſſeſſionem *ſignificat*. Aut ſi fortè multifariàm dicitur: (etenim dicimus hominem eſſe τῶν ζώων, *id eſt, animalium*, non tamen *eſſe eorum* poſſeſſionem) etiam, ſi quid ad mala referatur, vt *aliquid dicitur eſſe* alicuius, ob id τῶν κακῶν, *id eſt, malorum*, eſt: ſed hoc non *eſt* omnino & ſimpliciter τῶν κακῶν. Ergo propter *ſignificationẽ* quadamtenus & ſimpliciter *acceptam* videtur *elenchus*. At fortaſſe contingit, vt aliquid bonum ſit τῶν κακῶν bifariàm: non tamen in hac argumentatione: ſed potiùs *in illa*, Eſtne aliquod mãcipium bonũ praui *domini*? Quãquam fortaſſe ne ſic quidem *eſt multiplicitas*. neque enim ſi bonum *eſt*, & huius *eſt*, coniunctim quoque *eſt* bonum huius. Quin ne illud quidem, cùm dicimus hominem eſſe τῶν ζώων, multifariàm accipitur. non enim ſi quando aliquid ſignificamus ſuppreſsã *aliqua parte*, id dicitur multipliciter. nam & dimidio verſu pronunciato, Da mihi Iliadem, ſignificamus: velvti, *Da mihi* Μῆνιν ἄειδε θεά.

Quare ſi alterũ ſimpliciter *dicitur*, alterum quadamtenus: nondum *eſt* elẽchus. Hoc autem in concluſione ad contradictionem *collata* B ſpectandum *eſt*. 2 Omnes autem huiuſmodi argumentationes hoc habent: Fierine poteſt, vt quod non eſt, ſit? atqui aliquid eſt, id quod nõ eſt. Simili ratione, quod eſt, non erit: quia nõ erit aliquid eorũ quæ ſunt. Fieríne poteſt, vt idem ſimul liquidò iuret, ac peieret? Fieríne poteſt vt idem eidẽ ſimul credat, & non credat? An neq; eſſe aliquid, & eſſe *ſimpliciter*, idem ſunt? De vitandis ſolœciſmis. Cap. XXXII.

1 Tranſitio. 2 Exemplum primum, 3 ſecundum, 4 tertium, 5 quartum, 6 quintum, 7 Hos paralogiſmos non efficere ſed tantùm videri efficere ſolœciſmum.

DE ſolœciſmis autẽ, vnde videãtur effici, dixi- C mus antea: quomodo verò ſoluendi *ſint*, in ipſis argumentationibus apparebit. 2 Hę namque omnes hoc volunt efficere: Num quod dicis verè, etiam eſt hoc re vera? ais autẽ aliquid eſſe lapidẽ: eſt igitur aliquid lapidẽ. An qui dicit lapidem, nõ dicit quod, ſed, quem: neque hoc, ſed hũc? Quare ſi quis *ita* interroget, Num quẽ verè dicis, eſt hũc? non videbitur Latinè loqui: quemadmodum nec ſi interroget, Num quam dicis eſſe, eſt hic? At *cùm* hic lignum dixit, vel quæcũque *alia* neque feminam neque maſculũ ſignificant, nihil refert. Ideó- D que non fit ſolœciſmus; ſi, quod dicis eſſe, eſt hoc; lignum autem dicis eſſe, eſt igitur lignum. Sed lapis, *& articulus* Hic, maſculi habet appellationem. Si quis autẽ interroget, Num hic eſt hæc? deinde rurſus, quid? nónne hic eſt Coriſcus? poſtea dicat, hic igitur eſt hæc: non collegit ſyllogiſmo ſolœciſmum, nequidẽ ſi Coriſcus ſignificet id quod hęc, non tamen concedatur à reſpondẽte: ſed id priùs interrogatum oportuit. Quòd ſi neque eſt, neque conceditur, non eſt ſyllogiſmus, nec re vera, nec adversùs eum, qui interrogatur. Ergo ſimiliter & ibi oportet lapidem ſignificare hic: ſi verò nec eſt nec conceditur, non *eſt* admittenda concluſio: vi- E detur tamẽ; quia nominis caſus diſſimilis, videtur ſimilis. 3 Num verè dicitur quòd hæc eſt id quod dicis hanc eſſe? ais autẽ eſſe parmam: eſt igitur hęc parmam. An non eſt neceſſe *hanc concluſionem* admittere, ſi Hęc, non ſignificat parmam, ſed parma, parmam verò *eſt* hanc. 4 Nec ſi, quod ais eſſe hunc, eſt hic, ais autem eſſe Cleonem, idcirco hic eſt Cleonẽ: non. n. eſt hic Cleonem: quippe dictũ fuit, Quem aio hunc eſſe, eſt hic, non, hunc: quia nõ eſt Latina ſic prolata interrogatio. 5 Num ſcis hoc? eſt autem lapis; ſcis igitur lapis. An non idem ſignificat in *oratione*, Num ſcis hoc? & in *oratione*, hoc autem *eſt* lapis? ſed in priore hunc: in poſteriore, hic. 6 Num cuius ſcientiam habes, hoc ſcis?

Quocirca non *eſt* mirum, artem illam continere multitudinem quandam *præceptorum*. 7 Huius autem *dialecticæ* tractationis, non aliud erat, aliud non erat excultum: ſed nihil prorſus extabat. 8 Nam eorum qui in litigioſis diſputationibus quæſtum faciebant, inſtitutio quædam C erat ſimilis Gorgiæ tractationi. Alij namque orationes rhetoricas, alii ad interrogandum comparatas, tradebant ediſcendas, in quas vtrique putabant mutuos ſermones ſæpenumero incidere. idcirco celeriter quidem ſed citra artem diſcipulos ſuos docebant: non n. artem, ſed quæ ab arte *efficiuntur*, tradēdo, putabant *ſe rectè inſtituere*: perinde ac ſi quis profeſſus *ſe* traditurum ſcientiam *cauendi* ne pedes doleant, poſtea non doceat corium incidere, nec vnde eiuſmodi *inſtrumēta* parari poſſint, ſed multa det genera variorum calceorum: hic n. ad vſum quidem profuit, ſed artem non tradidit. D 9 Ac de rhetoricis quidem multa & antiqua dicta extabant: de ſyllogiſmis autem conficiendis nihil aliud habebamus antea quod diceremus: ſed exercitatione quærentes, multum temporis laborauimus. 10 Si igitur vobis *ſcripta noſtra* inſpicientibus videtur non eſſe hæc, methodus ex talibus initiò extantibus perfecta, *ſi comparetur* ad alias tractationes, quæ ex traditione ſunt aucta: *quod* reliquum *eſt*, veſtræ auditorúmve partes erunt, *ea quæ ad* huius methodi *conſummationem* ſunt prætermiſſa, veniâ *dignari*: quæ verò ſunt inuenta, multâ proſequi gratiâ.

Cap. I.

QVONIAM cognitio & ſcientia in omnibus methodis, quarum ſunt, principia vel cauſæ vel elementa, ex horum notitia proficiſcitur: (tunc enim putamus vnumquodque cognoſcere, cùm cauſas primas nouerimus, & principia prima, & vſque ad elementa) perſpicuum *eſt*, *hic* quoque tentandum, vt primùm definiantur ea quæ ad principia naturalis ſcientiæ *pertinent*. 2 Naturaliter autem conſtituta eſt via ab iis quæ *ſunt* nobis notiora & clariora, ad ea quæ *ſunt* clariora & notiora natura. non enim eadem *ſunt* & nobis notiora & ſimpliciter. quare neceſſe *eſt* hoc modo progredi, *nimirum* ex iis quæ natura quidem *ſunt* obſcuriora, nobis tamen *ſunt* clariora, ad ea quæ *ſunt* notiora & clariora natura. Ea verò ſunt nobis primùm perſpicua & manifeſta, quæ *ſunt* magis confuſa. deinde iis qui hæc diuidunt, ex ipſis elementa & principia innoteſcunt. 3 Idcirco ab vniuerſalibus ad ſingularia progredi oportet. totum enim ſecundùm ſenſum notius eſt: vniuerſale autem eſt totum quiddam: quoniam vniuerſale multa, tamquam partes, comprehendit. 4 Sic affecta quodammodo ſunt etiam nomina erga definitionem. totum enim quiddam & indefinite ſignificant: veluti, circulus: definitio verò eius diuidit in ſingulas *partes*. 5 Ac pueri quoque primùm omnes viros appellant patres: & omnes mulieres, matres: poſtea verò diſcernunt horum vtrumque.

A ΕΠΕΙΔΗ τὸ εἰδέναι καὶ τὸ ἐπίστασθαι συμβαίνει περὶ πάσας τὰς μεθόδους, ὧν εἰσὶν ἀρχαὶ, ἢ αἴτια, ἢ στοιχεῖα, ἐκ τοῦ ταῦτα γνωρίζειν (τότε γὰρ οἰόμεθα γινώσκειν ἕκαστον, ὅταν τὰ αἴτια γνωρίσωμεν τὰ πρῶτα, καὶ τὰς ἀρχὰς τὰς πρώτας, καὶ μέχρι τῶν στοιχείων) δῆλον ὅτι καὶ τῆς περὶ φύσεως ἐπιστήμης πειρατέον* πρότερον διορίσασθαι τὰ περὶ τὰς ἀρχάς.* 2 Πέφυκε δὲ ἐκ τῶν γνωριμωτέρων ἡμῖν ἡ ὁδὸς καὶ σαφεστέρων, ἐπὶ τὰ σαφέστερα τῇ φύσει καὶ γνωριμώτερα· οὐ γὰρ ταὐτὰ ἡμῖν τε γνώριμα, καὶ ἁπλῶς. διόπερ ἀνάγκη τὸν τρόπον τοῦτον προάγειν, ἐκ τῶν ἀσαφεστέρων μὲν τῇ φύσει, ἡμῖν δὲ σαφεστέρων, ἐπὶ τὰ
B σαφέστερα τῇ φύσει καὶ γνωριμώτερα. ἔστι δ' ἡμῖν τὸ πρῶτον δῆλα καὶ σαφῆ τὰ συγκεχυμένα μᾶλλον· ὕστερον δὲ ἐκ τούτων γίνεται γνώριμα τὰ στοιχεῖα, καὶ αἱ ἀρχαὶ, διαιροῦσι ταῦτα. 3 Διὸ ἐκ τῶν καθόλου ἐπὶ τὰ καθ' ἕκαστα δεῖ προϊέναι· τὸ γὰρ ὅλον, κατὰ τὴν αἴσθησιν γνωριμώτερον· τὸ δὲ καθόλου, ὅλον τί ἐστι. πολλὰ γὰρ περιλαμβάνει ὡς μέρη, τὸ καθόλου. 4 Πέπονθε δὲ ταὐτὸ τοῦτο τρόπον τινὰ καὶ τὰ ὀνόματα πρὸς τὸν λόγον· ὅλον γάρ τι καὶ* ἀδιορίστως σημαίνει, οἷον ὁ κύκλος· ὁ δὲ ὁρισμὸς αὐτοῦ διαιρεῖ εἰς τὰ καθ' ἕκαστα.
5 Καὶ τὰ παιδία τὸ μὲν πρῶτον* προσαγορεύει πάντας τοὺς ἄνδρας, πατέρας· καὶ μητέρας, τὰς γυναῖκας· ὕστερον δὲ διορίζει τούτων ἑκάτερον.

* Malim οὐ τῷ περὶ φ. ſupple ζητοῦντι, vel σκοποῦντι. ſiue τῷ φυσικῷ, vt habét Themiſtius, Philop. alij: ſic alibi, οἱ περὶ φύσεως dicere ſolet, pro, phyſici.

* γρ. περὶ φ. μὲν οὔ. non rectè, etſi ita Alexander & Porphyrius, & alij. vide Simplicium & Philoponum. Ipſe Ariſt. paulo ante dixit quęrere an vnú ſit τὸ ὂν, non eſſe περὶ φύσεως σκοπεῖν:

A Neceſſe autem eſt aut vnum eſſe principium, aut plura. &, ſi vnum *ſit*, aut *eſſe* immobile, inquiunt Parmenides & Meliſſus: aut quod moueatur, vt aiunt phyſici: quorum alij aërem, alij aquam ſtatuunt eſſe primum principium. quòd ſi plura *ſint*, *neceſſe eſt* vel *eſſe* finita vel infinita, &, ſi finita, vno autem plura: *certè* vel *eſſe* duo, vel tria, vel quatuor, vel aliquo alio numero. ſi infinita: vel *oportet* ſic *eſſe* vt *cenſuit* Democritus, *nimirum* genere vnum, figura autem vel forma diſcrepantia, aut etiam contraria. 2 Similiter etiam ij quærunt, qui quærunt, quot ſint entia: primùm enim quæ-B runt, vtrùm hæc, ex quibus entia conſtant, vnum ſint, an multa; &, ſi multa ſint, *vtrùm ſint* finita, an infinita. quocirca quærunt, vtrùm principium ac elementum *ſit* vnum, an multa. 3 Porro hæc conſideratio, an vnum ſit ens & immobile, non eſt conſideratio de natura. quemadmodum enim non amplùs geometræ eſt diſputare aduerſus eũ qui Geometriæ principia euertit: ſed *ea diſputatio eſt* vel alterius ſcientiæ, vel omnium communis: ita etiam ei qui de principiis *phyſicis agit*, non *eſt diſputandum aduerſus negantes principia phyſica*: quia nõ eſt ampliùs principium, ſi eſt tantùm vnum, & ita vnum: quandoquidem principium *eſt* alicuius, vel C aliquorum. 4 Perinde igitur *eſt*, conſiderare an ita *ſit* vnũ *principium*, ac ſi contra quamuis aliã theſim diſceptetur, quę diſputationis cauſa aſſeratur: velvti *aduerſus theſim* Heracliteam: vel ſi quis affirmarit id quod eſt, eſſe vnum hominem: 5 Aut ſoluere argumentationem litigioſam, quã ambo ſermones habent, tam Meliſſi quàm Parmenidis. etenim falſa accipiunt, neque concludunt. ſed ratio Meliſſi eſt magis importuna, nec habet dubitationem: ſed vno abſurdo dato cetera eueniunt: hoc verò non *eſt* difficile. 6 Nos autem ſupponamus, quæ natura *conſtant*, vel omnia vel quædam moueri. quod quidem per inductionẽ perſpicuum *eſt*. 7 Simul autem nec ſoluere omnia decet: ſed *ea* tantùm, quæ ex principiis demonſtrans quiſpiam falsò concludit: quæ verò non *ita concluduntur*, nequaquam *ſoluenda ſunt*. exempli gratia, tetragoniſmum, qui per ſegmenta *fit*, geometræ *eſt* diſſoluere: Antiphontis *verò tetragoniſmum diſſoluere*, non eſt geometræ. 8 Sed quia, licèt non de natura, tamen naturales dubitationes eos dicere contingit: fortaſſe è re erit, paululum de his diſſerere: habet enim *in ſe* philoſophiam hæc conſideratio.

Non eſſe vnum ens, vt Parmenides & Meliſſus cenſuerunt.

Cap. III.

* Metaphyſ. li. δ. cap. 7.
* γρ. οὐσίας μὲν μιᾶς ἢ τ. π.
* γρ. ἢ ποιόν. ἓν δ' ... οἷον λευκὸν, ἢ θερμὸν, ἢ ἄλλο τι τῶν τ.

Ἀρχὴ δὲ οἰκειοτάτη πασῶν, ἐπειδὴ * πολλαχῶς λέγεται D τὸ ὂν, πῶς λέγουσιν οἱ λέγοντες εἶναι ἓν τὰ πάντα; πότερον οὐσίαν τὰ πάντα, ἢ ποσὰ (τὰ πάντα,) ἢ ποιά; καὶ πάλιν, πότερον * οὐσίαν μίαν τὰ πάντα, οἷον ἄνθρωπον ἕνα, ἢ ἵππον ἕνα, ἢ ψυχὴν μίαν; * ἢ ποιὸν ἕν. καὶ τοῦτο, οἷον λευκὸν, ἢ θερμὸν, ἢ τῶν ἄλλων τι τῶν τοιούτων. ταῦτα γὰρ πάντα διαφέρει πολὺ, καὶ ἀδύνατα λέγειν. 2 Εἰ μὲν γὰρ ἔσται καὶ οὐσία, καὶ ποσὸν, καὶ ποιόν· καὶ ταῦτα εἴτε ἀπολελυμένα ἀπ᾽ ἀλλήλων, εἴτε μή· πολλὰ τὰ ὄντα.

Principium autem omnium accommodatiſſimum *eſt*, *vt videamus*, quoniam ens multis modis dicitur, quonã modo *id* accipiant, qui inquiunt omnia eſſe vnum: vtrùm *intelligant* omnia *eſſe* ſubſtantiam, an *omnia eſſe* quanta, vel qualia. rurſus vtrùm omnia *eſſe* vnam ſubſtantiam, vt hominem vnum, vel equum vnum, vel animam vnam; an vnum quale: atque hoc, vt album; vel calidum, vel aliud quidpiam tale. hæc enim omnia longè *inter ſe* differunt, ac dici nequeunt. 2 Etenim ſi ſit & ſubſtantia, & quantum, & quale: ſiue hæc ſint à ſe inuicem ſeiuncta, ſiue non *ſint ſeiuncta*: *certè* multa entia *ſunt*.

3 Si verò omnia *ſint* quãtum, vel quale: ſiue etiam ſubſtantia ſit, ſiue non ſit: abſurdum *eſt*: ſi tamen abſurdum dicere oportet, quod *eſt* impoſſibile. nihil enim aliud ſeparabile eſt præter ſubſtantiam: quoniam *reliqua* omnia de ſubiecta ſubſtantia dicuntur. atqui Meliſſus inquit ens infinitum eſſe. ens igitur *eſt* quantum quiddam: quoniam infinitum *eſt* in quantitate: ſubſtantia verò, aut qualitas, aut affectio non poteſt eſſe infinita, niſi ex accidenti, *videlicet* ſi quædam ſimul quanta ſint. nam in definitione infiniti quantũ adhibetur, non ſubſtantia, nec quale. ergo ſi & ſubſtantia eſt, & quantum: duo *ſunt* entia, non vnum. 4 Quòd ſi ſubſtantia tantùm *ſit*, *profectò* ens nec infinitum erit, nec vllam magnitudinem habebit: quandoquidem eſſet quantum quiddam. 5 Præterea quoniam ipſum quoque vnum dicitur multis modis, quemadmodum & ens: conſiderandum *eſt*, quonam modo dicant vniuerſum eſſe vnum. Dicitur autem vnum, vel quod *eſt* continuum, vel quod *eſt* indiuiduum, vel quorum vna & eadem eſt definitio quidditatem explicans, vt temetum & vinum. 6 Itaque ſi ens continuum *eſt*: multa eſt, quod *eſt* vnum: quia continuum *eſt* diuiſibile in infinitum. 7 Eſt autem dubitatio de parte ac toto, (quæ fortaſſe nihil ad hanc rationem facit, ſed ipſa per ſe *ſpectanda eſt*) vtrùm pars & totum *ſint* vnum, an multa: & quomodo *ſint* vnum, vel multa: & ſi *ſunt* multa, quomodo multa: (ac de partibus non continuis *eſt* eadem diſputatio) & ſi vtraque *pars* cum toto vnum ſit vtpote indiuidua: *hinc effici* vt & ipſæ *partes* inter ſe *vnum ſint*. 8 At verò ſi *vnum eſt ens* vt indiuiduum: nihil erit quantum, aut quale: proinde ens nec *erit* infinitum, vt inquit Meliſſus: nec finitum, *vt ait* Parmenides. finis enim *ſeu terminus* indiuiduum *eſt*, non id quod *eſt* finitum. 9 Sed ſi omnia entia ſunt definitione vnum, vt veſtimentum & indumentum: accidit eis, vt Heracliti ſermonem pronuntient. eadem enim erit eſſentia boni, & mali: item non boni, & boni. quocirca idem erit & bonum, & non bonum: necnon homo & equus: nec de hoc erit diſputatio, an omnia entia ſint vnum, ſed eo *potiùs*, an nihil *ſint*: item tale eſſe, & tantum *eſſe*, idem *erunt*. 10 Poſteri quoque, ſicut veteres, conturbati ſunt, *verentes* ne quando eis accideret *vt dicerent* idem ſimul eſſe vnum & multa. quare nonnulli verbum EST auferebant, vt Lycophron: *alij verò* orationem reformabant, non *dicentes* hominem album eſſe, ſed albeſcere: nec hominem eſſe ambulantem, ſed ambulare: ne verbum EST adiungentes, multa eſſe efficerent, quod *eſt* vnum: quaſi vno modo dicatur vnum aut ens. 12 Entia verò multa *ſunt*, vel definitione, (vt alia *eſt* albi eſſentia, & muſici: eidẽ tamen *ſubiecto inſunt*: multa igitur *eſt*, quod *eſt* vnum) vel diuiſione, vt totum & partes. Hîc verò ambigebant, & fatebantur, quod vnum *eſt*, eſſe multa: quaſi idem non poſſet eſſe vnum & multa: non *propterea* tamen oppoſita *concedebant*: eſt enim vnum, & poteſtate, & actu. 12 Iis igitur qui hoc modo aggrediuntur, apparet fieri non poſſe, vt ea quæ ſunt, vnum ſint.

A 3 Εἰ δὲ ἅπαντα ποιόν, ἢ ποσόν, εἴτε οὔσης οὐσίας, εἴτε μὴ οὔσης, ἄτοπον· εἰ δεῖ ἄτοπον λέγειν τὸ ἀδύνατον. οὐδὲν γὰρ τῶν ἄλλων χωριστόν ἐστι παρὰ τὴν οὐσίαν. πάντα γὰρ καθ᾽ *ὑποκειμένου λέγεται, τῆς οὐσίας. Μέλισσος δέ φησι τὸ ὂν ἄπειρον εἶναι. ποσὸν ἄρα τι τὸ ὄν· τὸ γὰρ ἄπειρον ἐν τῷ ποσῷ· οὐσίαν δὲ εἶναι ἄπειρον, ἢ ποιότητα, ἢ πάθος, οὐκ ἐνδέχεται, εἰ μὴ κατὰ συμβεβηκός, εἰ ἅμα καὶ ποσὰ ἄττα εἶεν· ὁ γὰρ τοῦ ἀπείρου λόγος τῷ ποσῷ προσχρῆται, ἀλλ᾽ οὐκ οὐσίᾳ, οὐδὲ τῷ ποιῷ. Εἰ μὲν τοίνυν καὶ οὐσία ἐστὶ, καὶ ποσόν, δύο, καὶ οὐχ ἕν, τὸ ὄν. 4 Εἰ δ᾽ οὐσία μόνον, οὐκ ἄπειρον, οὐδὲ μέγεθος ἕξει οὐδέν· ποσὸν γάρ τι ἔσται. 5 Ἔτι ἐπεὶ καὶ αὐτὸ *τὸ ἓν πολλαχῶς B λέγεται, ὥσπερ τὸ ὄν, σκεπτέον τίνα τρόπον λέγουσιν ἓν εἶναι τὸ πᾶν. λέγεται δ᾽ ἕν, ἢ τὸ συνεχές, ἢ τὸ ἀδιαίρετον, ἢ ὧν ὁ λόγος ὁ αὐτὸς καὶ εἷς, ὁ τοῦ τί ἦν εἶναι, ὥσπερ μέθυ καὶ οἶνος. 6 Εἰ μὲν τοίνυν συνεχές, πολλὰ *τὸ ἕν· εἰς ἄπειρον γὰρ διαιρετὸν τὸ συνεχές. 7 Ἔχει δ᾽ ἀπορίαν περὶ τοῦ μέρους, καὶ τοῦ ὅλου· ἴσως δὲ οὐ πρὸς τὸν λόγον, ἀλλ᾽ αὐτὴν καθ᾽ αὑτήν· πότερον ἓν ἢ πλείω τὸ μέρος καὶ τὸ ὅλον· καὶ πῶς ἕν, *ἢ πλείω· καὶ εἰ πλείω πῶς πλείω· καὶ περὶ τῶν μερῶν τῶν μὴ *συνεχῶν· καὶ εἰ τῷ ὅλῳ ἓν ἑκάτερον ὡς ἀδιαίρετον, ὅτι καὶ αὐτὰ αὑτοῖς. 8 Ἀλλὰ μὴν εἰ ὡς ἀδιαίρετον, *οὐδὲ ποσόν, οὐδὲ C ποιόν, οὐδὲ δὴ ἄπειρον τὸ ὄν, ὥσπερ Μέλισσός φησιν· οὐδὲ πεπερασμένον, ὥσπερ Παρμενίδης. τὸ γὰρ πέρας, ἀδιαίρετον, *οὐ τὸ πεπερασμένον. 9 Ἀλλὰ μὴν εἰ τῷ λόγῳ ἓν τὰ ὄντα πάντα, ὡς λώπιον καὶ ἱμάτιον, τὸν Ἡρακλείτου λόγον συμβαίνει λέγειν αὐτοῖς· ταὐτὸν γὰρ ἔσται καὶ ἀγαθῷ καὶ κακῷ, καὶ μὴ ἀγαθῷ εἶναι καὶ ἀγαθῷ· ὥστε τὸ αὐτὸ ἔσται ἀγαθὸν καὶ οὐκ ἀγαθόν, καὶ ἄνθρωπος καὶ ἵππος· καὶ οὐ περὶ τοῦ ἓν εἶναι τὰ ὄντα, ὁ λόγος ἔσται· ἀλλὰ περὶ τοῦ μηδὲν καὶ τὸ τοιονδὶ εἶναι καὶ τὸ τοσονδὶ ταὐτόν. 10 Ἐθορυβοῦντο δὲ καὶ οἱ ὕστεροι, καθάπερ οἱ ἀρχαῖοι, μή ποτε συμβαίνῃ αὐτοῖς ἅμα τὸ αὐτὸ ἓν εἶναι καὶ πολλά. διὸ οἱ μὲν τὸ ἐστὶν ἀφεῖλον, ὥσπερ Λυκόφρων· D οἱ δὲ τὴν λέξιν μετερρύθμιζον, ὅτι ὁ ἄνθρωπος οὐ λευκός ἐστιν, ἀλλὰ λελεύκωται· οὐδὲ βαδίζων ἐστίν, ἀλλὰ βαδίζει· ἵνα μὴ τὸ ἐστὶ προσάπτοντες, πολλὰ εἶναι ποιῶσι τὸ ἕν, ὡς μοναχῶς λεγομένου τοῦ ἑνός, ἢ τοῦ ὄντος. 11 Πολλὰ δὲ τὰ ὄντα, ἢ λόγῳ οἷον ἄλλο τὸ λευκῷ εἶναι καὶ μουσικῷ, τῷ δ᾽ αὐτῷ, ἄμφω· πολλὰ ἄρα τὸ ἓν ἢ διαιρέσει, ὥσπερ τὸ ὅλον, καὶ τὰ μέρη. ἐνταῦθα δὲ ἠπόρουν, καὶ ὡμολόγουν τὸ ἓν πολλὰ εἶναι· ὥσπερ οὐκ ἐνδεχόμενον τὸ αὐτὸ ἓν καὶ πολλὰ εἶναι, μὴ τὰ ἀντικείμενα δέ· ἔστι γὰρ τὸ ἓν καὶ δυνάμει, καὶ ἐντελεχείᾳ. 12 Τόν τε δὴ τρόπον τοῦτον ἐπιοῦσιν ἀδύνατον φαίνεται τὰ ὄντα ἓν εἶναι.

A ſed magis importuna eſt ratio Meliſſi, nec habet vllam dubitationem: verùm vno abſurdo dato, cetera ſequuntur: hoc autē nō eſt difficile. 2 Vitioſè igitur Meliſſum argumētari perſpicuum eſt. ſumpſiſſe.n. putat, ſi quicquid eſt factum, habet principium, etiam quod nō eſt factum, non habere principiū. 3 Deinde & hoc abſurdū eſt, exiſtimare quālibet generationē, non tantùm ſimplicem, ſed etiā variationem, rei quoque principium habere, non ſolùm tēporis, quaſi non fiat ſimul vlla mutatio. 4 Inſuper cur eſt immobile, ſi ſit vnum? ſicut [illegible] pars, cū ſit vna, vt hæc aqua, mouetur in eodē loco, cur non etiam vniuerſum ita mouebitur? præterea variatio

B quam ob cauſam eſſe non poterit? 5 At verò nec forma poteſt eſſe vnum, ſed tātùm eo ex quo: hoc autem modo vnum eſſe etiam phyſici quidam dicunt: illo autem modo nequaquam: homo nāque ab equo forma diuerſum eſt, & contraria inter ſe differunt. 6 Sed & adverſus Parmenidem idem eſt rationum modus, & ſi qui alij ſunt proprij: ac ſolutio eſt, partim quia falſa ſumit, partim quia non cōcludit. 7 Falſa ſumit, quatenus accipit ens ſimpliciter dici, cū dicatur multis modis. 8 Non cōcludit autē: quia ſi ſola alba ſumpta fuerint, cùm album vnam rē ſignificet, nihilominus multa alba erunt non vnum: quoniam album neque cōtinuatione vnum erit, neque definitione. diuerſa.n. erit

C eſſentia albi, & ſubiecti ſuſcipientis album: ac nihil erit ſeparabile præter album: non.n. differt, quatenus eſt ſeparabile; verùm albi eſſentia, & eius cui albor ineſt, diuerſa eſt. ſed hoc Parmenides nōdum viderat. 9 Neceſſe igitur eſt, vt qui dicunt ens eſſe vnum, non ſolùm ſumāt ens ſignificare vnum cui attribuatur; ſed etiam ſumant quod eſt propriè atque eſſentialiter ens, & quod eſt propriè atque eſſentialiter vnum. accidens.n. de ſubiecto aliquo dicitur. quare ſi ens ſit vnum accidens: certè id cui ens accidit, non erit: quandoquidem eſt diuerſum ab

D ente: erit igitur aliquid nō ens. ergo nō erit aliud, quàm id quod eſt propriè atque eſſentialiter ens: ſiquidē aliud entis eſſentiam non habebit, niſi ens multa ſignificet, ita vt vnumquodque ſit aliquid. atqui ſupponitur ens vnam rem ſignificare. 10 Si igitur quod propriè atq; eſſentialiter eſt ens, nulli accidit ſed ei aliud accidit: cur ens ſignificat potiùs id quod propriè atque eſſentialiter eſt ens, quàm nō ens? nam ſi idem ſit propriè atque eſſentialiter ens, nec non album, albi verò eſſentia non ſit propriè atque eſſentialiter ens: (etenim [illegible] poteſt ei accidere) certè, cùm non ſit ens præter id quod eſt propriè atque eſſentialiter ens, album non

E erit ens: nec tamen ita, quaſi aliquid non ens, ſed omnino eſt nō ens. Quod igitur eſt propriè atque eſſentialiter ens, eſt non ens: verè.n. dicitur eſſe album: hoc autem ſignificabat non ens. 11 Quapropter ſi etiam albū ſignificat id quod propriè atque eſſentialiter eſt ens, profectò ens multa ſignificat. 12 Ergo nec magnitudinem vllam ens habebit, ſiquidem ens nil aliud eſt quā quod eſt propriè & eſſentialiter ens: quoniam vtriuſque partis eſſentia eſt diuerſa. 13 Id autem quod eſt propriè & eſſentialiter ens, diuidi in aliud propriè atque eſſentialiter ens quiddam, etiam ratione perſpicuum eſt. Velut ſi homo eſt propriè atque eſſentialiter ens quiddam: neceſſe eſt, & animal, & bipes eſſe propriè atque eſſentialiter ens quiddam. niſi.n. propriè atque eſſentialiter entia ſint, accidentia erunt. aut igitur homini accident, aut alij cuipiam ſubiecto. atqui hoc eſt impoſſibile. 14 Id enim eſt ac dicitur accidens, vel quod poteſt ineſſe & non ineſſe, vel in cuius definitione ineſt id cui accidit. exempli cauſa, ſedere, eſt accidens, tamquam quod ſeparatur: in ſimo autem ineſt ratio naſi, cui dicimus ſimum accidere.

15 Præterea quæcũque inſunt in oratione definitiua, aut ex quibus *res* conſtat, in horũ definitione non ineſt ratio totius. vt in bipede *non ineſt* ratio hominis: aut in albo *non ineſt ratio* albi hominis. 16 Si igitur iſta hoc modo *ſe* habent, & bipes homini accidit: neceſſe *eſt* ipſum eſſe ſeparabile, adeo vt homo poſſit eſſe non bipes, aut in bipedis definitione inerit hominis ratio, ſed *hoc eſt* impoſſibile: quoniã illud in huius definitione ineſt. 17 Quòd ſi alij ſubiecto accidant bipes & animal, ac neutrũ ſit propriè atque eſſentialiter ens quoddam: certè & homo erit *in* eorum *numero* quæ alij accidunt. atqui illud eſto propriè atque eſſentialiter ens quoddam, quod nulli accidit. Item de quo ambo ſiue vtrumque, *de eo* id quoque quod ex his *cõſtat*, dicatur. 18 Ex indiuiduis igitur vniuerſum *cõſtat*. 19 Nonnulli autem vtrique rationi ſunt aſſenſi: alteri quidem, *qua cõcluditur* omnia eſſe vnum, ſi ens ſignificet vnũ: nam alioqui eſſet etiam nõ ens. alteri verò, per bipertitam diuiſionẽ efficiendo magnitudines indiuiduas. 20 Perſpicuum autem *eſt* non *eſſe* verum, ſi ens ſignificet vnũ, & cõtradictio ſimul eſſe nequeat, ſequi vt nullum non ens ſit. nihil.n. vetat *ſumi* non ens, *quod* non ſimpliciter ſit *non ens*, ſed non ens quiddam. Hæc igitur aſſertio, ſi non eſt aliud quidpiam præter ipſum ens, omnia vnum fore, abſurda *eſt*. quis.n. intelligit ipſum ens *aliud* eſſe, quàm quod eſt propriè & eſſentialiter ens quiddam? quod ſi *verum eſt*, nihil prohibet ſic eſſe multa entia, vt dictum fuit. 21 Ergo ita ens vnum eſſe non poſſe, perſpicuum *eſt*.

Principia eſſe contraria. Cap. VI.

B Omnes igitur ea quæ contraria *ſunt*, principia *eſſe* ſtatuunt, tam ij qui dicũt vniuerſum eſſe vnum quod nõ mouetur, (etenim Parmenides calidum & frigidum principia facit: hæc autem appellat ignem & terram) quàm ij qui rarum & denſum. Democritus quoque ſolidum & inane *principia ſtatuit*: quorum illud rationem entis, hoc verò rationem non entis habere ait. præterea *ſolida illa diſtinguit* ſitu, figurâ, ordine: (hęc verò ſunt contrariorũ genera) ſitu, vt ſupra, infra, ante, retro: figurâ, vt angulis præditum, angulis carẽs, rectum, circulare. Omnes igitur quodammodo ea quæ cõtraria *ſunt*, *rerũ* principia ſtatuere, manifeſtum *eſt*. 2 Atque hoc rationi *eſt* conſentaneum: oportet.n. principia nec ex ſe inuicem eſſe, nec ex aliis, & ex ipſis C *eſſe* omnia. primis autem contrariis hæc inſunt. nã, quia prima ſunt, ex aliis non *ſunt*, & quia *ſunt* contraria, nõ *ſunt* ex ſe inuicem, ſed & hoc *quod poſtremum poſuimus, vt ex ipſis omnia fiant*, ratione cõſiderãdum *eſt* quomodo accidat. 3 Primùm igitur ſumendum *eſt*, in omnibus entibus ita eſſe natura comparatum, vt nec agat quodvis in quodvis, nec patiatur quodlibet à quolibet, nec fiat quodcumque ex quocumque, niſi quis hæc ſumat ex accidenti. 4 Nam qui fieri poſſit album ex muſico, niſi albo aut nigro muſicum accidat? ſed album fit ex non albo: atque ex hoc, non quovis ſed ex nigro, vel ex interiectis *coloribus*. muſicum quoque *fit* ex non muſico: nec tamen ex quovis, ſed ex muſicæ D experte, aut ſi quid eſt his interiectum. 5 Ergo nec interit in quodvis primum, vt album non *interit* in muſicum, niſi fortè ex accidẽti, ſed in non album: in non album inquam, nõ quodvis, ſed in nigrum aut *colorum* medium. Itidémque muſicum *interit* in non muſicum: & hoc non quodvis, ſed in muſicæ expers, aut ſi quid his eſt interiectum. 6 Nõ aliter ſe res habet in ceteris: quoniam & entiũ *illorũ*, quę non ſimplicia, ſed compoſita *ſunt*, eadem eſt ratio: ſed quia oppoſitæ affectiones nomine vacant, hoc accidere latet. 7 Neceſſe.n. *eſt*, quicquid harmonia cõſtat, ex harmoniæ experte fieri: & quod harmonia caret, ex eo fieri quod harmoniam habet. E nec non interire quod eſt harmonia præditum, in harmoniæ priuationem: & hanc non quãlibet, ſed oppoſitam. 8 Nihil autem intereſt, vtrùm de harmonia dicatur, an *de* ordine vel compoſitione. patet.n. horum omnium eandem eſſe rationem. ſed & domus & ſtatua & quodvis aliud ſimiliter fit. domus.n. fit ex eo quòd hæc nõ eſſent hoc modo compoſita, ſed ſeiuncta. ſtatua quoque & *omnino* eorum aliquid quæ figuram habent, *fit* ex figuræ priuatione. Atque horum vnumquodque partim ordo, partim compoſitio quædam eſt. 9 Si igitur hoc verũ eſt: quicquid fit, ex contrariis fit, & quicquid interit, in contraria interit, & *in media* his interiecta. Sed hęc media ex contrariis ſunt, vt *medij* colores ex albo & nigro. quapropter quæcumque natura fiunt, aut ſunt contraria, aut ex contrariis.

C Conſequens autē eſt, vt explicetur duóne ſint principia an tria an plura. 2 Vnum. n. principium *eſſe* nequit, quia contraria non *ſunt* vnum. 3 Infinita verò *principia eſſe* non *poſſunt*: quoniam ens ſub ſcientiā non caderet. 4 Item vna contrarietas *eſt* in omni genere vno: ſubſtantia verò *eſt* vnum quoddam genus. 5 Et quia poteſt *omnium rerū naturalium* ex *principiis* finitis *afferri*: melius autem *eſt* ex finitis, vt *facit* Empedocles, quàm ex infinitis. omnia nāque putat Empedocles, ſe *per cauſas* explicare *ex principiis finitis*, ſicut Anaxagoras ex infinitis. 6 Præterea alia contraria ſunt aliis priora, & fiunt alia ex aliis, vt dulce & auſterum, & album D & nigrū. principia verò ſemper manere oportet. 7 Ex his igitur perſpicuum *eſt* nec vnum, nec infinita *principia eſſe*. 8 Cùm autē *finita principia ſint*, ratio aliqua eſt, cur non ponantur duo tantū principia: dubitare enim aliquis poſſit quomodo naturā comparatum ſit vt denſitas efficiat raritatem *eſſe* aliquid, aut hæc denſitatem. Similis ratio eſt alius cuiuſuis contrarietatis: quia nec amicitia contentionem copulat, ſeu quidpiam ex ea facit neque cōtentio quicquam ex illa facit: ſed ambo aliud quiddam tertium *efficiunt*. Nonnulli autem & plura ſumunt, ex quibus rerum naturam conſtituunt. 9 Ad hæc, illud quoque in dubitationem reuocare aliquis poſſit, niſi quis aliam naturam contrariis ſubiiciat. Nam contraria nullius *rei* eſſentiam *eſſe* videmus. principium verò non oportet dici de aliquo ſubiecto: alioquin erit principium principii: quandoquidem ſubiectum videtur eſſe attributi principium, & eo prius. 10 Præterea dicimus non eſſe ſubſtantiam contrariam ſubſtantiæ. quomodo igitur ex non ſubſtantia ſubſtantia eſſe poterit? aut quomodo non ſubſtantia poterit eſſe prior quàm ſubſtantia?

11 Quare ſi quis & priorem ſermonem & hunc A verum eſſe putet, neceſſe *eſt*, ſi vtrumque ſermonem tueri velit, *vt contrariis* ſubiiciat aliquod tertium. 12 Quemadmodum affirmant, qui aiunt vniuerſum eſſe vnam naturã, vt aquam aut ignem aut quod *eſt* his interiectum. 13 Videtur autẽ *illud* potiùs *eſſe ſubiectum*, quod *eſt elementis* interiectum. ignis enim, ac terra, nec non aër & aqua, contrarietatibus implicita ſunt. proinde nõ abſurdè faciunt qui ſubiectum ab his diuerſum conſtituũt. inter cæteros autem *illi rectiùs ſentiunt*, qui aërem *ponunt*: etenim aër minùs cæteris habet differentias ſenſiles. *aërem* autem ſequitur aqua. 14 Sed omnes vnum hoc contrariis figurant: vt denſitate & raritate, nec non contentione & remiſſione. B hæc autẽ in vniuerſum profectò ſunt exſuperantia & defectio, vt antea dictum fuit. 15 Ac videtur hæc opinio antiqua eſſe: *nempe* vnum & exſuperantiam & defectionem eſſe rerum principia: quamquam non eodem modo *veteres hæc principia poſuere, quo recentiores*: ſed veteres duo illa efficere, vnum autem illud pati: quidam autem poſteriores è contrario vnum illud efficere, duo verò illa pati potiùs affirmant. 16 Hæc igitur aſſertio, tria eſſe elementa, iis qui ex his & aliis eiuſmodi *inſpectionibus* rem conſiderãt, videri poteſt habere aliquã rationem, vt antea diximus. 17 Plura autem tribus non item: quoniam vnum ad patiendum ſufficit. 18 Quòd ſi, quatuor cùm ſint *termini*, duæ contrarietates erunt: *certè* oportebit ſeorſim C vtrique ſubiici aliam quãdam mediam naturam. ſin ex ſeinuicem gignere poſſunt; vtique ſupervacua erit alterutra contrarietas. 19 Item non poſſunt eſſe plures cõtrarietates primæ. nam ſubſtantia eſt vnum quoddam entis genus: quapropter principia eo tantùm inter ſe different, quòd alia ſint priora, alia poſteriora: ſed genere non *differunt*: quia ſemper in vno genere eſt vna contrarietas. omnes autem contrarietates ad vnã referri videntur. 20 Ergo nec vnum eſſe elementum, nec plura duobus, vel tribus, manifeſtum *eſt*: horum autem vtrum *ſit verius*, quemadmodum diximus, magnam habet dubitationem.

11 Διόπερ εἴ τις τόν τε πρότερον ἀληθῆ νομίζοι εἶναι λόγον, καὶ τοῦτον, ἀναγκαῖον, εἰ μέλλει διασώσειν ἀμφοτέρους αὐτούς, ὑποτιθέναι τι τρίτον. 12 Ὥσπερ φασὶν οἱ μίαν τινὰ φύσιν εἶναι λέγοντες τὸ πᾶν, οἷον, ὕδωρ, ἢ πῦρ, ἢ τὸ μεταξὺ τούτων. 13 Δοκεῖ δὲ τὸ μεταξὺ μᾶλλον· πῦρ γὰρ ἤδη, καὶ γῆ, καὶ ἀήρ, καὶ ὕδωρ μετ' ἐναντιοτήτων συμπεπλεγμένα ἐστί. διὸ οὐκ ἀλόγως ποιοῦσιν οἱ τὸ ὑποκείμενον ἕτερον τούτων ποιοῦντες· τῶν δ' ἄλλων οἱ ἀέρα. καὶ γὰρ ὁ ἀὴρ ἥκιστα ἔχει τῶν ἄλλων διαφορὰς αἰσθητάς· ἐχόμενον δὲ τὸ ὕδωρ. 14 Ἀλλὰ πάντες γε τὸ ἓν τοῦτο τοῖς ἐναντίοις σχηματίζουσιν, οἷον πυκνότητι καὶ μανότητι, καὶ τὸ μᾶλλον καὶ ἧττον. ταῦτα δ' ἐστὶν B ὅλως, ὑπεροχὴ δηλονότι, καὶ ἔλλειψις, ὥσπερ εἴρηται πρότερον. 15 Καὶ ἔοικε παλαιὰ εἶναι καὶ αὕτη ἡ δόξα, ὅτι τὸ ἕν, καὶ ὑπεροχὴ καὶ ἔλλειψις ἀρχαὶ τῶν ὄντων εἰσί· πλὴν οὐ τὸν αὐτὸν τρόπον· ἀλλ' οἱ μὲν ἀρχαῖοι, τὰ δύο μὲν ποιεῖν, τὸ δὲ ἓν πάσχειν. τῶν δὲ ὑστέρων τινὲς τοὐναντίον, τὸ μὲν ἓν ποιεῖν, τὰ δὲ δύο πάσχειν φασὶ μᾶλλον. 16 Τὸ μὲν οὖν τρία * φαίνεται τὰ στοιχεῖα εἶναι, ἔκ τε τούτων καὶ ἐκ τοιούτων ἄλλων ἐπισκοποῦσι δόξειεν ἂν ἔχειν τινὰ λόγον, ὥσπερ * εἴπομεν. 17 Τὸ δὲ πλείω τριῶν, οὐκέτι· πρὸς μὲν γὰρ τὸ πάσχειν ἱκανὸν τὸ ἕν. 18 Εἰ δὲ τεττάρων ὄντων δύο ἔσονται ἐναντιώσεις, δεήσει χωρὶς ἑκατέρᾳ ὑπάρχειν ἑτέραν τινὰ μεταξὺ φύσιν· εἰ δ' ἐξ ἀλλήλων δύνανται * γεννᾶν, περίεργος ἂν εἴη ἡ C ἑτέρα τῶν ἐναντιώσεων. 19 Ἅμα δὲ καὶ ἀδύνατον πλείους εἶναι ἐναντιώσεις τὰς πρώτας. ἡ γὰρ οὐσία ἕν τι γένος ἐστὶ τοῦ ὄντος, ὥστε τῷ πρότερον καὶ τῷ ὕστερον διοίσουσιν ἀλλήλων αἱ ἀρχαὶ μόνον, ἀλλ' οὐ τῷ γένει. ἀεὶ γὰρ * ἑνὶ γένει μία ἐναντίωσίς ἐστιν· ἅπασαι δὲ αἱ ἐναντιώσεις ἀνάγεσθαι δοκοῦσιν εἰς μίαν. 20 Ὅτι μὲν οὖν οὔτε ἓν τὸ στοιχεῖον, οὔτε πλείω δυοῖν ἢ τριῶν, φανερόν· τούτων δὲ πότερον, καθάπερ εἴπομεν, ἀπορίαν ἔχει πολλήν.

Erroris, in quem veteres philoſophi ob principiorum ignorationem inciderunt, diſſolutio. Cap. IX.

SEd & hoc tantùm modo veterum dubitationem diſſolui poſt hæc dicamus. 2 Primi namque philoſophi veritatẽ & rerum naturam quærentes aberrarunt, quaſi in aliam quandam viam præ imperitia abducti atque aſſerunt, eorũ quæ ſunt, nihil fieri aut interire, propterea quod neceſſe eſt, vt quod fit, vel fiat ex ente, vel ex nõ ente: ex his autem vtriſq; fieri nequit: quia neq; ens fit, cùm iam ſit: ex nihilo autẽ nihil fit, quoniam aliquid ſubiici oportet. 3 Atq; ita deinceps conſecutionem augentes, non eſſe multas res inquiunt, ſed tantummodo ipſum ens. 4 Illi igitur hanc opinionẽ acceperunt ob ea quæ dicta ſunt. 5 Nos autem dicimus, *hæc*, ex ente vel non ente fieri, aut non ens vel ens facere quippiam, ſeu pati, aut quodvis fieri illud, quodammodo nihil differre, *ſed perinde valere, ac ſiquis dicat* medicum aliquid facere, vel pati, aut ex medico aliquid eſſe, vel fieri. 6 Quare cùm hoc duobus modis dicatur: patet etiam illud, *nimirum* ex ente & ens vel facere vel pati, *bifariã accipi*. 7 Ædificat igitur medicus, non quà medicus, ſed quà ædificator: & albus fit, nõ quà medicus, ſed quà niger. medetur autẽ, & fit medicinæ expers, quà medicus. 8 Quia verò dicimus maximè propriè medicũ aliquid facere vel pati, aut ex medico fieri, cũ, quà medicus, hæc patitur, aut facit: manifeſtũ eſt

D ΟΤι δὲ μοναχῶς οὕτω λύεται καὶ ἡ τῶν ἀρχαίων ἀπορία, λέγωμεν μετὰ ταῦτα. 2 Ζητοῦντες γὰρ οἱ κατὰ φιλοσοφίαν πρῶτοι τὴν ἀλήθειαν, καὶ τὴν φύσιν τὴν τῶν ὄντων, ἐξετράπησαν, οἷον ὁδόν τινα ἄλλην ἀπωσθέντες ὑπὸ ἀπειρίας· καί φασιν οὔτε γίνεσθαι τῶν ὄντων οὐδέν, οὔτε φθείρεσθαι· διὰ τὸ ἀναγκαῖον μὲν εἶναι γίνεσθαι τὸ γιγνόμενον ἢ ἐξ ὄντος, ἢ ἐκ μὴ ὄντος. ἐκ δὲ τούτων ἀμφοτέρων ἀδύνατον εἶναι· οὔτε γὰρ τὸ ὂν γίνεσθαι· εἶναι γὰρ ἤδη. ἔκ τε μὴ ὄντος οὐδὲν ἂν γίνεσθαι· ὑποκεῖσθαι γάρ τι δεῖ. 3 Καὶ οὕτω δὴ τὸ ἐφεξῆς συμβαῖνον αὔξοντες, οὐδ' εἶναι πολλά φασιν, ἀλλὰ μόνον αὐτὸ τὸ ὄν. 4 Ἐκεῖνοι μὲν οὖν ταύτην ἔλαβον τὴν E δόξαν διὰ τὰ εἰρημένα. 5 Ἡμεῖς δὲ λέγομεν, ὅτι τὸ ἐξ ὄντος ἢ μὴ ὄντος γίνεσθαι, ἢ τὸ μὴ ὂν, ἢ τὸ ὂν ποιεῖν τι ἢ πάσχειν, ἢ ὁτιοῦν τόδε γίνεσθαι, ἕνα μὲν τρόπον οὐδὲν διαφέρει, ἢ τὸ τὸν ἰατρὸν ποιεῖν τι ἢ πάσχειν, ἢ τὸ ἐξ ἰατροῦ εἶναί τι ἢ γίγνεσθαι. 6 Ὥστ' ἐπεὶ τοῦτο διχῶς λέγεται, δῆλον ὅτι καὶ τὸ ἐξ ὄντος, καὶ τὸ ὂν, ἢ ποιεῖν, ἢ πάσχειν. 7 Οἰκοδομεῖ μὲν οὖν ὁ ἰατρὸς, οὐχ ᾗ ἰατρὸς, ἀλλ' ᾗ οἰκοδόμος. καὶ λευκὸς γίνεται, οὐχ ᾗ ἰατρὸς ἀλλ' ᾗ μέλας. ἰατρεύει δὲ καὶ ἀνίατρος γίνεται, ᾗ ἰατρός. 8 Ἐπεὶ δὲ μάλιστα λέγομεν κυρίως τὸν ἰατρὸν ποιεῖν τι, ἢ πάσχειν, ἢ γίγνεσθαι ἐξ ἰατροῦ, ἐὰν ᾗ ἰατρὸς ταῦτα πάσχῃ, ἢ ποιῇ, δῆλον ὅτι καὶ τὸ

μὴ ἐξ ὄντος γίγνεσθαι, καὶ τοῦτο σημαίνει τὸ ᾗ μὴ ὄν. 9 ὥσπερ ἐκεῖνοι μὲν οὐ διελόντες, ἀπέστησαν· καὶ διὰ ταύτην τὴν ἄγνοιαν τοσοῦτον προσηγνόησαν, ὥστε μηδὲν οἴεσθαι γίγνεσθαι, μηδὲ εἶναι τῶν ἄλλων, ἀλλ' ἀνελεῖν πᾶσαν τὴν γένεσιν. 10 Ἡμεῖς δὲ καὶ αὐτοί φαμεν, γίγνεσθαι μὲν οὐδὲν ἁπλῶς ἐκ μὴ ὄντος, ὅμως μέντοι γίγνεσθαι ἐκ μὴ ὄντος, οἷον κατὰ συμβεβηκός. ἐκ γὰρ τῆς στερήσεως, ὅ ἐστι καθ' αὑτὸ μὴ ὄν, οὐκ ἐνυπάρχοντος γίγνεταί τι. θαυμάζεται δὲ τοῦτο, καὶ ἀδύνατον οὕτω δοκεῖ, γίγνεσθαί τι ἐκ μὴ ὄντος. 11 Ὡσαύτως δὲ οὐδ' ἐξ ὄντος οὐδὲ τὸ ὂν γίγνεσθαι, πλὴν κατὰ συμβεβηκός. 12 Οὕτω δὲ καὶ τοῦτο γίγνεσθαι τὸν αὐτὸν τρόπον, οἷον εἰ ἐκ ζῴου ζῷον γίγνοιτο, καὶ ἐκ τινὸς ζῴου τὶ ζῷον, οἷον, εἰ κύων ἐξ ἵππου γίγνοιτο· γίγνοιτο μὲν γὰρ ἄν, οὐ μόνον ἐκ τινὸς ζῴου ὁ κύων, ἀλλὰ καὶ ἐκ ζῴου, ἀλλ' οὐχ ᾗ ζῷον· ὑπάρχει γὰρ ἤδη τοῦτο· εἰ δέ τι μέλλει γίγνεσθαι ζῷον, μὴ κατὰ συμβεβηκός, οὐκ ἐκ ζῴου ἔσται. καὶ εἴ τι ὄν, οὐκ ἐξ ὄντος, οὐδ' ἐκ μὴ ὄντος· τὸ γὰρ ἐκ μὴ ὄντος εἴρηται ἡμῖν τί σημαίνει, ὅτι ᾗ μὴ ὄν. 13 Ἔτι δὲ καὶ τὸ εἶναι ἅπαν, ἢ τὸ μὴ εἶναι, οὐκ ἀναιροῦμεν. 14 Εἷς μὲν δὴ τρόπος οὗτος. 15 Ἄλλος δ', ὅτι ἐνδέχεται ταὐτὰ λέγειν κατὰ τὴν δύναμιν καὶ τὴν ἐνέργειαν. τοῦτο δ' ἐν ἄλλοις διώρισται δι' ἀκριβείας μᾶλλον. 16 Ὥσθ' (ὥσπερ ἐλέγομεν) αἱ ἀπορίαι λύονται, δι' ἃς ἀναγκαζόμενοι ἀναιροῦσι τῶν εἰρημένων ἔνια. διὰ γὰρ τοῦτο καὶ οἱ πρότερον ἐξετράπησαν τῆς ὁδοῦ τῆς ἐπὶ τὴν γένεσιν καὶ φθορὰν, καὶ ὅλως μεταβολήν. αὕτη γὰρ ἂν ὀφθεῖσα ἡ φύσις, ἅπασαν ἔλυσεν αὐτῶν τὴν ἄγνοιαν.

A etiam hoc, ex non ente fieri, ſignificare quà non ens. 9 Quod quidē illi non diſtinguentes, *à recta via* ſunt abducti: & propter hanc ignorātiam eò inſcitiæ peruenerunt, vt putarint nullā aliam rem fieri, aut eſſe, ſed tollerent omnem generationem. 10 Nos autē & ipſi dicimus nihil quidē fieri ſimpliciter ex nō ente, fieri tamen ex non ente tamquam per accidēs. fit. n. *aliquid* ex priuatione, quæ eſt per ſe non ens, cū non inſit *in eo quod fit*. admirationi autem hoc eſt, & impoſſibile ita videtur fieri aliquid ex non ente. 11 Itidemque *dicimus*, neque ex ente, neque ens [illegible] per accidens. 12 Eodem autem modo fieri hoc *dicimus*, ac ſi ex animali animal fieret, & ex aliquo animali aliquod animal. velut, ſi canis ex equo fieret. B nā canis fieret non ſolùm ex aliquo animali, verùm etiam ex animali: nō tamen quà *eſt* animal, quia hoc iam eſt. Quòd ſi futurum eſt, vt aliquid fiat animal non ex accidenti, *certè* non ex animali erit. & ſi quid *fiet* ens, non *fiet* ex ente, neque ex non ente: quippe dictum à nobis fuit quid ſignificet illud, ex nō ente, videlicet quà *eſt* non ens. 13 Præterea verò omnem rem eſſe aut non eſſe non tollimus. 14 Vnus igitur *dubitationis ſoluēdæ* modus hic *eſt*. 15 Alius autem *eſt*: quoniam eadem dici poſſunt ſecūdùm poteſtatem & ſecundùm actum. hoc verò in alijs *libris* magis exquiſitè definitum eſt. C 16 Quare (vt diximus) dubitationes ſoluuntur, quibus coacti *veteres* tollunt nonnulla eorum quæ dicta ſunt. Ideo namque priores *philoſophi* tantùm aberrarunt à via *ducente* ad generationem & interitum, & omnino mutationem. nam hæc natura *ſi ab eis* cognita *fuiſſet*, omnem hanc eorum ignorantiam diſſoluiſſet.

Vt.n. dicitur ars, quod *eſt* ſecũ- D dùm artem, & quod *eſt* artificioſum: ita etiã dicitur natura, quod *eſt* ſecũdùm naturã, & quod *eſt* naturale. Neque autem illud vllo modo dicemus habere quidpiã ſecundùm artem, ſi poteſtate tantũ ſit lectica, nec dũ habeat lecticę ſpeciem, neque *ipſam* eſſe artem: neque in iis quæ naturâ conſtant. quod.n. poteſtate *eſt* caro, aut os: *id* necdũ habet ſuã ipſius naturã, priuſquam acceperit formã, quę *ponitur* in definitione, (*hoc eſt* quã dicimus definiẽtes quid ſit caro, vel os) nec naturâ cõſtat. quare alio modo natura eſt eorum quæ in ſe principium motus habẽt, forma & ſpecies, quæ nõ eſt ſeparabilis, niſi ſecundùm definitionem. 18 Quod autem ex his *eſt compoſitum*, natura E quidem non eſt, ſed *naturaliter eſt*, *ſeu* natura *conſtat*: vt homo. 19 Atque hæc magis, quã materia, *eſt* natura. Vnumquodque enim tunc dicitur, cùm actu eſt, potiùs quàm cùm *eſt* poteſtate. 20 Præterea fit homo ex homine, non lectica ex lectica. ideóque inquiunt, non figuram, ſed lignum eſſe naturam, quia, ſi germinaret, non fieret lectica, ſed lignum. ſi igitur hoc *eſt* ars, etiam forma *eſt* natura: fit enim ex homine homo. 21 Præterea natura accepta pro generatione, eſt via ad naturam. non enim *ita ſe habet*, vt medicatio, *quæ* dicitur via non ad medicinam, ſed ad ſanitatem. neceſſe enim *eſt* medicationem à medicina eſſe, non ad medicinam. ſed non ita habet natura ad naturam.

verū id quod naſcitur, ex aliquo ad aliquid venit ſeu naſcitur. ad quod igitur *veniendo* naſcitur? non ad id ex quo, ſed *ad id* ad quod. forma igitur *eſt* natura. 22 Forma autē & natura duobus modis dicitur. etenim priuatio eſt quodammodo forma. 23 Vtrùm autem priuatio & contrarium quidpiam ſit in ſimplici generatione, nec ne, poſteriùs erit conſiderandum.

His definitis, conſiderandũ *eſt*, quænam & quot numero ſint cauſæ. cũ.n. res naturales cognoſcẽdi gratiâ *ſit* hæc tractatio; nec priùs vnumquodq; noſſe arbitremur, quã ſumpſerimus *cauſam* propter quã eſt: (hoc autem eſt ſumere primam cauſam) profectò nobis quoque hoc faciendum *eſt* & in ortu & interitu, & in omni naturali mutatione: vt, cognitis horũ principiis, conemur ad ea referre ſingula quæſita. 2 Vno igitur modo cauſa dicitur id ex quo inſito aliquid fit: vt æs *eſt cauſa* ſtatuæ, & argẽtum phialæ, & horũ genera. 3 Alio autem *modo* forma & exẽplar, (hæc autẽ eſt ratio quidditatis) & huius genera: vt *harmoniæ* diapaſon, *forma eſt* duo ad vnũ, & omnino numerus, ac partes quę in definitione *ponũtur*. Pręterea vnde *eſt* primũ mutationis vel quietis principiũ: cuiuſmodi cauſa *eſt*, qui cõſultat; & pater filij, & omnino quod facit, eius quod fit, & quod mutat, eius quod mutatur. 5 Præterea vt finis. hoc autẽ eſt *id* cuius gratia: vt deambulãdi ſanitas. Cur.n. deambulat? dicimus, vt benę valeat: &, cùm ſic dixerimus, putamus *nos* cauſã reddidiſſe. & quæcumque igitur alio mouente interiecta, finis *gratia* fiunt: vt ſanitatis *gratia fit* extenuatio, vel purgatio, vel pharmaca, vel inſtrumenta: hæc.n. omnia finis gratiâ ſunt: differũt autem inter ſe, quòd alia ſint opera, alia inſtrumẽta.

6 Cauſæ igitur tot fere modis dicuntur.

7 Cùm autem cauſæ multis modis dicantur: accidit, vt eiuſdem *effectus* ſint multæ cauſæ, non ex accidente: vt ſtatuæ & *ars* ſtatuaria, & æs, non alia quapiam ratione, ſed qua *eſt* ſtatua: non tamen eodem modo: ſed altera *eſt cauſa*, vt materia; altera, vt id vnde motus *profectus eſt*. 8 Sunt etiam quædam ſibi inuicem cauſæ: vt labor *eſt* cauſa firmæ corporis conſtitutionis: atque hæc *eſt cauſa* laborandi: non tamen eodem modo: ſed hæc *eſt cauſa* vt finis: illud autem, vt principium motus. 9 Præterea eadem eſt contrariorum cauſa: quod enim præſens, *eſt* cauſa huius *effectus*: hoc abſens dicimus interdum cauſam eſſe contrarij *effectus*: vt abſentiam gubernatoris *dicimus eſſe cauſam* ſubmerſionis nauis, cuius pręſentia erat cauſa ſalutis. 10 Omnes autem cauſæ quæ nunc dictæ ſunt, in quatuor modos manifeſtiſſimos cadunt: (nam elementa *ſunt cauſa* ſyllabarum: & materia, eorum quæ opificio conſtant: & ignis, & quæ *ſunt* eiuſmodi, corporum: & partes, totius: & hypotheſes, concluſionis: cauſæ *inquam* ſunt, vt id ex quo) harum verò aliæ *ſunt* vt ſubiectum, velvti partes: aliæ vt quidditas, *nempe* totum, & compoſitio & forma; ſed ſemen, & medicus & conſultans, & omnino faciens, *hæc inquam* omnia *ſunt cauſæ* vnde *eſt* principium mutationis, vel ſtatus, vel motionis. aliæ verò *ſunt cauſæ* vt finis bonúmque aliorum. id enim cuius gratiâ, debet eſſe optimum, & ceterorum finis. ſed nihil intersit, vtrùm dicatur ipſum *finem* eſſe bonum, an videri bonum. Cauſæ igitur tales, ac tot ſunt ſpecie. 11 Modi verò cauſarum numero quidem ſunt multi: ſed, ſi ſummatim colligantur, & ipſi pauciores *ſunt*. dicũtur enim cauſæ multis modis. & ipſarum *cauſarum* quæ *ſunt* eiuſdem generis, alia *eſt* prior & poſterior quàm alia. vt ſanitatis *cauſa eſt* medicus, & artifex. & *harmonia* diapaſon *cauſa eſt* duplum & numerus. ac ſemper ea quæ continẽt, *ita ſe habent* ad ſingula. 12 Præterea *dicuntur cauſæ* vt accidens, & horum genera. vt puta ſtatuę aliter *cauſa eſt* Polycletus, aliter ſtatuarius, quoniam accidit ſtatuario vt ſit Polycletus. Sed & ea quę accidens continent, *appellantur cauſæ*: veluti ſi homo ſit cauſa ſtatuæ, aut omnino animal. 13 Accidentium quoque alia ſunt aliis remotiora & propinquiora: veluti ſi albus & muſicus dicatur eſſe cauſa ſtatuæ. 14 Pręter omnes autẽ cauſas, & quæ propriè, & quæ ex accidenti dicuntur, alię dicuntur *cauſæ*, quia poſſunt; aliæ, quia agunt: vt ædificandæ domus *cauſa eſt* ædificator, aut ædificans ædificator. 15 Similiter autem dicetur etiam in iis quorum *ex* cauſæ, *quas expoſuimus*, ſunt cauſæ, vt in *ipſis cauſis* expoſitis. exempli gratiâ *eſt cauſa* huius ſtatuę, vel ſtatuæ, vel omnino imaginis. item *eſt cauſa* huius æris, vel æris, vel omnino materiæ. Eadem *eſt* accidentium ratio. 16 Pręterea & hæ & illæ dicuntur coniunctę. verbi gratiâ, non Polycletus, nec ſtatuarius, ſed Polycletus ſtatuarius. 17 Sed nihilominus omnes hæ ſunt quidem, quod ad multitudinem ſex: ſed dicuntur bifariàm: vel enim vt ſingulare vel vt genus, vel vt ex accidenti, vel genus accidentis: & vel hæc coniuncta, vel ſimpliciter accepta: *hæc* autem omnia vel agẽtia, vel ſecundùm poteſtatem. 18 Adeo autem differunt; vt agentes, & ſingulares, ſimul ſint & non ſint cum *iis* quorum *ſunt* cauſę: (veluti hic qui medetur *ſimul eſt* cum hoc qui ſanatur: & hic ædificans, *ſimul eſt* cum hac te quę ædificatur) quæ verò ſecundùm poteſtatem *cauſæ dicuntur*, non ſemper *ſimul ſunt*; quia non ſimul

B Λέγεται δὲ καὶ ἡ τύχη καὶ τὸ αὐτόματον τῶν αἰτίων, καὶ πολλὰ καὶ εἶναι καὶ γίνεσθαι διὰ τύχην, καὶ διὰ τὸ αὐτόματον· τίνα οὖν τρόπον ἐν τούτοις ἐστὶ τοῖς αἰτίοις ἡ τύχη, καὶ τὸ αὐτόματον· καὶ πότερον τὸ αὐτὸ ἡ τύχη, καὶ τὸ αὐτόματον, ἢ ἕτερον, καὶ ὅλως τί ἐστιν ἡ τύχη, καὶ τὸ αὐτόματον, ἐπισκεπτέον. 2 Ἔνιοι γὰρ καὶ εἰ ἔστιν ἢ μή, ἀποροῦσιν· οὐδὲν γὰρ γίνεσθαι ἀπὸ τύχης φασίν, ἀλλὰ πάντων εἶναί τι αἴτιον ὡρισμένον, ὅσα λέγομεν ἀπὸ ταὐτομάτου γίνεσθαι, ἢ τύχης, οἷον τοῦ ἐλθεῖν ἀπὸ τύχης εἰς τὴν ἀγορὰν, καὶ καταλαβεῖν, ὃν ἐβούλετο μὲν, οὐκ ᾤετο δὲ, αἴτιον τὸ βούλεσθαι ἐλθόντα ἀγοράσαι· ὁμοίως δὲ καὶ ἐπὶ τῶν ἄλλων τῶν C ἀπὸ τύχης λεγομένων, ἀεί τι εἶναι λαβεῖν τὸ αἴτιον, ἀλλ' οὐ τύχην. 3 Ἐπεὶ εἴ γέ τι ἦν ἡ τύχη, ἄτοπον ἂν φανείη ὡς ἀληθῶς· καὶ ἀπορήσειεν ἄν τις, διὰ τί ποτε οὐδεὶς τῶν ἀρχαίων σοφῶν τὰ αἴτια περὶ γενέσεως καὶ φθορᾶς λέγων, περὶ τύχης οὐδὲν διώρισεν· ἀλλ' ὡς ἔοικεν, οὐδὲν ᾤοντο οὐδ' ἐκεῖνοι εἶναι ἀπὸ τύχης. 4 Ἀλλὰ καὶ τοῦτο θαυμαστόν· πολλὰ γὰρ καὶ γίνεται καὶ ἔστιν ἀπὸ τύχης καὶ ἀπὸ ταὐτομάτου· ἃ οὐκ ἀγνοοῦντες, ὅτι ἔστιν ἐπανενεγκεῖν ἕκαστον ἐπί τι αἴτιον τῶν γινομένων, καθάπερ ὁ παλαιὸς λόγος εἶπεν, ὁ ἀναιρῶν τὴν τύχην· ὅμως τούτων τὰ μὲν εἶναί φασι πάν- D τες ἀπὸ τύχης, τὰ δ' οὐκ ἀπὸ τύχης. 5 Διὸ καὶ* ἁμῶς γέ πως ἦν ποιητέον αὐτοῖς μνείαν. ἀλλὰ μὴν οὐδ' ἐκείνων γέ τι ᾤοντο εἶναι τὴν τύχην, οἷον φιλίαν, ἢ νεῖκος, ἢ πῦρ, ἢ νοῦν, ἢ ἄλλο γέ τι τῶν τοιούτων. ἄτοπον οὖν εἴτε μὴ ὑπελάμβανον εἶναι, εἴτε οἰόμενοι παρέλειπον. 6 Καὶ ταῦτ' ἐνίοτε χρώμενοι· ὥσπερ Ἐμπεδοκλῆς οὐκ ἀεὶ τὸν ἀέρα ἀποκρίνεσθαι ἀνωτάτω φησίν, ἀλλ' ὅπως ἂν τύχῃ. λέγει γοῦν ἐν τῇ κοσμοποιΐᾳ,

E Καὶ τὰ μόρια τῶν ζώων ἀπὸ τύχης γενέσθαι τὰ πλεῖστα φησίν. 7 Εἰσὶ δέ τινες οἳ καὶ τοῦ οὐρανοῦ τοῦδε, καὶ τῶν κοσμικῶν πάντων αἰτιῶνται τὸ αὐτόματον· ἀπὸ ταὐτομάτου γὰρ γενέσθαι φασὶ τὴν δίνην καὶ τὴν κίνησιν, τὴν διακρίνασαν καὶ καταστήσασαν εἰς ταύτην τὴν τάξιν τὸ πᾶν. 8 Καὶ μάλα τοῦτό γε αὐτὸ θαυμάσαι ἄξιον, λέγοντας, τὰ μὲν ζῷα καὶ τὰ φυτὰ ἀπὸ τύχης μήτε εἶναι μήτε γίνεσθαι, ἀλλ' ἤτοι φύσιν, ἢ νοῦν, ἤ τι τοιοῦτον ἕτερον εἶναι τὸ αἴτιον (οὐ γὰρ ὅ,τι ἔτυχεν, ἐκ τοῦ σπέρματος ἑκάστου γίνεται, ἀλλ' ἐκ μὲν τοῦ τοιουδὶ ἐλαία, ἐκ δὲ τοῦ τοιουδὶ ἄνθρωπος) τὸν δὲ οὐρανὸν καὶ τὰ θειότατα τῶν φανερῶν, ἀπὸ τοῦ αὐτομάτου γενέσθαι, τοιαύτην δὲ αἰτίαν μηδεμίαν εἶναι, οἵαν τῶν ζώων καὶ τῶν φυτῶν.

B Sed & fortuna & caſus dicuntur eſſe *in* cauſarum *numero*, multaque & eſſe & fieri fortuito & caſu. quo igitur modo in his cauſis ſit fortuna & caſus, & vtrùm idē *ſint* fortuna & caſus, an diuerſa, & omnino quid ſit fortuna & caſus, conſiderandum *eſt*. 2 Etenim nonnulli, an ſit nec ne, dubitant. aiunt enim nihil fieri à fortuna: ſed omnium, quæ dicimus caſu vel fortuitò fieri, eſſe aliquam cauſam definitam. vtputà fortuitò veniendi in forum, & reperiendi, quem volebat quidem, non tamen putabat *ſe reperturum*, cauſa *eſt* voluntas, *rem aliquam*, cùm in forum veniſſet, emendi. Similiter & in aliis, quæ fortuitò C fieri dicuntur, ſemper aliquam cauſam ſumi poſſe, non autem fortunam. 3 Nam ſi fortuna eſſet aliquid, re vera abſurdum videretur: ac dubitare quiſpiam poſſet, cur nemo vnquam veterum ſapientum, cauſas ortus & interitus tradens, de fortuna quidpiam definierit. Sed, vt videtur, ne illi quidem putarunt aliquid eſſe à fortuna. 4 Sed & hoc admirabile *eſt*. multa namque fiunt & ſunt à fortuna & caſu: quæ non ignorantes poſſe referri ſingula ad aliquam eorum quæ fiunt, cauſam, quemadmodum antiquus ſermo fortunam tollens ait, tamen horum quædam omnes aiunt eſſe à fortuna, quædam autem non à fortuna. 5 Quocirca eius quo- D que aliqua mentio ab ipſis facienda erat. At verò nec illorum quidpiam putarunt eſſe fortunam, velvti amicitiam, aut contentionem aut ignem, aut mentem, aut aliquid aliud eiuſmodi, alterutrum igitur *eſt*, ſiue non exiſtimarunt eſſe, ſiue, cùm eſſe putarent, prætermiſerunt. 6 Præſertim cùm ipſi quoque interdum *caſu & fortuna* vtantur: ſicut Empedocles non ſemper aërē in ſuperiorē locum ſecerni inquit, ſed quo modo contigerit: dicit. n. in Coſmopœia,

E Partes quoque animalium pleraſque à fortuna factas eſſe dicit. 7 Sunt autem nonnulli, qui & cœli huius & omnium mundi partium cauſam adſcribũt caſui: Caſu enim fieri aiunt conuerſionem, & motum, qui vniuerſum diſtinxit, & redegit in hunc ordinem. 8 Et ſanè hoc ipſum valde *eſt* admiratione dignum, quod dicunt, & animalia quidem & plantas nec eſſe nec fieri à fortuna; ſed eorum cauſam eſſe aut naturam, aut mentem, aut aliquid aliud tale: (quia non quodvis ex vnoquoque ſemine fit, ſed ex illo oliua, ex hoc autem homo) cœlum autem, & quæ ſunt inter res manifeſtas magis diuina, caſu facta eſſe, atque *eorum* nullam eſſe talem cauſam, qualem *fatentur eſſe* animalium & plantarum.

9 Atqui, ſi ita *res* habet, hoc ipſum *eſt* conſideratione dignum, & è re eſt de ipſo aliquid dicere. nam præterquam quòd alioqui eſt abſurdum, quod dicitur: adhuc abſurdius *eſt* hęc dicere, cùm videamus in cœlo quidem nihil caſu fieri, in his autem quæ non *ſunt* à fortuna, multa fortuitò accidere. atqui contrarium fieri decebat. 10 Sunt autem nónulli, quibus fortuna videtur eſſe quidem cauſa, ſed humanæ menti obſcura, tamquam ſit diuinum quid, ac numen excellens. 11 Quare conſiderandum eſt, & quid *ſit* vtrumque, & vtrùm idem *ſint*, an diuerſa. caſus (inquam) & fortuna, & quomodo in cauſas ſuprà definitas cadant.

Cap. V.

PRimùm igitur, cùm videamus quædam ſemper, alia plerumque eodem modo fieri: manifeſtum *eſt* neutrius horum cauſam, dici aut fortunam, aut quod eſt fortuitum, *id eſt*, neque eius quod neceſſariò & ſemper *fit*, neque eius quod plerumque *fit*: ſed quia nonnulla etiam ſunt, quæ præter hæc fiunt, atque omnes hæc aiunt eſſe à fortuna: conſtat, fortunam & caſum eſſe aliquid. nam quæ *ſunt* eiuſmodi, *eſſe* à fortuna: & quæ *ſunt* à fortuna, eiuſmodi eſſe nouimus. 2 Eorum autem quæ fiunt, alia fiunt alicuius gratiâ, alia minimè: illorum autem quædam ſunt ex prælectione, quædam non ex prælectione. ambo autem ſunt in iis quę alicuius gratiâ *fiunt*. quapropter perſpicuum *eſt*, etiam in iis quæ nec neceſſariò nec plerumque *fiunt*, eſſe nonnulla, in quibus eſſe poteſt quod *fit* alicuius gratiâ. ſunt autem alicuius gratiâ, cùm ea quæ à mente fieri poſſunt, tum etiam quæ à natura. Quæ igitur *ſunt* eiuſmodi, cùm ex accidenti fiunt, ea dicimus eſſe à fortuna. 3 Sicut enim ens, aliud eſt per ſe, aliud ex accidēti: ita etiam cauſa eſſe poteſt. vt ædium per ſe cauſa eſt quod eſt ædificandi facultate præditum: ex accidenti autem, album aut muſicum. 4 Quæ igitur *eſt* cauſa per ſe, definita *eſt*. quæ vero ex accidenti, indefinita: quoniam infinita poſſunt vni accidere. 5 Sicut igitur dictum fuit: quando in iis quæ alicuius cauſa fiunt, hoc fit, tum dicitur *eſſe* à caſu & à fortuna. Horum autem inter ſe differentia poſteriùs explicanda erit. ſed hoc in præſentia conſtet, vtraque in iis eſſe quæ alicuius cauſa *fiunt*. 6 Vtputà, argenti accipiendi gratiâ veniſſet vtiq; accepturus pecuniam, ſi ſciuiſſet: ſed non huius rei gratiâ venit: verùm accidit vt veniret, & hoc faceret accipiendi gratiâ: idque nec plerumque veniens in *eum* locum, nec neceſſariò. 7 Finis autem *id eſt* acceptio *pecuniæ*, non eſt *in numero* cauſarum quæ in ipſa re *ſunt*, ſed *eſt* eorum quæ ſub prælectionem cadunt, & à mēte *proficiſcuntur*. túncque dicitur fortuitò profectus eſſe. Quòd ſi *id* prælegiſſet, & huius gratiâ *iuiſſet*, vel ſemper aut plerūque *eò* ſe conferens acciperet *pecuniam: certè id* non *eſſet* à fortuna. 8 Patet igitur fortunam *eſſe* cauſam ex accidenti, in iis quæ rarò contingunt ſecundùm prælectionem eorum quæ alicuius gratiâ *fiunt*. 9 Quapropter in eodē *verſantur* mens & fortuna: quia prælectio non *eſt* ſine mente. 10 Neceſſe *eſt* igitur, vt eæ cauſæ ſint indefinitæ, à quibus fieri poteſt, quod *eſt* à fortuna. vnde fortuna videtur eſſe rei indefinitæ, atque homini occulta.

B Πρῶτον μὲν οὖν, ἐπειδὴ ὁρῶμεν τὰ μὲν ἀεὶ ὡσαύτως γινόμενα, τὰ δὲ ὡς ἐπὶ τὸ πολύ, φανερὸν ὅτι οὐδετέρου τούτων αἰτία ἡ τύχη λέγεται, οὐδὲ τὸ ἀπὸ τύχης, οὔτε τοῦ ἐξ ἀνάγκης καὶ ἀεί, οὔτε τοῦ ὡς ἐπὶ τὸ πολύ. ἀλλ᾽ ἐπειδὴ ἔστι τινὰ ἃ γίγνεται καὶ παρὰ ταῦτα, καὶ πάντες ταῦτά φασιν εἶναι ἀπὸ τύχης, φανερὸν ὅτι ἔστι τι ἡ τύχη καὶ τὸ αὐτόματον· τά τε γὰρ τοιαῦτα ἀπὸ τύχης, καὶ τὰ ἀπὸ τύχης τοιαῦτα ὄντα ἴσμεν. 2 Τῶν δὲ γινομένων τὰ μὲν ἕνεκά του γίγνεται, τὰ δ᾽ οὔ· τούτων δὲ τὰ μὲν κατὰ προαίρεσιν, τὰ δ᾽ οὐ κατὰ προαίρεσιν, ἄμφω δ᾽ ἐν τοῖς ἕνεκά του· ὥστε δῆλον, ὅτι καὶ ἐν τοῖς παρὰ τὸ ἀναγκαῖον C καὶ τὸ ὡς ἐπὶ τὸ πολύ, ἔστιν ἔνια, περὶ ἃ ἐνδέχεται ὑπάρχειν τὸ ἕνεκά του· ἔστι δὲ ἕνεκά του, ὅσα τε ἀπὸ διανοίας ἂν πραχθείη, καὶ ὅσα ἀπὸ φύσεως. τὰ δὴ τοιαῦτα ὅταν κατὰ συμβεβηκὸς γένηται, ἀπὸ τύχης φαμὲν εἶναι. 3 Ὥσπερ γὰρ καὶ ὄν ἐστι τὸ μὲν καθ᾽ αὑτό, τὸ δὲ κατὰ συμβεβηκός, οὕτω καὶ αἴτιον ἐνδέχεται εἶναι· οἷον οἰκίας, καθ᾽ αὑτὸ μὲν αἴτιον τὸ οἰκοδομικόν, κατὰ συμβεβηκὸς δὲ τὸ λευκὸν ἢ τὸ μουσικόν. 4 Τὸ μὲν οὖν καθ᾽ αὑτὸ αἴτιον, ὡρισμένον. τὸ δὲ κατὰ συμβεβηκός, ἀόριστον· ἄπειρα γὰρ ἂν τῷ ἑνὶ συμβαίη. 5 Καθάπερ οὖν ἐλέχθη, D ὅταν ἐν τοῖς ἕνεκά του γιγνομένοις τοῦτο γένηται, τότε λέγεται ἀπὸ ταὐτομάτου καὶ ἀπὸ τύχης. αὐτῶν δὲ πρὸς ἄλληλα τὴν διαφορὰν τούτων ὕστερον διοριστέον. νῦν δὲ τοῦτο ἔστω φανερόν, ὅτι ἄμφω ἐν τοῖς ἕνεκά του ἐστίν. 6 Οἷον ἕνεκα τοῦ ἀπολαβεῖν τὸ ἀργύριον, * ἦλθεν ἂν κομισόμενος τὸν ἔρανον, εἰ ᾔδει. ἦλθε δὲ οὐ τούτου ἕνεκα, ἀλλὰ συνέβη ἐλθεῖν, καὶ ποιῆσαι τοῦτο, τοῦ κομίσασθαι ἕνεκα. τοῦτο δὲ οὐδ᾽ ὡς ἐπὶ τὸ πολὺ φοιτῶν εἰς τὸ χωρίον, οὔτε ἐξ ἀνάγκης. 7 Ἔστι δὲ τὸ τέλος ἡ κομιδή, οὐ τῶν ἐν αὐτῷ E αἰτίων, ἀλλὰ τῶν * προαιρετῶν καὶ ἀπὸ διανοίας· καὶ λέγεταί γε τότε ἀπὸ τύχης ἐλθεῖν. εἰ δὲ προελόμενος, καὶ τούτου ἕνεκα, ἢ ἀεὶ φοιτῶν, ἢ ὡς ἐπὶ τὸ πολὺ κομιζόμενος, οὐκ ἀπὸ τύχης. 8 Δῆλον ἄρα ὅτι ἡ τύχη αἰτία κατὰ συμβεβηκὸς ἐν τοῖς κατὰ προαίρεσιν, τῶν ἕνεκά του. 9 Διὸ περὶ τὸ αὐτὸ διάνοια καὶ τύχη· ἡ γὰρ προαίρεσις οὐκ ἄνευ διανοίας. 10 Ἀόριστα μὲν οὖν τὰ αἴτια ἀνάγκη εἶναι, ἀφ᾽ ὧν ἂν γένοιτο τὸ ἀπὸ τύχης. ὅθεν δοκεῖ ἡ τύχη τοῦ ἀορίστου εἶναι, καὶ ἄδηλος ἀνθρώπῳ.

A 11 Et aliquo modo nihil à fortuna fieri poſſe videtur. hæc. n. omnia rectè dicuntur: quia *ſunt* rationi cõſentanea. nam aliquo modo fit à fortuna: ex accidenti namque: ac fortuna eſt cauſa vt accidens, ſimpliciter autem nullius *rei cauſa eſt*. 12 Vtputà, ædium cauſa quidem *eſt* ædificator, ſed ex accidẽti tibicen. & vt, cùm in forum venerit, argentum accipiat, qui nõ huius cauſa venit, *cauſæ ſunt* multitudine infinitę. nam & videre aliquem volens, & perſequens, & inſpecturus, & fugiẽs, *cauſæ hoc modo dici poſſunt*. 13 Illud quoque rectè *dicitur*, fortunã eſſe à ratione alienam: quoniam ratio *eſt* eorum, quæ ſemper aut quæ plerumque ſunt: fortuna verò in iis *cernitur*, quæ præter hæc fiunt: adeo vt, quia indefinitæ *ſunt*, quæ ita ſunt B cauſæ, etiã fortuna ſit res indefinita. 14 Verùtamen de quibuſdã aliquis dubitare poſſit, an quævis cauſę fieri poſſint ipſius fortunæ. velvti, an valetudinis *cauſa ſit* aut ventus, aut æſtus, non detonſum eſſe. nam cauſarum accidentariarũ aliæ ſunt aliis propinquiores. 15 Secunda autem fortuna dicitur, cùm aliquid boni euenit. aduerſa verò cùm aliquid mali. 16 Fortunæ verò proſperitas, & infortunium *ſeu calamitas tum dicitur*, cùm hæc magna ſunt. quare etiã cùm parum abeſt quin in magnum aliquod malum vel bonum inciderimus, id quoque eſt infortunio vel proſperitate fortunæ vti: quia mens *id* aſſerit, quaſi ſit. quod. n. parum *abeſt*, quaſi nihil abeſſe videtur. 17 Præterea fortunę proſperitas inconſtans eſt meritò: quoniam *ipſa* fortuna inconſtans *eſt*: vtpote cùm nihil eorum quæ à fortuna *proficiſcuntur*, aut ſemper aut plerumque eſſe poſſit.

C Ἔστι μὲν οὖν ἄμφω αἴτια, καθάπερ εἴρηται, κατὰ συμβεβηκὸς, καὶ ἡ τύχη, καὶ τὸ αὐτόματον, ἐν τοῖς ἐνδεχομένοις γίνεσθαι μὴ ὡς ἁπλῶς, μηδὲ ὡς ἐπὶ τὸ πολύ· καὶ τούτων, ὅσα ἂν γένοιτο ἐν τοῖς ἕνεκά του. 2 Διαφέρει δὲ, ὅτι τὸ αὐτόματον ἐπὶ πλεῖόν ἐστι· τὸ μὲν γὰρ ἀπὸ τύχης, ἀπὸ ταὐτομάτου· τοῦτο δὲ οὐ πᾶν ἀπὸ τύχης. 3 Ἡ μὲν γὰρ τύχη καὶ τὸ ἀπὸ τύχης, ἐστὶν ὅσοις καὶ τὸ εὐτυχῆσαι ἂν ὑπάρξειε, καὶ ὅλως πρᾶξις. διὸ καὶ ἀνάγκη περὶ τὰ πρακτὰ εἶναι τὴν τύχην. σημεῖον δὲ, ὅτι δοκεῖ ἤτοι ταὐτὸν εἶναι τῇ εὐδαιμονίᾳ, ἢ ἐγγύς· ἡ δ᾽ εὐδαιμονία, πρᾶξίς τις. εὐπραξία γάρ· ὥσθ᾽ * ὅσοις μὴ ἐνδέχεται πρᾶξαι, οὐδὲ τὸ ἀπὸ τύχης τι ποιῆσαι. 4 Καὶ διὰ τοῦτο οὔτε ἄψυχον οὐδὲν, οὔτε θηρίον, οὔτε παιδίον οὐδὲν ποιεῖ ἀπὸ τύχης, ὅτι οὐκ ἔχει προαίρεσιν· οὐδ᾽ εὐτυχία οὐδὲ ἀτυχία ὑπάρχει τούτοις, εἰ μὴ καθ᾽ ὁμοιότητα· ὥσπερ ἔφη Πρώταρχος, εὐτυχεῖς εἶναι τοὺς λίθους ἐξ ὧν οἱ βωμοὶ, ὅτι τιμῶνται, οἱ δὲ ὁμόζυγες αὐτῶν καταπατοῦνται. 5 Τὸ δὲ πάσχειν ἀπὸ τύχης, ὑπάρχει πως καὶ τούτοις, ὅταν ὁ πράττων τι περὶ αὐτὰ, πράξῃ ἀπὸ τύχης. ἄλλως δὲ οὐκ ἔστι. 6 Τὸ δὲ αὐτόματον καὶ τοῖς ἄλλοις ζῴοις, καὶ πολλοῖς * τῶν ἀψύχων. οἷον ὁ ἵππος αὐτόματος, φαμὲν, ἦλθεν, ὅτι ἐσώθη μὲν ἐλθὼν, οὐ τοῦ σωθῆναι δὲ ἕνεκεν ἦλθε. καὶ ὁ τρίπους αὐτόματος κατέπεσεν· ἔστη μὲν γὰρ τοῦ καθῆσθαι ἕνεκεν, ἀλλ᾽ οὐ τοῦ καθῆσθαι ἕνεκεν κατέπεσεν. 7 Ὥστε φανερὸν ὅτι ἐν τοῖς ἁπλῶς ἕνεκά του γινομένοις, ὅταν μὴ τοῦ συμβαίνοντος ἕνεκα γένηται, ὧν ἔξω τὸ αἴτιον,

C Dicendum porro eſt, primũ cur natura *ſit in* earũ cauſarum *numero* quę alicuius gratia *agunt*: deinde quomodo *ſe* habeat neceſſitas in *rebus* naturalibus. ad hanc. n. cauſam omnes referunt: *velvti*, quia naturâ eſt comparatum, vt, *quod eſt* calidum, ſit tale, & *quod eſt* frigidum, & vnumquodque eorum quæ talia ſunt, *idcirco* hæc neceſſariò ſunt, & fiunt, & naturâ comparatum eſt vt ſint: nam licèt aliam cauſam dicant, tamen, cùm vix attigerint, eam valere ſinũt, alius *ſcilicet* amicitiam & contentionem, alius mentem. 2 Eſt autẽ dubitatio, quid prohibeat naturam non facere alicuius gratia, nec quia *ita ſit* melius, ſed ſicut Iupiter pluit, non vt frumentum augeat, ſed ex neceſſitate. quod. n. ſublatum eſt, refrigerari opor- D tet, & refrigeratum, cùm ſit in aquam mutatum, deſcendere: accidit autem, vt hoc facto frumentũ augeatur. ſimiliter & ſi cui pereat frumentum in area: non huius gratia pluit, vt periret, ſed hoc accidit. quare quid prohibet ſic etiam partes habere in natura? velvti, dentes neceſſario ortos, anteriores quidem acutos, & ad ſcindendum aptos; molares autem latos, & ad molendum cibum idoneos. non enim huius cauſa factum *id* eſſe, ſed contigiſſe. ſimilis *ratio eſt* aliarum partium, quæ videntur eſſe alicuius gratia. 3 Vbi igitur omnia acciderunt perinde ac ſi alicuius gratia facta eſſent, hæc ſunt ſeruata, cùm caſu eſſent aptè conſtituta. quæ vero E non ita *facta ſunt*, perierunt, & pereunt: quemadmodum Empedocles inquit *periſſe* bouigena & androprora. 4 Ratio igitur, ob quam dubitare aliquis poſſit, hæc eſt, & ſi qua alia *eſt* eiuſmodi. 5 Sed impoſſibile *eſt*, vt hoc modo hæc *ſe* habeant. hæc enim, & quæcumque natura *conſtant*, aut ſemper ita fiunt, aut plerũque: eorum autem quæ à fortuna aut caſu *fiunt*, nihil *ſemper aut plerumque ita fit*: neque enim fortuitò neque caſu videtur ſæpe pluere hyeme, ſed ſi *id fiat, cùm ſol eſt* ſub cane: neque ęſtus ſub cane, ſed ſi hyeme. Si igitur aut caſu eſſe videtur, aut alicuius gratia: ſi hæc eſſe caſu non poſſunt, certè alicuius gratia erunt. atqui eiuſmodi omnia natura cõſtant, vt vel ipſi affirmarent, qui hæc dicũt.

eſſe igitur alicuius gratiâ, ineſt in rebus quæ fiunt, & conſtant natura. 6 Præterea in quibus eſt aliquis finis, huius gratiâ fit id quod *eſt* prius, & quod deinceps. ergo vt fit, ita natura aptum eſt fieri: & vt natura aptum eſt fieri, niſi quid impediat, ita vnumquodque fit. atqui fit alicuius gratia: ergo etiam natura aptum eſt fieri huius gratiâ. vtputà ſi domus *in* eorum *numero* eſſet, quæ natura fiunt: ſic vtique à natura fieret, vt nunc *fit* ab arte. quòd ſi ea quæ *fiunt* natura, non ſolùm natura, ſed etiam arte fierent: eodem ſane modo fierent, quo natura fieri apta ſunt. alterum igitur alterius gratia. & omnino ars partim perficit, quæ non poteſt natura perficere: partim *naturam* imitatur. Si igitur artificioſa fiunt alicuius gratia, patet etiam naturalia *ita fieri*. nam poſteriora & priora ſimiliter inter ſe affecta ſunt in *rebus* artificioſis, atque in *rebus* naturalibus. 7 Maximè autem *hoc* manifeſtum *eſt* in aliis animalibus, quæ nec arte nec adhibita inquiſitione aut conſultatione faciunt. ideo quidam dubitant, vtrùm mente, an alio quopiam operentur aranei, & formicæ, & eiuſmodi *animalia*. Paulatim verò ita progredienti, etiam in plantis videntur ea fieri, quæ ad finem conferunt: vt folia fructus tegendi gratia. quocirca ſi natura & alicuius gratia facit hirundo nidum, & araneus araneam, & plantæ folia fructuum gratia, & radices non ſurſum, ſed deorſum verſus, alimenti gratia: perſpicuum *eſt*, eiuſmodi cauſam eſſe in iis quæ natura fiunt & conſtant. 8 Et cùm natura duplex *ſit*, altera vt materia, altera vt forma; hæc autem *ſit* finis, & finis gratia reliqua ſint: certè hæc erit cauſa cuius gratia. 9 Peccatum autem committitur etiam in rebus artificioſis. ſcripſit enim non rectè grammaticus: & propinauit non rectè Medicus pharmacum. quare patet *id* contingere etiam in *rebus* naturalibus. Si igitur ſunt quædam artificioſa; in quibus quod rectè *fit*, alicuius gratia *fit*: in iis autem quæ peccantur, alicuius quidem* gratia *ars* aggreditur, ſed aberrat: res ſimiliter *ſe* habebit etiam in *rebus* naturalibus: ac monſtra *erunt* peccata eius quod alicuius gratia *agit*. Ergo & in primis conſtitutionibus bouigena, niſi ad aliquem terminum & finem venire poterant, vtique corrupto aliquo principio fiebant, vt nunc *fiunt* corrupto ſemine. 10 Præterea neceſſe *eſt*, ſemen priùs factum eſſe, non ſtatim animalia. & illud *οὐλοφυὲς, id eſt, confuſum & indigeſtum, exortum, quod* priùs *fuit*, ſemen erat. 11 Præterea & in plantis ineſt quod alicuius gratia *eſt*: ſed minùs eſt diſtinctum. vtrùm igitur etiam in plantis fiebant, ſicut bouigena androprora, ita etiam vitigena elæoprora, an non? quippe abſurdum *eſt*. atqui oportebat: ſiquidem & in animalibus. 12 Præterea oportebat etiam in ſeminibus fieri quidvis. 13 Omnino autem qui ſic dicit, ea tollit, quæ natura *conſtant*, & *ipſam* naturam. natura enim *conſtant*, quæcumque ab aliquo interno principio continenter mota, perueniunt ad aliquem finem. ab vnoquoque autem *principio* non *fit* idem ſingulis, nec quidvis, ſed ſemper ad eundem *peruenitur*, niſi quid impediat. 14 Id autem cuius gratia & id quod *eſt* eius gratia, fieri poſſunt etiam à fortuna: ſicut dicimus fortuitò veniſſe hoſpitem, & cùm redemerit, dimiſiſſe; quando *ſcilicet ita* egit, ac ſi huius gratia veniſſet, non tamen huius gratiâ venit: atque hoc *fecit* ex accidenti: nam fortuna *eſt in earum* cauſarum *numero*, quæ ex accidenti *agunt*, quemadmodum & antea diximus: ſed cùm hoc

B Neceſſitas autem vtrùm ineſt ex hypotheſi, an ſimpliciter? 2 Nunc enim putant neceſſitatem in ortu eſſe. perinde ac ſi quis ædificium ex neceſſitate factum eſſe arbitraretur: quia grauia deorſum feruntur ſuapte natura, leuia verò in locum ſublimem: idcirco lapides quidem & fundamenta ſunt inferiori loco, ſupra autem *eſt* terra ob leuitatem; ſummum locum maximè obtinent ligna, quia ſunt leuiſſima. 3 Verumtamen non quidem ſine his factum eſt, non tamen propter hoc *eſt factum*, niſi vt propter materiam, ſed potiùs quædam celandi ac ſeruandi gratiâ. ſimiliter autem & in aliis omnibus, in quibus *ineſt* quod *eſt* alicuius gratiâ. non C ſunt *enim* ſine his, quæ neceſſariam naturam habent: non tamen *ſunt* propter hæc, niſi vt materiam: ſed alicuius gratiâ. velvti, cur ſerra *eſt* talis? vt hoc *ſit*, huiúſque gratiâ: hoc verò cuius gratiâ, fieri nequit, niſi ferrea ſit: neceſſe *eſt* igitur ferream eſſe, ſi futura ſit ſerra, & opus eius. Ergo ex hypotheſi *eſt* neceſſitas, non vt finis. in materia namque *eſt* neceſſitas. id verò cuius gratiâ, *eſt* in ratione. 4 Eſt autem neceſſitas & in diſciplinis, & in iis quæ natura fiunt, quodammodo ſimilis. cùm enim rectum *ſit* hoc, neceſſe *eſt* triangulum habere *tres angulos* duobus rectis æquales. at non ſi hoc *ſit*, D etiam illud *eſt*, ſed ſi hoc non ſit, neque rectum erit. In iis verò quæ alicuius gratiâ fiunt, è contrario ſi finis erit aut eſt; etiam quod antecedit, erit aut eſt. ſin minùs, vt illic cùm non eſt concluſio, non erit principium; ita etiam hîc *non erit* finis & id cuius gratiâ. hoc enim *eſt* principium non actionis, ſed ratiocinationis. ibi autem ratiocinationis, quoniam actiones non ſunt. quare ſi erit domus, neceſſe *eſt*, hæc eſſe facta, aut ſuppetere, aut eſſe: aut omnino *eſſe* ipſam materiam alicuius gratiâ: velvti, lapides & lateres, ſi *futura eſt* domus. non tamen propter hæc eſt finis, neque ob hæc erit, niſi vt ob materiam. E omnino vero, niſi *hæc* ſint, neque domus erit, neque ſerra: illa quidem, niſi *ſint* lapides: hæc autem, niſi *ſit* ferrum. quia nec ibi *ſunt* principia, niſi triangulum *habeat tres angulos æquales* duobus rectis. 5 Perſpicuum igitur *eſt*, neceſſitatem *eſſe* in *rebus* naturalibus, quæ dicitur vt materia, & huius motiones. 6 Et ambæ quidem cauſæ tradendæ ſunt à phyſico: magis tamen ea cuius gratiâ: hæc enim *eſt* cauſa materiæ, non ipſa *materia eſt cauſa* finis. Ac finis, id cuius gratiâ, & principium, à definitione & ratione *ſumitur*. Vt in rebus artificioſis, cùm domus *ſit* talis, oportet hæc eſſe facta, & eſſe ex neceſſitate: [& cum ſanitas *ſit* hoc, oportet ex neceſſitate

hæc eſſe facta & eſſe:] ita etiam ſi homo *eſt* hoc, *opor-* A *tet* hæc *quoque eſſe*: & ſi hæc, *etiam* iſta. 7 Fortaſſis autem etiam in definitione eſt neceſſitas. cùm enim opus ſecandi *aliquis* definierit eſſe diuiſionem talem: at hæc non, niſi *ſerra* habeat dentes tales: hi verò non *erunt*, niſi *ſit* ferrea. ſunt enim in definitione partes quædam *definitionis*, tamquam materia.

TRACTATVS I.

Quid ſit motus. Cap. I.

CVM autem natura ſit principium B motus & mutationis, ac methodus nobis ſit *inſtituta* de natura, non eſt ignorandum quid ſit motus: hoc enim ignorato, neceſſe *eſt* etiam naturam ignorari. cùm autem definierimus de motu: nitendum *erit* eodem modo tractare de iis quæ deinceps *ſequuntur*. videtur autem motus eſſe *in* rerum continuarum *numero*. infinitum verò apparet primùm in eo quod eſt continuum. ideóque plerunque accidit vt qui definiunt, adiungant rationem infiniti: tamquam id quod in infinitum diuidi poteſt, continuum ſit. Ad hæc ſine loco & inani & tempore motus eſſe nequit. Manifeſtum C *eſt* igitur, cùm propter has *cauſas*, tum etiam quoniam iſta ſunt omnibus communia & vniuerſalia, conſiderandum in primis eſſe de his ſingulis: quia propriorum inſpectio poſterior eſt, quàm ea quæ in communibus *verſatur*. Primùm autem, vt diximus, *videndum eſt* de motu. 2 Eſt autem aliquid *quod eſt* actu tantùm: aliud, *quod eſt* poteſtate & actu: *quod* partim *eſt* hoc aliquid, partim tantum, partim tale: & ſimiliter in aliis entis Categoriis. 3 Eorum autem quæ ad aliquid *referuntur*, aliud ſecundùm exuperantiam & defectionem dicitur: aliud, quia efficiendi & patiendi, & omnino vt moueat & moueatur, vim habet. quod enim mouendi vim habet, rem D mobilem mouendi vim habet: & mobile, ab eo *eſt* mobile, quod mouendi vi eſt præditum. 4 Iam verò non eſt motus extra res. quicquid enim mutatur, aut mutatur ſecundùm ſubſtantiam, aut ſecundùm quantitatem, aut ſecundùm qualitatem, aut ſecundùm locum: commune autem his ſumere nihil licet, ſicut dicimus, quòd nec *ſit* hoc aliquid, nec quantum, nec quale, nec in vlla alia categoria. quare nec motus nec mutatio erit vllius præter ea quæ dicta ſunt: cùm nihil ſit præter ea quæ dicta ſunt. 5 Vnumquodque autem bifariàm cunctis ineſt. vt hoc aliquid: nam eius aliud *eſt* forma, aliud priuatio. & in qualitate: aliud enim eſt albũ, aliud nigrum. & in quãtitate, aliud eſt perfectum, aliud imperfectum.

A Similiter & in latione, aliud eſt ſupra, aliud infra: vel aliud leue, aliud graue. 6 Quocirca motus & mutationis ſpecies tot ſunt quot entis. 7 Cùm autem in vnoquoque genere diſtincta ſint, quod *eſt* actu, & quod *eſt* poteſtate: actus eius quod eſt poteſtate, qua talis *eſt*, motus eſt. 8 Vt eius quod eſt variabile, quà eſt variabile, variatio: & eius quod poteſt augeri, nec non oppoſiti, *id eſt*, eius quod poteſt deminui, (nullum enim nomen eſt commune vtriſque) accretio & deminutio. eius quod [illegible] & interire poteſt, ortus & interitus: & eius quod ferri poteſt, latio. 9. Motum autem hoc eſſe, hinc patet: cùm enim ædificabile, quatenus ipſum dicimus tale eſſe, actu eſt: *tunc* ædificatur, atque hoc eſt ędificatio. B Itidémque diſcēdi actus, & medicatio, & volutatio, & ſaltatio, & ad virilem ætatem & ſenectutem progreſſio. 10 Cùm autē nōnulla *ita ſe habeant, vt* eadem ſint poteſtate & actu, non tamen ſimul, vel non ſecundùm idem; ſed (exempli gratiâ) calidū poteſtate, frigidum actu: multa iam viciſſim facient & patientur. quoduis enim *horū* ſimul habebit vim faciendi, & patiendi. quapropter etiam quod naturaliter mouet, mobile *eſt*. quicquid enim *eſt* tale, mouet, cùm & ipſum moueatur. 11 Quibuſdam ergo videtur, quicquid mouet, moueri. ſed de his manifeſtum ex aliis *libris* erit, quomodo *res ſe* habeat: eſt enim aliquid mouēs & immobile. 12 Actus verò eius quod C poteſtate *eſt*, quando actu eſt, non quatenus *eſt id* ipſum *quod eſt*, ſed quatenus *eſt* mobile. *hic inquam actus* eſt motus. Illud autem QVATENVS, ſic dico. nam æs poteſtate eſt ſtatua: non tamen actus æris, quatenus *eſt* æs, eſt motus. non *eſt* enim eadem eſſentia æris, & poteſtate aliqua mobilis. quòd ſi eadem eſſent ſimpliciter & ſecundùm rationem: vtique actus æris quà *eſt* æs, eſſet motus. ſed non eſt *eadem*, vt dictum fuit. *hoc* autem patet in contrariis: nam poſſe valere, & poſſe ægrotare, differunt: (alioqui etiam ægrotare & valere eſſent idem) ſubiectum verò, quod valet, & quod ægrotat, (ſiue *ſit* humor, ſiue ſanguis) *eſt* vnum & idem. cùm autem non idem *ſit*, ſicuti neque color *eſt* D idem quod aſpectabile: perſpicuum *eſt*, actum poſſibilis, quatenus *eſt* poſſibile, eſſe motum. 13 Eſſe igitur hunc *actum*, & tunc accidere vt *res* moueatur, cùm eſt hic actus, non priùs, nec poſteriùs, manifeſtum *eſt*. vnum quodque enim poteſt interdum actu eſſe, interdùm non *eſſe*: veluti quod ædificari poteſt, quatenus ædificari poteſt. 14 Et actus eius quod ædificari poteſt, quatenus ædificari poteſt, ædificatio eſt. aut enim ædificatio eſt hoc, *id eſt*, actus eius quod ædificari poteſt: aut ædes: atqui cùm ædes ſunt, non erit amplius quod poteſt ædificari: ædificatur autem quod poteſt ædificari: neceſſe igitur *eſt* ædificationem eſſe actum illum. ædificatio E verò eſt motus quidam. ſed eadem ratio conueniet etiam aliis motibus. 15 Scitè autem dictū eſſe patet etiā ex iis quæ alij de ipſo *motu* dicunt, & ex eo quod non facile eſt ipſum aliter definire. neq; enim motum & mutationem in alio genere collocare aliquis poſſit: nec qui de eo aliter dixerūt, rectè locuti ſunt. 16 Quod quidem manifeſtum *fiet* conſiderantibus, quemadmodum quidam eum ponūt, qui aiunt motum eſſe diuerſitatem, & inæqualitatem, & non ens: cùm nihil horū moueri neceſſe ſit, nec ſi ſint diuerſa, nec ſi inæqualia, nec ſi non entia. 17 Sed neque mutatio, in hæc, aut ex his potiùs eſt quàm ex oppoſitis. 18 Cauſa verò cur hi *motum* ad hæc retulerint, *eſt*: quia motus videtur eſſe indefinitum quiddam;

ac alterius claſſis principia, quia ſunt priuantia, *ſunt* A indefinita. neque enim vllum eorum eſt hoc aliquid, neque tale neque *in vlla* aliarum Categoriarum. 19 Cur autem motus videatur eſſe res indefinita, cauſa *eſt*: quia neque ad entium poteſtatem, neque ad actum referri poteſt ſimpliciter. neque enim quod poteſt eſſe quantum, neceſſariò mouetur, neque *quod eſt* actu quantum. ac motus videtur quidem eſſe actus quidam, ſed imperfectus. cauſa autem eſt : quia id *eſt* imperfectum, quod eſt poteſtate, cuius actus eſt motus. 20 Ideòque difficile *eſt* ſumere, quid ipſe ſit. aut enim neceſſe *eſt eum* ad priuationem referre, aut ad poteſtatem, aut ad actum ſimplicem : quorum nullum videtur eſſe poſſe. relinquitur ergo modus, quem diximus : *nimirum motum* eſſe actum quẽdam, ac talem actum, qualem diximus, difficilem quidem cognitu, ſed nihilominus qui eſſe poſſit.

A τῆς δὲ ἑτέρας συστοιχίας αἱ ἀρχαὶ διὰ τὸ στερητικαὶ εἶναι, ἀόριστοι· οὔτε γὰρ τόδε οὔτε τοιόνδε, οὐδεμία αὐτῶν ἐστίν, ὅτι οὐδὲ τῶν ἄλλων κατηγοριῶν. 19 Τοῦ δὲ δοκεῖν ἀόριστον εἶναι τὴν κίνησιν, αἴτιον, ὅτι οὔτε εἰς δύναμιν τῶν ὄντων, οὔτε εἰς ἐνέργειαν ἔστι θεῖναι αὐτὴν ἁπλῶς· οὔτε γὰρ τὸ δυνατὸν εἶναι ποσόν, κινεῖται ἐξ ἀνάγκης, οὔτε τὸ ἐνεργείᾳ ποσόν· ἥ τε κίνησις, ἐνέργεια μέν τις εἶναι δοκεῖ, ἀτελὴς δέ. αἴτιον δ᾽, ὅτι ἀτελὲς τὸ δυνατόν, οὗ ἐστιν ἐνέργεια κίνησις. 20 Καὶ διὰ τοῦτο δὴ χαλεπὸν αὐτὴν λαβεῖν τί ἐστιν· ἢ γὰρ εἰς στέρησιν ἀναγκαῖον θεῖναι, ἢ εἰς δύναμιν, ἢ εἰς ἐνέργειαν ἁπλῆν· τούτων δ᾽ οὐδὲν φαίνεται ἐνδεχόμενον. λείπεται τοίνυν ὁ εἰρημένος τρόπος, ἐνέργειαν μέν τινα εἶναι, τοιαύτην δ᾽ ἐνέργειαν, οἵαν εἴπομεν, χαλεπὴν μὲν ἰδεῖν, ἐνδεχομένην δὲ εἶναι.

De mouente, & eo quod mouetur.

Cap. II.

MOuetur autem, vt dictum fuit, omne mouens, B quod poteſtate eſt mobile, & cuius immobilitas eſt quies. cui namque motus ineſt, eius immobilitas *eſt* quies. nam in id agere, qua tale *eſt*, idipſum eſt mouere. id autem facit tactu. quare ſimul etiam patitur : idcirco motus *eſt* actus eius quod eſt mobile, quatenus eſt mobile. atque hoc euenit tactu eius quod mouendi vim habet : quapropter ſimul etiam patitur. 2 Iam verò quod mouet, ſemper adfert aliquam formam, *id eſt*, vel hoc *aliquid* vel tale, vel tantum, quod erit principium & cauſa motus, quando mouet. vt is qui actu *eſt* homo, facit hominem ex eo quod *eſt* homo poteſtate. 3 Sed & id de quo dubitari ſolet, perſpicuum *ſit, nempe* motum, C eſſe in *re mobili*. eſt enim actus huius, & ab eo quod mouendi vim habet. 4 Atque eius quod mouendi vim habet, actus non eſt diuerſus. oportet enim ambobus eſſe actum. motiuum enim eſt quia poteſt: mouens autem, quia agit. eſt autem actiuum ipſius mobilis. quare ſimiliter vnus eſt vtriſque actus. quemadmodum idem *eſt* interuallum, *ſiue ſpectes* vnum ad duo, ſiue duo ad vnum. nec non accliue & decliue. hæc enim ſunt vnum. ſed definitio non eſt vna. ſimiliter autem *res habet* etiam in mouente & eo quod mouetur. 5 Exiſtit autem dubitatio Logica : quia fortaſſe neceſſe *eſt* eſſe aliquem actum diuerſum effectiui & paſſiui. alterum enim *eſt* effectio, alterum paſſio, opus verò & finis illius quidem D *eſt* effectus, huius verò effectio. 6 Cùm igitur ambo *ſint* motus : ſi diuerſi *ſunt*, in quonam *erunt*? aut enim ambo ſunt in eo quod patitur & mouetur : aut effectio *eſt* in efficiente, paſſio verò in patiente. quòd ſi & hanc vocare effectionem oportet, ſanè homonymus erit. at verò ſi hoc *eſt*, motus erit in eo quod mouet. *eſt* enim eadem ratio eius quod mouet & eius quod mouetur. quare aut omne mouens mouebitur, aut habens motum, non mouebitur. quòd ſi ambo *ſint* in eo quod mouetur & patitur, tam effectio quàm paſſio, & in eo quod diſcit, tam docendi quàm diſcendi actio, cùm duo ſint: primùm quidem ſuus cuiuſque actus in ipſo non erit : deinde *eueniet* abſurdum, duobus motibus *idem* ſimul moueri. erunt enim aliquæ variationes duæ vnius *ſubiecti* & ad vnam formam, quod *eſt* impoſſibile.

B Κινεῖται δὲ καὶ τὸ κινοῦν, ὥσπερ εἴρηται πᾶν, τὸ δυνάμει ὂν κινητόν, καὶ οὗ ἡ ἀκινησία ἠρεμία ἐστίν· ᾧ γὰρ ἡ κίνησις ὑπάρχει, τούτῳ ἡ ἀκινησία ἠρεμία· τὸ γὰρ πρὸς τοῦτο ἐνεργεῖν, ᾗ τοιοῦτον, αὐτὸ τὸ κινεῖν ἐστί· τοῦτο δὲ ποιεῖ *θίξει· ὥστε ἅμα καὶ πάσχει· διὸ ἡ κίνησις, ἐντελέχεια τοῦ κινητοῦ, ᾗ κινητόν. συμβαίνει δὲ τοῦτο θίξει τοῦ κινητικοῦ. ὥσθ᾽ ἅμα καὶ πάσχει. 2 Εἶδος δὲ ἀεὶ *οἴσεταί τι τὸ κινοῦν, ἤτοι τόδε, ἢ τοιόνδε, ἢ τοσόνδε, ὃ ἔσται ἀρχὴ καὶ αἴτιον τῆς κινήσεως, ὅταν κινῇ. οἷον ὁ ἐντελεχείᾳ ἄνθρωπος ποιεῖ ἐκ τοῦ δυνάμει ὄντος ἀνθρώπου ἄνθρωπον. 3 Καὶ C τὸ ἀπορούμενον δὲ φανερόν, ὅτι ἐστὶν ἡ κίνησις ἐν τῷ κινητῷ· ἐντελέχεια γάρ ἐστι τούτου, καὶ ὑπὸ τοῦ κινητικοῦ. 4 Καὶ ἡ τοῦ κινητικοῦ δὲ ἐνέργεια, οὐκ ἄλλη ἐστί· δεῖ μὲν γὰρ εἶναι ἐντελέχειαν ἀμφοῖν· κινητικὸν μὲν γάρ ἐστι, τῷ δύνασθαι· κινοῦν δέ, τῷ ἐνεργεῖν· ἀλλ᾽ ἔστιν ἐνεργητικὸν τοῦ κινητοῦ· ὥστε ὁμοίως μία ἡ ἀμφοῖν ἐνέργεια, ὥσπερ τὸ αὐτὸ διάστημα ἓν πρὸς δύο, καὶ δύο πρὸς ἕν, καὶ τὸ ἄναντες καὶ τὸ κάταντες· ταῦτα γὰρ ἓν μέν ἐστιν, ὁ μέντοι λόγος οὐχ εἷς. ὁμοίως δὲ καὶ ἐπὶ τοῦ κινοῦντος καὶ κινουμένου. 5 Ἔχει δ᾽ ἀπορίαν λογικήν· ἀναγκαῖον γὰρ ἴσως εἶναί τινα ἐνέργειαν ἄλλην τοῦ ποιητικοῦ καὶ τοῦ παθητικοῦ· τὸ μὲν γὰρ ποίησις, τὸ δὲ πάθησις. ἔργον δὲ καὶ τέλος, τοῦ μὲν D ποίημα, τοῦ δὲ πάθος. 6 Ἐπεὶ οὖν ἄμφω κινήσεις, εἰ μὲν ἕτεραι, ἐν τίνι; ἢ γὰρ ἄμφω ἐν τῷ πάσχοντι καὶ κινουμένῳ, ἢ ἡ μὲν ποίησις ἐν τῷ ποιοῦντι, ἡ δὲ πάθησις ἐν τῷ πάσχοντι. εἰ δὲ δεῖ καὶ ταύτην ποίησιν καλεῖν, *ὁμώνυμος ἂν εἴη. ἀλλὰ μὴν εἰ τοῦτο, ἡ κίνησις ἐν τῷ κινοῦντι ἔσται· ὁ γὰρ αὐτὸς λόγος ἐπὶ κινοῦντος καὶ κινουμένου. ὥστε ἢ πᾶν τὸ κινοῦν κινήσεται, ἢ ἔχον κίνησιν οὐ κινήσεται. εἰ δ᾽ ἄμφω ἐν τῷ *κινουμένῳ καὶ πάσχοντι, καὶ ἡ ποίησις καὶ ἡ πάθησις, καὶ ἡ δίδαξις καὶ ἡ μάθησις, δύο οὖσαι, ἐν τῷ μανθάνοντι. πρῶτον μέν, ἡ ἐνέργεια ἡ ἑκάστου, οὐκ ἐν ἑκάστῳ ὑπάρξει· εἶτα, ἄτοπον τὸ δύο κινήσεις ἅμα κινεῖσθαι· τίνες γὰρ ἔσονται ἀλλοιώσεις δύο τοῦ ἑνός, καὶ εἰς ἓν εἶδος; ἀλλ᾽ ἀδύνατον.

7 Ἀλλὰ μία ἔσται ἐνέργεια; ἀλλ' ἄλογον, δύο ἑτέρων τῷ εἴδει τὴν αὐτὴν καὶ μίαν εἶναι ἐνέργειαν. 8 Καὶ ἔσται, εἴπερ ἡ μάθησις καὶ ἡ δίδαξις ταὐτό, καὶ ἡ ποίησις καὶ ἡ πάθησις, καὶ τὸ διδάσκειν τῷ μανθάνειν ταὐτό, καὶ τὸ ποιεῖν τῷ πάσχειν. ὥστε τὸν διδάσκοντα ἀνάγκη ἔσται πάντα μανθάνειν, καὶ τὸν ποιοῦντα πάσχειν. 9 Ἢ οὐδὲ τὸ τὴν ἄλλου ἐνέργειαν ἐν ἑτέρῳ εἶναι ἄτοπον; ἔστι γὰρ ἡ δίδαξις ἐνέργεια τοῦ διδασκαλικοῦ ἔν τινι μέντοι, καὶ οὐκ ἀποτετμημένη, ἀλλὰ τοῦδε ἐν τῷδε· οὔτε γὰρ μίαν δυοῖν κωλύει οὐθὲν τὴν αὐτὴν εἶναι, μὴ ὡς τὸ εἶναι τὸ αὐτό, ὡς λώπιον καὶ ἱμάτιον· ἀλλ' ὡς τὸ δυνάμει ὂν ὑπάρχει πρὸς τὸ ἐνεργοῦν. 10 Οὔτ' ἀνάγκη τὸν διδάσκοντα μανθάνειν, οὐδ' εἰ τὸ πάσχειν καὶ τὸ ποιεῖν τὸ αὐτό ἐστι· μὴ μέντοι ὡς τὸν λόγον εἶναι ἕνα, τὸν τί ἦν εἶναι λέγοντα, οἷον τῷ λωπίῳ καὶ τῷ ἱματίῳ· ἀλλ' ὡς ἡ ὁδὸς ἡ Θήβηθεν Ἀθήναζε, καὶ ἡ Ἀθήνηθεν εἰς Θήβας, ὥσπερ εἴρηται καὶ πρότερον. οὐ γὰρ ταὐτὰ πάντα ὑπάρχει τοῖς ὁπωσοῦν ταὐτοῖς, ἀλλὰ μόνον οἷς τὸ εἶναι τὸ αὐτό. 11 Οὐ μὴν, ἀλλ' οὐδ' εἰ ἡ δίδαξις τῇ μαθήσει τὸ αὐτό, καὶ τὸ μανθάνειν τῷ διδάσκειν τὸ αὐτό· ὥσπερ οὐδ' εἰ ἡ διάστασις μία τῶν διεστηκότων, καὶ τὸ διίστασθαι ἐνθένδε ἐκεῖσε, καὶ ἐκεῖθεν δεῦρο, ἓν καὶ τὸ αὐτό. 12 Ὅλως δ' εἰπεῖν, οὐδ' ἡ δίδαξις τῇ μαθήσει, οὐδ' ἡ ποίησις τῇ παθήσει τὸ αὐτὸ κυρίως, ἀλλ' ᾧ ὑπάρχει ταῦτα, ἡ κίνησις· τὸ γὰρ τοῦδε ἐν τῷδε, καὶ τὸ τοῦδε ὑπὸ τοῦδε ἐνέργειαν εἶναι, ἕτερον τῷ λόγῳ.

A 7 Sed vnus erit actus? verùm à ratione eſt alienum, duarum rerum ſpecie diuerſarum vnum & eundem eſſe actum. 8 Et ſi quidē diſcendi ac docendi actus idem *ſunt*, nec non effectio & paſſio: *certe* & docere erit idem quod diſcere, & facere idem quod pati: quare neceſſe erit, omnem docentem, diſcere, & facientem, pati. 9 An nec abſurdum eſt, alius rei actū in alia re eſſe? (nam actus docendi eſt actus [illegible] quod docendi vim habet, in aliquo tamen, [illegible] ſus, ſed huius in hoc) nec quidquam prohibet [illegible] & eundem eſſe duarum *rerum* actum (non vt *eſſentia* *ſit* eadem ſicut indumentum & veſtimentum, ſed vt id quod eſt poteſtate ſe habet ad id quod agit. 10 Nec neceſſe *eſt* eum qui docet, diſcere, ne quidem B ſi pati & facere idem ſint, non ſint tamen vt vna ſit ratio quidditatem explicans, qualis *eſt* veſtimenti & indumenti, ſed vt via quæ Thebis Athenas & quæ Athenis Thebas *ducit*, ſicut & antè dictum fuit. non enim eadem omnia inſunt iis quæ quoquo modo ſunt eadem, ſed tantùm iis quorum eadem *eſt* eſſentia. 11 At verò nec ſi actus docendi eſt idem quod actus diſcendi, *propterea* etiam diſcere *eſt* idem quod docere. quemadmodum nec ſi diſtantia eſt vna eorum quæ diſtant, *propterea* etiam diſtare hoc ab illo, & illud ab hoc, *ſunt* vnum & idem. 12 Vt autem omnino dicam, nec docendi & diſcendi actus, nec effectio & paſſio *ſunt* idem propriè: ſed motus, cui hæc inſunt, *idem eſt*. nam eſſe actum huius in hoc & huius ab hoc, ratione differunt.

De ſpeciali & perfecta motus definitione.

Cap. III.

Τί μὲν οὖν ἐστιν ἡ κίνησις, καὶ καθόλου, καὶ κατὰ μέρος, C εἴρηται· οὐ γὰρ ἄδηλον ὡς ὁρισθήσεται τῶν εἰδῶν ἕκαστον αὐτῆς· ἀλλοίωσις μὲν γάρ, ἡ τοῦ ἀλλοιωτοῦ, ᾗ ἀλλοιωτόν, ἐντελέχεια. 2 Ἔτι δὲ γνωριμώτερον, ἡ τοῦ δυνάμει ποιητικοῦ καὶ παθητικοῦ, ᾗ τοιοῦτον, ἁπλῶς τε, καὶ πάλιν καθ' ἕκαστον, ἢ οἰκοδόμησις, ἢ ἰάτρευσις. τὸν αὐτὸν δὲ λεχθήσεται τρόπον καὶ περὶ τῶν ἄλλων κινήσεων ἑκάστης.

Qvid igitur ſit motus, & vniuerſaliter & in parte dictum eſt. non *eſt* enim obſcurum, quomodo vnaqueque eius ſpecies definietur. Variatio namque *eſt* actus eius quod variari poteſt, quatenus variari poteſt. 2 Præterea notiori modo *definitur actus* eius quod facere & quod pati poteſt, quatenus *eſt* tale. *idque* & ſimpliciter: & rurſus in ſingulis, vel ædificatio, vel medicatio. eodem modo docetur & de ſingulis aliis motibus.

DE INFINITO,

Tractatvs II.

Agendum eſſe de infinito: & veterum de eo opiniones.

Cap. IV.

Ἐπεὶ δ' ἐστὶν ἡ περὶ φύσεως ἐπιστήμη περὶ μεγέθη, καὶ D κίνησιν, καὶ χρόνον, ὧν ἕκαστον ἀναγκαῖον ἢ ἄπειρον, ἢ πεπερασμένον εἶναι, εἰ καὶ μὴ πᾶν ἐστιν ἢ ἄπειρον, ἢ πεπερασμένον, οἷον πάθος ἢ στιγμή (τῶν γὰρ τοιούτων ἴσως οὐδὲν ἀναγκαῖον ἐν θατέρῳ τούτων εἶναι·) προσῆκον ἂν εἴη τὸν περὶ φύσεως πραγματευόμενον θεωρῆσαι περὶ ἀπείρου, εἰ ἔστιν, ἢ μή· καὶ εἰ ἔστι, τί ἐστι. 2 Σημεῖον δέ, ὅτι ταύτης τῆς ἐπιστήμης οἰκεία ἡ θεωρία ἡ περὶ αὐτοῦ· πάντες γὰρ ὅσοι δοκοῦσιν ἀξιολόγως ἧφθαι τῆς τοιαύτης φιλοσοφίας, πεποίηνται λόγον περὶ τοῦ ἀπείρου, καὶ πάντες ὡς ἀρχήν τινα τιθέασι τῶν ὄντων. 3 Οἱ μὲν ὥσπερ οἱ Πυθαγόρειοι

Cvm autem ſcientia de natura in magnitudinibus & motibus ac temporibus verſetur, quorum vnumquodque neceſſe *eſt* vel infinitum vel finitum eſſe: (etſi non quodvis eſt vel infinitum vel finitum: vt affectio aut punctum: fortaſſis enim nihil eorum quæ *ſunt* eiuſmodi, neceſſe *eſt* in horum altero collocari) ſanè decet, eum qui de natura pertractat, conſiderare de infinito, an ſit, nec ne: & ſi ſit, quid ſit. 2 Indicat autem hanc de ipſo inſpectionem *eſſe* huius ſcientiæ propriam, quòd quicumque videntur cum dignitate huiuſmodi philoſophiam attigiſſe, de infinito diſſeruerunt. Idque omnes, vt principium quoddam entium, ponunt. 3 Alij quidem, vt Pythagorei

A & Plato, per ſe, non quaſi ipſum infinitum alij cuipiam accidat, ſed quaſi ſit ſubſtantia. (4 Verùm Pythagorei *ponunt infinitum* in *rebus* ſenſibilibus; quia numerum ſeparatum non faciunt, atque aſſerunt id quod *eſt* extra cœlum, *eſſe* infinitum: Plato verò *inquit* extra *cœlum* non eſſe vllum corpus, nec ideas, propterea quòd hæ nuſſibi ſunt: ſed infinitum & in *rebus* ſenſibilibus, & in illis *eſſe* ait. 5 Et illi quidem infinitum *aiunt* eſſe par; hoc enim comprehenſum, & ab impari terminatum præbet entibus infinitatem: huius autem *rei* ſignum eſſe, quod accidit in numeris: cùm enim circa vnum & ſeorſim ponantur normæ, aliquando fit ſemper alia forma, aliquando vna *& eadem manet*: Plato autem duo infinita *ponit, nempe* magnum & paruum.) 6 Qui verò de natura *diſſerunt*, omnes infinito ſemper ſubiiciunt aliquam aliam naturam eorum quæ vocantur elementa: vt aquam, aut aërem, aut quod *eſt* his interiectum. 7 Eorum autem qui finita elementa faciunt, nemo *ea* infinita facit. 8 Sed quicumque infinita elementa faciunt, ſicut Anaxagoras & Democritus: hi aiunt infinitum eſſe tactu continuum: *nempe* ille ex partibus ſimilaribus, hic autem ex figurarum farragine. 9 Et ille quidem quamvis particulam æquè eſſe mixturam atque vniuerſum, quia videt quodvis ex quovis fieri: (hinc enim dixiſſe videtur ſimul aliquando omnes res fuiſſe, vt hæc caro, & hoc os, atque ita quodvis, ergo & omnia. & ſimul igitur. Principium enim ſecretionis non ſolùm eſt in vnoquoque, ſed & omnium. Cùm enim quod fit, ex tali fiat corpore, omnium autem fit generatio, quamvis non ſimul: etiam principium aliquod generationis eſſe oportet. hoc autẽ eſt vnum, quam ille appellat mentẽ. mens verò à principio aliquo operatur intelligendo. quare neceſſe *eſt*, omnia ſimul aliquando fuiſſe, & quandoq; moueri cœpiſſe) Democritus autem nullum principiorum fieri alterum ex altero inquit. Verumtamen ipſum commune corpus eſt omnium *rerum* principium, magnitudine ac figura partium differens. 10 Hanc igitur inſpectionem phyſicis conuenire, manifeſtum ex his *eſt*. 11 Nec ſine ratione omnes ponunt ipſum *eſſe* principium: quia nec fruſtra eſſe poteſt, nec aliam vim habere quàm principij. omnia namque aut *ſunt* principium, aut ex principio. ſed infiniti non eſt principiũ: alioquin etiam eius eſſet finis. 12 Præterea & ingenitum, & interitus expers: vt pote quod eſt principium quoddam. quod enim factum eſt, neceſſe *eſt* accepiſſe finem. & finis *quoque* eſt cuiuſuis interitus. Ideo, ſicut dicimus, non videtur *eſſe* huius principiũ, ſed hoc eſſe aliorum *principium*. 13 Et continere omnia, atque omnia gubernare, vt aiunt quicumque præter infinitum non faciunt tales cauſas: velvti, mentem, & amicitiam. 14 Atque hoc eſſe numen: *eſſe* enim immortale, ac perire non poſſe, vt inquit Anaximander, & plurimi eorum qui de natura diſſerunt.

E Sſe autem quoddam infinitum, ex quinque potiſſimùm *argumentis* fides conſiderantibus fit. 2 Nempe ex tempore: hoc enim *eſt* infinitum. 3 Et ex diuiſione, quæ in magnitudinibus *cernitur*. nam & mathematici vtuntur infinito.

E Τοῦ δ' εἶναί τι ἄπειρον, ἡ πίστις ἐκ πέντε μάλιστ' ἂν συμβαίνοι σκοποῦσιν. 2 Ἔκ τε τοῦ χρόνου· οὗτος γὰρ ἄπειρος. 3 Καὶ ἐκ τῆς ἐν τοῖς μεγέθεσι διαιρέσεως· χρῶνται γὰρ καὶ οἱ μαθηματικοὶ τῷ ἀπείρῳ.

4 Ἔτι, τῷ οὕτως ἂν μόνως μὴ ὑπολείπειν γένεσιν καὶ φθοράν, εἰ ἄπειρον εἴη, ὅθεν ἀφαιρεῖται τὸ γιγνόμενον. 5 Ἔτι, τῷ τὸ πεπερασμένον ἀεὶ πρός τι περαίνειν. ὥστε ἀνάγκη μηδὲν εἶναι πέρας, εἰ ἀεὶ περαίνειν ἀνάγκη ἕτερον πρὸς ἕτερον. 6 Μάλιστα δὲ καὶ κυριώτατον, ὃ τὴν κοινὴν ποιεῖ ἀπορίαν πᾶσι· διὰ γὰρ τὸ ἐν τῇ νοήσει μὴ ὑπολείπειν, καὶ ὁ ἀριθμὸς δοκεῖ ἄπειρος εἶναι, καὶ τὰ μαθηματικὰ μεγέθη, καὶ τὸ ἔξω τοῦ οὐρανοῦ. ἀπείρου δ' ὄντος τοῦ ἔξω, καὶ σῶμα ἄπειρον εἶναι δοκεῖ, καὶ κόσμοι· τί γὰρ μᾶλλον τοῦ κενοῦ ἐνταῦθα, ἢ ἐνταῦθα; ὥστε εἴπερ μοναχοῦ, καὶ πανταχοῦ ἀνάγκη εἶναι τὸν ὄγκον. ἅμα δ' εἰ καὶ ἔστι κενόν, καὶ τόπος ἄπειρος, καὶ σῶμα ἄπειρον ἀναγκαῖον εἶναι· τὸ γὰρ ἐνδέχεσθαι τοῦ εἶναι οὐδὲν διαφέρει ἐν τοῖς ἀϊδίοις. 7 Ἔχει δ' ἀπορίαν ἡ περὶ τοῦ ἀπείρου θεωρία· καὶ γὰρ μὴ εἶναι πολλὰ ἀδύνατα συμβαίνει, καὶ εἶναι. 8 Ἔτι δὲ, ποτέρως ἐστί, πότερον ὡς οὐσία, ἢ ὡς συμβεβηκὸς καθ' αὑτὸ φύσει τινί, ἢ οὐδετέρως· ἀλλ' οὐδὲν ἧττόν ἐστιν ἄπειρον ἢ ἄπειρα τῷ πλήθει. 9 Μάλιστα δὲ φυσικοῦ ἐστι σκέψασθαι, εἰ ἔστι μέγεθος αἰσθητὸν ἄπειρον.

A 4 Præterea, quia hoc tantùm modo non deficit ortus & interitus, si *illud* sit infinitum, vnde aufertur quod fit. 5 Præterea, quia finitum ſemper ad aliquid terminatur. quare neceſſe *eſt* nullum eſſe terminum, ſi ſemper neceſſe *eſt* terminari alterum ad alterum. 6 Maximè autem *fidem facit*, & maximè proprium *eſt argumentum*, *quod* communem dubitationem omnibus efficit. nam quia cogitationis non eſt finis, videtur & numerus eſſe infinitus, & mathematicæ magnitudines, & quod est extra cælum. cùm autem infinitum ſit, quod extra *eſt*: etiam corpus infinitum eſſe videtur, ac mundi *infiniti*. cur enim potiùs in hac parte inanis, quàm in illa? B quare ſi vno *eſt* loco, etiam vbique eſſe molem neceſſe *eſt*. item ſi eſt inane, & locus infinitus: neceſſe *eſt* etiam eſſe corpus infinitum. nam poſſe, & eſſe, in ſempiternis nihil differunt. 7 Habet autem dubitationem inſpectio de infinito: quoniam & iis qui non eſſe ponunt, multa impoſſibilia eueniunt, & *iis qui* eſſe *ponunt*. 8 Præterea vtro modo ſit, vtrùm vt ſubſtantia, an vt accidens per ſe naturæ alicui, an neutro modo, ſed nihilominus ſit infinitum vel infinita numero. 9 Maximè autem phyſici eſt conſiderare an ſit magnitudo ſenſibilis infinita.

Diſputatio contra Platonem & Pythagoreos, ponentes infinitum eſſe ſubſtantiam, & per ſe.

Cap. VI.

Πρῶτον οὖν διαιρετέον, ποσαχῶς λέγεται τὸ ἄπειρον. 2 Ἕνα μὲν οὖν τρόπον, τὸ ἀδύνατον διελθεῖν, τῷ μὴ πεφυκέναι διιέναι, ὥσπερ ἡ φωνὴ ἀόρατος. ἄλλως δὲ, τὸ διέξοδον ἔχον ἀτελεύτητον, ἢ ὃ μόγις, ἢ ὃ πεφυκὸς ἔχειν, μὴ ἔχει διέξοδον, ἢ πέρας. 3 Ἔτι ἄπειρον ἅπαν, ἢ κατὰ πρόσθεσιν, ἢ κατὰ διαίρεσιν, ἢ ἀμφοτέρως. 4 Χωριστὸν μὲν οὖν εἶναι τὸ ἄπειρον τῶν αἰσθητῶν, αὐτό τι ὂν ἄπειρον, οὐχ οἷόν τε. εἰ γὰρ μήτε μέγεθός ἐστι, μήτε πλῆθος, ἀλλ' οὐσία αὐτό ἐστι τὸ ἄπειρον, καὶ μὴ συμβεβηκός, ἀδιαίρετον ἔσται· τὸ γὰρ διαιρετὸν, ἢ μέγεθος ἔσται, ἢ πλῆθος. εἰ δὲ ἀδιαίρετον, οὐκ ἄπειρον, εἰ μὴ ὡς ἡ φωνὴ ἀόρατος. ἀλλ' οὐχ οὕτως, οὔτε φασὶν εἶναι οἱ φάσκοντες εἶναι τὸ ἄπειρον, οὔτε ἡμεῖς ζητοῦμεν, ἀλλ' ὡς ἀδιέξοδον. 5 Εἰ δὲ κατὰ συμβεβηκός ἐστι τὸ ἄπειρον, οὐκ ἂν εἴη στοιχεῖον τῶν ὄντων, ᾗ ἄπειρον· ὥσπερ οὐδὲ τὸ ἀόρατον τῆς διαλέκτου, καίτοι ἡ φωνή ἐστιν ἀόρατος. 6 Ἔτι πῶς ἐνδέχεται εἶναί τι αὐτὸ ἄπειρον, εἴπερ μὴ καὶ ἀριθμὸν καὶ μέγεθος, ὧν ἐστι καθ' αὑτὸ πάθος τι τὸ ἄπειρον; ἔτι γὰρ ἧττον ἀνάγκη, ἢ τὸν ἀριθμόν, ἢ τὸ μέγεθος. 7 Φανερὸν δὲ καὶ ὅτι οὐκ ἐνδέχεται εἶναι τὸ ἄπειρον, ὡς ἐνεργείᾳ ὄν, καὶ ὡς οὐσίαν, καὶ ἀρχήν· ἔσται γὰρ ὁτιοῦν αὐτοῦ ἄπειρον τὸ λαμβανόμενον, εἰ μεριστόν. τὸ γὰρ ἀπείρῳ εἶναι, καὶ ἄπειρον, τὸ αὐτό, εἴπερ οὐσία τὸ ἄπειρον, καὶ μὴ καθ' ὑποκειμένου. ὥστ' ἢ ἀδιαίρετον, ἢ εἰς ἄπειρα διαιρετόν· πολλὰ δ' ἄπειρα ἀδύνατον τὸ αὐτὸ εἶναι. ἀλλὰ μὴν ὥσπερ ἀέρος ἀὴρ μέρος, οὕτω καὶ ἄπειρον ἀπείρου, εἴγε οὐσία ἐστὶ καὶ ἀρχή. ἀμέριστον ἄρα καὶ ἀδιαίρετον. ἀλλ' ἀδύνατον τὸ ἐντε-

C PRimùm igitur definiendum *eſt*, quot modis dicatur infinitum. 2 Vno igitur modo *dicitur infinitum*, quod eſt impoſſibile pertranſire, quia non eſt natura aptum vt percurratur: quemadmodum vox *eſt* inaſpectabilis. alio modo, cuius tranſitus non habet finem, aut vix, aut quod ſua natura poteſt habere, non tamen habet tranſitum vel finem. 3 Præterea omne infinitum *eſt* vel additione, vel diuiſione, vel vtroque modo. 4 Infinitum igitur ſeparatum à rebus ſenſibilibus, quod ſit ipſum quiddam infinitum, eſſe nequit. nam ſi ipſum infinitum nec eſt magnitudo, nec multitudo, ſed eſt ſubſtantia, D non accidens: *certè* indiuiduum erit. quod enim eſt diuiduum, aut erit magnitudo aut multitudo. ſi verò indiuiduum *ſit*, non *erit* infinitum, niſi vt vox *eſt* inaſpectabilis. ſed ita nec eſſe dicunt ij qui aiunt eſſe infinitum, nec nos quærimus, ſed vt id quod pertranſiri non poteſt. 5 Sin autem infinitum eſt ex accidenti: non poteſt eſſe elementum eorum quæ ſunt, quatenus *eſt* infinitum: quemadmodum nec aſpectabile *eſt* linguæ *elementum*, quamvis vox ſit aſpectabilis. 6 Præterea qui fieri poteſt, vt aliquid ſit ipſum infinitum? ſi quidem non *ita eſſe poſſunt* numerus & magnitudo, quorum affectio quædam per ſe eſt infinitum. neceſſe enim *eſt* adhuc mi- E nùs *eſſe infinitum*, quàm numerum, vel magnitudinem. 7 Perſpicuum quoque eſt, non poſſe infinitum eſſe vt actu exiſtens, & vt ſubſtātiam, & *vt* principium: nam quævis eius *pars* ſumatur, erit infinita, ſi partibilis *eſt*. infiniti enim eſſentia, & infinitum, idem *ſunt*: ſi quidem infinitum *eſt* ſubſtantia, nec *dicitur* de ſubiecto. quare aut indiuiduum eſt, aut in infinita diuiduum. ſed multa infinita eidem ineſſe non poſſunt. At verò vt aëris pars *eſt* aer: ita etiam infiniti infinitum, ſi eſt ſubſtantia, & principium. *Eſt* igitur impartibile & indiuiduum. ſed impoſſibile *eſt*, cùm

actu ſit infinitum: quantum enim quiddam eſſe neceſſe *eſt*. 8 Ergo ex accidẽti infinitum ineſt. Sed ſi ita *ſit*, dictum fuit non poſſe id appellari principium, ſed illud *potiùs* cui accidit, *nempe* aërem, aut par. 9 Quare abſurdè pronuntiant, qui ſic aſſerunt, vt inquiunt Pythagorei: ſimul enim ſtatuunt infinitum *eſſe* ſubſtantiam, & in partes diuidunt.

A λεχεία ὂν ἄπειρον· ποσὸν γάρ τι εἶναι ἀναγκαῖον. 8 Κατὰ συμβεβηκὸς ἄρα ὑπάρχει τὸ ἄπειρον. ἀλλ' εἰ οὕτως, εἴρηται ὅτι οὐκ ἐνδέχεται αὐτὸ ἀρχὴν λέγειν· ἀλλ' ἐκεῖνο ᾧ συμβέβηκε, τὸν ἀέρα, ἢ τὸ ἄρτιον. 9 Ὥστε ἀτόπως ἂν ἀποφαίνοιντο οἱ λέγοντες οὕτως, ὥσπερ οἱ Πυθαγόρειοί φασιν· ἅμα γὰρ οὐσίαν ποιοῦσι τὸ ἄπειρον, καὶ μερίζουσιν.

Non eſſe corpus ſenſibile infinitum.

Cap. VII.

SEd fortaſſis hæc quæſtio eſt magis vniuerſalis, an B
poſſit eſſe infinitum etiam in mathematicis, & in intelligibilibus, & in iis quæ nullam habent magnitudinem. Nos verò de *rebus* ſenſibilibus, ac de quibus methodum conſcribimus, diſpiciamus, vtrùm in his ſit an non ſit corpus infinitum accretione. 2 Logicè igitur conſiderantibus ex *rationibus* eiuſmodi videri poſſit non eſſe. 3 Nam ſi eſt corporis definitio, Quod ſuperficie terminatur: non poteſt eſſe corpus infinitum, nec intelligibile, non ſenſibile. 4 At verò neque numerus, ſic vt ſeparatus, & infinitus: quoniam numerus, aut quod habet numerum, *eſt* numerabile. Si igitur numerabile
poteſt numerari: etiam poterit infinitum pertranſ- C
iri. 5 Magis autem phyſicè diſpicientibus, ex his. 6 Etenim neque compoſitum eſſe poteſt, neque ſimplex. 7 Infinitum igitur corpus non erit compoſitum, ſi elementa ſint numero finita. neceſſe enim *eſt*, ſemper contraria eſſe plura, & *inter ſe* æquari, nec eſſe vnum eorum infinitum. nam ſi quocumque modo vis, quæ in vno *eſt* corpore, ſuperetur ab altero: veluti, ſi ignis eſt finitus, aër autem infinitus, ſed æqualis ignis æqualem aërem vi quantumvis multipla ſuperat, modò numerum aliquem habeat: perſpicuum tamen *eſt* fore, vt infinitum ſuperet & interimat quod finitum *eſt*. 8 Vnum-
quodque autem eſſe infinitum, impoſſibile *eſt*. cor- D
pus enim eſt, quod vndique habet extenſionem: infinitum verò, quod in immenſum extenditur. quare infinitum corpus vndique erit extenſum in immenſum. 9 At verò nec poteſt infinitum corpus eſſe vnum & ſimplex, neque (vt quidam dicunt) id quod *eſt* præter elementa, ex quo hæc gignuntur, neque omnino. 10 Sunt enim nonnulli, qui infinitum hoc faciunt, non aërem, aut aquam, ne cætera ab eo interimantur, quod inter illa eſt infinitum. habent enim inter ſe contrarietatem. vtputà aër *eſt* frigidus, aqua verò *eſt* humida, ignis autem calidus: quorum ſi vnum *ſit* infinitum, cetera iam interimerentur. nunc verò aliud eſſe aiunt id, ex quo hæc *ſiunt*. 11 Verùm impoſſibile *eſt* eſſe tale:
non quia infinitum (de hoc enim commune ali- E
quid dicendum *eſt*, *quod* omni corpori æquè *conueniat, id eſt* & aëri & aquæ & *alij* cuiuis:) ſed quia non eſt tale ſenſibile corpus præter ea quæ vocantur elementa. omnis enim res, ex quo eſt, in id etiam diſſoluitur. quare hîc eſſet aliud quidpiam præter aërem & ignem & terram & aquam. ſed nullum apparet. 12 Neque igitur ignis, neque vllum aliud elementum poteſt eſſe infinitum. nam omnino, & præterquam quòd eſſet aliquod eorum infinitum, impoſſibile *eſt*, vt vniuerſum, etiamſi *ſit* finitum, aut ſit aut fiat vnum aliquid illorum: ſicut Heraclitus ait omnia fieri aliquando ignem.

B Ἀλλ' ἴσως, αὕτη μὲν ἐστὶ καθόλου ἡ ζήτησις μᾶλλον, εἰ ἐνδέχεται τὸ ἄπειρον καὶ ἐν τοῖς μαθηματικοῖς εἶναι, καὶ ἐν τοῖς νοητοῖς, καὶ ἐν τοῖς μηδὲν ἔχουσι μέγεθος. ἡμεῖς δὲ ἐπισκοποῦμεν περὶ τῶν αἰσθητῶν, καὶ περὶ ὧν ποιούμεθα τὴν μέθοδον, ἆρ' ἐστιν ἐν αὐτοῖς, ἢ οὐκ ἔστι σῶμα ἄπειρον * περὶ τὴν αὔξησιν. λογικῶς μὲν οὖν σκοπουμένοις, ἐκ τῶν τοιῶνδε δόξειεν ἂν οὐκ εἶναι. 13 Εἰ γὰρ ἐστὶ σώματος λόγος τὸ ἐπιπέδῳ ὡρισμένον, οὐκ ἂν εἴη σῶμα ἄπειρον, οὔτε νοητὸν, οὔτε αἰσθητόν. 4 Ἀλλὰ μὴν οὐδ' ἀριθμὸς οὕτως ὡς κεχωρισμένος καὶ ἄπειρος· ἀρι-
C θμητὸν γὰρ ὁ ἀριθμὸς, ἢ τὸ ἔχον ἀριθμόν. εἰ οὖν τὸ ἀριθμητὸν ἐνδέχεται ἀριθμῆσαι, καὶ διεξελθεῖν ἂν εἴη δυνατὸν τὸ ἄπειρον. 5 Φυσικῶς δὲ μᾶλλον θεωροῦσιν ἐκ τῶνδε. 6 Οὔτε γὰρ σύνθετον οἷόν τε εἶναι, οὔτε ἁπλοῦν. 7 Σύνθετον μὲν οὖν οὐκ ἔσται τὸ ἄπειρον σῶμα, εἰ πεπερασμένα τῷ πλήθει τὰ στοιχεῖα εἴη. ἀνάγκη γὰρ πλείω εἶναι, καὶ ἰσάζειν ἀεὶ τἀναντία, καὶ μὴ εἶναι ἓν αὐτῶν ἄπειρον· εἰ γὰρ ὁπωσοῦν λείπεται ἡ ἐν ἑνὶ σώματι δύναμις θατέρου, οἷον εἰ τὸ πῦρ πεπέρασται, ὁ δ' ἀὴρ ἄπειρος· ἔστι δὲ τὸ ἴσον πῦρ τοῦ ἴσου ἀέρος τῇ δυνάμει ὁποσαπλασιονοῦν, μόνον δὲ ἀριθμόν τινα ἔχον· ὅμως φανερὸν, ὅτι τὸ ἄπειρον ὑπερ-
D βαλεῖ καὶ φθερεῖ τὸ πεπερασμένον. 8 Ἕκαστον δ' ἄπειρον εἶναι ἀδύνατον· σῶμα γάρ ἐστι τὸ πάντῃ ἔχον διάστασιν· ἄπειρον δὲ τὸ ἀπεράντως διεστηκός· ὥστε τὸ ἄπειρον σῶμα, πανταχῇ ἔσται διεστηκὸς εἰς ἄπειρον. 9 Ἀλλὰ μὴν οὐδὲ ἓν καὶ ἁπλοῦν εἶναι ἐνδέχεται τὸ ἄπειρον σῶμα, οὔτε ὡς λέγουσί τινες τὸ παρὰ τὰ στοιχεῖα, ἐξ οὗ ταῦτα γεννῶσιν, οὔθ' ἁπλῶς. 10 Εἰσὶ γάρ τινες οἱ τοῦτο ποιοῦσι τὸ ἄπειρον, ἀλλ' οὐκ ἀέρα, ἢ ὕδωρ, ὅπως μὴ τἆλλα φθείρηται ὑπὸ τοῦ ἀπείρου αὐτῶν· ἔχουσι γὰρ πρὸς ἄλληλα ἐναντίωσιν, οἷον ὁ μὲν ἀὴρ ψυχρὸς, τὸ δ' ὕδωρ ὑγρὸν, τὸ δὲ πῦρ θερμόν. ὧν εἰ [ἦν] ἓν ἄπειρον, ἔφθαρτο ἂν ἤδη τἆλλα· νῦν δὲ ἕτερον φασὶν εἶναι τὸ ἐξ οὗ ταῦτα. 11 Ἀδύνατον
E δ' εἶναι τοιοῦτον, οὐχ ὅτι ἄπειρον (περὶ τούτου γὰρ κοινόν τι λεκτέον ἐπὶ παντὸς ὁμοίως καὶ ἀέρος, καὶ ὕδατος, καὶ ὁτουοῦν) ἀλλ' ὅτι οὐκ ἔστι τοιοῦτον αἰσθητὸν σῶμα παρὰ τὰ καλούμενα στοιχεῖα· ἅπαν γὰρ ἐξ οὗ ἐστι, καὶ διαλύεται εἰς τοῦτο. ὥστε ἦν ἂν ἐνταῦθα παρὰ ἀέρα, καὶ πῦρ, καὶ γῆν, καὶ ὕδωρ ἄλλο τι· φαίνεται δ' οὐδέν. 12 Οὐδὲ δὴ πῦρ, οὐδ' ἄλλο τῶν στοιχείων οὐθὲν ἄπειρον ἐνδέχεται εἶναί τι· ὅλως γὰρ καὶ χωρὶς τοῦ ἄπειρον εἶναί τι αὐτῶν, ἀδύνατον τὸ πᾶν κἂν ᾖ πεπερασμένον, ἢ εἶναι, ἢ γίνεσθαι ἕν τι αὐτῶν, ὥσπερ Ἡράκλειτός φησιν, ἅπαντα γίνεσθαί ποτε πῦρ.

13 Ὁ δὲ αὐτὸς λόγος καὶ ἐπὶ τοῦ ἑνός, οἷον ποιοῦσι παρὰ τὰ στοιχεῖα οἱ φυσικοί· πάντα γὰρ μεταβάλλει ἐξ ἐναντίου εἰς ἐναντίον, οἷον ἐκ θερμοῦ εἰς ψυχρόν. 14 Δεῖ δὲ περὶ παντός, καὶ ἐκ τῶνδε σκοπεῖν, εἰ ἐνδέχεται ἢ οὐκ ἐνδέχεται εἶναι σῶμα ἄπειρον αἰσθητόν. 15 Ὅτι δὲ ὅλως ἀδύνατον εἶναι σῶμα ἄπειρον αἰσθητόν, ἐκ τῶνδε δῆλον· πέφυκε γὰρ πᾶν τὸ αἰσθητὸν πού εἶναι, καὶ ἔστι τόπος τις ἑκάστου, καὶ ὁ αὐτὸς τοῦ μορίου καὶ παντός, οἷον ὅλης τε τῆς γῆς καὶ μιᾶς βώλου, καὶ πυρὸς καὶ σπινθῆρος. 16 Ὥστε εἰ μὲν * ὁμοειδές, ἢ ἀκίνητον ἔσται, ἢ ἀεὶ οἰσθήσεται. καίτοι ἀδύνατον· τί γὰρ μᾶλλον κάτω ἢ ἄνω, ἢ ὁπουοῦν; λέγω δέ, οἷον εἰ βῶλος εἴη, ποῦ αὕτη κινηθήσεται, ἢ ποῦ μενεῖ; ὁ γὰρ τόπος ἄπειρος, τοῦ συγγενοῦς αὐτῇ σώματος. πότερον οὖν καθέξει τὸν ὅλον * τόπον, καὶ πῶς; τίς οὖν καὶ ποῦ ἡ μονὴ καὶ ἡ κίνησις αὐτῆς; ἢ πανταχοῦ μενεῖ; οὐ κινηθήσεται ἄρα. ἢ πανταχοῦ κινηθήσεται; οὐκ ἄρα στήσεται. 17 Εἰ δὲ ἀνόμοιον τὸ πᾶν, ἀνόμοιοι καὶ οἱ τόποι. 18 Καὶ πρῶτον μὲν οὐχ ἓν τὸ σῶμα τοῦ παντός, ἀλλ' ἢ τῷ ἅπτεσθαι. 19 Ἔπειτα, ἤτοι πεπερασμένα ταῦτ' ἔσται ἢ ἄπειρα τῷ εἴδει. 20 Καὶ πεπερασμένα μὲν οὐχ οἷόν τε· ἔσται γὰρ τὰ μὲν ἄπειρα, τὰ δ' οὔ, εἰ τὸ πᾶν ἄπειρον, οἷον τὸ πῦρ, ἢ τὸ ὕδωρ. φθορὰ δὲ τὸ τοιοῦτον τοῖς ἐναντίοις, καθάπερ εἴρηται πρότερον. 21 Καὶ διὰ τοῦτο, οὐθεὶς τὸ ἓν καὶ ἄπειρον πῦρ ἐποίησεν, οὐδὲ γῆν, τῶν φυσιολόγων, ἀλλ' ἢ ὕδωρ, ἢ ἀέρα, ἢ τὸ μέσον αὐτῶν. ὅτι τόπος ἑκατέρου, δῆλος ἦν διωρισμένος. ταῦτα δὲ ἐπαμφοτερίζει τῷ ἄνω καὶ κάτω. 22 Εἰ δ' ἄπειρα, καὶ ἁπλᾶ, καὶ οἱ τόποι ἄπειροι, καὶ ἔσται ἄπειρα τὰ στοιχεῖα. εἰ δὲ τοῦτο ἀδύνατον, καὶ πεπερασμένοι οἱ τόποι, καὶ τὸ ὅλον πεπεράνθαι ἀναγκαῖον· ἀδύνατον γὰρ μὴ ἀπαρτίζειν τὸν τόπον, καὶ τὸ σῶμα· οὔτε γὰρ ὁ τόπος ὁ πᾶς μείζων, ἢ ὅσον ἐνδέχεται τὸ σῶμα ἅμα εἶναι· ἅμα δ', οὐδ' ἄπειρον ἔσται τὸ σῶμα· οὔτε τὸ σῶμα μεῖζον, ἢ ὁ τόπος· ἢ γὰρ κενὸν ἔσται τι, ἢ σῶμα οὐδαμοῦ πεφυκὸς εἶναι. 23 Ἀναξαγόρας δ' ἀτόπως λέγει περὶ τῆς τοῦ ἀπείρου μονῆς· στηρίζειν γὰρ αὐτὸ αὑτό φησι τὸ ἄπειρον· τοῦτο δέ, ὅτι ἐν * αὑτῷ. ἄλλο γὰρ οὐδὲν περιέχει. 24 Ὡς ὅπου ἄν τι ᾖ, πεφυκὸς ἐνταῦθα εἶναι. τοῦτο δ' οὐκ ἀληθές· εἴη γὰρ ἄν τι που βίᾳ, καὶ οὐχ οὗ πέφυκεν. 25 Εἰ οὖν ὅτι μάλιστα μὴ κινεῖται τὸ ὅλον (τὸ γὰρ ἐν αὑτῷ στηριζόμενον, καὶ ἐν αὑτῷ ὄν, ἀκίνητον εἶναι ἀνάγκη) ἀλλὰ διὰ τί οὐ πέφυκε κινεῖσθαι, λεκτέον· οὐ γὰρ ἱκανὸν τὸ οὕτως εἰπόντα ἀπηλλάχθαι· εἴη γὰρ ἂν καὶ ὁτιοῦν ἄλλο οὐ κινούμενον· ἀλλὰ πεφυκέναι οὐδὲν κωλύει· ἐπεὶ καὶ ἡ γῆ οὐ φέρεται, οὐδ' εἰ ἄπειρος ἦν· εἰργομένη μέντοι ἀπὸ τοῦ μέσου· ἀλλ' οὐχ ὅτι οὐκ ἔστιν ἄλλο οὗ ἐνεχθήσεται, μένοι ἂν ἐπὶ τοῦ μέσου· ἀλλ' ὅτι οὐ πέφυκεν οὕτω. καίτοι ἐξείη ἂν λέγειν, ὅτι στηρίζει ἑαυτήν. εἰ οὖν μηδ' ἐπὶ τῆς γῆς τοῦτο αἴτιον ἀπείρου οὔσης, ἀλλ' ὅτι βάρος ἔχει, τὸ δὲ βαρὺ μένει ἐπὶ τοῦ μέσου, ἡ δὲ γῆ ἐπὶ τοῦ μέσου, ὁμοίως καὶ τὸ ἄπειρον μένει ἐν αὑτῷ, διὰ ἄλλην τινὰ αἰτίαν, καὶ οὐχ ὅτι ἄπειρον, καὶ στηρίζει αὐτὸ αὑτό. 26 Ἅμα δὲ δῆλον, ὅτι κἂν ὁτιοῦν δέοι μέρος μένειν· ὡς γὰρ τὸ ἄπειρον ἐν ἑαυτῷ μένει στηρίζον, οὕτω κἂν ὁτιοῦν ληφθῇ μέρος,

A 13 Eadem ratio *eſt* etiam in vno, quale præter elementa faciunt phyſici: omnia namque mutantur ex contrario in contrarium, vt ex calido in frigidum. 14 Oportet autem de omni *corpore* etiam ex his conſiderare, vtrùm poſſit, an non poſſit eſſe corpus infinitum ſenſibile. 15 Omnino autem eſſe impoſſibile, vt ſit corpus infinitum ſenſibile, ex his manifeſtum *erit*: quia naturâ eſt comparatum, vt omne ſenſibile ſit alicubi: & ſit cuiuſque rei locus aliquis: idemque *ſit* partis & totius *locus*, vt totius terræ & vnius glebæ, nec non ignis & ſcintillæ. 16 Quocirca ſi quidem eſt vnius formæ: aut immobile erit, aut ſemper feretur. atqui *eſt* impoſſibile. cur enim B potiùs infrà, quàm ſuprà, aut vbivis? verbi gratiâ, ſi gleba ſit, vbi hæc mouebitur? aut vbi manebit? infinitus enim *eſt* locus corporis ei cognati. vtrùm igitur continebit totum locum? & quomodo? quiſnam ergo, & vbi erit ſtatus & motus eius? an vbique ſtabit? non ergo mouebitur. an vbique mouebitur? non igitur conſiſtet. 17 Quòd ſi vniuerſum diſſimile *ſit*, diſſimiles etiam *erunt* loci. 18 Ac primùm quidem non *erit* vniuerſi corpus vnum, niſi tactu. 19 Deinde aut finita hæc erunt, aut infinita, ſpecie. 20 Ac finita quidem *eſſe* non poſſunt. nam alia erunt infinita, alia minimè, ſi vniuerſum *eſt* infinitum: vt ignis, vel aqua. ſed *quod eſt* tale, contrariis interitum affert, ſicut antea dictum fuit. 21 Ideóque C nullus eorum qui de natura diſſeruerunt, vnum illud & infinitum ſtatuerunt *eſſe* ignem, aut terram: ſed vel aquam, vel aërem, vel medium his *interiectum*: quia locus *illius* vtriuſque perſpicuè definitus eſt: hæc autem participant ſuperiorem & inferiorem locum. 22 Sin autem infinita & ſimplicia *ſunt*: etiam loci *erunt* infiniti, & elementa erunt infinita. quod ſi *eſt* impoſſibile, ac finiti loci *ſunt*: neceſſe *eſt*, vt etiam vniuerſum ſit finitum. eſt enim impoſſibile, non eſſe paria locum & corpus: quia neque totus locus *eſt* maior, quàm vt poſſit corpus ſimile eſſe: (ſimul autem neque corpus erit infinitum) neque corpus *eſt* maius quã locus: alioqui aut erit aliquid inane, aut corpus, quod ſuapte natura D nullibi ſit. 23 Anaxagoras verò abſurdè loquitur de infiniti ſtatu. ait enim ipſum infinitum ſe ipſum ſuſtinere: & hoc *ideo*, quia in ſe ipſo *eſt*: quippe quod nulla alia res continet. 24 Quaſi vbi aliquid eſt, ibi ſuapte natura ſit. ſed hoc non eſt verum: poteſt enim aliquid eſſe alicubi vi, non vbi natura comparatum eſt vt ſit. 25 Si igitur quàm maximè non mouetur vniuerſum; quia neceſſe *eſt* id eſſe immobile, quod in ſe ſuſtinetur, & in ſe eſt: tamen dicendum *eſt*, cur nón ſit naturâ aptum moueri. non enim æquum eſt, eum, qui ita dixerit, aufugiſſe: quoniam & quodvis aliud eſſe poteſt, quod non moueatur: ſed naturâ aptum E eſſe *vt moueatur*, nihil prohibet. nam & terra nón fertur: nec, ſi infinita eſſet, ferretur, à medio cohibita: non *tamen*, quia non eſſet aliud quò ferretur, maneret in medio: ſed quia non eſt ei naturâ inſitum ita *moueri*. atqui dicere liceret *terram* ſe ipſam ſuſtinere. ergo ſi ne in terra quidem, ſi ſit infinita, hæc *eſt* cauſa *quietis*; ſed quia pondus habet, quod autem *eſt* graue, in medio manet, terra verò in medio *eſt*: ſimiliter etiam infinitum manet in ſe ipſo propter aliquam aliam cauſam, non quia *eſt* infinitum, & ipſum ſe ſuſtinet. 26 Item manifeſtum *eſt*, opus eſſe vt quævis eius pars maneat. vt enim infinitum in ſe ipſo manet, *ſe* ſuſtinens: ita & ſi quævis pars ſumatur,

in ſe ipſa manebit: quia loca totius & partis ſunt A eiuſdem ſpeciei: velut, totius terræ & glebæ *locus* inferus, ac totius ignis ac ſcintillæ *locus* ſuperus. quare ſi infiniti locus eſt in ſe ipſo, etiam partis *locus* idem *erit*. in ſe igitur manebit. 27 Omnino autem patet eſſe impoſſibile, vt ſimul dicatur *eſſe* infinitum corpus, & aliquem eſſe locum corporibus: ſi omne corpus ſenſibile aut pondus habet, aut leuitatem: &, ſi quidem graue *eſt*, ad medium natura fertur: ſi verò leue, ſurſum: quia neceſſe *eſt*, etiam infinitum corpus *eſſe tale*. ſed *eſt* impoſſibile, aut totum alterutro modo aut dimidium vtroque modo affectum eſſe. quo enim modo diuides? aut quomodo infiniti erit alia pars ſuprà, alia infrà? aut extrema vel media? 28 Præterea omne corpus ſen- B ſibile *eſt* in loco. loci autem ſpecies ac differentiæ *ſunt* ſuperum & inferum, & anterius & poſterius, & dextrum & ſiniſtrum: atque hæc non tantùm *relatione* ad nos *habita*, & poſitione, ſed etiam in ipſo vniuerſo definita ſunt: atqui *eſt* impoſſibile, hæc infinito ineſſe. & omnino ſi impoſſibile *eſt* locum eſſe infinitum, omne autem corpus *eſt* in loco: impoſſibile *etiam eſt*, eſſe aliquod corpus infinitum. *29 At verò quod *eſt* alicubi, *eſt* in loco. ergo ſi infinitum non poteſt eſſe quantum: (quoniam eſſet quantum quiddam, vt bicubitum & tricubitum: hæc enim quantum ſignificant) ita etiam *ſe habet* quod *eſt* in loco: quia *eſt* alicubi: hoc autem vel ſuprà, vel infrà, vel in aliqua alia ſex dimenſionum, quarum vnaquæque eſt terminus quidam. 10 Non eſſe igitur actu corpus infinitum, ex his perſpicuum *eſt*.

Cap. VIII.

SEd accidere multa impoſſibilia, ſi infinitum omnino non ſit, manifeſtum *eſt*: quia temporis erit aliquod principium, & finis; ac magnitudines non erunt diuiduæ in magnitudinem; ac numerus non erit infinitus. 2 Quando autem, *his* ſic definitis, neutro modo videtur eſſe poſſe: hinc apparet, aliquo modo *infinitum* eſſe, aliquo modo non *eſſe*. 3 Eſſe autem dicitur aliud poteſtate, aliud actu. 4 Et infinitum partim eſt adiectione, partim detractione. 5 Iam verò magnitudinem actu non eſſe infinitam dictum fuit: diuiſione autem eſſe *infinitam*. non enim difficile *eſt* tollere inſectiles lineas. relinquitur ergo, infinitum eſſe poteſtate. 6 Non oportet autem, quod eſt poteſtate, accipere: velut, ſi hoc poteſt eſſe ſtatua, hoc erit ſtatua: ſic & infinitum quidpiam, quod erit actu. ſed cùm multis modis eſſe *dicatur*: ſicut eſt dies, & certamen, quia ſemper aliud & aliud fit: ita etiam *eſt* infinitum. eſt enim in his quoque poteſtate *eſſe*, & actu. Olympia namque ſunt, & quia poteſt certamen fieri, & quia fit. 7 Aliter autem in tempore infinitum apparet, & in hominibus, & in diuiſione magnitudinum. 8 Etenim in vniuerſum ſic infinitum eſt: quia ſemper aliud & aliud ſumitur: & id quidem, quod ſumitur, ſemper finitum eſt: ſed ſemper *eſt* aliud, & aliud. Quare infinitum non oportet accipere, vt hoc aliquid: velut, hominem, aut domum: ſed vt dies dicitur, & certamen, (quorum eſſentia non vt ſubſtantia quædam facta eſt, ſed ſemper in ortu & interitu *conſiſtit*) etiam ſi *ſint* finita, tamen ſemper alia atque alia.

9 Ἀλλ' ἐν μὲν τοῖς μεγέθεσιν, ὑπομένοντος τοῦ ληφθέντος, τοῦτο συμβαίνει· ἐπὶ δὲ τῶν ἀνθρώπων καὶ τοῦ χρόνου φθειρομένων, οὕτως, ὥστε μὴ ὑπολείπειν. 10 Τὸ δὲ κατὰ πρόσθεσιν, τὸ αὐτό πώς ἐστι, καὶ τὸ κατὰ διαίρεσιν· ἐν γὰρ τῷ πεπερασμένῳ κατὰ πρόσθεσιν γίνεται ἀντεστραμμένως· ᾗ γὰρ διαιρούμενον ὁρᾶται εἰς ἄπειρον, ταύτῃ προστιθέμενον φανεῖται πρὸς τὸ ὡρισμένον. ἐν γὰρ τῷ πεπερασμένῳ μεγέθει ἂν λαβών τις ὡρισμένον προσλαμβάνῃ τῷ αὐτῷ λόγῳ, μὴ τὸ αὐτό τι τοῦ ὅλου* μέγεθος (τῷ λόγῳ) περιλαμβάνων, οὐ διέξεισι τὸ πεπερασμένον· ἂν δ' οὕτως αὔξῃ τὸν λόγον, ὥστε ἀεί τι τὸ αὐτὸ περιλαμβάνειν μέγεθος, διέξεισι, διὰ τὸ πᾶν τὸ πεπερασμένον ἀναιρεῖσθαι ὁτῳοῦν ὡρισμένῳ. 11 Ἄλλως μὲν οὖν οὐκ ἔστιν, οὕτως δ' ἐστὶ τὸ ἄπειρον, δυνάμει τε καὶ ἐπὶ καθαιρέσει· καὶ ἐντελεχείᾳ δὲ ἐστιν, ὡς τὴν ἡμέραν εἶναι λέγομεν, καὶ τὸν ἀγῶνα· καὶ δυνάμει οὕτως ὡς ἡ ὕλη, καὶ οὐ καθ' αὑτό, ὡς τὸ πεπερασμένον. καὶ κατὰ πρόσθεσιν δὲ οὕτως ἄπειρον δυνάμει ἐστίν, ὃ ταὐτὸ λέγομεν τρόπον τινὰ εἶναι τῷ κατὰ διαίρεσιν· ἀεὶ μὲν γάρ τι αὐτοῦ ἔξω ἔσται λαμβάνειν. 12 Οὐ μέντοι ὑπερβαλεῖ παντὸς ὡρισμένου μεγέθους, ὥσπερ ἐπὶ τὴν διαίρεσιν ὑπερβάλλει παντὸς ὡρισμένου, καὶ ἔσται ἔλαττον. ὥστε* δὲ παντὸς ὑπερβάλλειν κατὰ τὴν πρόσθεσιν, οὐδὲ δυνάμει οἷόν τε εἶναι, εἴπερ μὴ ἔστι κατὰ συμβεβηκὸς ἐντελεχείᾳ ἄπειρον· ὥσπερ φασὶν οἱ φυσιολόγοι τὸ ἔξω σῶμα τοῦ κόσμου, οὗ ἡ οὐσία ἀὴρ, ἢ ἄλλο τι τοιοῦτον ἄπειρον. ἀλλ' εἰ μὴ οἷόν τε εἶναι ἄπειρον ἐντελεχείᾳ σῶμα αἰσθητὸν οὕτω, φανερὸν ὅτι οὐδὲ δυνάμει ἂν εἴη κατὰ πρόσθεσιν, ἀλλ' ἢ ὥσπερ εἴρηται ἀντεστραμμένως τῇ διαιρέσει. 13 Ἐπεὶ καὶ Πλάτων διὰ τοῦτο ἄπειρα δύο ἐποίησεν, ὅτι καὶ ἐπὶ τὴν* αὔξησιν δοκεῖ ὑπερβάλλειν, καὶ εἰς ἄπειρον ἰέναι, καὶ ἐπὶ τὴν καθαίρεσιν. 14 Ποιήσας μέντοι δύο οὐ χρῆται. οὔτε γὰρ ἐν τοῖς ἀριθμοῖς τὸ ἐπὶ τὴν καθαίρεσιν ἄπειρον ὑπάρχει· ἡ γὰρ μονὰς ἐλάχιστον. οὔτε ἐπὶ τὴν* αὔξησιν· μέχρι γὰρ δεκάδος ποιεῖ τὸν ἀριθμόν.

A 9 Sed in magnitudinibus quidem hoc accidit, permanente eo quod ſumptum eſt: in hominibus autem, ac tempore, *iis* interemptis, ita vt numquam deficiant. 10 Iam verò quod eſt ſecundùm adiectionem, & quod ſecundùm diuiſionem, idem quodammodo eſt. nam in eo quod eſt finitum ſecundùm adiectionem, fit modo conuerſo. quatenus enim diuidi conſpicitur in infinitum, tantum adiici apparet ad id quod eſt finitum. etenim in magnitudine finita, ſi quis ſumpta parte finita alteram ſumat eâdem ratione, non eandem totius partem ea ratione ſumens: non pertranſibit, quod eſt finitum. B ſin autem ita rationem auxerit, vt ſemper ſumat eandem magnitudinem: pertranſibit. quia omne finitum conſumitur quovis finito. 11 Infinitum igitur aliter non eſt: ſic autem eſt: poteſtate enim *eſt*, ac detractione. quin & actu eſt: ſicvti diem eſſe dicimus, & certamen. & poteſtate ita *eſt*, vt materia: non per ſe, vt id quod eſt finitum. ergo & ſecundùm additionem ita infinitum eſt poteſtate: quod dicimus idem quodammodo eſſe, atque *infinitum* ſecundùm diuiſionem: quia ſemper licebit aliquid extra ipſum ſumere. 12 Non tamen ſuperat omnem definitam magnitudinem: ſicut in diuiſione ſuperat omnem *magnitudinem* definitam: C & fit minus. vt igitur omnem magnitudinem ſuperet *infinitum* additione, ne quidem poteſtate eſſe poteſt, niſi ſit ex accidenti infinitum actu, vt inquiunt phyſici illi, *qui* extra mundum *ponunt* corpus, cuius eſſentia *eſt* aër, aut aliud quidpiam tale infinitum. Sed ſi corpus ſenſile infinitum actu ita eſſe non poteſt: perſpicuum *eſt*, ne poteſtate quidem infinitum eſſe poſſe ſecundùm additionem, niſi, vt dictum fuit, modo diuiſioni contrario. 13 Nam & Plato ideo fecit duo infinita, quia & accretione videtur ſuperare & in infinitum *abire*, & detractione. 14 Cùm tamen duo fecerit, *his* non vtitur. neque enim in numeris ineſt infinitas detractione, quia vnitas *eſt* minimum: neque accretione, quia numerum facit vſque ad denarium.

Quid ſit Infinitum.

Cap. IX.

Συμβαίνει δὲ τοὐναντίον εἶναι ἄπειρον, ἢ ὡς λέγουσιν. οὐ γὰρ οὗ μηδὲν ἔξω, ἀλλ' οὗ ἀεί τι ἔξω ἐστί, τοῦτο ἄπειρόν ἐστι. 2 Σημεῖον δέ· καὶ γὰρ τοὺς δακτυλίους ἀπείρους φασὶ τοὺς μὴ ἔχοντας σφενδόνην, ὅτι αἰεί τι ἔξω ἔστι λαμβάνειν, καθ' ὁμοιότητα μέν τινα λέγοντες, οὐ μέντοι κυρίως· δεῖ γὰρ τοῦτό τε ὑπάρχειν, καὶ μηδέποτε τὸ αὐτὸ λαμβάνεσθαι. ἐν δὲ τῷ κύκλῳ οὐ γίνεται οὕτως, ἀλλ' αἰεὶ τὸ ἐφεξῆς μόνον ἕτερον. ἄπειρον μὲν οὖν τοῦτ' ἐστὶν οὗ κατὰ τὸ ποσὸν λαμβάνουσιν, αἰεί τι λαβεῖν ἔξω ἐστίν. 3 Οὗ δὲ μηδὲν ἔξω, τοῦτ' ἐστὶ τέλειον καὶ ὅλον· οὕτω γὰρ ὁριζόμεθα τὸ ὅλον, οὗ πρὸς τὰ μέρη μηδὲν ἄπεστιν, οἷον ἄνθρωπον ὅλον, ἢ κιβώτιον. ὥσπερ δὲ ὁριζόμεθα τὸ καθ' ἕκαστον, οὕτω καὶ τὸ κυρίως· οἷον τὸ ὅλον, οὗ μηδέν ἐστιν ἔξω· οὗ δ' ἐστὶν ἀπουσία ἔξω, οὐ πᾶν, ὅ, τι ἂν ἀπῇ. τὸ ὅλον δὲ καὶ τέλειον, ἢ τὸ αὐτὸ πάμπαν, ἢ σύνεγγυς τὴν φύσιν ἐστί. τέλειον δ' οὐδέν, μὴ ἔχον τέλος· τὸ δὲ τέλος, πέρας.

D Contra verò accidit eſſe infinitum, quàm *alij* dicant: non enim cuius nihil extra *eſt*, ſed cuius ſemper aliquid extra eſt, id infinitum eſt. 2 *Huius* autem *rei* ſignum *eſt*: quoniam anulos illos infinitos *eſſe* aiunt, quia pala carent, propterea quòd ſemper aliquid extra licet ſumere: per ſimilitudinem quandam *hoc* dicentes, non propriè. oportet enim hoc ineſſe, & numquam idem ſumi. in circulo autem non fit ita: ſed tantummodo ſemper diuerſum *eſt*, quod deinceps *ſumitur*. infinitum igitur hoc eſt, cuius quantitate *aliqua* accepta, ſemper aliquid extra ſumere licet. 3 Cuius autem nihil extra *eſt*, id eſt perfectum ac totum. E ſic enim totum definimus, à quo nihil abeſt, *quod* ad partes *pertineat*: vt hominem totum, vel arcam. ſicut autem vnumquodque definimus, ita etiam quod propriè & præcipuè *eſt*, vt totum, cuius nihil eſt extra. cuius autem aliquid abeſt, *id* non *eſt* vniuerſum, quidquid abſit. totum verò & perfectum aut omnino idem ſunt, aut natura inter ſe affinia. atqui perfectum nihil *eſt*, quod non habeat finem: finis autem eſt terminus.

4 Idcirco.

4 Idcirco exiſtimandum *eſt*, rectiùs locutum eſſe Parmenidem, quàm Meliſſum. hic enim ait infinitum *eſſe* totum: ille verò totum eſſe finitum, à medio æquidiſtans. nam infinitum cum vniuerſo ac toto *connectere*, non eſt linum cum lino coniungere. A

4 Διὸ βέλτιον οἰητέον Παρμενίδην Μελίσσου εἰρηκέναι. ὁ μὲν γὰρ, τὸ ἄπειρον ὅλον φησίν· ὁ δὲ, τὸ ὅλον πεπεράνθαι, *Μεσσόθεν ἰσοπαλές. οὐ γὰρ ὡς λίνον λίνῳ ἐστὶ συνάπτειν τῷ παντὶ καὶ ὅλῳ τὸ ἄπειρον.

* Parmenides τὸ ὅλον eſſe ait, Πάντοθεν εὐκύκλου σφαίρης ἐναλίγκιον ὄγκῳ, Μεσσόθεν ἰσοπαλὲς πάντῃ.

Quale ſit infinitum. Cap. X.

Ceterùm hinc ſumunt excellentiam illam infiniti, Quod omnia continet: &, Quod in ſe vniuerſum habet: quoniam habet ſimilitudinem quandam cum toto. 2 Infinitum enim eſt perfectionis magnitudinis materia. 3 Et poteſtate totum, actu autem minimè. 4 Diuiduum autem detractione, & inuerſa adiectione. 5 Totum verò, & finitum, non per ſe, ſed per aliud. 6 Neque continet, ſed continetur, quatenus *eſt* infinitum. 7 Ideóque eſt ignotum, qua infinitum. materia namque formam non habet. 8 Quare perſpicuum *eſt*, infinitum potiùs habere rationem partis, quàm totius. nam materia *eſt* pars totius, vt æs æneæ ſtatuæ. 9 Ceterùm ſi magnum & paruum continet in ſenſibilibus & intelligibilibus: oportet *id* continere intelligibilia. ſed abſurdum *eſt*, & impoſſibile, id quod eſt ignotum & infinitum, continere ac definire. B

ΕΠεὶ ἐντεῦθέν γε λαμβάνουσι τὴν σεμνότητα κατὰ τοῦ ἀπείρου, τὸ πάντα περιέχειν, καὶ τὸ πᾶν ἐν ἑαυτῷ ἔχειν, διὰ τὸ ἔχειν τινὰ ὁμοιότητα τῷ ὅλῳ. 2 Ἔστι γὰρ τὸ ἄπειρον, τῆς τοῦ μεγέθους τελειότητος ὕλη. 3 Καὶ τὸ δυνάμει ὅλον, ἐντελεχείᾳ δὲ οὔ. 4 Διαιρετὸν δὲ, ἐπί τε τὴν καθαίρεσιν καὶ τὴν ἀντιστραμμένην πρόσθεσιν. 5 Ὅλον δὲ καὶ πεπερασμένον, οὐ καθ᾽ αὑτὸ, ἀλλὰ κατ᾽ ἄλλο. 6 Καὶ οὐ περιέχει, ἀλλὰ περιέχεται, ᾗ ἄπειρον. 7 Διὸ καὶ ἄγνωστον, ᾗ ἄπειρον. εἶδος γὰρ οὐκ ἔχει ἡ ὕλη. 8 Ὥστε φανερὸν, ὅτι μᾶλλον ἐν μορίου λόγῳ τὸ ἄπειρον, ἢ ἐν ὅλου· μόριον γὰρ ἡ ὕλη τοῦ ὅλου, ὥσπερ ὁ χαλκὸς τοῦ χαλκοῦ ἀνδριάντος. 9 Ἐπεὶ εἴγε περιέχει ἐν τοῖς αἰσθητοῖς καὶ ἐν τοῖς νοητοῖς τὸ μέγα καὶ τὸ μικρὸν, ἔδει περιέχειν τὰ νοητά. ἄτοπον δὲ καὶ ἀδύνατον, τὸ ἄγνωστον καὶ τὸ ἀόριστον περιέχειν καὶ ὁρίζειν.

Quotuplex ſit infinitum. Cap. XI.

IAm verò hoc rationi conſentaneum accidit, vt adiectione infinitum non ita eſſe videatur, vt omnem magnitudinem ſuperet: diuiſione autem ſit. vt enim materia intus continetur, ita etiam infinitum: forma autem continet. 2 Illud quoque rationi conſentaneum *euenit*, vt in numero verſùs minimum ſit terminus: progrediendo autem ad plura, ſemper omnis multitudo ſuperetur. in magnitudinibus verò contrarium *fit*: nam in *progreſſu ad* minimum omnis magnitudo ſuperatur: in *progreſſu autem* ad maius, non eſt magnitudo infinita. 3 Cauſa verò *eſt*: quia vnum eſt indiuiduum, quidquid vnum ſit. vt homo *eſt* vnus homo non multi. numerus autem eſt plura vno, & quanta quædam. quapropter neceſſe *eſt*, in indiuiduo conſiſtere. duo namque aut tria ſunt nomina paronyma: itidémque quilibet alius numerus. 4 Id autem verſùs quod plus *eſt*, progredienti ſemper licet intelligere: quoniam infinitæ *ſunt* bipartitæ diuiſiones magnitudinis. quocirca poteſtate quidem eſt, actu verò minimè: ſed ſemper, quod ſumitur, ſuperat omnem definitam multitudinem. verùm hic numerus non *eſt* ſeparatus à bipartita illa diuiſione, neque manet illa infinitas: ſed fit, vt & tempus, & numerus temporis. 5 In magnitudinibus autem contrarium eſt: & continuum diuiditur quidem in infinita: progrediendo autē ad id quod *eſt* maius, non eſt infinitum. quantum enim poteſt eſſe poteſtate, tantum poteſt etiam eſſe actu. quare cùm nulla magnitudo ſenſibilis ſit infinita: fieri non poteſt vt ſuperetur omnis finita magnitudo. eſſet enim aliquid cælo maius. 6 Iam verò infinitum non *eſt* idem in motu, & magnitudine, & tempore, quaſi vna quædam natura: ſed poſterius dicitur ratione prioris. Reliquum *eſt*, vt percurramus rationes, propter quas infinitum eſſe videtur non tantùm poteſtate, ſed *etiam* vt definitum. nam partim non ſunt neceſſariæ, partim eis occurri poteſt aliis quibuſdam veris modis. 2 Neque enim vt generatio non deficiat, neceſſe *eſt* actu infinitum eſſe corpus ſenſile: quia poteſt alterius interitus eſſe alterius generatio, cùm vniuerſum ſit finitum. 3 Præterea tangere, & finitum eſſe, differunt. illud enim ad aliquid *refertur*, & *in Græca lingua* alicuius *eſſe dicitur*, (quodcumque enim *tangit*, ἅπτεταί τινος, *id eſt, tangit rem aliquam*) & alicui finito accidit. quod autem finitum *eſt*, non *refertur* ad aliquid. nec quamvis rem tangere quævis poteſt. 4 Cogitationi autem credere abſurdum *eſt*. non *eſt* enim exuperantia & defectio in re, ſed in cogitatione. Vnumquemque enim noſtrûm poſſet aliquis cogitare multiplo quàm ſit maiorem, infinitè augens. non ideo tamen excedit aliquis vrbem: aut *eſt* tali magnitudine *præditus*, quam habemus: quia ſic quiſpiam cogitat: ſed quia eſt: hoc autem accidit. 5 Tempus verò & motus infinita ſunt, nec non intellectio, non permanente eo quod ſumitur. 6 Sed magnitudo neque decretione, neque accretione quæ in cogitatione conſtat, infinita eſt. 7 Verùm de infinito; quomodo ſit, & quomodo non ſit, & quid ſit, dictum eſt.

Οὐ μὴν ἀλλ' ἔχει γε ἀπορίαν, εἰ ἔστι, τί ἐστι πότερον ὄγκος τις σώματος, ἤ τις ἑτέρα φύσις· ζητητέον γὰρ τὸ γένος αὐτοῦ πρῶτον. 2 Διαστήματα μὲν οὖν ἔχει τρία, μῆκος, καὶ πλάτος, καὶ βάθος, οἷς ὁρίζεται σῶμα πᾶν. ἀδύνατον δὲ σῶμα τὸν τόπον εἶναι· ἐν ταὐτῷ γὰρ ἂν εἴη δύο σώματα. 3 Ἔτι εἴπερ ἐστὶ σώματος τόπος καὶ χώρα, δῆλον ὅτι καὶ ἐπιφανείας, καὶ τῶν λοιπῶν περάτων· ὁ γὰρ αὐτὸς ἁρμόσει λόγος. ὅπου γὰρ ἦν πρότερον τὰ τοῦ ὕδατος ἐπίπεδα, ἔσται πάλιν τὰ τοῦ ἀέρος. ἀλλὰ μὴν διαφορὰν οὐδεμίαν ἔχομεν στιγμῆς, καὶ τόπου στιγμῆς. ὥστ' εἰ μηδὲ ταύτης ἐστὶν ὁ τόπος ἕτερος, οὐδὲ τῶν ἄλλων οὐθενός, οὐδ' ἔστι τι παρ' ἕκαστον τούτων ὁ τόπος. 4 Τί γὰρ ἄν ποτε καὶ θείημεν εἶναι τὸν τόπον; οὔτε γὰρ στοιχεῖον, οὔτ' ἐκ στοιχείων οἷόν τ' εἶναι τοιαύτην ἔχοντα φύσιν, οὔτε τῶν σωματικῶν, οὔτε τῶν ἀσωμάτων· μέγεθος μὲν γὰρ ἔχει, σῶμα δ' οὐδέν. ἔστι δὲ τὰ μὲν τῶν αἰσθητῶν σωμάτων στοιχεῖα σώματα· ἐκ δὲ τῶν νοητῶν στοιχείων οὐδὲν γίνεται μέγεθος. 5 Ἔτι δὲ, καὶ τίνος ἄν τις θείη τοῖς οὖσιν αἴτιον εἶναι τὸν τόπον; οὐδεμία γὰρ αἰτία ὑπάρχει αὐτῷ τῶν τεττάρων· οὔτε γὰρ ὡς ὕλη τῶν ὄντων· οὐδὲν γὰρ ἐξ αὐτοῦ συνέστηκεν· οὔτε ὡς εἶδος καὶ λόγος τῶν πραγμάτων, οὔθ' ὡς τέλος, οὔτε κινεῖ τὰ ὄντα. 6 Ἔτι δὲ, καὶ αὐτὸς εἰ ἔστι τι τῶν ὄντων, ποῦ ἔσται; ἡ γὰρ Ζήνωνος ἀπορία ζητεῖ τινα λόγον· εἰ γὰρ πᾶν τὸ ὂν, ἐν τόπῳ, δῆλον ὅτι καὶ τοῦ τόπου τόπος ἔσται· καὶ τοῦτο εἰς ἄπειρον πρόεισιν. 7 Ἔτι, εἰ ὥσπερ ἅπαν σῶμα ἐν τόπῳ, οὕτω καὶ ἐν τόπῳ ἅπαν τι σῶμα· πῶς οὖν ἐροῦμεν περὶ τῶν αὐξανομένων; ἀνάγκη γὰρ ἐκ τούτων συναυξάνεσθαι τὸν τόπον * αὐτοῖς, εἰ μήτε ἐλάττων μήτε μείζων ὁ τόπος ἑκάστου. 8 Διὰ μὲν οὖν τούτων, οὐ μόνον τί ἐστιν, ἀλλὰ καὶ εἰ ἔστιν, ἀπορεῖν ἀναγκαῖον.

* γ. φησὶ & αὐτῷ.

C Verumenimvero exiſtit dubitatio, ſi *locus* eſt, quid ſit, vtrùm moles quædam corporis, an alia quædam natura. primùm namque ipſius genus eſt quærendum. 2 Sanè dimenſiones tres habet, longitudinem, & latitudinem, & altitudinem, quibus omne corpus definitur : impoſſibile tamen *eſt* locum eſſe corpus, propterea quòd in eodem eſſent duo corpora. 3 Præterea ſi corporis eſt locus & receptaculum : patet, etiam ſuperficiei *eſſe*, ac reliquorum terminorum. eadem namque ratio conueniet. vbi namque priùs erant planities aquæ, rurſus erunt *planities* aëris. Atqui differentiam nullam habemus D puncti & loci puncti. quaſi ſi non eſt locus ab hoc diuerſus, nec ab vllo alio *diuerſus erit*, nec locus eſt aliquid præter hæc ſingula. 4 Quid enim tandem poſſumus ponere locum eſſe? quia, cùm talem habeat naturam, neque poteſt eſſe elementum, neque conſtare ex elementis aut corporeis aut incorporeis. nam magnitudinem quidem habet, ſed non *eſt* corpus vllum. elementa verò corporum ſenſibilium ſunt corpora. ex elementis autem intelligibilibus nulla magnitudo fit. 5 Præterea quamobrem ponat aliquis locum eſſe entibus cauſam? nulla enim quatuor cauſarum ipſi ineſt : quia nec eſt vt entium materia, (quandoquidem ex eo nil conſtat) nec vt E rerum forma & ratio, nec vt finis, nec entia mouet. 6 Præterea & ipſe locus, ſi eſt aliquod ens, vbi erit? Zenonis enim dubitatio rationem aliquam quærit : quia ſi omne ens *eſt* in loco : patet, etiam loci locum fore : atque hoc in infinitum progreditur. 7 Præterea ſi quemadmodum omne corpus in*eſt* loco, ita etiam in omni loco eſt corpus : quomodo igitur dicemus de iis quæ augentur? neceſſe enim ex his *eſt*, eorum locum ſimul augeri, ſi locus neque minor neque maior *eſt* qualibet re *locata*. 8 Ex his igitur non ſolùm quid ſit, ſed etiam an ſit, dubitare neceſſe *eſt*.

An locus ſit materia & forma.

Cap. IV.

CVm autem aliquid per ſe, aliquid per aliud dicatur: locus quoque alius *eſt* communis, in quo ſunt omnia corpora: alius proprius, in quo primo *aliquid eſt*. Verbi gratiâ, tu nunc *es* in cælo, quia es in aëre, hic autem *eſt* in cælo: & in aëre *es*, quia *es* in terra: ſimilitérque in hac *es*, quia *es* in hoc loco, qui nihil aliud continet quàm te. 2 Si igitur locus eſt id quod primum continet vnumquodque corpus: vtique erit terminus. quare locus videtur eſſe forma & ſpecies cuiuſque rei: quo definitur magnitudo, & magnitudinis materia. hic enim *eſt* cuiuſque rei terminus. Ergo iis qui ita conſiderant, locus eſt cuiuſque *rei* ſpecies. 3 Quatenus autem locus videtur eſſe interuallum magnitudinis, *eſt potiùs* materia. hoc enim *eſt* diuerſum à magnitudine: atque hoc eſt quod continetur, ac definitur à forma, vt à planitie & termino: tale autem eſt materia, & quod interminatum eſt. cùm enim terminus & affectiones globi detractæ fuerint: nihil relinquitur præter materiam. 4 Idcirco etiam Plato in Timæo materiam & receptaculum ait idem eſſe. quod enim vim habet recipiendi, ac receptaculum, *ait eſſe* vnum & idem. Cùm autem alio modo ibi appellet id quod habet vim recipiendi, & *alio modo* in iis quæ vocantur dogmata non ſcripta: tamen locum & receptaculum pronunciauit *eſſe* idem. nam omnes quidem inquiunt locum eſſe aliquid. ſed quid ſit, hic ſolus dicere eſt aggreſſus. 5 Meritò autem, ſi quis ex his rem conſideret, difficile eſſe videbitur cognoſcere quid ſit locus: ſiquidem eſt horum alterutrum, *id eſt*, ſiue materia, ſiue forma. nam alioqui altiſſimam *hæc* habent inſpectionem: nec facile eſt ea cognoſcere à ſe inuicem ſeiuncta. 6 At verò impoſſibile eſſe, vt locus ſit horum alterutrum, non difficile *eſt* videre. forma namque & materia non ſeiunguntur à re. locus autem *ſeiungi* poteſt: in quo enim *modò* erat aër, in eum rurſus aqua (vt dicimus) ingreditur, viciſſim facta tranſlatione aëris & aquæ, & ſimiliter aliorum corporum. 7 Quocirca locus nec *eſt* pars, nec habitus, ſed eſt ſeparabilis à quaque re. 8 Etenim locus tale quidpiam eſſe videtur, quale eſt vas: nam vas eſt locus qui transferri poteſt: vas autem non eſt pars vlla rei. 9 Quatenus igitur eſt ſeparabilis à re, eatenus non eſt forma, quatenus autem continet, eatenus differt à materia. 10 Porrò ſemper videtur quod eſt alicubi, & ipſum eſſe aliquid, & extra id *eſſe* quiddam *ab eo* diuerſum. 11 Platoni ſanè dicendum *erat* (ſi oportet *hoc* in exceſſu dicere) cur formæ & numeri non *ſint* in loco: ſiquidem locus *eſt* id quod habet vim participandi: ſiue id quod habet vim participandi ſit magnum & paruum; ſiue *ſit* materia, vt in Timæo ſcripſit. 12 Præterea quomodo res ferretur ad ſuum locum, ſi locus eſſet materia, vel forma? impoſſibile enim *eſt* id eſſe locum, cuius non eſt motus, nec ſuperum, nec inferum. quapropter in huiuſmodi locus *eſt* quærendus. 13 Quòd ſi in ipſa re eſt locus: (oportet enim, ſiquidem *eſt* vel forma, vel materia) erit locus in loco. ſimul enim cum re mutatur ac mouetur & forma, & quod eſt interminatum: nec ſemper *eſt* in eodem loco,

A Ἐπεὶ δὲ, τὸ μὲν καθ' αὑτὸ, τὸ δὲ κατ' ἄλλο λέγεται· καὶ τόπος ὁ μὲν κοινὸς, ἐν ᾧ ἅπαντα τὰ σώματά ἐστιν· ὁ δ' ἴδιος, ἐν ᾧ * πρώτος· λέγω δὲ, οἷον σὺ νῦν ἐν τῷ οὐρανῷ, ὅτι ἐν τῷ ἀέρι. οὗτος δ' ἐν τῷ οὐρανῷ, καὶ ἐν τῷ ἀέρι, ὅτι ἐν τῇ γῇ· ὁμοίως δὲ καὶ ἐν ταύτῃ, ὅτι ἐν τῷδε τῷ τόπῳ, ὃς περιέχει οὐδὲν πλέον, ἢ σέ. 2 Εἰ δή ἐστιν ὁ τόπος τὸ πρῶτον περιέχον ἕκαστον τῶν σωμάτων, πέρας ἄν εἴη. ὥστε δόξειεν ἂν τὸ εἶδος καὶ ἡ μορφὴ ἑκάστου, ὁ τόπος εἶναι, ᾧ ὁρίζεται τὸ μέγεθος, καὶ ἡ ὕλη ἡ τοῦ μεγέθους· τοῦτο γὰρ ἑκάστου πέρας. οὕτω μὲν οὖν σκοποῦσιν ὁ τόπος τὸ ἑκάστου εἶδός ἐστιν. 3 Ἡ δὲ δοκεῖ ὁ τόπος B εἶναι τὸ διάστημα τοῦ μεγέθους, ἡ ὕλη· τοῦτο γὰρ ἕτερον τοῦ μεγέθους· τοῦτο δ' ἐστὶ τὸ περιεχόμενον ὑπὸ τοῦ εἴδους καὶ ὡρισμένον, οἷον, ὑπὸ ἐπιπέδου καὶ πέρατος. ἔστι δὲ τοιοῦτον ἡ ὕλη καὶ τὸ ἀόριστον· ὅταν γὰρ ἀφαιρεθῇ τὸ πέρας, καὶ τὰ πάθη τῆς σφαίρας, λείπεται οὐδὲν παρὰ τὴν ὕλην. 4 Διὸ καὶ ὁ Πλάτων τὴν ὕλην καὶ τὴν χώραν τὸ αὐτό φησιν εἶναι ἐν τῷ Τιμαίῳ· τὸ γὰρ μεταληπτικὸν καὶ τὴν χώραν ἓν καὶ ταὐτόν· ἄλλον δὲ τρόπον ἐκεῖ τε λέγων τὸ μεταληπτικὸν, καὶ ἐν τοῖς λεγομένοις ἀγράφοις δόγμασιν, ὅμως τὸν τόπον καὶ τὴν C χώραν τὸ αὐτὸ ἀπεφήνατο. λέγουσι μὲν γὰρ ἅπαντες εἶναί τι τὸν τόπον. τί δ' ἐστὶν, οὗτος μόνος ἐπεχείρησεν εἰπεῖν. 5 Εἰκότως δ' ἐκ τούτων σκοπουμένοις δόξειεν ἂν εἶναι χαλεπὸν γνωρίσαι, τί ἐστιν ὁ τόπος, εἴπερ τούτων ὁποτερονοῦν ἐστιν, εἴτε ὕλη, εἴτε τὸ εἶδος· ἄλλως τε γὰρ τὴν ἀκροτάτην ἔχει θέαν, καὶ χωρὶς ἀλλήλων οὐ ῥᾴδιον αὐτὰ γνωρίζειν. ἀλλὰ μὴν ὅτι γε ἀδύνατον ὁποτερονοῦν τούτων εἶναι τὸν τόπον, οὐ χαλεπὸν ἰδεῖν· τὸ μὲν γὰρ εἶδος καὶ ἡ ὕλη, οὐ χωρίζεται τοῦ πράγματος· τὸν δὲ τόπον, ἐνδέχεται· ἐν ᾧ γὰρ ἀὴρ ἦν, D ἐν τούτῳ πάλιν ὕδωρ, ὥς φαμεν, γίνεται, ἀντιμεθισταμένων ἀλλήλοις τοῦ τε ἀέρος καὶ ὕδατος, καὶ τῶν ἄλλων σωμάτων ὁμοίως. 7 Ὥστε, οὔτε μόριον, οὔτε ἕξις, ἀλλὰ χωριστὸς ὁ τόπος ἐστὶν ἑκάστου. 8 Καὶ γὰρ δοκεῖ τοιοῦτόν τι εἶναι ὁ τόπος, οἷον τὸ ἀγγεῖον· ἔστι γὰρ τὸ ἀγγεῖον, τόπος μεταφορητός· τὸ γὰρ ἀγγεῖον, οὐδὲν τοῦ πράγματός ἐστιν. 9 Ἡ μὲν οὖν χωριστός ἐστι τοῦ πράγματος, ταύτῃ μὲν οὐκ ἔστι τὸ εἶδος· ᾗ δὲ περιέχει, ταύτῃ ἕτερος τῆς ὕλης. 10 Δοκεῖ δὲ ἀεὶ τὸ ὄν που αὐτό τε εἶναί τι, καὶ ἕτερόν τι ἐκτὸς αὐτοῦ. 11 Πλάτωνι μέντοι E λεκτέον, εἰ δεῖ παρεκβάντας εἰπεῖν, διὰ τί οὐκ ἐν τόπῳ τὰ εἴδη καὶ οἱ ἀριθμοὶ, εἴπερ τὸ μεθεκτικὸν ὁ τόπος, εἴτε τοῦ μεγάλου καὶ τοῦ μικροῦ ὄντος τοῦ μεθεκτικοῦ, εἴτε τῆς ὕλης, καθάπερ ἐν τῷ Τιμαίῳ γέγραφεν. 12 Ἔτι, πῶς ἂν φέροιτο εἰς τὸν αὑτοῦ τόπον, εἰ ὁ τόπος ἦν ἡ ὕλη, ἢ τὸ εἶδος; ἀδύνατον γὰρ οὗ μὴ κίνησις, μηδὲ τὸ ἄνω ἢ κάτω ἐστὶ, τόπον εἶναι. ὥστε ζητητέος ἐν τοιούτοις ὁ τόπος. 13 Εἰ δ' ἐν αὐτῷ ὁ τόπος (δεῖ γὰρ εἴπερ ἢ μορφὴ, ἢ ὕλη) ἔσται ὁ τόπος ἐν τόπῳ. μεταβάλλει γὰρ ἅμα τῷ πράγματι, καὶ κινεῖται, καὶ τὸ εἶδος, καὶ τὸ ἀόριστον, οὐκ ἀεὶ ἐν τῷ αὐτῷ,

* γρ. πρώτῳ.

ἀλλ' οὗπερ καὶ τὸ πρᾶγμα. ὥστε τοῦ τόπου ἔσται τόπος. 14 Ἔτι ὅταν ἐξ ἀέρος ὕδωρ γένηται, ἀπόλωλεν ὁ τόπος· οὐ γὰρ ἐν τῷ αὐτῷ τόπῳ τὸ γινόμενον σῶμα. * τίς οὖν ἡ φθορά; 15 Ἐξ ὧν μὲν τοίνυν ἀναγκαῖον εἶναί τι τὸν τόπον, καὶ πάλιν ἐξ ὧν ἀπορήσειεν ἄν τις αὐτοῦ περὶ τῆς οὐσίας, εἴρηται.

* γρ. τίς οὖν ἡ φθορά.

A ſed vbi *eſt* res *ipſa*. quapropter loci erit locus. 4 Præterea quando ex aëre facta eſt aqua, locus periit. nam corpus, quod factum eſt, non eſt in eodem loco. quis igitur *eſt* interitus? 15 Ergo ex quibus neceſſe *eſt* locum eſſe aliquid, & rurſus ex quibus aliquis dubitare poſſit de eius eſſentia, dictum eſt.

An idem ſit in ſeipſo, & an locus ſit in loco.

Μετὰ δὲ ταῦτα ληπτέον ποσαχῶς ἄλλο ἐν ἄλλῳ λέγεται. ἕνα μὲν δὴ τρόπον, ὡς ὁ δάκτυλος ἐν τῇ χειρί, καὶ ὅλως τὸ μέρος ἐν τῷ ὅλῳ. ἄλλον δέ, ὡς τὸ ὅλον ἐν τοῖς μέρεσιν· οὐ γάρ ἐστι παρὰ τὰ μέρη τὸ ὅλον. ἄλλον δὲ τρόπον, ὡς ὁ ἄνθρωπος ἐν ζῴῳ, καὶ ὅλως ὡς εἶδος ἐν γένει. ἄλλον δέ, ὡς τὸ γένος ἐν τῷ εἴδει, καὶ ὅλως τὸ μέρος τοῦ εἴδους ἐν τῷ τοῦ εἴδους λόγῳ. ἔτι δέ, ὡς ὑγίεια ἐν θερμοῖς καὶ ψυχροῖς, καὶ ὅλως τὸ εἶδος ἐν τῇ ὕλῃ. ἔτι ὡς ἐν βασιλεῖ τὰ τῶν Ἑλλήνων, καὶ ὅλως τὸ ἐν τῷ πρώτῳ κινητικῷ. ἔτι, ὡς ἐν τῷ ἀγαθῷ, καὶ ὅλως ἐν τῷ τέλει· τοῦτο δ' ἐστὶ τὸ οὗ ἕνεκα. πάντων δὲ κυριώτατον τὸ ὡς ἐν ἀγγείῳ, καὶ ὅλως τὸ ἐν τόπῳ. 2 Ἀπορήσειε δ' ἄν τις, εἰ ἄρα ἐν καὶ αὐτό τι ἐν ἑαυτῷ ἐνδέχεται εἶναι· ἢ οὐδέν, ἀλλὰ πάντα ἢ οὐδαμοῦ, ἢ ἐν ἄλλῳ. 3 Διχῶς δὲ τοῦτό ἐστιν, ἤτοι καθ' αὑτό, ἢ καθ' ἕτερον. 4 Ὅταν μὲν γὰρ ᾖ μόρια τοῦ ὅλου, τό, τ' ἐν ᾧ, καὶ τὸ ἐν τούτῳ, λεχθήσεται τὸ ὅλον ἐν αὐτῷ. λέγεται γὰρ καὶ κατὰ τὰ μέρη, οἷον λευκόν, ὅτι ἡ ἐπιφάνεια * λευκή· καὶ * ἐπιστήμων, ὅτι τὸ λογιστικόν. ὁ μὲν οὖν ἀμφορεὺς οὐκ ἔσται ἐν αὐτῷ, οὐδ' ὁ οἶνος· ὁ δὲ τοῦ οἴνου ἀμφορεὺς ἔσται· ὅ, τε γάρ, καὶ ἐν ᾧ, ἀμφότερα τοῦ αὐτοῦ μόρια. οὕτω μὲν οὖν ἐνδέχεται αὐτό τι ἐν αὐτῷ εἶναι. 5 Πρώτως δ' οὐκ ἐνδέχεται, οἷον τὸ λευκὸν ἐν σώματι. ἡ ἐπιφάνεια γὰρ ἐν σώματι, ἡ δ' ἐπιστήμη ἐν ψυχῇ. κατὰ ταῦτα δ' αἱ προσηγορίαι μέρη ὄντα, ὥστε ἐν ἀνθρώπῳ· ὁ δ' ἀμφορεὺς καὶ ὁ οἶνος, χωρὶς μὲν ὄντα, οὐ μέρη. ἅμα δέ· διὸ ὅταν ᾖ μέρη, ἔσται αὐτὸ ἐν αὐτῷ· οἷον τὸ λευκὸν ἐν ἀνθρώπῳ, ὅτι ἐν τῷ σώματι· καὶ ἐν τούτῳ, ὅτι ἐν τῇ ἐπιφανείᾳ· ἐν δὲ ταύτῃ, οὐκ ἔτι κατ' ἄλλο. καὶ ἕτερά γε τῷ εἴδει ταῦτα καὶ ἄλλην φύσιν ἔχει ἑκάτερον καὶ δύναμιν, ἥ τ' ἐπιφάνεια, καὶ τὸ λευκόν. 6 Οὔτε δὴ ἐπακτικῶς σκοποῦσιν, οὐδὲν ἐν αὐτῷ ὁρῶμεν κατ' οὐδένα τῶν διορισμῶν. 7 Τῷ τε λόγῳ δῆλον, ὅτι ἀδύνατον· δεήσει γὰρ ἀμφότερα ἑκάτερον ὑπάρχειν. οἷον τὸν ἀμφορέα, ἀγγεῖόν τε καὶ οἶνον εἶναι· καὶ τὸν οἶνον, οἶνόν τε καὶ ἀμφορέα, εἴπερ ἐνδέχεται αὐτό τι ἐν αὐτῷ εἶναι. 8 Ὥστε εἰ ὅτι μάλιστα ἐν ἀλλήλοις εἶεν, ὁ μὲν ἀμφορεὺς δέξεται τὸν οἶνον, οὐχ ᾗ αὐτὸς ὁ οἶνος, ἀλλ' ᾗ ἐκεῖνος· ὁ δ' οἶνος ἐνέσται ἐν τῷ ἀμφορεῖ, οὐχ ᾗ ἀμφορεὺς αὐτός, ἀλλ' ᾗ ἐκεῖνος ἀμφορεύς. κατὰ μὲν οὖν τὸ εἶναι ὅτι ἕτερον, δῆλον. ἄλλος γὰρ ὁ λόγος ὁ τοῦ ἐν ᾧ, καὶ ὁ τοῦ ἐν τούτῳ. 9 Ἀλλὰ μὴν οὐδὲ κατὰ συμβεβηκὸς ἐνδέχεται· ἅμα γὰρ δύο σώματα ἐν τῷ αὐτῷ ἐνέσται· αὐτός τε γὰρ ἐν αὐτῷ ὁ ἀμφορεὺς ἔσται, εἰ οὗ ἡ φύσις δεκτική, τοῦτ' ἐνδέχεται ἐν ἑαυτῷ εἶναι· καὶ ἔτι, ἐκεῖνο οὗ δεκτικὸν οἷον, εἰ οἴνου ὁ οἶνος. ὅτι μὲν οὖν ἀδύνατον ἐν ἑαυτῷ τι * πρώτως εἶναι, δῆλον. 10 Ὃ δὲ Ζήνων ἠπόρει, ὅτι εἰ ὁ τόπος

* γρ. λευκόν.
* γρ. ἐπιστήμων.

B Poſt hæc ſumendum *eſt*, quot modis aliud ſit in alio. vno igitur modo, vt digitus in manu, & omnino pars in toto. alio *modo*, vt totum in partibus: non enim totum eſt extra partes. alio modo, vt homo in animali, & omnino vt ſpecies in genere. alio, vt genus in ſpecie, & omnino pars ſpeciei in definitione ſpeciei. præterea vt ſanitas in calidis & frigidis, & omnino forma in materia. præterea vt in rege res Græcorum, & omnino quod *eſt* in primo motore. præterea vt in bono, & omnino in fine: hoc autem eſt id cuius gratia. omnium autem maxime proprie *dicitur*, quod eſt vt in vaſe, & omnino quod *eſt* in loco. 2 Iam verò dubitare quis poſſit, vtrùm aliquid poſſit eſſe vnum & idem in ſemetipſo, an nihil, ſed omnia vel nuſquam *ſint*, vel in alio. 3 Hoc autem bifariàm eſt, *nempe* vel per ſe, vel per aliud. 4 Cùm enim totius partes ſunt, & id in quo *ineſt*, & id quod in illo *ineſt*: *tunc* dicitur totum *eſſe* in ſeipſo. nam & ratione partium dicitur: vtputà albus, quia ſuperficies *eſt* alba: & *homo* ſciens, quia facultas ratiocinandi *eſt ſciens*. Ergo nec vas erit in ſeipſo, nec vinum, ſed vini vas: quod enim *ineſt*, & id in quo *ineſt*, ambo ſunt eius partes: ſic igitur fieri poteſt, vt idem ſit in ſeipſo. 5 Primo autem *eſſe* non poteſt: vt album *eſt* in corpore: quia ſuperficies eſt in corpore: ſcientia verò *eſt* in anima. ex his autem, cùm ſint partes, appellationes *ſumuntur*, adeo vt in homine *eſſe dicantur*. ſed amphora & vinum, cùm ſunt ſeorſum, non *ſunt* partes: ſimul verò *accepta partes ſunt*. idcirco, quando ſunt partes, erit idem in ſeipſo: vt album in homine, quia *eſt* in corpore: & in hoc, quia eſt in ſuperficie: verùm in hac non ampliùs per aliud. atque hæc diuerſa *ſunt* ſpecie: aliámque naturam & vim vtrumque habet, ſuperficies, & albor. 6 Si igitur per inductionem conſideremus, nihil videmus *eſſe* in ſeipſo ſecundùm vllam definitionem. 7 Et ratione patet *hoc* eſſe impoſſibile. oportebit enim vtrumque ambo eſſe: vtputà, amphoram eſſe & vas & vinum, ac vinum eſſe & vinum & amphoram: ſiquidem aliquid poteſt ipſum eſſe in ſeipſo. 8 Quocirca ſi quàm maximè in ſe inuicem ſint: tamen amphora recipiet vinum, non quatenus ipſa *eſt* vinum, ſed quatenus illud *eſt vinum*. vinum autem ineſt in amphora, non quatenus ipſum *eſt* amphora, ſed quatenus illa *eſt* amphora. ac ſecundùm eſſentiam *hæc* differre patet: alia namque *eſt* definitio eius in quo *eſt*, & eius quod in illo *eſt*. 9 Quinimmo nec ex accidenti eſſe poteſt: ſimul enim duo corpora in eodem inerunt. nam & ipſa amphora in ſe ipſa erit, ſi *id* cuius natura *eſt* ad ſuſcipiendum apta, poteſt in ſe ipſo eſſe: & inſuper *in eodem erit* id cuius ſuſcipiendi vim habet, vt vinum, ſi vini *ſuſcipiendi vim habet*. impoſſibile igitur eſſe vt aliquid ſit primò in ſeipſo, manifeſtum *eſt*. 10 Quod autem Zeno dubitabat, quia

ſi locus eſt aliquid, erit in aliquo, ſoluere non *eſt* difficile: nihil enim vetat, primum locum eſſe quidem in alio; non tamen *eſſe in* illo, vt in loco, ſed quemadmodum ſanitas *eſt* in calidis, vt habitus, calidum autem in corpore, vt affectio. quare non eſt neceſſe, in infinitum abire. 11 Sed illud perſpicuum *eſt*, quia vas non eſt vlla pars eius quod in ipſo *eſt*, (nam quod primò *ineſt*, & in quo *ineſt*, diuerſa *ſunt*) locum nec poſſe eſſe materiam, nec formam, ſed diuerſum *quidpiam*. nam hæc *ſunt* aliquid eius quod ineſt, tam materia quàm forma. 12 De his igitur dubitatum eſto.

A ἐστί τι, ἐν τίνι ἔσται, λύειν οὐ χαλεπόν· οὐδὲν γὰρ κωλύει, ἐν ἄλλῳ μὲν εἶναι τὸν πρῶτον τόπον, μὴ μέντοι ὡς ἐν τόπῳ ἐκείνῳ, ἀλλ' ὥσπερ ἡ μὲν ὑγίεια ἐν τοῖς θερμοῖς, ὡς ἕξις, τὸ δὲ θερμὸν ἐν τῷ σώματι, ὡς πάθος. ὥστ' οὐκ ἀνάγκη εἰς ἄπειρον ἰέναι. 11 Ἐκεῖνο δὲ φανερόν, ὅτι ἐπεὶ οὐδὲν τὸ ἀγγεῖον τοῦ ἐν αὐτῷ· (ἕτερον γὰρ τὸ πρώτως, ὅ, τε καὶ ἐν ᾧ) οὐκ ἂν εἴη οὔτε ἡ ὕλη, οὔτε τὸ εἶδος ὁ τόπος, ἀλλ' ἕτερον. ἐκείνου γάρ τι ταῦτα τοῦ ἐνόντος, καὶ ἡ ὕλη, καὶ ἡ μορφή. 12 Ταῦτα μὲν οὖν ἔστω διηπορημένα.

Quid ſit locus.
Cap. VI.

SEd quid tandem ſit locus, ita perſpicuum fieri poteſt. 2 De eo autem accipiamus, quæcumque videntur verè ipſi per ſe ineſſe. cenſemus igitur locum primò continere id cuius eſt locus, nec eſſe aliquid rei, *quam continet*. præterea primum locum nec *eſſe* minorem, nec maiorem *re locata*. præterea nec deſtitui quaque re, & eſſe ſeparabile. ad hæc, omnem locum habere partem ſuperam & inferam; & ſingula corpora natura ferri, ac manere in propriis locis: hoc autem facere aut ſupra, aut infra. His ſuppoſitis, reliqua ſunt diſpicienda. 3 Conari autem oportet conſiderationem ita inſtituere, quatenus quid ſit, explicetur: adeo vt & ea de quibus dubitatur, ſoluantur: & quæ videntur loco ineſſe, maneant: & præterea cauſa difficultatis, atque eorum quæ de ipſo dubitantur, perſpicua fiat. ſic enim pulcherrimè vnumquodque monſtrabitur. 4 Primùm itaque oportet intelligere, non futuram fuiſſe loci inquiſitionem, niſi motus aliquis eſſet, qui in loco *ſpectaretur*. idcirco & cœlum maximè putamus *eſſe* in loco, quia ſemper *eſt* in motu. 5 Hîc verò partim *eſt* latio, partim accretio & deminutio: nam & in accretione & deminutione fit mutatio: & quod prius hîc erat, rurſus translatum eſt in minus aut maius. 6 Quod autem mouetur, partim eſt per ſe actu, partim ex accidenti. 7 Quod autem *eſt* ex accidenti, partim poteſt moueri per ſe, vt partes corporis, & clauus qui *eſt* in naui: alia non poſſunt *per ſe moueri*, ſed ſemper *mouentur* ex accidenti; vt albor, & ſcientia, hæc enim ſic mutant locum, quia *id* in quo inſunt, mutat. 8 Quia verò dicimus eſſe in cœlo vt in loco, quia *eſt* in aëre; hic autem *eſt* in cœlo: ſed & in aëre *eſſe dicimus, id eſt*, non in toto: ſed propter eius extremum & continens, in aëre eſſe dicimus: (nam ſi vniuerſus aër *eſſet* locus, certè non eſſet æqualis cuiuſque *rei* locus & res ipſa: ſed videtur æqualis eſſe: talis autem *eſt* primus locus, in quo *res* eſt.) 9 Cùm igitur id quod continet, non eſt diuiſum: ſed continuum: *tunc* dicitur in illo *eſſe*, non vt in loco, ſed vt pars in toto. cùm autem eſt diuiſum, ac tangit: *tunc* eſt in aliquo primo, quod eſt extremum continentis, & neque eſt pars eius quod in ipſo eſt, neque maius interuallo, ſed æquale, quoniam in eodem *ſunt* extremitates eorum quæ ſe tangunt. 10 Et id quidem quod eſt continuum, non in eo mouetur, ſed cũ illo: quod autem eſt diuiſum, in illo, & ſiue continens moueatur, ſiue minimè: nihilominus *ipſum mouetur*. 11 Præterea cùm non eſt diuiſum, dicitur *eſſe* vt pars in toto: velut, vt in oculo aſpectus, aut in corpore manus. cùm autẽ eſt diuiſum, & tãgit, *dicitur eſſe* vt vt in loco:

B Τί δέ ποτ' ἐστὶν ὁ τόπος, ὧδ' ἂν γένοιτο φανερόν. 2 Λάβωμεν δὲ περὶ αὐτοῦ, ὅσα δοκεῖ ἀληθῶς καθ' αὑτὸ ὑπάρχειν αὐτῷ. ἀξιοῦμεν δὴ τὸν τόπον εἶναι, πρῶτον μὲν περιέχον ἐκεῖνο οὗ τόπος ἐστί· καὶ μηδὲν τοῦ πράγματος εἶναι. ἔτι, τὸν πρῶτον τόπον, μήτε ἐλάττω, μήτε μείζω. ἔτι, [μήτε] ἀπολείπεσθαι ἑκάστου, καὶ χωριστόν. πρὸς δὲ τούτοις, πάντα τόπον, ἔχειν τὸ ἄνω καὶ τὸ κάτω· καὶ φέρεσθαι φύσει, καὶ μένειν ἐν τοῖς οἰκείοις τόποις ἕκαστον τῶν σωμάτων. τοῦτο δὲ ποιεῖν, ἢ ἄνω, ἢ κάτω. ὑποκειμένων δὲ τούτων, τὰ λοιπὰ θεωρητέον. 3 Δεῖ δὲ πειρᾶσθαι τὴν σκέψιν οὕτω ποιεῖσθαι, ὅπως τὸ τί ἐστιν ἀποδοθήσεται· ὥστε τά τε ἀπορούμενα λύε- C σθαι, καὶ τὰ δοκοῦντα ὑπάρχειν τῷ τόπῳ, ὑπάρχοντα ἔσται· καὶ ἔτι, τὸ τῆς δυσκολίας αἴτιον, καὶ τῶν περὶ αὐτὸν ἀπορημάτων, ἔσται φανερόν. οὕτω γὰρ ἂν κάλλιστα δεικνύοιτο ἕκαστον. 4 Πρῶτον μὲν οὖν δεῖ κατανοῆσαι, ὅτι οὐκ ἂν ἐζητεῖτο ὁ τόπος, εἰ μὴ κίνησίς τις ἦν ἡ κατὰ τόπον· διὰ γὰρ τοῦτο καὶ τὸν οὐρανὸν μάλιστα οἰόμεθα ἐν τόπῳ, ὅτι ἀεὶ ἐν κινήσει. 5 Ταύτης δέ, τὸ μὲν φορά, τὸ δ' αὔξησις καὶ φθίσις· καὶ γὰρ ἐν τῇ αὐξήσει καὶ φθίσει μεταβάλλει, καὶ ὅπερ πρότερον ἦν ἐνταῦθα, πάλιν μεθέστηκεν εἰς ἔλαττον, ἢ μεῖζον. 6 Ἔστι δὲ κινούμενον τὸ μὲν καθ' αὑτὸ ἐνεργείᾳ, τὸ δὲ κατὰ συμβεβηκός. 7 Τοῦ δὲ κατὰ D συμβεβηκός, τὸ μὲν ἐνδεχόμενον κινεῖσθαι καθ' αὑτό, οἷον τὰ μόρια τοῦ σώματος, καὶ ὁ ἐν τῷ πλοίῳ ἧλος· τὰ δ' οὐκ ἐνδεχόμενα, ἀλλ' ἀεὶ κατὰ συμβεβηκός· οἷον ἡ λευκότης, καὶ ἡ ἐπιστήμη· ταῦτα γὰρ οὕτω μεταβέβληκε τὸν τόπον, ὅτι ἐν ᾧ ὑπάρχουσι, μεταβάλλει. 8 Ἐπεὶ δὲ λέγομεν εἶναι ὡς ἐν τόπῳ ἐν τῷ οὐρανῷ, διότι ἐν τῷ ἀέρι, οὗτος δ' ἐν τῷ οὐρανῷ· καὶ ἐν τῷ ἀέρι δέ, οὐκ ἐν παντί· ἀλλὰ διὰ τὸ ἔσχατον αὐτοῦ καὶ περιέχον, ἐν τῷ ἀέρι φαμὲν εἶναι. εἰ γὰρ ἅπας ὁ ἀὴρ τόπος, οὐκ ἂν ἴσος εἴη ἑκάστου ὁ τόπος, καὶ ἕκαστον. δοκεῖ δέ γε ἴσος εἶναι. τοιοῦτος δ' ὁ πρῶτος ἐν ᾧ ἐστιν. 9 Ὅταν μὲν οὖν μὴ διῃρημένον ᾖ τὸ περιέχον, ἀλλὰ συνεχές, οὐχ ὡς ἐν τόπῳ λέγεται εἶναι ἐν ἐκεί- E νῳ, ἀλλ' ὡς μέρος ἐν ὅλῳ· ὅταν δὲ διῃρημένον ᾖ καὶ ἁπτόμενον, ἐν πρώτῳ ἐστί τινι τῷ ἐσχάτῳ τοῦ περιέχοντος, ὃ οὔτ' ἐστὶ μέρος τοῦ ἐν αὐτῷ ὄντος, οὔτε μεῖζον τοῦ διαστήματος, ἀλλ' ἴσον· ἐν γὰρ τῷ αὐτῷ τὰ ἔσχατα τῶν ἁπτομένων. 10 Καὶ συνεχὲς μὲν ὄν, οὐκ ἐν ἐκείνῳ κινεῖται, ἀλλὰ μετ' ἐκείνου· διῃρημένον δέ, ἐν ἐκείνῳ. καὶ ἐάν τε κινῆται τὸ περιέχον, ἐάν τε μή, οὐδὲν ἧττον. 11 Ἔτι δ', ὅταν μὴ διῃρημένον ᾖ, ὡς μέρος ἐν ὅλῳ λέγεται· οἷον ὡς ἐν τῷ ὀφθαλμῷ ἡ ὄψις, ἢ ἐν τῷ σώματι ἡ χείρ. ὅταν δὲ διῃρημένον ᾖ ἁπτόμενον, ὡς ἐν τόπῳ·

ἐστὶν ἐν τῷ κάδῳ τὸ ὕδωρ, ἢ ἐν τῷ κεραμίῳ ὁ οἶνος. ἡ μὲν γὰρ χεὶρ μετὰ τοῦ σώματος κινεῖται, τὸ δὲ ὕδωρ ἐν τῷ κάδῳ. 12 Ἤδη τοίνυν φανερὸν ἐκ τούτων, τί ἐστιν ὁ τόπος. σχεδὸν γὰρ τέτταρά ἐστιν, ὧν ἀνάγκη τὸν τόπον ἕν τι εἶναι· ἢ γὰρ μορφή, ἢ ὕλη, ἢ διάστημά τι τὸ μεταξὺ τῶν ἐσχάτων, ἢ τὰ ἔσχατα, εἰ μή ἐστι μηδὲν διάστημα παρὰ τὸ τοῦ ἐγγινομένου σώματος μέγεθος. 13 Τούτων δ' ὅτι τὰ τρία οὐκ ἐνδέχεται εἶναι, φανερόν. 14 Ἀλλὰ διὰ μὲν τὸ περιέχειν, δοκεῖ ἡ μορφὴ εἶναι· ἐν ταὐτῷ γὰρ τὰ ἔσχατα τοῦ περιέχοντος καὶ τοῦ περιεχομένου. 15 Ἔστι μὲν οὖν ἄμφω πέρατα, ἀλλ' οὐ τοῦ αὐτοῦ. ἀλλὰ τὸ μὲν εἶδος, τοῦ πράγματος· ὁ δὲ τόπος, τοῦ περιέχοντος σώματος. 16 Διὰ δὲ τὸ μεταβάλλειν πολλάκις μένοντος τοῦ περιέχοντος τὸ περιεχόμενον καὶ διῃρημένον, οἷον ἐξ ἀγγείου ὕδωρ, τὸ μεταξὺ εἶναί τι δοκεῖ διάστημα, ὡς ὄν τι παρὰ τὸ σῶμα τὸ μεθιστάμενον. 17 Τὸ δ', οὐκ ἔστιν, ἀλλὰ τὸ τυχὸν ἐμπίπτει σῶμα τῶν μεθισταμένων, καὶ ἅπτεσθαι πεφυκότων. 18 Εἰ δ' ἦν τι τὸ διάστημα τὸ πεφυκός, καὶ μένον ἐν τῷ αὐτῷ τόπῳ, ἄπειροι ἂν ἦσαν τόποι· μεθισταμένου γὰρ τοῦ ὕδατος, καὶ τοῦ ἀέρος, τὸ αὐτὸ ποιήσει τὰ μόρια ἅπαντα ἐν τῷ ὅλῳ, ὅπερ ἅπαν τὸ ὕδωρ ἐν τῷ ἀγγείῳ. 19 Ἅμα δὲ καὶ ὁ τόπος ἔσται μεταβάλλων. ὥστ' ἔσται καὶ τοῦ τόπου ἄλλος τόπος, καὶ πολλοὶ τόποι ἅμα ἔσονται. 20 Οὐκ ἔστι δὲ ἄλλος τόπος ὁ τοῦ μορίου, ἐν ᾧ κινεῖται, ὅταν τὸ ὅλον ἀγγεῖον μεθίστηται, ἀλλ' ὁ αὐτός. ἐν ᾧ γάρ ἐστιν, ἀντιμεθίσταται ὁ ἀήρ, καὶ τὸ ὕδωρ, καὶ τὰ μόρια τοῦ ὕδατος, ἀλλ' οὐκ ἐν ᾧ γίνονται τόπῳ, ὅς μέρος ἐστὶ τοῦ τόπου, ὅς ἐστι τόπος ὅλου τοῦ οὐρανοῦ. 21 Καὶ ἡ ὕλη δὲ δόξειεν ἂν εἶναι τόπος, εἴγε ἐν ἠρεμοῦντί τις σκοποίη, καὶ μὴ κεχωρισμένῳ, ἀλλὰ συνεχεῖ. ὥσπερ γὰρ εἰ ἀλλοιοῦται, ἔστι τι ὃ νῦν μὲν λευκόν, πάλαι δὲ μέλαν· καὶ νῦν μὲν σκληρόν, πάλαι δὲ μαλακόν· διὸ φαμὲν εἶναί τι τὴν ὕλην· οὕτω καὶ ὁ τόπος διὰ τοιαύτης τινὸς εἶναι δοκεῖ φαντασίας. 22 Πλὴν ἐκεῖνο μέν, διότι ὃ ἦν ἀήρ, τοῦτο νῦν ὕδωρ· ὁ δὲ τόπος, ὅτι οὗ νῦν ἦν ὁ ἀήρ, ἐνταῦθά ἐστι νῦν ὕδωρ. 23 Ἀλλ' ἡ μὲν ὕλη, ὥσπερ ἐλέχθη ἐν τοῖς πρότερον, οὔτε χωριστὴ τοῦ πράγματος, οὔτε περιέχουσα· ὁ δὲ τόπος, ἄμφω. 24 Εἰ τοίνυν μηδὲν τούτων τῶν τριῶν ὁ τόπος ἐστί, μήτε τὸ εἶδος μήτε ἡ ὕλη, μήτε διάστημα, ἀεί τι ὑπάρχον ἕτερον παρὰ τὸ τοῦ πράγματος τοῦ μεθισταμένου, ἀνάγκη τὸν τόπον εἶναι τὸ λοιπὸν τῶν τεσσάρων, τὸ πέρας *τοῦ περιέχοντος σώματος. 25 Λέγω δὲ τὸ περιεχόμενον σῶμα, τὸ κινητὸν κατὰ φοράν. 26 Δοκεῖ δὲ μέγα τι εἶναι καὶ χαλεπὸν ληφθῆναι ὁ τόπος, διά τε τὸ παρεμφαίνεσθαι τὴν ὕλην, καὶ τὴν μορφήν· καὶ διὰ τὸ ἐν ἠρεμοῦντι τῷ περιέχοντι γίνεσθαι τὴν μετάστασιν τοῦ φερομένου· ἐνδέχεσθαι γὰρ φαίνεται εἶναι διάστημα μεταξὺ ἄλλο τι τῶν κινουμένων μεγεθῶν. συμβάλλεται δέ τι καὶ ὁ ἀήρ, δοκῶν ἀσώματος εἶναι· φαίνεται γὰρ οὐ μόνον τὰ πέρατα τοῦ ἀγγείου εἶναι ὁ τόπος, ἀλλὰ καὶ τὸ μεταξὺ ὄν, ὡς κενόν. 27 Ἔστι δ' ὥσπερ τὸ ἀγγεῖον τόπος μεταφορητός, οὕτως ὁ τόπος ἀγγεῖον ἀμετακίνητον. διὸ ὅταν μὲν ἐν κινουμένῳ τι κινῆται καὶ μεταβάλλῃ τὸ ἐντός, οἷον ἐν ποταμῷ πλοῖον, ὡς ἀγγείῳ χρῆται μᾶλλον ἢ τόπῳ τῷ περιέχοντι. βούλεται δ' ἀκίνητον εἶναι ὁ τόπος. διὸ ὁ πᾶς μᾶλλον ποταμὸς τόπος, ὅτι ἀκίνητος ὁ πᾶς. 28 Ὥστε τὸ τοῦ περιέχοντος πέρας ἀκίνητον πρῶτον, τοῦτ' ἔστιν ὁ τόπος.

A velut in cado aqua, aut in dolio vinum. etenim manus cum corpore mouetur: aqua verò in cado. 12 Iam verò ex his perſpicuum *eſt*, quid ſit locus. ferè enim quatuor ſunt, ad quorum vnum neceſſe *eſt* locum referri. aut enim *eſt* forma, aut materia, aut interuallum quoddam, quod eſt extremis interiectum, aut extrema, ſi nullum eſt interuallum præter magnitudinem corporis quod ineſt. 13 Horum autem tria eſſe non poſſe, perſpicuum *eſt*. 14 Verùm, quia continet, videtur eſſe forma. in eodem enim *ſunt* extremitates eius quod continet & eius quod continetur. 15 Sanè ambo ſunt termini: non tamen eiuſdem: ſed forma *eſt terminus* rei: locus autem, corporis continentis. 16 Quia verò id quod B continetur ac diuiſum eſt, eo quod continet manente, mutatur ſæpe, vt ex vaſe aqua: *idcirco* quod eſt interiectum, videtur eſſe aliquod interuallum, quaſi quippiam ſit præter corpus, quod transfertur. 17 Quod non *ita* eſt: ſed incidit quodvis corpus eorum, quæ transferuntur, & ſuâ naturâ tangere poſſunt. 18 Cæterùm ſi interuallum eſſet aliquid, quod ſua natura eſſet, ac maneret eodem in loco: infiniti eſſent loci. translatis enim aqua & aëre: idem faciunt omnes partes in toto, quod vniuerſa aqua *facit* in vaſe. 19 Item locus mutabitur. quapropter erit etiam loci alius locus: & multi loci ſimul erunt. 20 Non eſt autem alius locus partis in quo mouetur. cùm C totum vas transfertur, ſed idem *manet*. nam in quo ſunt, *in eo* viciſſim transferuntur aër & aqua & partes aquæ: non in eo loco, in quem tranſeunt: qui ſcilicet eſt pars loci, qui eſt locus totius cæli. 21 Sed & materia videri poteſt eſſe locus, ſi quis conſideret in eo quod quieſcit nec eſt ſeparatum ſed continuum. quemadmodum enim ſi variatur, eſt aliquid quod nunc *eſt* album, olim *erat* nigrum: & nunc *eſt* durum, olim *erat* molle: vnde dicimus materiam eſſe aliquid: ita & locus videtur eſſe *aliquid*, quia eiuſmodi quandam ſpeciem præ ſe fert. 22 Verùm illud *ideo dicitur*: quia quod erat aër, nunc *eſt* aqua. locus autem; quia vbi erat aër, ibi nunc eſt aqua. 23 Sed D materia quidem, vt in ſuperioribus dictum fuit, neque ſeparabilis *eſt* à re, neque continet: cùm vtrumque loco conueniat. 24 Si igitur locus non eſt vllum ex his tribus: *hoc eſt*, neque forma, neque materia, neque interuallum, quod ſemper diuerſum quiddam ſit præter rem quæ transfertur: neceſſe *eſt*, locum eſſe id quod ex his tribus eſt reliquum, *nempe* terminus corporis continentis. 25 Corpus autem contentum appello, quod eſt latione mobile. 26 Iam verò magnum quiddam ac difficile eſſe videtur, ſumere quid ſit locus: cùm quia materiæ & formæ ſpeciem refert: tum etiam quia in eo, quod continet, quieſcente, fit translatio eius quod fertur. videtur enim eſſe poſſe interuallum quoddam interiectum, E diuerſum à magnitudinibus quæ mouentur. confert etiam aliquid aër, qui videtur eſſe incorporeus. nam locus videtur eſſe non ſolùm extremitates vaſis, ſed etiam quod eſt interiectum quaſi inane. 27 Porrò ſicut vas *eſt* locus qui transferri poteſt, ita locus eſt vas immobile. idcirco quando in re mota aliquid mouetur, & quod intus eſt, mutat *locum*: velvti, in flumine nauigium, eo vtitur quod continet, potiùs vt vaſe, quàm *vt* loco. locus autem debet eſſe *quiddam* immobile. quare vniuerſum flumen magis *eſt* locus: quia vniuerſum *eſt* immobile. 28 Quocirca eius quod continet, terminus immobilis primus, idipſum eſt locus.

IDeóque medium cæli, & extremum conuerſionis quod nos versùs eſt, omnibus maximè propriè videtur eſſe, hoc quidem ſuprà, illud autem infrà: quoniam illud ſemper manet: circuli autem extremum ſemper eodem modo *ſe* habens manet. quapropter cùm leue *id* ſit, quod ſurſum naturâ fertur, graue autem, quod deorſum: certè terminus, qui medium versùs continet, infrà eſt, *nec non* & ipſum medium. qui verò extremum verſùs *continet*, ſuprà *eſt*, *nec non* & ipſum extremum. 2 Proinde locus videtur eſſe planum quiddam, & quaſi vas, & *rem locatam* continens. 3 Præterea locus ſimul *eſt* aliquo modo cum re: quia termini ſimul *ſunt* cum eo quod terminatur. 4 Illud corpus igitur eſt in loco, extra quod eſt aliquod *aliud* corpus, quod ipſum continet. *illud* verò non *eſt in loco*, extra quod non *eſt vllum corpus*. 5 Idcirco etiamſi aqua talis fiat: partes quidem eius mouebuntur, quia continentur aliæ ſub aliis: vniuerſum autem aliquo modo mouebitur, aliquo modo non *mouebitur*. vt enim *eſt* totum, ſimul locum non mutabit: in orbem autem mouebitur, quia partium hic locus *eſt*. 6 Et nonnulla quidem non *mouentur* ſurſum & deorſum, ſed in orbem: alia verò ſurſum, ac deorſum, quæcumque *ſcilicet* habent denſitatem & raritatem. 7 Sicut autem dictum fuit, alia ſunt in loco poteſtate, alia actu. quare cùm id quod conſtat ex ſimilibus partibus, eſt continuum: partes poteſtate in loco *ſunt*. cùm autem ſeparatæ ſunt, ac tangunt, velut aceruus: *tunc* actu *in loco ſunt*. 8 Et alia quidem per ſe *ſunt in loco*: vt omne corpus aut latione aut accretione mobile, per ſe *eſt* alicubi. cælum autem (vt dictum fuit) nuſquam totum eſt, nec in aliquo loco: ſiquidem nullo corpore continetur. quatenus autem mouetur, eatenus etiam locus eſt eius partibus: alia namque pars alij cohæret. Alia verò *ſunt in loco* ex accidenti: vt anima, & cœlum. nam omnes partes *ſunt* quodammodo in loco: quoniam in circulo alia *pars* aliam continet. idcirco ſuperum corpus tantùm in orbem mouetur. vniuerſum autem non *eſt* alicubi: quod enim *eſt* alicubi & ipſum eſt aliquid, & inſuper oportet præter hoc eſſe aliud quidpiam, in quo *ſit*, *ſeu* quod ipſum contineat: ſed præter vniuerſum ac totum, nihil eſt *quod ſcilicet ſit* extra vniuerſum. 9 Proinde in cælo omnia ſunt: nam cælum fortaſſe *eſt* vniuerſum. Locus autem eſt, non cælum, ſed cæli quoddam extremum ac terminus quieſcens, qui tangit corpus mobile. 10 Ideóque terra *eſt* in aqua: hæc verò in aëre: hic autem in æthere: æther autem in cœlo. ſed cœlum non *eſt* ampliùs in alio. 11 Ex his perſpicuum *eſt*, omnes dubitationes diſſolui poſſe, ſi ita locus explicetur: quia neque neceſſe *eſt*, ſimul augeri locum: neque puncti eſſe locum: neque duo corpora *eſſe* in eodem loco: neque eſſe aliquod interuallum corporeum. quod enim loco *eſt* interiectum, *eſt* corpus quodlibet, non interuallum corporis. & locus eſt alicubi, non tamen vt in loco, ſed vt terminus in re terminata. non enim omne ens *eſt* in loco, ſed *tantùm* corpus mobile. 12 Et fertur igitur vnumquodque optimâ ratione ad ſuum locum. quod enim deinceps *collocatum eſt*, ac tangit non vi, *illud eſt* cognatum: & copulata quidem in vnam naturam, *ſunt* impatibilia. cùm autem ſe tangunt, viciſſim pati & agere poſſunt.

A Καὶ διὰ τοῦτο τὸ μέσον τοῦ οὐρανοῦ, καὶ τὸ ἔσχατον τὸ πρὸς ἡμᾶς τῆς κύκλῳ φορᾶς, δοκεῖ εἶναι, τὸ μὲν ἄνω, τὸ δὲ κάτω, μάλιστα πᾶσι κυρίως· ὅτι τὸ μὲν ἀεὶ μένει. τοῦ δὲ κύκλου τὸ ἔσχατον ὡσαύτως ἔχον μένει. ὥστ' ἐπεὶ τὸ μὲν κοῦφον, τὸ ἄνω φερόμενόν ἐστι φύσει, τὸ δὲ βαρὺ τὸ κάτω, τὸ μὲν πρὸς τὸ μέσον περιέχον, πέρας, κάτω ἐστὶ, καὶ αὐτὸ τὸ μέσον· τὸ δὲ πρὸς τὸ ἔσχατον, ἄνω, καὶ αὐτὸ τὸ ἔσχατον. 2 Καὶ διὰ τοῦτο δοκεῖ ἐπίπεδόν τι εἶναι, καὶ οἷον ἀγγεῖον ὁ τόπος καὶ περιέχον. 3 Ἔτι, ἅμα τῷ πράγματί πως καὶ ὁ τόπος· ἅμα γὰρ τῷ πεπερασμένῳ τὰ πέρατα. 4 Ὧι μὲν οὖν σώματί B ἐστί τι ἐκτὸς σῶμα περιέχον αὐτὸ, τοῦτό ἐστιν ἐν τόπῳ· ᾧ δὲ μὴ, οὔ. 5 Διὸ κἂν ὕδωρ γένηται τοιοῦτο, τὰ μὲν μόρια κινήσεται αὐτοῦ· περιέχεται γὰρ ὑπ' ἀλλήλων. τὸ δὲ πᾶν, ἔστι μὲν ὡς κινήσεται, ἔστι δ' ὡς οὔ. ὡς μὲν γὰρ ὅλον, ἅμα τὸν τόπον οὐ μεταβάλλει· κύκλῳ δὲ κινήσεται· τῶν μορίων γὰρ οὗτος ὁ τόπος.* 6 Καὶ ἄνω μὲν καὶ κάτω, οὔ· κύκλῳ δὲ, ἔνια. τὰ δὲ ἄνω καὶ κάτω, [καὶ] ὅσα ἔχει πύκνωσιν καὶ μάνωσιν. 7 Ὥσπερ δ' ἐλέχθη, τὰ μέν ἐστιν ἐν τόπῳ κατὰ δύναμιν, τὰ δὲ κατ' ἐνέργειαν. διὸ, ὅταν μὲν συνεχὲς ᾖ τὸ ὁμοιομερὲς, κατὰ δύναμιν ἐν τόπῳ τὰ μέρη· ὅταν δὲ χωρισθῇ μὲν, ἅπτηται δὲ ὥσπερ σωρὸς, κατ' ἐνέργειαν. 8 Καὶ τὰ μὲν, καθ' αὑτὰ, οἷον πᾶν σῶμα, ἢ κατὰ φορὰν, ἢ κατ' αὔξη- C σιν κινητὸν καθ' αὑτὸ πού. ὁ δ' οὐρανὸς, ὥσπερ εἴρηται, οὔ που ὅλος, οὐδ' ἔν τινι τόπῳ ἐστὶν, εἴ γε μηδὲν αὐτὸν περιέχει σῶμα. ἐφ' ᾧ δὲ κινεῖται, ταύτῃ καὶ τόπος ἐστὶ τοῖς μορίοις· ἕτερον γὰρ ἑτέρου ἐχόμενον τῶν μορίων ἐστί. τὰ δὲ κατὰ συμβεβηκὸς, οἷον ἡ ψυχὴ, καὶ ὁ οὐρανός· τὰ γὰρ μόρια ἐν τόπῳ πως* πάντα· ἐπὶ τῷ κύκλῳ γὰρ περιέχει ἄλλο ἄλλο. διὸ κινεῖται μὲν κύκλῳ μόνον τὸ ἄνω· τὸ δὲ πᾶν, οὔ που· τὸ γὰρ πού αὐτό τε ἐστί τι, καὶ ἔτι ἄλλο τι δεῖ εἶναι παρὰ τοῦτο ἐν ᾧ ὃ περιέχει. παρὰ δὲ τὸ πᾶν καὶ ὅλον, οὐδέν ἐστιν ἔξωθεν τοῦ παντός. 9 Καὶ διὰ τοῦτο ἐν τῷ οὐρανῷ πάντα· ὁ γὰρ οὐρανὸς τὸ D πᾶν ἴσως. ἔστι δὲ ὁ τόπος οὐχ ὁ οὐρανὸς, ἀλλὰ τοῦ οὐρανοῦ τι τὸ ἔσχατον, καὶ ἁπτόμενον τοῦ κινητοῦ σώματος πέρας ἠρεμοῦν. 10 Καὶ διὰ τοῦτο, ἡ μὲν γῆ, ἐν τῷ ὕδατι, τοῦτο δ' ἐν τῷ ἀέρι, οὗτος δ' ἐν τῷ αἰθέρι, ὁ δ' αἰθὴρ ἐν τῷ οὐρανῷ. ὁ δ' οὐρανὸς οὐκ ἔτι ἐν ἄλλῳ. 11 Φανερὸν δὲ ἐκ τούτων, ὅτι καὶ αἱ ἀπορίαι πᾶσαι λύοιντ' ἂν, οὕτω λεγομένου τοῦ τόπου. οὔτε γὰρ συναυξάνεσθαι ἀνάγκη τὸν τόπον, οὔτε στιγμῆς εἶναι τόπον, οὔτε δύο σώματα ἐν τῷ αὐτῷ τόπῳ, οὔτε διάστημά τι εἶναι σωματικόν. σῶμα γὰρ τὸ μεταξὺ τοῦ τόπου τὸ τυχὸν, ἀλλ' οὐ διάστημα σώματος· καὶ ἔστιν ὁ τόπος καὶ πού, οὐχ ὡς ἐν τόπῳ δὲ, ἀλλ' ὡς τὸ πέρας ἐν τῷ πεπερασμένῳ. οὐ γὰρ πᾶν τὸ ὂν ἐν τόπῳ, ἀλλὰ τὸ κινητὸν σῶμα. 12 Καὶ φέρεται δὴ εἰς τὸν ἑαυτοῦ τόπον ἕκαστον, εὐλόγως· τὸ γὰρ ἐφεξῆς καὶ ἁπτόμενον μὴ βίᾳ, συγγενές· καὶ συμπεφυκότα μὲν ἀπαθῆ, ἁπτόμενα δὲ, παθητικὰ καὶ ποιητικὰ ἀλλήλων.

TRACTATVS II.

Aliorum rationes de inani. Cap. VIII.

Τὸν αὐτὸν δὲ τρόπον ὑποληπτέον εἶναι τοῦ φυσικοῦ θεωρῆσαι καὶ περὶ κενοῦ, εἰ ἔστιν, ἢ μή· καὶ πῶς ἐστιν, ἢ τί ἐστιν, ὥσπερ καὶ περὶ τοῦ τόπου· καὶ γὰρ παραπλησίαν ἔχει τήν τε ἀπιστίαν, καὶ τὴν πίστιν, διὰ τῶν ὑπολαμβανομένων· οἷον γὰρ τόπον τινὰ καὶ ἀγγεῖον τὸ κενὸν τιθέασιν οἱ λέγοντες. δοκεῖ δὲ, πλῆρες μὲν εἶναι, ὅταν ἔχῃ τὸν ὄγκον, οὗ δεκτικόν ἐστιν· ὅταν δὲ στερηθῇ, κενόν· ὡς τὸ αὐτὸ μὲν ὂν κενὸν καὶ πλῆρες καὶ τόπον. τὸ δ᾽ εἶναι αὐτοῖς, οὐ ταὐτὸ ὄν. 2 Ἄρξασθαι δὲ δεῖ τῆς σκέψεως λαβοῦσιν, ἅτε λέγουσιν οἱ φάσκοντες εἶναι· καὶ πάλιν ἃ λέγουσιν οἱ μὴ φάσκοντες εἶναι· καὶ τρίτον, τὰς κοινὰς δόξας περὶ αὐτῶν. 3 Οἱ μὲν οὖν δεικνύναι πειρώμενοι ὅτι οὐκ ἔστιν, οὐχ ὃ βούλονται λέγειν οἱ ἄνθρωποι κενόν, τοῦτο ἐξελέγχουσιν, ἀλλ᾽ ἁμαρτάνοντες λέγουσιν, ὥσπερ Ἀναξαγόρας, καὶ οἱ τοῦτον τὸν τρόπον ἐλέγχοντες. ἐπιδεικνύουσι γὰρ, ὅτι ἐστί τι ὁ ἀὴρ, στρεβλοῦντες τοὺς ἀσκοὺς, καὶ δεικνύοντες, ὡς ἰσχυρὸς ὁ ἀὴρ, καὶ ἐναπολαμβάνοντες ἐν ταῖς κλεψύδραις. οἱ δὲ ἄνθρωποι βούλονται κενὸν εἶναι διάστημα, ἐν ᾧ * μηδέν ἐστι σῶμα αἰσθητόν. οἰόμενοι δὲ τὸ ὂν ἅπαν εἶναι σῶμα, φασὶν ἐν ᾧ ὅλως μηδέν ἐστι, τοῦτ᾽ εἶναι κενόν· διὸ τὸ πλῆρες ἀέρος, κενὸν εἶναι. οὐκ οὖν τοῦτο δεῖ δεικνύναι, ὅτι ἐστί τι ὁ ἀὴρ, ἀλλ᾽ ὅτι οὐκ ἔστι διάστημα ἕτερον τῶν σωμάτων, οὔτε χωριστὸν, οὔτε ἐνεργείᾳ ὄν, ὃ διαλαμβάνει τὸ πᾶν σῶμα ὥστ᾽ εἶναι μὴ συνεχὲς, καθάπερ λέγουσι Δημόκριτος καὶ Λεύκιππος, καὶ ἕτεροι πολλοὶ τῶν φυσιολόγων, ἢ καὶ εἴ τι ἔξω τοῦ παντὸς σώματός ἐστιν, ὄντος συνεχοῦς. οὗτοι μὲν οὖν οὐ κατὰ θύρας πρὸς τὸ πρόβλημα ἀπαντῶσιν. 4 Ἀλλ᾽ οἱ φάσκοντες εἶναι, μᾶλλον. λέγουσι δ᾽, ἓν μὲν, ὅτι ἡ κίνησις ἡ κατὰ τόπον οὐκ ἂν εἴη· αὕτη δ᾽ ἐστὶ φορὰ καὶ αὔξησις· οὐ γὰρ ἂν δοκοίη εἶναι κίνησις, εἰ μὴ ἦ κενόν· τὸ γὰρ πλῆρες ἀδύνατον εἶναι δέξασθαι· εἰ δὲ δέξαιτο, καὶ ἔσται δύο ἐν τῷ αὐτῷ, ἐνδέχοιτ᾽ ἂν καὶ ὁποσαοῦν ἅμα εἶναι σώματα· τὴν γὰρ διαφορὰν, δι᾽ ἣν οὐκ ἂν εἴη τὸ λεχθὲν, οὐκ ἔστιν εἰπεῖν. εἰ δὲ τοῦτο ἐνδέχεται, καὶ τὸ μικρότατον δέξεται τὸ μέγιστον· πολλὰ γὰρ τὰ μικρὰ τὸ μέγα ἐστὶν·

* κ. μηδὲν μὴ ε.

B Eodem modo exiſtimandum *eſt*, phyſici eſſe diſpicere etiam de inani, an ſit, nec ne, & quomodo ſit, vel quid ſit; quemadmodum & de loco. etenim ſimilem habet refutationem & fidem ex iis quæ de eo exiſtimantur. nam qui *id eſſe* dicunt, *hi* ponunt inane quaſi locum quendam & vas. videtur autem plenum quidem eſſe, cùm molem habet, cuius eſt capax: cùm autem *ea* deſtitutum fuerit, *tunc eſſe* inane; quaſi idem ſit inane & plenum & locus, ſed eorum eſſentia non ſit eadem. 2 Initium autem conſiderationis fieri oportet, ſumptis *iis* quæ dicunt, qui aiunt eſſe *inane*; & rurſus quæ dicunt, qui C negant eſſe; ac tertiùm communes de iis opiniones. 3 Qui igitur oſtendere conantur non eſſe *inane*, *hi* non id refellunt, quod homines inane dicere volunt, ſed quod aberrantes inquiunt: ſicut Anaxagoras, & *alij*, qui hoc modo redarguunt: demonſtrant enim aërem eſſe aliquid, vtres torquendo, & oſtendendo quanta ſit vis aëris, eúmque in clepſydris intercipiendo: homines autem volunt inane eſſe interuallum, in quo nullum eſt corpus ſenſile. cùm autem putent omne ens eſſe corpus, inquiunt, in quo omnino nihil eſt, id eſſe inane: idcirco quod eſt aëre plenum, eſſe inane. non oportet igitur hoc probare, aërem eſſe aliquid: ſed non eſſe interual- D lum diuerſum à corporibus, neque ſeparatum, neque quod actu ſit & permeet *per* omne corpus, adeo vt non ſit continuum, quemadmodum inquiunt Democritus & Leucippus, & multi alij de natura diſſerentes: aut ſi quid eſt extra omne corpus, cùm *corpus* ſit continuum. Ergo hi non per ianuam problemati occurrunt. 4 Sed potiùs qui *inane* eſſe dicunt. Primùm autem inquiunt non fore motum ſecundùm locum: hic verò eſt latio, & accretio. non videbitur enim eſſe motus, niſi ſit inane: quia quod eſt plenum, recipere nequit. ſin autem reciperet, & duo corpora in eodem eſſent: certè poſſent quotcumque corpora ſimul eſſe. nam differentia, propter quam, quod dixi, eſſe nequeat, afferri non poteſt. quòd ſi hoc fieri poteſt: etiam quod eſt minimum, recipiet quod eſt maximum. multa namque parua eſt quod magnum *eſt*. qua-

A propter ſi multa æqualia poſſunt in eodẽ eſſe, etiam multa inæqualia *eſſe poterunt*. 5 Ac Meliſſus quidem ex his oſtendit vniuerſum eſſe immobile: quia ſi mouebitur, neceſſe (inquit) *erit* inane eſſe: inane autem non *eſt* in entium *numero*. *6 Vno igitur modo ex his oſtendunt inane eſſe aliquid. alio autem; quia videntur quædam coire & comprimi, ſicut & vinum aiunt vnà cum vtribus recipi à doliis, tanquam corpus condenſatum coeat, in ea *ſpatia* inania quæ inſunt. 7 Præterea etiam accretio videtur omnibus fieri per inane: alimentum enim eſſe corpus: duo verò corpora ſimul eſſe non poſſe. B 8 Teſtimonium quoque de cinere afferunt, qui recipit tantum aquæ, quantum vas, *cùm eſt* inane. 9 Pythagorei quoque dixerunt eſſe inane: & in cœlum, quaſi reſpiret, ingredi ex infinito ſpiritu: atque inane *eſſe*, quod naturas diſterminat: tanquam inane ſit ſeparatio quædam & diſtinctio eorum quæ deinceps *collocantur*: & hoc eſſe primum in numeris: inane enim diſtinguere eorum naturam. 10 Ex quibus igitur alij aiunt eſſe, alij negant, tot ferè ac talia ſunt.

A ὥστ᾽ εἰ πολλὰ ἴσα ἐνδέχεται ἐν ταὐτῷ εἶναι, καὶ πολλὰ ἄνισα. 5 Μέλισσος μὲν οὖν καὶ δείκνυσιν, ὅτι τὸ πᾶν ἀκίνητον ἐκ τούτων· εἰ γὰρ κινήσεται, ἀνάγκη εἶναι, φησί, κενόν· τὸ δὲ κενὸν, οὐ τῶν ὄντων. 6 Ἕνα μὲν οὖν τρόπον ἐκ τούτων δεικνύουσιν, ὅτι ἔστι τι κενόν, ἄλλον δ᾽, ὅτι φαίνεται ἔνια συνιόντα καὶ πιλούμενα· οἷον καὶ τὸν οἶνόν φασι μετὰ τῶν ἀσκῶν δέχεσθαι τοὺς πίθους, ὡς εἰς τὰ ἐνόντα κενὰ συνιόντος τοῦ πυκνουμένου σώματος. 7 Ἔτι δὲ καὶ ἡ αὔξησις δοκεῖ γίνεσθαι πᾶσι διὰ κενοῦ· τὴν μὲν γὰρ τροφὴν εἶναι σῶμα· δύο δὲ σώματα ἀδύνατον ἅμα εἶναι. B 8 Μαρτύριον δὲ καὶ τὸ περὶ τῆς τέφρας ποιοῦνται, ἣ δέχεται ἴσον ὕδωρ, ὅσον τὸ ἀγγεῖον τὸ κενόν. 9 Εἶναι δ᾽ ἔφασαν καὶ οἱ Πυθαγόρειοι κενόν, καὶ ἐπεισιέναι αὐτὸ τῷ οὐρανῷ ἐκ τοῦ ἀπείρου πνεύματος, ὡς ἂν ἀναπνέοντι· καὶ τὸ κενόν, ὃ διορίζει τὰς φύσεις, ὡς ὄντος τοῦ κενοῦ χωρισμοῦ τινος τῶν ἐφεξῆς, καὶ τῆς διορίσεως· καὶ τοῦτ᾽ εἶναι πρῶτον ἐν τοῖς ἀριθμοῖς. τὸ γὰρ κενὸν διορίζειν τὴν φύσιν αὐτῶν. 10 Ἐξ ὧν μὲν οὖν, οἱ μέν φασιν εἶναι, οἱ δ᾽ οὔ φασι, σχεδὸν τοσαῦτα καὶ τοιαῦτά ἐστι.

Quid ſignificat inane.

Cap. IX.

C Ceterùm *ad intelligendum* vtro modo *res* habet, oportet ſumere quid nomen ſignificet. 2 Videtur igitur inane eſſe locus, in quo nihil eſt. 3 Huius cauſa eſt: quia quod eſt, putant eſſe corpus: omne autem corpus *eſſe* in loco: inane verò, in quo loco nullum eſt corpus. quare ſicubi non eſt corpus, ibi eſſe inane. rurſus putant omne corpus eſſe tactile: tale autem *eſſe*, quodcumque habet grauitatem aut leuitatem. Itaque ſyllogiſmo efficitur id eſſe inane, in quo nihil eſt graue aut leue. hæc igitur, vt & antea diximus, ſyllogiſmo colliguntur. 4 Abſurdum autem *eſt*, punctum *eſſe* inane. oportet enim *inane* eſſe locum, in quo ſit corporis tactilis interuallum. D 5 At verò videtur inane dici vno quidem modo, quod non eſt plenum corporis tactu ſenſibilis: tactu autem ſenſibile eſt, quod habet pondus & leuitatem. 6 Idcirco & dubitare quiſpiam poſſit, quid dicerent, ſi interuallum haberet colorem aut ſonum, vtrum *eſſet* inane nec ne. An manifeſtum *eſt*, ſi poſſit recipere corpus tactile, inane eſſe. ſin minùs, non *eſſe*. 7 Alio autem modo *inane dicitur*, in quo non *eſt* hoc aliquid nec ſubſtantia aliqua corporea. 8 Quare nonnulli aiunt inane eſſe corporum materiam: qui hoc ipſum dicunt etiam *eſſe* locum, haud ſcitè: nam materia non eſt ſeparabilis à corporibus: inane autem quærunt vt ſeparabile.

C Πρὸς δὲ τὸ, ποτέρως ἔχει, δεῖ λαβεῖν τί σημαίνει τοὔνομα. 2 Δοκεῖ δὴ τὸ κενὸν τόπος εἶναι, ἐν ᾧ μηδέν ἐστι. 3 Τούτου δ᾽ αἴτιον, ὅτι τὸ ὂν σῶμα, οἴονται εἶναι· πᾶν δὲ σῶμα ἐν τόπῳ· κενὸν δὲ, ἐν ᾧ τόπῳ μηδὲν ἐστὶ σῶμα. ὥστ᾽ εἴ που μή ἐστι σῶμα, κενὸν εἶναι ἐνταῦθα. σῶμα δὲ πάλιν ἅπαν οἴονται εἶναι ἁπτόν· τοιοῦτον δὲ, ὃ ἂν ἔχῃ βάρος ἢ κουφότητα. συμβαίνει οὖν ἐκ συλλογισμοῦ τοῦτο εἶναι κενὸν, ἐν ᾧ μηδέν ἐστι βαρύ τι ἢ κοῦφον. ταῦτα μὲν οὖν ὥσπερ εἴπομεν καὶ πρότερον, ἐκ συλλογισμοῦ συμβαίνει. 4 Ἄτοπον δὲ, εἰ ἡ στιγμὴ κενόν· δεῖ γὰρ τόπον D εἶναι, ἐν ᾧ σώματός ἐστι διάστημα ἁπτοῦ. 5 Ἀλλ᾽ οὖν φαίνεται λέγεσθαι τὸ κενὸν, ἕνα μὲν τρόπον, τὸ μὴ πλῆρες αἰσθητοῦ σώματος, κατὰ τὴν ἁφήν· αἰσθητὸν δ᾽ ἐστὶ κατὰ τὴν ἁφὴν τὸ βάρος ἔχον καὶ κουφότητα. 6 Διὸ κἂν ἀπορήσειέ τις, τί ἂν φαῖεν, εἰ ἔχοι τὸ διάστημα, χρῶμα, ἢ ψόφον, πότερον κενὸν, ἢ οὔ; ἢ δῆλον, ὅτι εἰ μὲν δέχοιτο σῶμα ἁπτὸν, κενὸν εἶναι· εἰ δὲ μὴ, οὔ. 7 Ἄλλον δὲ τρόπον, ἐν ᾧ μὴ τόδε τι, μηδ᾽ οὐσία τις σωματική. 8 Διό φασί τινες εἶναι τὸ κενὸν τὴν τοῦ σώματος ὕλην, οἵπερ καὶ τὸν τόπον, τὸ αὐτὸ τοῦτο λέγοντες, οὐ καλῶς· ἡ μὲν γὰρ ὕλη οὐ χωριστὴ τῶν σωμάτων· τὸ δὲ κενὸν ζητοῦσιν ὡς χωριστόν.

Solutio rationum, quibus eſſe inane confirmabatur.

Cap. X.

E Qvia verò de loco definitum fuit, & neceſſe *eſt* inane eſſe locum, ſi eſt corpore priuatum; dictum autem eſt, quomodo locus ſit, & quomodo non ſit: patet igitur non eſſe ita inane, nec ſeparatum, nec inſeparabile: quandoquidem inane non debet eſſe corpus, ſed corporis interuallum. Quocirca etiam inane videtur eſſe aliquid: quia & locus *ita videtur*: atque iiſdem de cauſis. etenim motus ſecundùm locum *in mentem* venit & iis qui dicunt locum eſſe aliquid præter corpora quæ incidunt, & iis qui inane. putant autẽ inane eſſe

E Ἐπεὶ δὲ καὶ περὶ τοῦ τόπου διώρισται, καὶ τὸ κενὸν τόπον ἀνάγκη εἶναι, εἰ ἔστιν ἐστερημένον σώματος· τόπος δὲ καὶ πῶς ἐστι, καὶ πῶς οὐκ ἔστιν, εἴρηται· φανερὸν οὖν, ὅτι οὕτω μὲν κενὸν οὐκ ἔστιν, οὔτε κεχωρισμένον, οὔτε ἀχώριστον· τὸ γὰρ κενὸν, οὐ σῶμα, ἀλλὰ σώματος διάστημα βούλεται εἶναι. διὸ καὶ τὸ κενὸν δοκεῖ τι εἶναι, ὅτι καὶ ὁ τόπος, καὶ διὰ τὰ αὐτά. ἥκει γὰρ δὴ * ἡ κατὰ τόπον, καὶ τοῖς τόπον φάσκουσιν εἶναι παρὰ τὰ σώματα τὰ ἐμπίπτοντα, καὶ τοῖς τὸ κενόν. αἴτιον δὲ κινήσεως οἴονται

εἶναι τὸ κενόν, οὕτως ὡς ἐν ᾧ κινεῖται· τοῦτο δ' ἂν εἴη, οἷον τὸν τόπον φασί τινες εἶναι. 2 Οὐδεμία δ' ἀνάγκη, εἰ ἔστι κίνησις, εἶναι κενόν. ὅλως μὲν οὖν ἁπάσης κινήσεως, οὐδαμῶς. διὸ καὶ Μέλισσον ἔλαθεν· ἀλλοιοῦσθαι γὰρ ἐνδέχεται τὸ πλῆρες. 3 Ἀλλὰ δὴ οὐδὲ τὴν κατὰ τόπον κίνησιν· ἅμα γὰρ ὑπεξιέναι, ἀλλήλοις ἐνδέχεται, οὐδενὸς ὄντος διαστήματος χωριστοῦ παρὰ τὰ σώματα τὰ κινούμενα. καὶ τοῦτο δῆλον καὶ ἐν ταῖς τῶν συνεχῶν δίναις, ὥσπερ καὶ ἐν ταῖς τῶν ὑγρῶν. 4 Ἐνδέχεται δὲ καὶ πυκνοῦσθαι μὴ εἰς τὸ κενόν, ἀλλὰ διὰ τὸ τὰ ἐνόντα ἐκπυρηνίζειν· οἷον ὕδατος συνθλιβομένου, τὸν ἐνόντα ἀέρα. 5 Καὶ αὐξάνεσθαι, οὐ μόνον εἰσιόντος τινός, ἀλλὰ καὶ ἀλλοιώσει, οἷον εἰ ἐξ ὕδατος γίνοιτο ἀήρ. 6 Ὅλως δὲ ὅ,τε περὶ τῆς αὐξήσεως λόγος, καὶ τοῦ εἰς τὴν τέφραν ἐγχεομένου ὕδατος, αὐτὸς αὐτὸν ἐμποδίζει. ἢ γὰρ οὐκ αὐξάνεται ὁτιοῦν, ἢ οὐ σώματι· ἢ ἐνδέχεται δύο σώματα ἐν τῷ αὐτῷ εἶναι* (ἀπορίαν οὖν ἀξιοῦσι κοινὴν λύειν, ἀλλ' οὐ κενὸν ἐπιδεικνύουσιν ὡς ἔστιν) ἢ πᾶν εἶναι τὸ σῶμα ἀναγκαῖον κενόν, εἰ πάντῃ αὐξάνεται, καὶ αὐξάνεται διὰ κενοῦ. ὁ δ' αὐτὸς λόγος καὶ ἐπὶ τῆς τέφρας. 7 Ὅτι μὲν οὖν ἐξ ὧν δεικνύουσι τὸ κενὸν εἶναι, λύειν ῥᾴδιον, φανερόν.

* Vicomercatus obſcurum hunc locum tranſpoſitione verborum illuſtrat: eum vide.

A cauſam motus, ſicut *id* in quo mouetur: quod perinde eſt, vt nonnulli locum eſſe inquiunt. 2 Sed nulla neceſſitas *cogit*, ſi ſit motus, eſſe inane. Ac omnino quidem omnis motus *inane cauſa eſſe nullo modo poteſt*, ob id quòd & Meliſſum latuit: variari enim poteſt, quod eſt plenum. 3 Sed neque motum ſecundùm locum *neceſſe eſt eſſe propter inane.* ſimul enim ſibi viciſſim cedere poſſunt corpora quæ mouentur, cùm nullum præter ea ſit interuallum ſeparatum. atque hoc manifeſtum *eſt* etiam in rerum continuarum, vt & in humidarum, conuerſionibus. 4 Poſſunt etiam corpora cogi non in inane, ſed B quia extruduntur ea quæ inſunt, vt aquâ compreſſâ *extruditur* aër qui ineſt. 5 Et augeri *poſſunt*, non ſolùm corpore aliquo ingrediente, ſed etiam variatione: velvti, ſi ex aqua fiat aër. 6 Omnino autem & hæc ratio de accretione & *illa* de aqua in cinerem infuſa, ſibi ipſi eſt impedimento. aut enim non quodvis augetur: aut non corpore *augetur*: aut poſſunt duo corpora eſſe in eodem loco: (dubitationem igitur communem putant *ſe* ſoluere, ſed non probant eſſe inane) aut neceſſe eſt, vniverſum corpus eſſe inane, ſi vndique augetur, & per inane augetur. Eadem ratio *eſt* etiam in cinere. 7 Ea igitur, ex quibus demonſtrant eſſe inane, facilè ſolui, perſpicuum *eſt*.

Non eſſe inane ſeparatum à corporibus.

Cap. XI.

Ὅτι δ' οὐκ ἔστι κενόν, οὕτω κεχωρισμένον, ὡς ἔνιοί φασι, λέγωμεν πάλιν. 2 Εἰ γάρ ἐστιν ἑκάστου φορά τις τῶν ἁπλῶν σωμάτων φύσει, οἷον, τῷ πυρὶ μὲν ἄνω, τῇ δὲ γῇ κάτω, καὶ πρὸς τὸ μέσον, δῆλον ὅτι οὐκ ἂν τὸ κενὸν εἴη αἴτιον τῆς φορᾶς. τίνος οὖν* αἴτιον τὸ κενόν; δοκεῖ γὰρ αἴτιον εἶναι κινήσεως τῆς κατὰ τόπον· ταύτης δ' οὐκ ἔστιν. 3 Ἔτι, εἰ ἔστι τι, οἷον τόπος ἐστερημένος σώματος, ὅταν ᾖ κενόν, ποῦ οἰσθήσεται τὸ ἐντεθὲν εἰς αὐτὸ σῶμα; οὐ γὰρ δὴ εἰς ἅπαν. ὁ δ' αὐτὸς λόγος καὶ πρὸς τοὺς τὸν τόπον εἶναί τι οἰομένους κεχωρισμένον, εἰς ὃ *φέρεται· πῶς γὰρ οἰσθήσεται τὸ ἐντεθέν, ἢ μενεῖ; καὶ περὶ τοῦ ἄνω καὶ κάτω, καὶ* περὶ τοῦ κενοῦ, ἁρμόσει ὁ αὐτὸς λόγος εἰκότως· τὸ γὰρ κενὸν τόπον ποιοῦσιν οἱ φάσκοντες εἶναι. 4 Καὶ πῶς δὴ ἐνέσται, ἢ ἐν τόπῳ ἢ ἐν τῷ κενῷ; [*οὐ γὰρ συμβαίνει, ὅταν ὅλον τι τεθῇ, ὡς ἐν κεχωρισμένῳ τόπῳ, καὶ ὑπομένοντι σώματι. τὸ γὰρ μέρος ἐὰν μὴ χωρὶς τιθῆται, οὐκ ἔσται ἐν τόπῳ, ἀλλ' ἐν τῷ ὅλῳ. 5 Ἔτι, εἰ μηδὲ τόπος, οὐδὲ κενὸν ἔσται.] 6 Συμβαίνει δὲ τοῖς λέγουσιν εἶναι κενόν, ὡς ἀναγκαῖον, εἴπερ ἔσται κίνησις, τοὐναντίον μᾶλλον ἐάν τις ἐπισκοπῇ, μὴ* ἐνδέχεσθαι μηδέν, ἐὰν ᾖ κενόν [*ὥσπερ γὰρ οἱ διὰ τὸ ὅμοιον φάμενοι καὶ τὴν γῆν ἠρεμεῖν, οὕτως καὶ ἐν κενῷ ἀνάγκη ἠρεμεῖν· οὐ γάρ ἐστιν οὗ μᾶλλον ἢ ἧττον κινηθήσεται· ᾗ γὰρ κενόν, οὐκ ἔχει διαφοράν.] 7 Πρῶτον μὲν οὖν, ὅτι πᾶσα κίνησις, ἢ βίᾳ ἢ κατὰ φύσιν· ἀνάγκη δὲ ἄν περ ᾖ βίαιος, εἶναι καὶ τὴν κατὰ φύσιν· ἡ μὲν γὰρ βίαιος παρὰ φύσιν· ἡ δὲ παρὰ φύσιν, ὑστέρα τῆς κατὰ φύσιν. ὥστε εἰ μὴ κατὰ φύσιν ἐστὶν ἑκάστῳ τῶν φυσικῶν σωμάτων κίνησις, οὐδὲ τῶν ἄλλων ἔσται κινήσεων οὐδεμία. ἀλλὰ μήν, φύσει γε πῶς ἔσται, μηδεμιᾶς οὔσης διαφορᾶς κατὰ τὸ κενὸν καὶ τὸ ἄπειρον; ᾗ μὲν γὰρ ἄπειρον, οὐδὲν ἔσται ἄνω, οὐδὲ

C NOn eſſe autem inane ita ſeparatum, vt nonnulli aiunt, rurſus dicamus. 2 Nam ſi cuique ſimplici corpori eſt naturalis quædam latio, vt igni ſurſum *verſus*, terræ autem deorſum & ad medium: vtique patet, inane non eſſe cauſam lationis. cuius igitur cauſa inane *erit*? quandoquidem videtur eſſe cauſa motus, qui *fit* in loco: ſed *tamen* huius *cauſa* non eſt. 3 Præterea ſi eſt aliquid vt locus priuatus corpore, cùm ſit inane, quò feretur corpus in illud impoſitum? non enim *fertur* ad vniuerſum. eadem ratio *eſt* & aduersùs eos qui putant locum eſſe aliquid ſeparatum, in quem fertur id quod fertur. quo- D modo enim feretur, quod impoſitum eſt? aut *quomodo* manebit? ac de ſupero atque infero & de inani eadem ratio meritò conueniet: quoniam ij qui dicunt eſſe inane, ſtatuunt *id* eſſe locum. 4 Quomodo igitur inerit vel in loco vel in inani? *hoc* enim eſſe nequit, cùm totum aliquod corpus ponitur tamquam in loco ſeparato ac permanente. pars enim, niſi ſeorſim ponatur, non erit in loco, ſed in toto. 5 Præterea ſi non *eſt* locus, nec inane erit. 6 Quòd ſi quis rem conſideret: iis qui dicunt eſſe inane quaſi *hoc ſit* neceſſarium ſi ſit motus, contrarium potiùs euenit, *id eſt*, non poſſe quidpiam moue- E ri ſi ſit inane. ſicut enim quidam propter ſimilitudinem inquiunt terram quieſcere: ita etiam neceſſe *eſt*, in inani quieſcere. non eſt enim vbi magis vel minùs moueatur. nam quà eſt inane, non habet differentiam. 7 Primùm igitur quia omnis motus aut *eſt* vi aut natura: neceſſe *eſt*, ſi violentus *ſit*, etiam naturalem eſſe. nam violentus *eſt* præter naturam. qui verò *eſt* præter naturam, *eſt* naturali poſterior. quare niſi motus naturalis ineſt cuique naturali corpori, nec vllus alius motus inerit. atqui naturalis quomodo erit, cùm nulla ſit differentia in inani & infinito? quatenus enim *eſt* infinitum, nihil erit ſuperum

aut

aut inferum, aut medium. quatenus verò *eſt* inane, nihil differet inferum à ſupero. nam ſicvti nihili nulla eſt differentia, ita etiam non entis: inane autem videtur eſſe non ens quiddam ac priuatio. ſed naturalis latio *eſt* differens: quocirca & quæ natura *mouentur*, differentia erunt. aut igitur nulli vſquam eſt naturalis latio: aut, ſi hoc eſt, non eſt inane. 8 Præterea, quæ iaciuntur, nunc mouentur, cùm is qui impulit, *amplius* non tangit; vel propter antiperiſtaſin, vt nonnulli inquiunt; vel quoniam aër impulſus celeriori motu impellit quàm *ſit* latio *corporis* impulſi, quà fertur ad proprium locum. in inani autem nihil tale ineſſe poteſt: nec ferri quicquam poterit, niſi vt id quod vehitur. 9 Præterea nemo poteſt dicere, cur res mota ſiſtetur alicubi. cur enim potiùs hic quàm illic? quare aut quieſcet: aut neceſſe eſt in infinitum ferri; niſi quid potentius impediet. 10 Præterea nunc ad inane, quia cedit, ferri videtur. ſed in omni parte inanis ſimiliter *eſt* eiuſmodi *quod cedit*. quare in omnem partem feretur. 11 Præterea ex his quoque perſpicuum fit quod dicitur: videmus enim idem pondus & corpus celeriùs ferri ob duas cauſas: *nimirum* vel quia differt id per quod *fertur*: velvti, per aquam aut terram, aut aërem: vel quia id quod fertur, ſi cetera eadem ſint, differt ob exuperantiam ponderis vel leuitatis. 12 Id igitur per quod fertur, *eſt* cauſa, quia impedit, maximè quidem ſi contra feratur, deinde etiam ſi maneat: magis autem quod non facilè diuidi poteſt, cuiuſmodi *eſt*, quod craſſius *eſt*. 13 *Pondus* igitur α feretur per *magnitudinem* β in tempore γ: per *magnitudinem* verò δ, quæ eſt ſubtilior, in tempore ε: ſi æqualis *eſt* longitudo *magnitudinis* β & *magnitudinis* δ, ſecundùm proportionem impedientis corporis. eſto namque τὸ β, aqua: τὸ δ autem aër. quanto igitur aër *eſt* res ſubtilior & magis incorporea quàm aqua, tanto celeriùs τὸ α feretur per δ, quàm per β: habeat ergo eandem rationem celeritas ad celeritatem, quam aër ad aquam. quare ſi duplo *eſt* ſubtilius: in duplo tempore conficiet *ſpatium* β, quàm *ſpatium* δ: ac tempus γ erit duplo maius *tempore* ε. & ſemper igitur quanto magis erit incorporeum, & minus habebit vim impediendi, & faciliùs diuidi poterit *id* per quod fertur; *tanto* celeriùs *pondus* feretur. 14 Inane autem nullam habet proportionem, qua ſuperetur à corpore: ſicvti nihil *nullam habet proportionem* ad numerum. nam ſi quatuor vno ſuperant tria, pluribus autem duo, & adhuc pluribus vnum quàm duo: iam nulla erit proportio, qua ſuperet nihil: quandoquidem neceſſe *eſt*, id, quod ſuperat, diuidi in exſuperantiam & id quod ſuperatur: proinde quatuor erunt *id* quo ſuperant & nihil. idcirco nec linea ſuperat punctum, niſi componatur ex punctis. itidemque inane non poteſt vllam rationem habere ad plenum. quocirca neque motus *per inane, vllam rationem habebit ad motum qui fit per plenum*. ſed ſi *pondus* conficit tantum *ſpatij*, tanto *tempore*, per id quod eſt ſubtiliſſimum: *profectò ſi feratur* per inane, ſuperat omnem proportionem. Eſto namque τὸ ζ, inane æquale magnitudinibus β & δ. ſi igitur τὸ α tranſeat & moueatur in aliquo tempore, *nempe in tempore* vbi η, quod minus *eſt* quàm tempus ε, certè etiam inane ad plenum hanc rationem habebit. 15 Atqui in tanto tempore, quantum *eſt* η, pondus α pertranſit τῆς δ *partem* θ. 16 Verùm pertranſibit etiam, ſi quid ſit, in quo ζ ſubtilitate differẽs ab aëre,

9 Οἱ μὲν οὖν διὰ ταῦτα κενόν φασιν εἶναι. 10 Ἡμεῖς δὲ λέγομεν ἐκ τῶν ὑποκειμένων, ὅτι ἐστὶν ὕλη μία τῶν ἐναντίων, θερμοῦ καὶ ψυχροῦ, καὶ τῶν ἄλλων τῶν φυσικῶν ἐναντιώσεων· καὶ ἐκ δυνάμει ὄντος, ἐνεργείᾳ ὂν γίνεται· καὶ οὐ χωριστὴ μὲν ἡ ὕλη, τῷ δ' εἶναι ἕτερον· καὶ μία τῷ ἀριθμῷ, εἰ ἔτυχε χρώματος, καὶ θερμοῦ καὶ ψυχροῦ. 11 Ἔστι δὲ καὶ σώματος ὕλη, καὶ μεγάλου καὶ μικροῦ, ἡ αὐτή. δῆλον δέ· ὅταν γὰρ ἐξ ὕδατος ἀὴρ γένηται, ἡ αὐτὴ ὕλη, οὐ προσλαβοῦσά τι ἄλλο ἐγένετο, ἀλλ' ὃ ἦν δυνάμει, ἐνεργείᾳ ἐγένετο· καὶ πάλιν ὕδωρ ἐξ ἀέρος ὡσαύτως, ὁτὲ μὲν εἰς μέγεθος ἐκ μικρότητος, ὁτὲ δὲ εἰς μικρότητα ἐκ μεγέθους. ὁμοίως τοίνυν καὶ ἂν ὁ ἀὴρ πολὺς ὢν ἐν ἐλάττονι γίνηται ὄγκῳ, καὶ ἐξ ἐλάττονος μείζων, ἡ δυνάμει οὖσα ὕλη γίνεται ἄμφω. 12 Ὥσπερ γὰρ ἐκ ψυχροῦ θερμόν, καὶ ἐκ θερμοῦ ψυχρὸν ἡ αὐτή, ὅτι ἦν δυνάμει· οὕτω καὶ ἐκ θερμοῦ μᾶλλον θερμόν, οὐδενὸς γινομένου ἐν τῇ ὕλῃ θερμοῦ, ὃ οὐκ ἦν θερμόν, ὅτε ἧττον ἦν θερμόν· ὥσπερ οὐδ' εἰ τοῦ μείζονος κύκλου ἡ περιφέρεια καὶ κυρτότης ἐλάττονος γίνεται κύκλου, ἡ αὐτὴ οὖσα, ἢ ἄλλη, ἐν οὐθενὶ ἐγγέγονε τὸ κυρτόν, ὃ οὐ κυρτὸν ἀλλ' εὐθὺ ἦν. οὐ γὰρ τῷ διαλείπειν τὸ ἧττον ἢ τὸ μᾶλλον ἐστίν· *οὐδὲ ἔστι τῆς φλογὸς λαβεῖν τι μέγεθος, ἐν ᾧ οὐ καὶ λευκότης καὶ θερμότης ἔνεστιν· *ἡ προτέρα θερμότης πρὸς τὴν ὑστέραν. ὥστε καὶ τὸ μέγεθος καὶ ἡ μικρότης τοῦ αἰσθητοῦ ὄγκου, οὐ προσλαβούσης τι τῆς ὕλης ἐπεκτείνεται, ἀλλ' ὅτι δυνάμει ἐστὶν ἡ ὕλη ἀμφοῖν. 13 Ὥστε ἐστὶ τὸ αὐτὸ πυκνὸν καὶ μανόν, καὶ μία ὕλη αὐτῶν. ἔστι δὲ τὸ μὲν πυκνὸν, βαρύ· τὸ δὲ μανόν, κοῦφον. [*ἔτι ὥσπερ ἡ τοῦ κύκλου περιφέρεια συναγομένη εἰς ἔλαττον, οὐκ ἄλλο τι λαμβάνει τὸ κοῖλον, ἀλλ' ὃ ἦν συνήχθη, οὕτω καὶ τοῦ πυρὸς ὅτι ἄν τις λάβῃ πᾶν ἐστὶ θερμόν, οὕτω καὶ τὸ πᾶν συναγωγῇ καὶ διαστολῇ τῆς αὐτῆς ὕλης.] δύο γάρ ἐστιν ἐφ' ἑκατέρῳ, τῷ τε πυκνῷ καὶ τῷ μανῷ. τό, τε γὰρ βαρὺ καὶ τὸ σκληρόν, πυκνὰ δοκεῖ εἶναι· καὶ τἀναντία μανά, τό, τε κοῦφον καὶ τὸ μαλακόν. διαφωνεῖ δὲ τὸ βαρὺ καὶ τὸ σκληρὸν ἐπὶ μολύβδου καὶ σιδήρου. 14 Ἐκ δὴ τῶν εἰρημένων φανερόν, ὅτι οὔτ' ἀποκεκριμένον ἐστὶ κενόν, οὔθ' ἁπλῶς, οὔτ' ἐν τῷ μανῷ, οὔτε δυνάμει, εἰ μή τις βούλοιτο πάντως καλεῖν κενόν, τὸ αἴτιον τοῦ φέρεσθαι. οὕτω δ' ἡ τοῦ βαρέος καὶ κούφου* ὕλη, ᾗ τοιαύτη, εἴη ἂν τὸ κενόν. τὸ γὰρ πυκνὸν καὶ τὸ μανὸν κατὰ ταύτην τὴν ἐναντίωσιν, φορᾶς ποιητικά· κατὰ δὲ τὸ σκληρὸν καὶ μαλακόν, πάθους καὶ ἀπαθείας, καὶ οὐ φορᾶς, ἀλλ' ἑτεροιώσεως μᾶλλον. 15 Καὶ περὶ μὲν κενοῦ πῶς ἐστι, καὶ πῶς οὐκ ἔστι, διωρίσθω τὸν τρόπον τοῦτον.

9 Ergo hi propter huiuſmodi *argumenta* inane aliquod eſſe affirmarent. 10 Nos autem ex iis quæ ſuppoſita ſunt, dicimus vnam eſſe materiam contrariorum, *nempe* calidi & frigidi, & aliarum naturalium contrarietatum. & ex eo quod eſt poteſtate, fieri quod eſt actu. & materiam non eſſe ſeparabilem, ſed eſſentia diuerſam. & vnam numero *eſſe materiam*: verbi gratia, coloris, & calidi & frigidi. 11 Ergo & corporis tam magni quam parui eadem eſt materia. *hoc* autem manifeſtum *eſt*: quia cùm ex aqua fit aër, eadem materia, non aſſumpto aliquo alio, fit *aër*: ſed quod erat poteſtate, fit actu: itidemque rurſus *fit* aqua ex aëre: modò ex paruitate in magnitudinem, modò ex magnitudine in exiguitatem *mutatione facta*. ſimiliter itaque, ſi aër ex maiori mole in minorem, & ex minore in maiorem mutetur: materia, quæ poteſtate eſt, fit vtrumque. 12 *Sicut* enim eadem *materia* ex frigida *fit* calida, & ex calida *fit* frigida, quoniam erat poteſtate: ita etiam ex calida *fit* magis calida, cùm nulla materiæ pars calefiat, quæ non eſſet *antea* calida, cùm erat minus caloris. quemadmodum nec minoris circuli circumferentia & conuexitas ſi fiat minoris circuli, *ſiue* ſit eadem ſiue alia; in nulla *parte* fit conuexitas, quæ non conuexa, ſed recta eſſet. (non enim intermiſſione eſt minus vel magis) nec licet ſumere aliquam flammæ magnitudinem, in qua non inſit & candor & calor: ſic igitur & prior calor ſe ad poſteriorem *habet*. quare & magnitudo & paruitas molis ſenſibilis, non adſumente aliquid materia, extenditur: ſed quia materia poteſtate eſt ad vtrumque. Quocirca idem eſt denſum & rarum, & vna *eſt* ipſorum materia. 13 Porrò denſum eſt graue: rarum autem *eſt* leue. Duo namque in vtroque ſunt, *id eſt*, raro & denſo. nam graue & durum, videntur eſſe denſa: & contraria *videntur eſſe* rara, nempe leue & molle. diſcordant autem graue & durum in ferro & plumbo. 14 Ex iis igitur quæ dicta fuerunt, perſpicuum *eſt*, neque eſſe inane ſeparatum, ſiue ſimpliciter ſiue in eo quod eſt rarum, neque poteſtate: niſi quis omnino appellare velit inane, *id* quod *eſt* cauſa lationis. ſic autem grauis & leuis *rei* materia, quā *eſt* talis, erit inane illud. nam denſum & rarum, ratione huius contrarietatis, vim habent efficiendæ lationis: ratione autem duri & mollis, *vim habent efficiendæ* paſſionis & impatibilitatis, nec lationis, ſed variationis potiùs. 15 Ac de inani quidem, quomodo ſit, & quomodo non ſit, hoc modo definitum eſto.

Ἐχόμενον δὲ τῶν εἰρημένων ἐστὶ περὶ χρόνου ἐπελθεῖν. πρῶτον δὲ καλῶς ἔχει διαπορῆσαι περὶ αὐτοῦ, καὶ διὰ τῶν ἐξωτερικῶν λόγων, πότερον τῶν ὄντων ἐστὶν, ἢ τῶν μὴ ὄντων· εἶτα τίς ἡ φύσις αὐτοῦ. 2 Ὅτι μὲν οὖν ὅλως οὐκ ἔστιν, ἢ μόλις καὶ ἀμυδρῶς, ἐκ τῶνδέ τις ἂν ὑποπτεύσειε. τὸ μὲν γὰρ αὐτοῦ γέγονε, καὶ οὐκ ἔστι· τὸ δὲ μέλλει, καὶ οὔπω ἔστιν. ἐκ δὲ τούτων καὶ ὁ ἄπειρος, καὶ ὁ ἀεὶ λαμβανόμενος χρόνος σύγκειται. τὸ δ' ἐκ μὴ ὄντων συγκείμενον, ἀδύνατον ἂν δόξειε* κατέχειν ποτὲ οὐσίας.

* Argyropylus vertit quaſi legiſſet μετ. τ. π. μεγιστ. vel. participare legit, μετέχειν, vt eſt in quibuſdam codd.

His quæ dicta ſunt conſequens *eſt*, vt agatur de tempore. primùm autem e re erit, de eo dubitare etiam per rationes exotericas, vtrùm ſit *in numero* entium an non entium: deinde quę *ſit* eius natura. 2 Omnino igitur *tempus* non eſſe, aut *ſaltem* vix & obſcurè *eſſe*, ex his ſuſpicari quiſpiam poſſit. pars enim eius fuit, nec eſt: pars autem futura eſt, nec dum eſt: ex his autem *partibus* conſtat tempus infinitum & quod ſemper ſumitur. quod vero conſtat ex iis quæ non ſunt, non videtur poſſe vnquam obtinere eſſentiam.

A 3 Ad hæc cuiuſvis rei diuiduæ, ſi ſit, neceſſe *eſt*, vt, quando eſt, vel aliquæ vel omnes eius partes ſint. atqui temporis aliæ *partes* prætericrunt, aliæ futuræ ſunt, nulla autem eſt, cùm ſit diuiduum. 4 Inſtans autem non *eſt* pars. nam pars metitur: & opus eſt vt totum componatur ex partibus: tempus autem non videtur componi ex inſtantibus. 5 Præterea & hoc inſtans, quod videtur diſterminare præteritum & futurum, vtrùm ſemper vnum & idem permaneat, an *ſit* aliud & aliud, non facile *eſt* videre. 6 Nam ſi ſemper *eſt* aliud atque aliud: non eſt autem in tempore vlla pars alia atque alia ſimul, quarum vna non contineat, & altera contineatur, vt minus tempus *continetur* à maiori: quod verò nunc non eſt, & antea erat, neceſſe *eſt* aliquando interiiſſe: *profectò* etiam inſtantia viciſſim ſimul non erunt, ſed neceſſe ſemper *erit* prius inſtans interiiſſe. itaque in ſe ipſo interiiſſe non poteſt, quia tunc eſt. in alio autem inſtanti interiiſſe prius inſtans non poteſt. eſto namque impoſſibile, vt inſtantia ſibi inuicem cohęreant, ſicvti punctum puncto. ergo ſi in eo quod *eſt* deinceps, non interiit, ſed in alio: *certè* in infinitis inſtantibus interiectis ſimul erit: quod *eſt* impoſſibile. 7 At verò nec ſemper idem permanere poteſt. nullius enim rei diuiduæ finitæ vnus eſt terminus, nec ſi ad vnum ſit continua, nec ſi ad plura: inſtans autem eſt terminus: ac licet ſumere tempus terminatum. 8 Præterea ſi ſimul eſſe tempore, & neque prius neque poſterius *eſſe, nihil aliud* eſt *quàm* in eodem eſſe, & in inſtanti *eſſe*: *certè* ſi ea quæ ſunt priùs & quæ poſteriùs, ſint in eodem inſtanti, etiam ea quæ ante decem millia annorum facta ſunt, ſimul erunt cum iis quæ facta ſunt hodie, nec erit quicquam prius aut poſterius aliud alio. 9 De iis igitur quæ ipſi *tempori* inſunt, tot in dubium reuocata ſunto.

3 Πρὸς δὲ τούτοις, παντὸς μεριστοῦ, ἐάνπερ ᾖ, ἀνάγκη, ὅτε ἔστιν, ἤτοι ἔνια, ἢ πάντα τὰ μέρη εἶναι· τοῦ δὲ χρόνου, τὰ μὲν γέγονε, τὰ δὲ μέλλει, ἔστι δ' οὐδὲν, ὄντος μεριστοῦ. 4 Τὸ δὲ νῦν, οὐ μέρος·* μετρεῖ τε γὰρ τὸ μέρος, καὶ συγκεῖσθαι δεῖ τὸ ὅλον ἐκ τῶν μερῶν· ὁ δὲ χρόνος οὐ δοκεῖ συγκεῖσθαι ἐκ τῶν νῦν. 5 Ἔτι δὲ καὶ τοῦτο τὸ νῦν ὃ φαίνεται διορίζειν τὸ παρελθὸν καὶ τὸ μέλλον, πότερον ἓν καὶ ταὐτὸ ἀεὶ διαμένει, ἢ ἄλλο καὶ ἄλλο, οὐ ῥᾴδιον ἰδεῖν. 6 Εἰ μὲν γὰρ ἀεὶ ἕτερον καὶ ἕτερον, μηδὲν δ' ἐστὶ τῶν ἐν τῷ χρόνῳ ἄλλο καὶ ἄλλο μέρος ἅμα, ὃ μὴ περιέχει, τὸ δὲ περιέχεται, ὥσπερ ὁ ἐλάττων χρόνος ὑπὸ τοῦ πλείονος· B τὸ δὲ νῦν μὴ ὂν, πρότερον δὲ ὂν, ἀνάγκη ἐφθάρθαι ποτέ· καὶ τὰ νῦν, ἅμα μὲν ἀλλήλοις οὐκ ἔσται· ἐφθάρθαι δὲ ἀνάγκη ἀεὶ τὸ πρότερον. ἐν ἑαυτῷ μὲν οὖν ἐφθάρθαι οὐχ οἷόν τε, διὰ τὸ εἶναι τότε· ἐν ἄλλῳ δὲ νῦν ἐφθάρθαι τὸ πρότερον νῦν, οὐκ ἐνδέχεται· ἔστω γὰρ ἀδύνατον, ἐχόμενα εἶναι ἀλλήλων τὰ νῦν, ὥσπερ στιγμὴν στιγμῆς· εἴπερ οὖν ἐν τῷ ἐφεξῆς οὐκ ἔφθαρται, ἀλλ' ἐν ἄλλῳ, ἐν τοῖς μεταξὺ τοῖς νῦν ἀπείροις οὖσιν, ἅμα ἂν εἴη· τοῦτο δὲ ἀδύνατον. 7 Ἀλλὰ μὴν οὐδὲ ἀεὶ τὸ αὐτὸ διαμένειν δυνατόν· οὐδενὸς γὰρ διαι- C ρετοῦ πεπερασμένου, ἓν πέρας ἐστὶν, οὔτε ἂν ἐφ' ἓν ᾖ συνεχὲς, οὔτε ἂν ἐπὶ πλείω· τὸ δὲ νῦν πέρας ἐστὶ, καὶ χρόνον ἐστὶ λαβεῖν πεπερασμένον. 8 Ἔτι, εἰ τὸ ἅμα εἶναι κατὰ χρόνον, καὶ μήτε πρότερον, μήτε ὕστερον, τὸ ἐν τῷ αὐτῷ εἶναι, καὶ ἐν τῷ νῦν ἐστιν, εἰ τά τε πρότερον καὶ τὰ ὕστερον ἐν τῷ νῦν ἐστιν, ἅμα ἂν εἴη τὰ εἰς ἔτος γινόμενα μυριοστὸν τοῖς γενομένοις τήμερον· καὶ οὔτε πρότερον, οὔτε ὕστερον οὐδὲν ἄλλο ἄλλου. 9 Περὶ μὲν οὖν τῶν* ὑπαρχόντων αὐτῷ, τοσαῦτα ἔστω διηπορημένα.

Variæ opiniones de natura & eſſentia temporis.

Cap. XV.

D QVid autem ſit tempus, & quæ ſit eius natura, æquè ex iis quæ tradita ſunt, eſt incertum, atque *de iis* de quibus antea diſſeruimus. 2 Alij namque aiunt eſſe motum vniuerſi: alij verò ipſam ſphæram. 3 Atqui conuerſionis etiam pars eſt motus quidam: non tamen *eſt* conuerſio. quod enim ſumptum eſt, pars *eſt* conuerſionis, non conuerſio. 4 Præterea ſi plures eſſent cœli, æquè tempus eſſet cuiuſvis horum motio. quare multa tempora ſimul *eſſent*. 5 Vniuerſi autem ſphæra viſum eſt iis qui *id* dixerunt, tempus eſſe: quia & in tempore omnia ſunt, & in vniuerſi ſphæra. Sed hoc *eorum* dictum magis fatuum *eſt*, quã vt ſit opus de eo conſiderare impoſſibilia, *quæ conſequantur*. Cùm autem maximè videatur tempus eſſe motum & mutationem quandam: hoc vtique conſiderandum eſt. ergo cuiuſque mutatio ac motus eſt ſolùm in eo quod mutatur, vel vbicumque eſt *illud* ipſum quod mouetur & mutatur. tempus verò peræquè eſt & vbique & apud omnia. 7 Inſuper omnis quidem mutatio eſt celerior & tardior: tempus verò non eſt: nam tardum & velox tẽpore definitur. velox etenim *eſt* quod breui *tempore* multum mouetur: tardum autem quod longo *tempore* paruum. atqui tempus non definitur tempore, nec quia ſit quantum quiddam, nec quia *ſit* quale. Patet igitur tempus non eſſe motum. 8 Nihil autem differat ſiue in præſentia dicamus motum, ſiue mutationem.

ΤΙ δέ ἐστιν ὁ χρόνος, καὶ τίς αὐτοῦ ἡ φύσις, ὁμοίως ἔκ τε τῶν παραδεδομένων ἄδηλόν ἐστι, καὶ περὶ ὧν τυγχάνομεν διεληλυθότες πρότερον. 2 Οἱ μὲν γὰρ τὴν τοῦ ὅλου κίνησιν εἶναί φασιν, οἱ δὲ, τὴν σφαῖραν αὐτήν. 3 Καίτοι τῆς περιφορᾶς καὶ τὸ μέρος, χρόνος τίς ἐστι· περιφορά δέ γε οὔ· μέρος γὰρ περιφορᾶς τὸ ληφθὲν, ἀλλ' οὐ περιφορά. 4 Ἔτι δὲ, εἰ πλείους ἦσαν οὐρανοὶ, ὁμοίως ἂν ἦν ὁ χρόνος, ἑκατέρου αὐτῶν κίνησις· ὥστε πολλοὶ χρόνοι ἅμα. 5 Ἡ δὲ τοῦ ὅλου σφαῖρα, ἔδοξε μὲν τοῖς εἰποῦσιν εἶναι ὁ χρόνος, ὅτι ἔν τε τῷ χρόνῳ πάντα ἐστὶ, καὶ ἐν τῇ τοῦ ὅλου σφαίρᾳ. ἔστι δ' εὐηθικώτερον τὸ εἰρημένον, ἢ ὥστε περὶ αὐτοῦ τὰ ἀδύνατα ἐπι- E σκοπεῖν. 6 Ἐπεὶ δὲ δοκεῖ μάλιστα κίνησις εἶναι καὶ μεταβολή τις ὁ χρόνος, τοῦτ' ἂν εἴη σκεπτέον. ἡ μὲν οὖν ἑκάστου μεταβολὴ καὶ κίνησις, ἐν αὐτῷ τῷ μεταβάλλοντί ἐστι μόνον, ἢ οὗ ἂν τύχῃ ὂν αὐτὸ τὸ κινούμενον καὶ μεταβάλλον· ὁ δὲ χρόνος ὁμοίως καὶ πανταχοῦ, καὶ παρὰ πᾶσιν. 7 Ἔτι δὲ, μεταβολὴ μέν ἐστι πᾶσα θάττων καὶ βραδυτέρα, χρόνος δ' οὐκ ἔστι· τὸ γὰρ βραδὺ καὶ ταχὺ χρόνῳ ὥρισται· ταχὺ μὲν γὰρ τὸ ἐν ὀλίγῳ πολὺ κινούμενον, βραδὺ δὲ, τὸ ἐν πολλῷ ὀλίγον· ὁ δὲ χρόνος οὐχ ὥρισται χρόνῳ, οὔτε τῷ ποσός τις εἶναι, οὔτε τῷ ποιός. ὅτι μὲν τοίνυν οὐκ ἔστι κίνησις, φανερόν. 8 Μηδὲν δὲ διαφερέτω λέγειν ἡμῖν ἐν τῷ παρόντι κίνησιν, ἢ μεταβολήν.

Cap. XVI.

Ἀλλὰ μὴν οὐδ' ἄνευ γε μεταβολῆς· ὅταν γὰρ αὐτοὶ μηδὲν μεταβάλλωμεν τὴν διάνοιαν, ἢ λάθωμεν μεταβάλλοντες, οὐ δοκεῖ ἡμῖν γεγονέναι ὁ χρόνος· καθάπερ οὐδὲ τοῖς ἐν τῇ Σαρδοῖ μυθολογουμένοις καθεύδειν παρὰ τοῖς ἥρωσιν, ὅταν ἐγερθῶσι. συνάπτουσι γὰρ τὸ πρότερον νῦν τῷ ὕστερον νῦν, καὶ ἓν ποιοῦσιν, ἐξαιροῦντες διὰ τὴν ἀναισθησίαν τὸ μεταξύ. ὥσπερ οὖν εἰ μὴ ἦν ἕτερον τὸ νῦν, ἀλλὰ ταὐτὸ καὶ ἕν, οὐκ ἂν ἦν χρόνος· οὕτως καὶ ἐπεὶ λανθάνει ἕτερον ὄν, οὐ δοκεῖ εἶναι τὸ μεταξὺ χρόνος. εἰ δὲ τὸ μὴ οἴεσθαι εἶναι χρόνον τότε συμβαίνει ἡμῖν, ὅταν μὴ ὁρίζωμεν μηδεμίαν μεταβολήν, ἀλλ' ἐν ἑνὶ καὶ ἀδιαιρέτῳ φαίνηται ἡ ψυχὴ μένειν· ὅταν δ' αἰσθώμεθα, καὶ ὁρίσωμεν, τότε φαμὲν γεγονέναι χρόνον· φανερὸν ὅτι οὐκ ἔστιν ἄνευ κινήσεως καὶ μεταβολῆς ὁ χρόνος. ὅτι μὲν οὖν οὔτε κίνησις, οὔτε ἄνευ κινήσεως ὁ χρόνος ἐστί, φανερόν. 2 Ληπτέον δέ, ἐπεὶ ζητοῦμεν τί ἐστιν ὁ χρόνος, ἐντεῦθεν ἀρχομένοις, τί τῆς κινήσεώς ἐστιν. ἅμα γὰρ κινήσεως αἰσθανόμεθα καὶ χρόνου· καὶ γὰρ ἐὰν ᾖ σκότος, καὶ μηδὲν διὰ τοῦ σώματος πάσχωμεν, κίνησις δέ τις ἐν τῇ ψυχῇ ἐνῇ, εὐθὺς ἅμα δοκεῖ* τι γεγονέναι, καὶ χρόνος. ἀλλὰ μὴν καὶ ὅταν γε χρόνος δοκῇ γενέσθαι τις, ἅμα καὶ κίνησίς τις φαίνεται γεγονέναι. ὥστε ἤτοι κίνησις, ἢ τῆς κινήσεώς τι ἐστὶ χρόνος. ἐπεὶ οὖν οὐ κίνησις, ἀνάγκη τῆς κινήσεώς τι εἶναι αὐτόν. 3 Ἐπεὶ δὲ τὸ κινούμενον κινεῖται ἔκ τινος εἴς τι, καὶ πᾶν μέγεθος συνεχές, ἀκολουθεῖ τῷ μεγέθει ἡ κίνησις· διὰ γὰρ τὸ μέγεθος εἶναι συνεχές, καὶ ἡ κίνησίς ἐστι συνεχής· διὰ δὲ τὴν κίνησιν καὶ ὁ χρόνος· ὅση γὰρ ἡ κίνησις, τοσοῦτος καὶ ὁ χρόνος ἀεὶ δοκεῖ γεγονέναι. 4 Τὸ δὲ δὴ πρότερον καὶ ὕστερον ἐν τόπῳ, πρῶτόν ἐστιν. ἐνταῦθα μέντοι τῇ θέσει. ἐπεὶ δ' ἐν τῷ μεγέθει ἐστὶ τὸ πρότερον καὶ τὸ ὕστερον, ἀνάγκη καὶ ἐν κινήσει εἶναι τὸ πρότερον καὶ ὕστερον, ἀνάλογον τοῖς ἐκεῖ. ἀλλὰ μὴν καὶ ἐν τῷ χρόνῳ ἐστὶ τὸ πρότερον καὶ ὕστερον, διὰ τὸ ἀκολουθεῖν ἀεὶ θατέρῳ θάτερον αὐτῶν. 5 Ἔστι δὲ τὸ πρότερον καὶ τὸ ὕστερον αὐτῶν ἐν τῇ κινήσει, ὃ μέν ποτε ὂν κίνησίς ἐστι· τὸ μέντοι εἶναι αὐτοῦ ἕτερον, καὶ οὐ κίνησις. 6 Ἀλλὰ μὴν καὶ τὸν χρόνον γε γνωρίζομεν, ὅταν* ὁρίζωμεν τὴν κίνησιν, τὸ πρότερον καὶ ὕστερον ὁρίζοντες· καὶ τότε φαμὲν γεγονέναι χρόνον, ὅταν τοῦ προτέρου καὶ ὑστέρου ἐν τῇ κινήσει αἴσθησιν λάβωμεν. ὁρίζομεν δέ, τῷ ἄλλο καὶ ἄλλο ὑπολαβεῖν αὐτά, καὶ μεταξύ τι αὐτῶν ἕτερον· ὅταν γὰρ τὰ ἄκρα ἕτερα τοῦ μέσου νοήσωμεν, καὶ δύο εἴπῃ ἡ ψυχὴ τὰ νῦν, τὸ μὲν πρότερον, τὸ δὲ ὕστερον, τότε καὶ τοῦτό φαμεν εἶναι χρόνον· τὸ γὰρ ὁριζόμενον‡ τῷ νῦν, χρόνος εἶναι δοκεῖ· καὶ ὑποκείσθω. ὅταν μὲν οὖν ὡς ἓν τὸ νῦν αἰσθανώμεθα, καὶ μὴ ἤτοι ὡς τὸ πρότερον καὶ ὕστερον ἐν τῇ κινήσει, ἢ ὡς τὸ αὐτὸ μέν, μὴ προτέρου δὲ καὶ ὑστέρου τινός, οὐ δοκεῖ χρόνος γεγονέναι οὐδείς, ὅτι οὐδὲ κίνησις. ὅταν δὲ τὸ πρότερον καὶ ὕστερον, τότε λέγομεν χρόνον. 7 Τοῦτο γάρ ἐστιν ὁ χρόνος, ἀριθμὸς κινήσεως κατὰ τὸ πρότερον καὶ ὕστερον.

‡ ἢ τὸ νῦν,

A At verò nec *eſt* ſine mutatione. cùm enim ipſi nihil mutamur cogitatione, aut, ſi mutemur, non animaduertimus: tunc non videtur nobis fuiſſe tempus: quemadmodum nec iis quos in Sardo fabulantur dormire apud heroas, cùm experrecti fuerint: coniungunt enim prius inſtans cum poſteriori inſtanti, & vnum faciunt, eximentes tempus interiectum, quia *id* ſenſu non percipiunt. ſicut igitur ſi non eſſet aliud inſtans, ſed vnum & idem, non eſſet tempus: ita etiam quando non animaduertitur eſſe diuerſum, non videtur eſſe tempus quod *eſt* interiectum. ergo ſi tunc nobis accidit, vt non B putemus eſſe tempus, cùm nullam mutationem diſtinguimus, ſed anima in vno & indiuiduo manere videtur: cùm autem ſentimus ac diſtinguimus, tunc dicimus fuiſſe tempus: perſpicuum *eſt*, non eſſe tempus ſine motu & mutatione. patet igitur tempus nec eſſe motum nec ſine mutatione. 2 Quoniam autem quærimus quid ſit tempus, ſumendum *eſt*, hinc facto initio, quid motionis ſit. ſimul enim motionem ſentimus ac tempus. nam etiam ſi tenebræ ſint, & nihil corpore patiamur, motus tamen aliquis in anima inſit: confeſtim ſimul videtur fuiſſe etiam aliquod tempus. at verò & cùm tempus aliquod videtur fuiſſe, ſimul etiam C motus aliquis fuiſſe apparet. quocirca tempus aut eſt motus aut aliquid ipſius motus. quoniam igitur non *eſt* motus; neceſſe *eſt*, vt ſit aliquid ipſius motus. 3 Cùm autem id quod mouetur, moueatur ab aliquo ad aliquod, *cùmque* omnis magnitudo *ſit* continua: magnitudini conſequens eſt motus. nam quia magnitudo eſt continua, etiam motus eſt continuus. & quia motus, etiam tempus. quantus enim *fuit* motus, tantum etiam ſemper videtur tempus fuiſſe. 4 Iam verò prius & poſterius in loco primum ſunt: & hic quidem poſitione *partium*. cùm autem in magnitudine ſit D prius & poſterius; neceſſe eſt, vt etiam in motu ſint prius & poſterius, quæ illis proportione reſpondeant. quinetiam in tempore eſt prius & poſterius, quia ſemper horum alterum alteri conſequens eſt. 5 Horum autem prius & poſterius eſt in motu quod re ipſa eſt motus, ſed eius eſſentia diuerſa non motus eſt. 6 At verò etiam tempus cognoſcimus, cùm motum diſtinguimus, prius & poſterius diſtinguentes: tuncque dicimus fuiſſe tempus, cùm ſenſu percepimus prius & poſterius in motu. diſtinguimus autem: quoniam hæc aliud atque aliud *eſſe*, & his diuerſum quiddam *eſſe* interiectum exiſtimamus. cùm enim E extrema à medio diuerſa intelligimus, ac duo momenta affirmat anima, alterum prius, alterum poſterius: tunc id dicimus eſſe tempus. quod enim momentis terminatur, tempus eſſe videtur: atque *hoc* ſupponatur. Cùm igitur ſentimus momentum, quaſi vnum, nec eſt aliquid tanquam prius & poſterius in motu: vel *ſentimus* quaſi idem, non prioris & poſterioris alicuius: *tunc* non videtur fuiſſe vllum tempus, quia nec motus. cùm autem prius & poſterius *ſentimus*, tunc dicimus *eſſe* tempus. 7 Tempus enim nihil aliud eſt quam numerus motus ſecundùm prius & poſterius.

8 Tempus igitur non *eſt* motus, niſi quatenus motus numerum habet. argumento eſt, quòd plus & minus diiudicamus numero, motum autem maiorem & minorem *diiudicamus* tempore: ergo tempus *eſt* numerus quidam. 9 Cùm autem numerus bifariàm accipiatur (nam & quod numeratur, & quod eſt numerabile, numerum vocamus, & *id* quo numeramus) tempus igitur eſt id quod numeratur, non quo numeramus. ſunt autem diuerſa, *id* quo numeramus, & quod numeratur.

ET quemadmodum motus ſemper *eſt* alius atque alius, *ita* etiam tempus. vniuerſum verò tempus ſimul *acceptum*, idem *eſt*: quoniam momentum re ipſa *vnum & idem eſt*, ſed eſſentia eius *eſt* diuerſa. momentum autem metitur tempus, quatenus *eſt* prius & poſterius. 2 Iam verò momentum partim eſt idem, partim non eſt idem. quatenus enim in alio atque alio *eſt*, diuerſum eſt: hoc autem eſt ipſum momentum: ſed quatenus momentum *eſt id* quod tandem eſt, *eatenus eſt* idem. conſequens enim eſt, vt dictum fuit, magnitudini motus, huic verò tempus, vt aſſerimus. peræque igitur puncto id quod fertur, quo motum cognoſcimus, atque in eo prius & poſterius. hoc autem reipſa idem eſt: aut enim eſt punctum, aut lapis, aut aliquid aliud eiuſmodi: ſed ratione *eſt* aliud: ſicvti ſophiſtæ ſumunt alium eſſe Coriſcum in Lyceo, & Coriſcum in foro: ergo & hoc, quia alibi & alibi eſt, diuerſum *eſt*. Atqui ei quod fertur, conſequens eſt momentum, & motui tempus: nam eo quod fertur cognoſcimus prius ac poſterius in motu: momentum autem eſt, quatenus prius ac poſterius *eſt* numerabile. Quocirca & in his re ipſa momentum eſt idem; quia quod in motu *eſt*, vel eſt prius vel poſterius: eſſentia verò *eſt* diuerſa: quoniam momentum eſt, quatenus prius & poſterius *eſt* numerabile. atque hoc eſt maximè notum: quia & motus per id quod mouetur, *cognoſcitur*: & latio per id quod fertur. quod enim fertur, *eſt* hoc aliquid: motus autem non *eſt hoc aliquid*, partim itaque id quod vocatur momentum, eſt ſemper idem, partim non idem: quoniam & id quod fertur, *ſimiliter ſe habet*. 3 Perſpicuum etiam *eſt*, ſiue tempus non ſit, momentum non fore: ſiue non ſit momentum, non fore tempus. vt enim ſimul *ſunt* id quod fertur & latio, ita etiam numerus eius quod fertur & numerus lationis. tempus enim *eſt* lationis numerus: momentum verò *eſt* velut id quod fertur, vt vnitas numeri. 4 Ergo & continuum *eſt* tempus propter momentum, ac diuiditur ratione momenti. nam & *quod ad* hoc, ſequitur lationem, & rem quæ fertur. etenim motio & latio vna eſt propter id quod fertur, quia *eſt* vnum: nec *ſolum*, quoniam interrumpi poſſet, ſed etiam ratione. hoc igitur terminat priorem & poſteriorem motum. 5 Quin etiam *quod ad* hoc, aliquo modo eſt conſequens puncto. nam punctum quoque & continet quodammodo longitudinem, & terminat: quoniam alterius eſt principium, alterius *eſt* finis. ſed cùm ita quiſpiam accipit, vtens vno puncto quaſi duobus: neceſſe *eſt* conſiſtere, ſi idem punctum erit principium & finis. momentum autem, quia quod fertur, mouetur, ſemper diuerſum *eſt*.

B TEmpus igitur eſſe numerũ motus ratione prioris & poſterioris, & *eſſe* continuum, quia *eſt* continui, perſpicuum *eſt*. 2 Minimus autem numerus, qui ſimpliciter *accipitur*, eſt binarius: aliquis autem numerus partim eſt *minimus*, partim non eſt. vt lineæ minimus numerus multitudine quidem ſunt duæ, aut vna: magnitudine vero non eſt minimus: ſemper enim omnis linea diuiditur. quare ſimiliter etiã tempus: minimum enim numero eſt vnum, aut duo: magnitudine autem non eſt. 3 Perſpicuum quoque *eſt*, cur non dicatur velox & tardum: ſed multum & paucum, & longũ & breue. nam quà *eſt* continuum, C *eſt* longum & breue: quà verò *eſt* numerus, *eſt* multum & paucum. ſed velox & tardum non eſt: quia nec vllus numerus quo numeramus, eſt velox & tardus. 4 Et idem *tempus* ſimul *eſt* vbique. prius autem & poſterius non eſt idem: quoniam & mutatio, præſens quidem vna *eſt*, præterita verò & futura *eſt* diuerſa. tempus autem eſt numerus, non quo numeramus, ſed qui numeratur. hoc autem euenit ratione prioris & poſterioris ſemper diuerſum: quia momenta ſunt diuerſa. numerus autem eſt vnus & idem, centum equorum, & centum hominum: ſed quorum *eſt* numerus, *caſunt* diuerſa, *nempe* equi & homines. 5 Præterea vt accidit motum eſſe vnum & D eundem iterum atque iterum, ita & tempus *idem eſſe* accidit: vt annum, aut ver, vel autumnum. 6 Non ſolùm autem metimur motum tempore, ſed etiam motu tempus: quia ſe inuicem definiunt. tempus enim definit motum, cùm ſit eius numerus: ac motus tempus. dicimúſque multum ac paucum tempus, motu metientes, quemadmodum & numerabili numerum: verbi gratiã, vno equo, numerum equorum. etenim numero cognoſcimus multitudinem equorum: ruſúſque vno equo ipſum numerũ equorum: ſimiliter autem & in tempore, & in motu *res habet*. nam tempore motum, & motu tempus meti- E mur. 7 Atque hoc eſt rationi conſentaneum: ſequitur enim magnitudinem motus, & motum tempus: quia ſunt & quanta, & continua, & diuidua. nam propterea quòd talis eſt magnitudo, motus ita eſt affectus: & propter motum tempus: metimúrque magnitudinem motu, & motum magnitudine. dicimus enim longam eſſe viam, ſi ſit longa profectio: & hanc longam, ſi *ſit longa* via: nec non tempus, ſi motus: & motum, ſi tempus.

quàm eſſe aliquem numerum rei, & numerum, in quo *ea res* eſt, metiri eius rei eſſentiam. quare ſi *eſt* in tempore, *eius rei eſſentiam metitur* tempus. metietur autem tẽpus, id quod mouetur, & id quod quieſcit, quatenus illud mouetur, hoc autem quieſcit. nam motionem eorum & quietem metietur, quota ſit. quocirca id quod mouetur, nõ ſimpliciter cadit ſub menſuram tẽporis, quatenus eſt quantum quiddam, ſed quatenus motio eius *eſt* tanta. 11 Quapropter quæcumque nec mouentur nec quieſcunt, non ſunt in tempore. nam eſſe in tempore, *nihil aliud eſt* quàm comprehendi menſura temporis: tempus autem *eſt* menſura motus & quietis. 12 Patet igitur, nec quidquid non eſt, in tempore eſſe: velvti, quæcumque non poſſunt aliter *ſe habere*, vt dimetientem habere communem menſuram cum latere. 13 Omnino enim ſi tempus eſt motus menſura per ſe, cæterorum autem ex accidenti: manifeſtum *eſt*, quorum eſſentiam *tempus* metitur, eorum omnium eſſentiam conſiſtere in eo vt moueantur & quieſcant. quæcumque igitur interitui & generationi ſunt obnoxia, & omnino quandoque ſunt, quandoque non ſunt hæc, neceſſe *eſt* eſſe in tempore. eſt enim tempus quoddam maius, quod excedet eorum eſſentiam, ac tẽpus metiens eorum eſſentiam. ſed inter ea quæ non ſunt, quæcumque tẽpus continet, partim fuerunt, vt Homerus aliquando fuit: partim erunt, vt futurum aliquid: in vtramvis partem *ea tempus* contineat. & ſi in vtramque partem *contineat*, & erant & erunt. Quæ verò *tempus* nullo modo continet, *hæc* neque fuerunt, neque ſunt, neq; erunt. eiuſmodi autem ſunt ea non entia, quorum oppoſita ſemper ſunt. verbi gratia, dimetientem non habere communem mẽſuram, ſemper eſt: atque hoc non erit in tempore: proinde nec habere communem menſuram. ideo ſemper non eſt, quia *eſt* contrarium ei quod ſemper eſt: quorum autem contrarium non ſemper *eſt*, hæc poſſunt eſſe & non *eſſe*: eorumque eſt ortus & interitus. 14 Porrò Nunc, *ſeu momentum*, eſt continuatio temporis, ſicvti dictum fuit: continet enim tempus præteritum & futurum: & omnino eſt terminus temporis. quoniam alterius eſt principium, alterius *eſt* finis. quamquam hoc non *eſt*, vt in puncto permanente, perſpicuum. diuidit autem poteſtate, & quatenus *eſt* tale, ſemper *eſt* diuerſum Nunc, quatenus verò conectit, ſemper *eſt* idem: vt in mathematicis lineis. non enim *eſt* ſemper vnum & idem punctum intellectu: quia diuidentibus eſt aliud atque aliud: ſed quatenus *eſt* vna *linea*, idem *punctum* eſt omnino. ita etiam Nunc, partim eſt temporis diuiſio ſecundùm poteſtatem: partim terminus vtriuſque & copula. eſt autem idem & ſecundùm idem diuiſio & copulatio: ſed eſſentia non *eſt* eadem. Sic ergo dicitur aliquod Nunc. 15 Aliud autem *eſt*, quando eſt tempus huic propinquum. veniet *enim* nunc, quia hodie veniet: *aut* venit nunc, quia venit hodie. ſed quæ Ilij *ſunt geſta*, non ſunt facta nunc, neque inundatio nunc eſt facta. atqui vſque ad ea tempus eſt continuum. ſed *nihilo magis dicuntur nunc facta*, quia non *ſunt* propinqua. 16 Aliquando autem, eſt tempus terminatum priori *&* *poſteriori* Nunc: velvti, aliquando capta eſt Troia: & aliquando erit inundatio. oportet enim eſſe terminatum ipſo Nunc. erit igitur tempus certa quantitate præditum, ab hoc *Nunc* vſque ad illud. & *ita* fuit in præteritum. 17 Si verò nullum *eſt* tẽpus, quod non *ſit* aliquando, certè omne tempus finitum erit. 18 Numquid ergo deficiet? an non? ſi quidem ſemper eſt motus. 19 Aliúſne igitur, an idem ſæpius? manifeſtum *eſt*, vt eſt motus,

ita etiam *eſſe* tempus. nam ſi vnus & idem motus ali- A quando ſit, erit vnum & idem tempus. ſin minùs, non erit. 20 Quia verò Nunc *eſt* finis & principium temporis, non tamen eiuſdem, ſed finis præteriti, principium autem futuri: vtique ſicut circulus in eodem quodammodo habet conuexum & concauum, ita etiam tempus ſemper *eſt* in principio & fine. ideóque ſemper aliud videtur *eſſe*: quia Nunc non *eſt* principium & finis eiuſdem: alioqui ſimul & ſecundùm idem eſſent oppoſita. non deficiet igitur *tempus*, quia ſemper in principio *eſt*. 21 Modò autem dicitur, *quod eſt* propinquum præſenti Nunc indiuiduo, cùm ſit pars futuri temporis: *velvti*, quando ambulabis? modò: quia propinquum *eſt* tempus, quo futurum eſt, *vt ambulet*. & præteriti B temporis *illud*, quod non procul *diſtat* à præſenti Nunc: *velvti*, quando ambulabis? modò ambulaui. Ilium autem modò captum eſſe non dicimus, quia *eſt* valde remotum à præſenti Nunc. 22 Et nuper dicitur, *quod eſt* propinquum præſenti Nunc, & *eſt* pars præteriti. velvti, quando veniſti? nuper: ſi ſit tempus propinquum præſenti Nunc. 23 Olim autem, quod longè *diſtat*. 24 Repentè verò *dicitur*, quod in tempore propter exiguitatem inſenſibili de ſtatu dimouetur. 25 Omnis autem mutatio naturaliter vim habet de ſtatu dimouendi. omnia verò in tempore fiunt, & intereunt, idcirco alij dixerunt *tempus eſſe* ſapientiſſimum: Pythagoreus autem Paro rectiùs dixit *eſſe* inſipientiſſimum; quia & obliuiſcuntur in eo. manifeſtum igitur *eſt*, *tempus* per ſe fore po- C tiùs cauſam interitus, quàm generationis, quemadmodum & antea dictum fuit. nam mutatio per ſe vim habet de ſtatu dimouendi: ex accidenti autem *eſt* cauſa generationis, & cur *quidque* ſit *cuius rei* argumentum ſufficiens *eſt*: quia nihil fit, quin aliquo modo ipſum moueatur & agat: interit autem, etiam quod nihil mouetur. atque hunc maximè interitum dicere ſolemus *eſſe* à tempore. at verò ne huc quidem tempus facit: ſed accidit, vt hæc quoque mutatio in tempore fiat. 26 Eſſe igitur tempus, & quid *ſit*, & quot modis dicimus Nunc, & quid *ſit* Aliquando, & Nuper, & Modò, & Olim, & Repentè, dictum eſt.

HIS à nobis ita commemoratis, perſpicuum *eſt* D neceſſe *eſſe*, vt omnis mutatio *ſit in tempore*; & quicquid mouetur, moueatur in tempore. celerius enim ac tardius, eſt in omni mutatione: quoniam in omnibus ſic apparet. dico autem celeriùs moueri, quod priùs mutatur in ſubiectum, cùm moueatur in eodem interuallo, & æquabili motu. vt in latione ſi ambo moueantur per circumferentiam, vel ambo per *lineam* rectam. ſimiliterque in aliis *ſe res habet*. at verò prius, in tempore eſt. prius namque & poſterius dicimus ratione diſtantiæ à præſenti momento: præſens autem momentum *eſt* terminus præteriti & futuri. quare cùm præſens E momentum ſit in tempore, etiam prius & poſterius in tempore erunt: nam in quo *eſt* præſens momentum, in eo eſt etiam diſtantia à præſenti momento: ſed contrario modo dicitur prius in tempore præterito & in futuro. quoniam in præterito prius dicimus, *quod eſt* remotius à præſenti momento: poſterius autem, *quod eſt* propinquius.

D ΤΟύτων δ' ἡμῖν οὕτω διωρισμένων, φανερὸν ὅτι ἅπασαν μεταβολὴν, καὶ ἅπαν τὸ κινούμενον ἀνάγκη κινεῖσθαι ἐν χρόνῳ. τὸ γὰρ θᾶττον καὶ βραδύτερον, κατὰ πᾶσάν ἐστι μεταβολήν· ἐν πᾶσι γὰρ οὕτω φαίνεται. λέγω δὲ θᾶττον κινεῖσθαι τὸ πρότερον μεταβάλλον εἰς τὸ ὑποκείμενον κατὰ τὸ αὐτὸ διάστημα, καὶ ὁμαλὴν κίνησιν κινούμενον· οἷον, ἐπὶ τῆς φορᾶς, εἰ ἄμφω κατὰ τὴν περιφερῆ κινεῖται, ἢ ἄμφω κατὰ τὴν εὐθεῖαν· ὁμοίως δὲ καὶ ἐπὶ τῶν ἄλλων. ἀλλὰ μὴν τό γε πρότερον ἐν χρόνῳ ἐστί· πρότερον γὰρ καὶ ὕστερον λέγομεν κατὰ τὴν πρὸς τὸ νῦν ἀπόστα- E σιν· τὸ δὲ νῦν, ὅρος τοῦ παρήκοντος, καὶ τοῦ μέλλοντος· ὥστε ἐπεὶ τὰ νῦν ἐν χρόνῳ, καὶ τὸ πρότερον καὶ ὕστερον ἐν χρόνῳ ἔσται· ἐν ᾧ γὰρ τὸ νῦν, καὶ ἡ τοῦ νῦν ἀπόστασις. ἐναντίως δὲ λέγεται τὸ πρότερον κατά τε τὸν παρεληλυθότα χρόνον, καὶ τὸν μέλλοντα· ἐν μὲν γὰρ τῷ παρεληλυθότι πρότερον λέγομεν, τὸ πορρώτερον τοῦ νῦν, ὕστερον δὲ, τὸ ἐγγύτερον.

ἐν δὲ τῷ μέλλοντι, πρότερον μὲν τὸ ἐγγύτερον, ὕστερον δὲ τὸ πορρώτερον. ὥστε ἐπεὶ, τὸ μὲν πρότερον ἐν χρόνῳ, πάσῃ δ᾽ ἀκολουθεῖ κινήσει τὸ πρότερον, φανερὸν ὅτι πᾶσα μεταβολὴ καὶ πᾶσα κίνησις ἐν χρόνῳ ἐστίν. 2 Ἄξιον δὲ ἐπισκέψεως, καὶ πῶς ποτε ἔχει ὁ χρόνος πρὸς τὴν ψυχὴν, καὶ διὰ τί ἐν παντὶ εἶναι δοκεῖ ὁ χρόνος, καὶ ἐν γῇ, καὶ ἐν θαλάττῃ, καὶ οὐρανῷ. 3 Ἢ ὅτι κινήσεώς τι πάθος, ἢ ἕξις, ἀριθμός γε ὤν, ταῦτα δὲ κινητὰ πάντα. ἐν τόπῳ γὰρ πάντα· ὁ δὲ χρόνος καὶ ἡ κίνησις ἅμα, κατά τε τὴν δύναμιν, καὶ κατ᾽ ἐνέργειαν. 4 Πότερον δὲ μὴ οὔσης τῆς ψυχῆς, εἴη ἂν ὁ χρόνος, ἢ οὔ, ἀπορήσειεν ἄν τις· ἀδυνάτου γὰρ ὄντος εἶναι τοῦ ἀριθμήσοντος, ἀδύνατον καὶ ἀριθμητόν τι *εἶναι· ὥστε δῆλον ὅτι οὐδὲ ἀριθμός· ἀριθμὸς γὰρ ἢ τὸ ἠριθμημένον, ἢ τὸ ἀριθμητόν. Εἰ δὲ μηδὲν ἄλλο πέφυκεν, ἢ ψυχὴ, ἀριθμεῖν, καὶ ψυχῆς νοῦς, ἀδύνατον εἶναι χρόνον, ψυχῆς μὴ οὔσης· ἀλλ᾽ ἢ τοῦτο ὅ ποτε ὂν ἐστὶν ὁ χρόνος· οἷον εἰ ἐνδέχεται κίνησιν ἄνευ ψυχῆς εἶναι. τὸ δὲ πρότερον καὶ ὕστερον ἐν κινήσει ἐστί· χρόνος δὲ ταῦτ᾽ ἐστὶν ᾗ ἀριθμητά ἐστιν. 5 Ἀπορήσειε δ᾽ ἄν τις καὶ ποίας κινήσεως ὁ χρόνος ἀριθμὸς, ἢ ὁποιασοῦν. καὶ γὰρ γίνεται ἐν χρόνῳ* καὶ φθείρεται, καὶ αὐξάνεται, καὶ ἀλλοιοῦται ἐν χρόνῳ, καὶ φέρεται· ᾗ οὖν κίνησίς ἐστι, ταύτῃ ἐστὶν ἑκάστης κινήσεως ἀριθμός. διὸ κινήσεως ἁπλῶς ἀριθμός ἐστι συνεχοῦς, ἀλλ᾽ οὐ τινός. 6 Ἀλλ᾽ ἔστι νῦν κεκινῆσθαι καὶ ἄλλο, ὧν ἑκατέρας τῆς κινήσεως εἴη ἂν ἀριθμός· ἕτερος οὖν χρόνος ἔσται, καὶ ἅμα δύο ἴσοι χρόνοι ἂν εἶεν, ἢ οὔ; ὁ αὐτὸς γὰρ χρόνος εἷς ὁμοίως καὶ ἅμα· εἴδει δὲ καὶ οἱ μὴ ἅμα. Εἰ γὰρ εἶεν [οἱ μὲν] κύνες, οἱ δ᾽ ἵπποι, ἑκάτεροι δ᾽ ἑπτὰ, ὁ αὐτὸς ἀριθμός· οὕτω καὶ τῶν κινήσεων τῶν ἅμα περαινομένων, ὁ αὐτὸς χρόνος· ἀλλ᾽ ἡ μὲν ταχεῖα ἴσως, ἡ δ᾽ οὔ· καὶ ἡ μὲν φορὰ, ἡ δ᾽ ἀλλοίωσις. *ὁ μέντοι χρόνος, ὁ αὐτὸς, εἴπερ καὶ ὁ ἀριθμὸς ἴσος, καὶ ἅμα, τῆς τε ἀλλοιώσεως, καὶ τῆς φορᾶς· καὶ διὰ τοῦτο, αἱ μὲν κινήσεις ἕτεραι καὶ χωρίς· ὁ δὲ χρόνος πανταχοῦ ὁ αὐτὸς, ὅτι καὶ ὁ ἀριθμὸς εἷς, καὶ πανταχοῦ ὁ αὐτὸς, ὁ τῶν ἴσων καὶ ἅμα. 7 Ἐπεὶ δ᾽ ἐστὶ φορὰ καὶ ταύτης ἡ κύκλῳ, ἀριθμεῖται δ᾽ ἕκαστον ἑνί τινι συγγενεῖ, μονάδες μονάδι, ἵπποι δ᾽ ἵππῳ· οὕτω καὶ ὁ χρόνος, χρόνῳ τινὶ ὡρισμένῳ· μετρεῖται δ᾽ ὥσπερ εἴπομεν, ὅ, τε χρόνος κινήσει, καὶ ἡ κίνησις χρόνῳ. τοῦτο δ᾽ ἐστὶν, ὅτι ὑπὸ τῆς ὡρισμένης κινήσεως χρόνῳ μετρεῖται τῆς τε κινήσεως τὸ ποσὸν, καὶ τοῦ χρόνου. 8 Εἰ οὖν τὸ πρῶτον μέτρον πάντων τῶν συγγενῶν, ἡ κυκλοφορία ἡ ὁμαλὴς, μέτρον μάλιστα, ὅτι ὁ ἀριθμὸς ὁ ταύτης *γνωριμώτατος. ἀλλοίωσις μὲν οὖν, οὐδὲ αὔξησις, οὐδὲ γένεσις, οὐκ εἰσὶν ὁμαλεῖς. φορὰ δ᾽ ἐστί. 9 Διὸ καὶ δοκεῖ ὁ χρόνος εἶναι ἡ τῆς σφαίρας κίνησις, ὅτι ταύτῃ μετροῦνται αἱ ἄλλαι κινήσεις, καὶ ὁ χρόνος ταύτῃ τῇ κινήσει. 10 Διὰ δὲ τοῦτο, καὶ τὸ εἰωθὸς λέγεσθαι συμβαίνει· φασὶ γὰρ κύκλον εἶναι τὰ ἀνθρώπινα πράγματα, καὶ τῶν ἄλλων τῶν κίνησιν ἐχόντων φυσικὴν, καὶ γένεσιν, καὶ φθοράν. τοῦτο δὲ, ὅτι ταῦτα πάντα τῷ χρόνῳ κρίνεται, καὶ λαμβάνει τελευτὴν καὶ ἀρχὴν, ὥσπερ ἂν εἰ κατά τινα περίοδον· καὶ γὰρ ὁ χρόνος αὐτὸς εἶναι δοκεῖ κύκλος τις. τοῦτο δὲ πάλιν δοκεῖ, διότι τοιαύτης φορᾶς ἐστὶ μέτρον, καὶ μετρεῖται

nempe ſanatio. ſed quia ſic accidit: velvti, ſi ex recordatione in obliuionem mutetur: quoniam cui ineſt, illud mutatur quandoque in ſcientiam, quandoque in ſanitatem. 6 Præterea in infinitum *res* abibit, ſi erit mutationis mutatio, & generationis generatio. neceſſe igitur *eſt* etiam priorem eſſe, ſi poſterior erit. vtputà ſi generatio ſimplex aliquando fiebat: etiam quod fit, fiebat. quare nondum erat, quod fit ſimpliciter, ſed *erat* aliquid quod fiebat, *idque* olim fiebat, & rurſus hoc aliquando fiebat. quocirca nondum erat tunc id quod fit. Quoniam autem in infinitis non eſt aliquid primum: non erit primum *quod fit*. quare neque conſequens *erit*. neque igitur fieri, neque moueri, neque mutari quidpiam poſſibile *eſt*. 7 Præterea eiuſdem *eſt* motus contrarius, & præterea quies: item generatio, & corruptio. quare quod fit, tunc corrumpitur, cùm fit. non enim ſtatim ac fit, tunc corrumpitur, nec poſtea: quoniam oportet eſſe, quod interit. 8 Præterea oportet materiam ſubeſſe & ei quod fit, & ei quod mutatur. quænam igitur erit? ſicvti variabile *eſt* aut corpus, aut anima: ita quod fit, *eſt* motus vel generatio. Rurſus quid *eſt*, in quod mouentur? oportet enim eſſe motum & generationem huius ex hoc in hoc. item quomodo erit? non enim diſciplinæ generatio eſt diſciplina. quare nec generationis generatio, nec alicuius aliqua. Præterea ſi tres ſunt ſpecies motus: neceſſe *eſt*, vt harum aliqua ſit natura ſubiecta, & ad quas mouentur: vtputa neceſſe *eſt* lationem variari, vel ferri. 9 Omnino autem cùm moueatur, quicquid mouetur, tribus modis, id eſt, vel quia ex accidenti vel quia pars aliqua, vel quia per ſe *mouetur*: ſolùm ex accidenti poteſt mutari mutatio: velvti, ſi is qui ſanatur, currat, aut diſcat. ſed mutationem ex accidenti, iam miſſam fecimus. 10 Quoniam autem motus nec eſt ſubſtantiæ, nec eius quod ad aliquid *refertur*, nec ipſius facere, vel pati: relinquitur, vt in qualitate, & quantitate, & vbi dumtaxat ſit. nam in his ſingulis eſt contrarietas. 11 Motus igitur, qui *eſt* in qualitate, eſto variatio. hoc enim commune nomen ei aptum eſt. dico autem qualitatem, non quæ *eſt* in ſubſtantia: quandoquidem etiam differentia *eſt* qualitas: ſed patibilem, ex qua dicitur pati aut impatibile eſſe. 12 Qui verò *eſt* quantitate, communiter quidem vacat nomine: vtriuſque autem ratione vocatur accretio, & deminutio: is quidem qui *tendit* ad perfectam magnitudinem, accretio: qui verò ab hac, deminutio. 13 Qui autem *eſt* ſecundùm locum, & propriè & communiter nomine caret: vocatur autem communiter latio. quamquam ea ſola propriè dicuntur ferri, quæ cùm locum mutent, non eſt in ipſis *ſitum*, vt ſe ſiſtant; & quæ ſe ipſa non mouent ſecundùm locum. 14 Iam verò mutatio, quæ *fit* in eadem forma ad magis & minus, variatio eſt. etenim motus *eſt* ex contrario in contrarium vel ſimpliciter, vel quadamtenus. nam qui ad minus progreditur, in contrarium dicetur mutari. *qui* verò ad magis, tamquam ex contrario ad ipſum. nihil autem intereſt vtrùm quadamtenus mutetur, an ſimpliciter: *præterquam* quòd oportebit quadamtenus eſſe contraria: magis autem & minus eſt, quia plus vel minus contrarij ineſt, & non *ineſt*. 15 Eſſe igitur hos tres ſolos motus, ex his manifeſtum *eſt*.

De immobili. Cap. IV.

IMmobile autem eſt, & quod omnino moueri nequit, vt ſonus *eſt* inaſpectabilis: & quod lõgo tempore vix mouetur, aut tardè moueri incipit, quod dicitur difficulter mobile: & quod natura aptum eſt moueri, & poteſt *moueri*, ſed non mouetur tunc cùm natura aptum eſt, & vbi, & quomodo: quod quidem inter immobilia ſolùm quieſcere appello: cõtrarium enim *eſt* quies motui: proinde erit priuatio eius quod eſt *motionis* capax. 2 Quid igitur ſit motus, & quid quies, & quot ſint mutationes, & quales *mutationes ſint* motus, perſpicuum *eſt* ex his quæ dicta ſunt. ΕΤι δέ, διοριστέον ποία κίνησις ἐναντία κινήσει· καὶ περὶ μονῆς δέ, τὸν αὐτὸν τρόπον. 2 Διαιρετέον δὲ πρῶτον, πότερον ἐναντία κίνησις ἡ ἐκ τοῦ αὐτοῦ τῇ εἰς τὸ αὐτό, οἷον ἡ ἐξ ὑγιείας, τῇ εἰς ὑγίειαν, οἷον καὶ γένεσις καὶ φθορὰ δοκεῖ· ἢ ἡ ἐξ ἐναντίων, οἷον ἡ ἐξ ὑγιείας τῇ ἐκ νόσου· ἢ ἡ εἰς ἐναντία, οἷον ἡ εἰς ὑγίειαν τῇ εἰς νόσον· ἢ ἡ ἐξ ἐναντίου, τῇ εἰς ἐναντίον, οἷον ἡ ἐξ ὑγιείας, τῇ εἰς νόσον· ἢ ἡ ἐξ ἐναντίου εἰς ἐναντίον, τῇ ἐξ ἐναντίου εἰς ἐναντίον, οἷον, ἡ ἐξ ὑγιείας εἰς νόσον, τῇ ἐκ νόσου εἰς ὑγίειαν. ἀνάγκη γὰρ ἢ ἕνα τινὰ τούτων εἶναι τῶν τρόπων, ἢ πλείους· οὐ γὰρ ἔστιν ἄλλως ἀντιτεθῆναι. 3 Ἔστι δέ, ἡ μὲν ἐξ ἐναντίου τῇ εἰς ἐναντίον οὐκ ἐναντία, οἷον ἡ ἐξ ὑγιείας τῇ εἰς νόσον· ἡ αὐτὴ γὰρ καὶ μία. τὸ μέντοι εἶναι, οὐ τὸ αὐτὸ αὐταῖς. ὥσπερ οὐδὲ τὸ αὐτὸ τὸ ἐξ ὑγιείας μεταβάλλειν, καὶ τὸ εἰς νόσον. 4 Οὐδ' ἡ ἐξ ἐναντίου, τῇ ἐξ ἐναντίου· ἅμα γὰρ συμβαίνει ἐξ ἐναντίου, καὶ εἰς ἐναντίον, ἢ μεταξύ. ἀλλὰ περὶ μὲν τούτου, ὕστερον ἐροῦμεν. ἀλλὰ μᾶλλον τὸ εἰς ἐναντίον μεταβάλλειν δόξειεν ἂν αἴτιον εἶναι τῆς ἐναντιώσεως, ἢ τὸ ἐξ ἐναντίου· ἡ μὲν γάρ, ἀπαλλαγὴ ἐξ ἐναντιότητος· ἡ δέ, λῆψις. καὶ λέγεται δὲ ἑκάστη εἰς ὃ μεταβάλλει μᾶλλον, ἢ ἐξ οὗ· οἷον ὑγίανσις ἡ εἰς ὑγίειαν· νόσανσις δὲ ἡ εἰς νόσον. 5 Λείπεται δὴ ἡ εἰς ἐναντία, καὶ ἡ εἰς ἐναντία * ἐξ ἐναντίων. 6 Τάχα μὲν οὖν συμβαίνει τὰς εἰς ἐναντία, καὶ ἐξ ἐναντίων εἶναι· ἀλλὰ τὸ εἶναι ἴσως οὐ τὸ αὐτό· λέγω δέ, τὸ εἰς ὑγίειαν, τῷ ἐκ νόσου· καὶ τὸ ἐξ ὑγιείας, τῷ εἰς νόσον. 7 Ἐπεὶ δὲ διαφέρει μεταβολὴ κινήσεως· (ἡ ἐκ τινος γὰρ ὑποκειμένου εἰς τι ὑποκείμενον μεταβολή, κίνησις

C PRæterea definiendum *eſt*, quis motus *ſit* motui contrarius: & eodem modo de ſtatu. 2 Primùm autē explicandum *eſt*, ſitne contrarius motus qui eſt ex eodem, ei *motui* qui *eſt* in idem: velvti, qui *eſt* ex ſanitate, ei qui in ſanitatem, cuiuſmodi & ortus & interitus *eſſe* videtur: an qui eſt ex contrariis, vt qui *eſt* ex ſanitate, ei qui ex morbo: an qui in contraria, vt is qui in ſanitatem, ei qui in morbum: an qui ex cōtrario, ei qui in contrarium: velvti, qui *eſt* ex ſanitate, ei qui in morbum: an qui ex contrario in cōtrarium, ei qui ex contrario in cōtrarium, velvti, qui ex ſanitate in morbum, ei qui ex morbo in ſanitatem. neceſſe *eſt* D enim, vel vnum aliquē eſſe ex his modis, vel plures: quia non licet *motus* aliter opponere. 3 Sed qui *eſt* ex contrario, ei qui *eſt* in contrarium, cōtrarius non *eſt*: velvti, qui *eſt* ex ſanitate, ei qui *eſt* in morbū: quippe qui *eſt* vnus & idem: verùm eſſentia non eſt ipſis eadem: ſicvti nec mutari ex ſanitate, & in morbum, idē *eſt*. 4 Nec qui *eſt* ex contrario, ei qui *eſt* ex *altero* contrario. ſimul enim accidit *vt ſit* ex cōtrario & in contrarium vel *medium* interiectum. Sed de hoc poſteriùs dicemus. Sed potiùs in cōtrarium mutari, videri poteſt eſſe cauſa contrarietatis, quàm *mutari* ex contrario: quoniam hoc *eſt* liberatio à cōtrario, illud autem *eſt* aſſumptio: ac dicitur quiſque *motus ab eo* in quod E mutatur, potiùs quàm *ab eo* ex quo *mutatur*: vt ſanatio dicitur, quæ *tēdit* in ſanitatem: morbi autē correptio, quæ in morbum. 5 Reſtat igitur motus qui eſt in cōtraria, & qui *eſt* ex contrariis in contraria. 6 Fortaſſis quidem accidit, vt *motus* qui ſunt in contraria, etiam ſint ex contrariis: ſed eſſentia fortaſſe non *eſt* eadem. Verbi gratia, qui *eſt* ad ſanitatē, ei qui *eſt* ex morbo: & qui ex ſanitate, ei qui in morbum. 7 Cùm autem differat mutatio à motu: quoniam *ea demum* mutatio *quæ eſt* ex ſubiecto in aliquod ſubiectum, motus

eſt: certè motus qui eſt ex contrario in contrarium, ei A qui eſt ex contrario in contrarium, contrarius eſt: velut, qui eſt ex ſanitate in morbum, ei qui eſt ex morbo in ſanitatem. 8 Sed & inductione manifeſtũ eſt, qualia videtur eſſe, quæ ſunt contraria. nam morbo corripi & ſanari contraria ſunt: item diſcere & falli non à ſe ipſo: ſunt enim in contraria. nam vt ſcientiam, ita & deceptionem & per ſe nanciſci licet & per alium. item latio quæ eſt ſurſum verſùs, ei quæ eſt deorſum verſùs: quoniam hæc ſunt contraria in logitudine: & quæ eſt in dexteram, ei quæ eſt in ſiniſtram: quoniam hæc ſunt cõtraria in latitudine. & quæ eſt in anteriorem partem, ei quæ eſt in poſteriorem: quoniam & hæc ſunt contraria in altitudine. 9 *Mutatio* verò quæ dumtaxat *eſt* in contrarium, non *eſt* motus, ſed mutatio: velut, fieri album nõ ex aliquo. 10 Sed & quibus B non eſt aliquid contrarium, *mutatio* quæ eſt ex eodẽ, mutationi quæ eſt in idem, cõtraria *eſt*. idcirco ortus *eſt* interitui contrarius: & abiectio *aſſumptioni*. verũ hæ ſunt mutationes, non motus. 11 Motus verò qui ad inter*iectum medium fiunt*, quibus ſcilicet contrariis aliquod eſt inter*iectum*, tamquam in contraria quodammodo ponendi *ſunt*: quoniam motus vtitur eo quod *eſt* inter*iectum* quaſi contrario, in vtramvis partem mutetur: vtputa ex fuſco in album, quaſi ex nigro: & ex albo in fuſcum, quaſi in nigrum: ex nigro autem in fuſcum, quaſi in album. nam fuſcum, *quod eſt* medium, ad vtrumque extremum quodammodo refertur, vt & antea dictum fuit. 12 Motus igitur motui contrarius ita *eſt*: *nempe* qui *eſt* ex contrario in contrarium, ei qui *eſt* ex contrario in contrarium.

B Iam verò dubitare aliquis poſſit, quamobrem in loci mutatione ſunt & ſecundùm naturam, & præter naturam, tam manſiones quàm motus: in aliis autem minimè, vt variatio, alia *eſt* ſecundùm naturam, alia præter naturam. non *eſt* enim magis ſanatio quã ægrotatio, ſecundùm naturam, vel præter naturam: nec dealbatio, quàm denigratio. ſimiliter *ſe res habet* etiam in accretione, & diminutione: quia nec hę *ſunt* ſibi inuicem contrariæ, tamquam natura, vel præter naturã: nec accretio accretioni. ortus quoque & interitus eadem *eſt* ratio: neque enim ortus *eſt* ſecundùm naturam, interitus verò præter naturam: nam ſeneſcere *eſt* ſecundùm naturam. neque ortum videmus partim *eſſe* ſecundùm naturam, partim præter naturam. C 2 Sed ſi id quod *eſt* vi, eſt præter naturam: etiam interitus erit interitui contrarius, *nimirum* violentus; quippe qui eſt præter naturam, ei qui *eſt* ſecundùm naturam. Sunt igitur & ortus quidam violenti, non fatales, quibus contrarij ſunt ortus naturales: & auctiones violentę, & diminutiones: vt auctiones eorũ qui citò propter delicias pubeſcunt: & frumenta, quæ citò adoleſcunt, nec terra ſubacta altiùs radices agunt. In variatione autem quomodo *res habet*? an eodem modo: erunt enim quædam violentæ, aliæ naturales. vtputa alij *morbo* liberãtur non in diebus criticis, alij verò in diebus criticis: *quorum* illi præter naturam variantur; hi verò ſecundùm naturam. D 3 Erunt autem interitus inter ſe contrarij, non *ſolum* generationi. & quid prohibet? *hoc* enim eſt aliquo modo, nempe ſi alter ſit iucundus, alter moleſtus: quocirca non ſimpliciter interitus *eſt* interitui contrarius: ſed quatenus alter ex ipſis eſt talis, alter verò talis. 4 Omnino igitur contrariæ ſunt motiones & quietes eo quo diximus modo: vel vt quæ *eſt* ſurſum, ei quæ *eſt* deorſum: loci namque contrarietates hæ *ſunt*. naturaliter autem fertur ea latione quæ ſurſum *tendit*, ignis: ea quæ deorſum, terra: & contrariæ *ſunt* E horum lationes. ignis verò ſurſum quidem *fertur* natura, deorſum autem præter naturam: & cõtraria *eſt* eius motio naturalis ei quę *eſt* pręter naturam. quin etiam quietes itidem *ſe habent*: nã quies in *loco* ſupero, motui ex *loco* ſupero ad inferum contraria *eſt*. accidit autem terrę quies illa præter naturam, hic autẽ motus ſecundùm naturam. quapropter motui quies *eſt* cõtraria: nempe quæ *eſt* præter naturam, ei qui *eſt* ſecundùm naturam, eiuſdem *rei*: quoniam & motus eiuſdem *rei* ita *eſt* contrarius. alter enim ipſorum eſt ſecundùm naturam, qui eſt ſurſum, vel deorſum verſùs: alter autem præter naturam. 5 Exiſtit autem dubitatio, an omnis quietis, quæ non *eſt* ſemper, *ſit* generatio. & an hæc *ſit* progreſſus ad quietem. 6 Eius igitur quod præter naturam manet vt terræ in loco ſupero, erit generatio. quando igitur vi ſurſum ferebatur, ad quietem progrediebatur. 7 Atqui quod ad quietem tendit, ſemper videtur ferri celeriùs: quod autem vi *mouetur*, è contrario. erit igitur quieſcens, cùm non ſit factum quieſcens.

8 Præterea tendere ad quietem, videtur propriè dici A dè eo quod ſecundùm naturam ad ſuum locum fertur, *hoc eſt*, vel omnino *id* eſſe, vel ſimul accidere. 9 Item exiſtit dubitatio, an quies quæ *eſt* hîc, ſit contraria motui qui *eſt* hinc. quando enim mouetur ex hoc, vel etiam abiicit, adhuc videtur habere id quod abiicitur. quare ſi hæc quies *eſt* contraria motui qui *eſt* hinc in contrarium: *certè* ſimul inerunt contraria. 10 An quadamtenus quieſcit, ſi adhuc manet? & omnino quod mouetur, partim *eſt* hîc, partim in eo in quod mutat. 11 Ideóq; magis motus motui eſt contrarius, quàm quies. 12 Dubitare autem quiſpiam poſſit etiam de progreſſu ad ſtatum, an quicumque *ſunt* motus præter naturam, his ſit *aliqua* quies oppoſita. 13 Si igitur non erit, abſurdum *eſt*. manet enim B ſed vi *manet*. 14 Quocirca erit aliquid quieſcẽs, *quod* non ſemper *quieſcit*, ſine quietis generatione. 15 Atqui conſtat fore. vt enim mouetur præter naturam, etiam quieſcere aliquid poteſt præter naturam. 16 Cùm autem quibuſdam motus ſit ſecundùm naturam, & præter naturam: vt igni ſecundùm naturam *eſt motus* ſurſum versùs: qui verò *eſt* deorſum versùs, *eſt* præter naturam. vtrum hic *eſt* contrarius, an motus terræ? ſiquidem hæc deorſum fertur ſecundùm naturam. 17 An patet vtroſque *eſſe contrarios*, ſed non eodem modo: verùm hic vt ſecundùm naturam, ei qui *eſt* ſecũdùm naturam: *motus* verò ignis ad locum ſuperum, *eiuſdem motui* ad inferum opponitur, vt *motus* qui *eſt* ſecundùm naturam, ei qui *eſt* præter naturam. 18 Similiter *dicendum eſt* etiam *de* quietibus. 19 Ac de motione quidem & quiete, quomodo vtraque *ſit* vna, & quæ quibus *ſint* contraria, dictum eſt.

8 Ἔτι δοκεῖ τὸ ἵστασθαι κυρίως λέγεσθαι, ἢ ὅλως εἶναι ἐπὶ τοῦ κατὰ φύσιν εἰς τὸν αὐτοῦ τόπον φέρεσθαι, ἢ συμβαίνειν ἅμα. 9 Ἔχει δ' ἀπορίαν εἰ ἐναντία ἡ μονὴ ἡ ἐνταῦθα, τῇ ἐντεῦθεν κινήσει. ὅταν γὰρ κινῆται ἐκ τουδί, ἢ καὶ ἀποβάλλῃ, ἔτι δοκεῖ ἔχειν τὸ ἀποβαλλόμενον. ὥστε εἰ αὕτη ἡ ἠρεμία ἐναντία τῇ ἐντεῦθεν εἰς τοὐναντίον κινήσει, ἅμα ὑπάρξει τἀναντία. 10 Ἢ πῇ ἠρεμεῖ, εἰ ἔτι μένει; ὅλως δὲ τοῦ κινουμένου, τὸ μὲν ἐκεῖ, τὸ δ', εἰς ὃ μεταβάλλει. 11 Διὸ καὶ μᾶλλον κίνησις κινήσει ἐναντίον, ἢ ἠρέμησις. 12 Ἀπορήσειε δ' ἄν τις καὶ περὶ τοῦ ἵστασθαι, εἰ καὶ ὅσαι παρὰ φύσιν κινήσεις, εἰ ταύταις ἐστὶν ἠρεμία ἀντικειμένη. 13 Εἰ μὲν οὖν μὴ ἔσται, ἄτοπον. μένει γάρ, βίᾳ δέ. 14 Ὥστε ἠρεμοῦν τι ἔσται οὐκ ἀεὶ ἄνευ τοῦ γίνεσθαι. 15 Ἀλλὰ δῆλον ὅτι ἔσται. ὥσπερ γὰρ κινεῖται παρὰ φύσιν, καὶ ἠρεμοίη ἄν τι παρὰ φύσιν. 16 Ἐπεὶ δ' ἐστὶν ἐνίοις κίνησις κατὰ φύσιν καὶ παρὰ φύσιν, οἷον τῷ πυρὶ, κατὰ φύσιν μὲν, ἡ ἄνω· ἡ δὲ κάτω, παρὰ φύσιν, πότερον αὕτη ἐναντία, ἢ ἡ τῆς γῆς; αὕτη γὰρ φέρεται κατὰ φύσιν κάτω. 17 Ἢ δῆλον ὅτι ἄμφω, ἀλλ' οὐχ ὡσαύτως, ἀλλ' ἡ μὲν, ὡς κατὰ φύσιν, τῇ ὡς κατὰ φύσιν· ἡ δ' ἄνω τοῦ πυρὸς, τῇ κάτω, ὡς ἡ κατὰ φύσιν τῇ παρὰ φύσιν. 18 Ὁμοίως δὲ καὶ ταῖς μοναῖς. 19 Καὶ περὶ μὲν κινήσεως καὶ ἠρεμίας, καὶ πῶς ἑκατέρα μία, καὶ τίνες ἐναντίαι τίσιν, εἴρηται.

B 3 Præterea diuideretur in indiuidua: ſiquidem ex quibus eſt vtrumque, in hæc diuiditur. ſed nullum continuum eſt in ea diuiduum quę partibus vacant. 4 Nullũ autem aliud genus poteſt eſſe interiectum punctis, & momentis. nã ſi erit, conſtat fore vel diuiduum, vel indiuiduum: & ſi diuiduũ: vel in indiuidua, vel in ſemper diuidua: hoc verò *eſt* cõtinuum. 5 Perſpicuum quoque *eſt*, omne continuum *eſſe* diuiduum in ſemper diuidua: nam ſi *diuidatur* in indiuidua, indiuiduum ab indiuiduo tangetur: quandoquidem continuorum extremum *eſt* vnum, ac tangit. 6 Porrò eiuſdem rationis *eſt*, & magnitudinem, & tempus, & motum ex indiuiduis cõſtare, ac diui-
C di in indiuidua, vel nullũ *horum*. patet autem ex his: quia ſi magnitudo ex indiuiduis conſtat, etiam motus, qui *per ſpatium* huius *magnitudinis fit*, ex æqualibus motibus indiuiduis erit. velvti, ſi *magnitudo* α β γ conſtet ex α β γ indiuiduis: etiam motus δ ε ζ, quo motum eſt ω per interuallum α β γ, habet ſingulas partes indiuiduas. 7 Si igitur præſente motu neceſſe *eſt* moueri aliquid; & ſi quid mouetur, neceſſe *eſt* adeſſe motum: etiam ipſum moueri conſtabit ex indiuiduis. itaque per α, motum eſt ω, cùm moueretur motu δ: & per β, *motu* ε: & per γ itidem *motu* ζ. 8 Si igitur neceſſe *eſt* id quod mouetur ab aliquo loco ad aliquem locum, non ſimul moueri & eſſe motum
D quò mouebatur, cùm mouebatur: (velvti, ſi quis Thebas proficiſcatur: impoſſibile *eſt*, vt ſimul proficiſcatur Thebas & profectus ſit Thebas) certè per α partibus vacans, mouebatur ω, quatenus motus δ aderat. quare ſi poſt pertranſiit quàm pertranſibat, diuiduum erit. quando enim pertranſibat, nec quieſcebat nec pertranſierat, ſed inter medium erat. quod ſi ſimul pertranſit & pertranſiit, profectò quod proficiſcitur, quando proficiſcitur, profectum erit & motum, quò mouetur. 9 Quod ſi mouetur aliquid per totam *longitudinem* α β γ, & motus, quo mouetur, eſt δ ε ζ: nihil autem mouetur per *partem* α quæ partibus caret, ſed motum eſt: erit vtique motus, non ex motibus, ſed ex terminis motuum; & ali-
E quod motum erit, quod non mouebatur: quia pertranſiit *partem* α, non pertranſeundo. quocirca fieri poterit vt aliquid profectum ſit, cùm numquam proficiſceretur: quia per hanc eſt profectũ, non per eam proficiſcendo. Itaque ſi neceſſe *eſt* quodvis aut quieſcere aut moueri, quieſcit autem in ſingulis α β γ: erit igitur aliquid continenter quieſcens ſimul & motũ. nam per totam *magnitudinem* α β γ mouebatur: & in quavis parte quieſcebat, proinde etiam in tota. Et ſi quidẽ indiuiduæ *partes* δ ε ζ, *ſint* motus: fieri poterit vt motu pręsẽte *res* nõ moueatur, ſed quieſcat ſi verò nõ ſint motus: *eueniet* vt motus ex nõ motibus cõſtet. 10 Vt autẽ longitudinem & motũ, ſic tempus eſſe indiuiduũ & ex momẽtis indiuiduis cõſtare neceſſe *eſt*.

nam ſi omnis *eſt* diuiduus; quod autem æquè velox eſt, in minori *tempore* conficit minus *ſpatij*: etiam tempus diuiduum erit. quòd ſi tempus diuiduum erit, quo aliquid fertur per *magnitudinem* α: etiam *magnitudo* α, erit diuidua. 11 Cùm autem omnis magnitudo in magnitudines diuidua *ſit*: (quippe oſtẽſum eſt fieri non poſſe vt ex indiuiduis conſtet aliquid continuum: omnis verò magnitudo eſt continua) neceſſe *eſt* id quod eſt velocius, æquali tempore maius *ſpatij* pertrãſire, & minori æquale, & minori maius, quemadmodum nonnulli definiunt id quod eſt velocius. 12 Eſto namque id in quo eſt α, velocius eo in quo eſt β. quoniã igitur quod priùs mutatur, eſt velocius: *certè* quo tempore ζη α mutatum eſt à γ ad δ, puta *tẽpore* ζη, hoc *tempore* ζη β nondum peruenit ad δ, ſed citrà erit. quapropter id quod eſt velocius, æquali tẽpore plus *ſpatij* conficit. 13 Quin etiam minori *tempore* plus *ſpatij conficit* quàm id *quod eſt tardius*. nam quo *tempore* ζη α peruenit ad δ, ζη β perueniet ad ε, cùm ſit tardius. ergo quia ζη α ad δ peruenit toto illo tẽpore ζη, ad θ perueniet minori *tempore* quàm hoc *ſit*. ac perueniat *tempore* ζκ. *ſpatium* igitur γθ, quod pertranſibit α, eſt maius quàm γε. tempus verò ζκ *eſt* minus toto illo *tẽpore* ζη. quare minori *tempore* conficit maius *ſpatium*. 14 Ex his etiam patet, id quod eſt velocius, minori tempore conficere æquale *ſpatium*. nam quia maiorem *longitudinem* pertranſit minori *tempore*, quàm id quod eſt tardius: ipſum autem per ſe acceptum maiori tempore pertranſit *longitudinem* maiorem minore: velut, *longitudinem* λμ, *quæ eſt maior longitudine* λξ, profectò tempus πρ, quo pertranſit *longitudinem* λμ, eſt maius quàm tempus πσ, quo pertranſit *longitudinem* λξ. quocirca ſi tempus πρ *eſt* minus *tempore* πχ, quo *mobile* tardius pertranſit *longitudinem* λξ: etiam tempus πσ *eſt* minus *tempore* in quo eſt πχ: ſiquidem *eſt* minus *tempore* πρ: quod autem eſt minore minus, ipſum quoque *eſt* minus. quapropter minori tempore conficiet æquale ſpatium. 15 Prætereà ſi neceſſe *eſt* quodvis aut æquali aut minori aut maiori tempore moueri: & quod maiori *tempore mouetur*, *eſt* tardius: quod autẽ æquali, *eſt* æquè velox: quod verò eſt celerius, nec *eſt* æquè velox, nec tardius: *profectò* quod eſt velocius, nec æquali nec maiori *tempore* mouetur. reſtat igitur, *vt moueatur* minori *tempore*. quare neceſſe etiam *eſt*, vt velocius minori tẽpore pertranſeat ęqualem magnitudinem. 16 Quoniam autem omnis motus *eſt* in tẽpore, & in omni tempore poſſibile *eſt aliquid* moueri, quicquid autem mouetur, poteſt & celeriùs moueri & tardius: *certè* in omni tempore fieri poterit vt celeriùs moueatur & tardiùs. 17 Cùm hæc *ita* ſint, neceſſe eſt etiam tempus eſſe cõtinuum. dico autem continuum quod eſt diuiduum in ſemper diuidua. nam ſi ſupponatur continuum eſſe hoc, neceſſe *eſt* tẽpus eſſe continuum. Cùm enim oſtenſum ſit, id quod eſt velocius, minori tempore conficere æquale *ſpatium*: eſto vbi α, *mobile* velocius: vbi β, tardius: ac tardius pertranſeat magnitudinem γδ, tempore ζη. patet igitur velocius minori quàm hoc tempore pertranſiturum eandem magnitudinem: ac pertranſeat tempore ζθ. Rurſus quia velocius *mobile tempore* ζθ pertranſit totam *longitudinem* γδ: certè tardius eodem tempore minorem cõficit: *hæc* eſto, vbi γκ. cùm autem β, *mobile tardius*, tempore ζθ pertranſeat *lõgitudinem* γκ: velociùs *eam* conficit minori *tempore*. quapropter rurſus diuidetur tẽpus ζθ. hoc autem diuiſo, etiam magnitudo γκ diuidetur ſecundùm eandem rationem. quòd ſi magnitudo, etiam tempus. ac ſemper hoc erit, ſi ſumẽtes progrediamur à velociori ad tardius,

A & à tardiore ad velocius; atque eo quod demonſtratum erit, vtamur. nam velocius diuidit tẽpus: ac tardius longitudinem. ergo ſi ſemper cõuerſio *eſt* vera, conuertendo autem ſemper fit diuiſio: perſpicuum *eſt* omne tempus eſſe continuum. 18 Simul autem patet omnem magnitudinem eſſe continuam: quoniam iiſdem & æqualibus diuiſionibus tẽpus & magnitudo diuiduntur. 19 Præterea etiam ex ſermonibus qui vulgò haberi ſolent, perſpicuum *eſt*, ſi tempus ſit continuũ, etiam magnitudinem *eſſe continuam*: ſiquidem dimidio tẽpore pertranſit dimidium *ſpatij*, & omnino minori *tempore* minus *ſpatij*. eædem enim diuiſiones erunt temporis ac magnitudinis. 20 Et ſi

B alterutrum *eſt* infinitum, etiam alterum, *infinitum eſt*. & vt alterum, ita etiam alterum. velvti, ſi tempus ſit extremis infinitum, etiam longitudo extremis *infinita erit*. ſi verò *illud eſt* diuiſione *infinitum*: diuiſione *erit infinita* etiam magnitudo. ſin autem vtroque modo tempus, vtroque modo etiam magnitudo. 21 Ideóque Zenonis ratio falſum ſumit, non poſſe *aliquid* infinita pertranſire, ſeu tãgere infinita ſingillatim tempore finito. nam & longitudo, & tempus, & omnino continuum bifariàm dicitur infinitum: *nimirum* vel diuiſione, vel extremis. Quæ igitur ſecundùm quantitatem ſunt infinita, non poſſunt tangi tempore finito. quæ verò ſecundùm diuiſionem, poſſunt: quoniam & ipſum tempus ita *eſt* infinitum. quare *tempore*

C infinito, non finito, accidit vt *aliquid* pertranſeat infinita: ac tangat infinita infinitis, non finitis. 22 Ergo nec infinitum poteſt finito tempore pertranſiri, nec infinito finitũ: ſed ſi tempus infinitum ſit, etiam magnitudo erit infinita, & ſi magnitudo, etiam tempus. 23 Eſto namque finita magnitudo, vbi αβ: tempus infinitum, vbi γ. ſumitur igitur aliqua pars temporis finita, vbi γδ. hoc igitur *tempore* conficiet aliquam partem magnitudinis: ac pertranſeat *partem*, vbi βε. hæc verò aut metietur *magnitudinem* αβ, aut deficiet, aut ſuperabit: nihil enim refert. nam ſi ſemper æqualem magnitudinem *parti* βε, æquali tempore conficit; hæc autem metitur totam *magnitudinem*: vniuerſum tempus, quo pertranſiit, finitum erit: quandoquidem in

D *partes* æquales diuidetur, ſic vt & magnitudo. 24 Præterea ſi non omnem magnitudinẽ infinito tempore pertranſit, ſed aliquam tẽpore finito pertranſire poteſt, vt *partem* βε, hæc autem metitur totum: *cum* æqualem *partem*, æquali tempore pertranſit. quare tempus finitum erit. Quod autem non infinito tempore *mobile* pertranſeat *partem* βε, perſpicuum *erit*, ſi ſumptum fuerit ab altera parte finitum tempus. nam ſi minori *tempore* conficit partem, neceſſe *eſt* hoc eſſe finitum, *cùm* alter terminus adſit. 25 Eadem *eſt* demonſtratio, & ſi *ponatur* longitudo *eſſe* infinita; tempus verò, finitum. 26 Patet igitur ex iis quæ dicta ſunt, neque lineam, neque ſuperficiem, neque omni-

tempus igitur ſecabitur in duas partes. itaque quod A eſt indiuiduum, diuidetur: & quod partibus vacat, non pertranſit indiuiduo tempore, ſed longiori. Perſpicuum igitur *eſt*, nullum continuum partibus carere.

οὐκοῦν καὶ ὁ χρόνος τμηθήσεται δίχα. διαιρεθήσεται ἄρα τὸ ἄτμητον, καὶ τὸ ἀμερὲς οὐκ ἐν ἀτόμῳ δίεισιν, ἀλλ' ἐν πλείονι. φανερὸν οὖν, ὅτι οὐδέν ἐστι τῶν συνεχῶν ἀμερές.

Cap. II.

NEceſſe a. *eſt*, momentum, quod non per aliud, B ſed per ſe & primò dicitur, eſſe indiuiduum, ac tale *momentum* in omni tempore ineſſe, eſt enim extremum quiddam præteriti, citra quod nihil eſt futuri: & rurſus futuri, vltra quod nihil eſt præteriti: quod quidē diximus eſſe vtriuſque terminū. 2 Hoc autē ſi oſtenſum fuerit tale eſſe per ſe, atque idem: ſimul perſpicuū erit *eſſe* indiuiduum. 3 Neceſſe igitur *eſt* momentū quod eſt vtriuſque temporis extremū, eſſe idē. nam ſi *ſit* diuerſum, non poterit alterū alteri deinceps eſſe, propterea quòd non eſt continuum ex iis quæ partibus vacant. ſi verò vtrūque ſeorſum *eſt*, tempus erit interiectum: omne enim continuum *eſt* tale, vt ſit aliquod ſynonymū extremis interiectum. atqui ſi tempus *eſt*, quod eſt interiectum, diuiduum C erit: quia probatum eſt omne tempus *eſſe* diuiduum: quapropter momentum erit diuiduum. quòd ſi momentum ſit diuiduum, erit aliquid præteriti in futuro, & futuri in præterito. id enim quo diuidetur, præſens ac futurum tempus diſterminabit. 4 Item momentum non erit *terminus* per ſe, ſed per aliud. diuiſio namque non *eſt* eius quod eſt per ſe. 5 Ad hæc præſentis momenti aliquid erit præteritum: aliud, futurum: nec ſemper idem præteritum, aut futurū. ergo nec præſens momentum ſemper *eſt* idem: quia tempus multis modis diuidi poteſt. quocirca ſi hæc momento ineſſe nequeunt: neceſſe *eſt* idem eſſe in vtroque momentum. 6 At verò ſi idem *ſit*, patet etiam *eſſe* indiuiduum: quia ſi *ſit* diuiduum, rurſus eadem euenient quæ in priori *argumento dicta ſunt*. 7 D Eſſe igitur aliquid in tēpore indiuiduum, quod dicimus eſſe momentum, cōſtat ex iis quæ dicta ſunt. 8 Nihil autem in momēto moueri, ex his perſpicuum *erit*. quoniā ſi *id* ſit, poterit & celerius in eo moueri & tardius. eſto igitur momētū, in quo ν, & in eo moueatur, quod eſt celerius per *longitudinem* α β. quod igitur eſt tardius in eodem mouebitur per *longitudinem* minorem quā α β: velut, per α γ. quia verò quod eſt tardius in toto momento motum eſt per α γ: id quod eſt celerius, in minori quàm hoc *ſit* mouebitur. quapropter diuidetur momentum. atqui erat indiuiduum. non poteſt igitur moueri in momento. 9 Sed nec quieſcere. nam quieſcere dicebamus, quod na- E tura aptum eſt moueri, nec mouetur quando natura aptum eſt, & vbi, & quomodo. quare cùm in momento nihil ſit natura aptum moueri; conſtat non eſſe etiam *aptum* quieſcere. 10 Præterea ſi idem eſt momentum in vtroque tempore: poteſt autem *toto* altero moueri, altero toto quieſcere: quod autem toto tempore mouetur, in quauis huius *parte* mouebitur, in quo natura aptum eſt moueri: & quieſcens itidem quieſcet: *profectò* eueniet vt idem ſimul quieſcat & moueatur. idem enim *eſt* extremum vtriuſque temporis, *nimirum* momentum. 11 Præterea quieſcere dicimus, quod ſimiliter ſe habet & ipſum & partes *eius* tam nunc quàm priùs: ſed in momento non eſt priùs: quare nec quieſcere.

Ἀνάγκη δὲ καὶ τὸ νῦν τὸ μὴ καθ' ἕτερον, ἀλλὰ καθ' αὑτὸ καὶ πρώτως λεγόμενον, ἀδιαίρετον εἶναι, καὶ ἐν ἅπαντι τοιοῦτον χρόνῳ ἐνυπάρχειν. ἔστι γὰρ ἔσχατόν τι τοῦ γεγονότος, οὗ ἐπὶ τάδε οὐδέν ἐστι τοῦ μέλλοντος· καὶ πάλιν τοῦ μέλλοντος, οὗ ἐπὶ τάδε οὐδέν ἐστι τοῦ γεγονότος· ὃ δὴ ἔφαμεν ἀμφοῖν εἶναι πέρας. 2 Τοῦτο δὲ ἂν δειχθῇ ὅτι τοιοῦτόν ἐστι, καθ' αὑτὸ καὶ ταὐτό, ἅμα φανερὸν ἔσται καὶ ὅτι ἀδιαίρετον. 3 Ἀνάγκη δὴ τὸ αὐτὸ εἶναι τὸ νῦν τὸ ἔσχατον ἀμφοτέρων τῶν χρόνων· εἰ γὰρ ἕτερον, ἐφεξῆς μὲν οὐκ ἂν εἴη θάτερον θατέρῳ, διὰ τὸ μὴ εἶναι συνεχὲς ἐξ ἀμερῶν· εἰ δὲ χωρὶς ἑκάτερον, μεταξὺ ἔσται χρόνος· πᾶν γὰρ τὸ συνεχὲς τοιοῦτον, ὥστ' εἶναί τι συνώνυμον μεταξὺ τῶν περάτων. ἀλλὰ μὴν εἰ ὁ χρόνος τὸ μεταξύ, διαιρετὸς ἔσται. πᾶς γὰρ χρόνος δέδεικται ὅτι διαιρετός. ὥστε διαιρετὸν τὸ νῦν. εἰ δὲ διαιρετὸν τὸ νῦν, ἔσται τι τοῦ γεγονότος ἐν τῷ μέλλοντι, καὶ τοῦ μέλλοντος ἐν τῷ γεγονότι· καθ' ὃ γὰρ ἂν διαιρεθῇ, τοῦτο διοριεῖ τὸν παρήκοντα καὶ τὸν μέλλοντα χρόνον. 4 Ἅμα δὲ καὶ οὐκ ἂν καθ' αὑτὸ εἴη τὸ νῦν, ἀλλὰ καθ' ἕτερον· ἡ γὰρ διαίρεσις οὐ καθ' αὑτό. 5 Πρὸς δὲ τούτοις, τοῦ νῦν, τὸ μέν τι γεγονὸς ἔσται, τὸ δὲ μέλλον· καὶ οὐκ ἀεὶ τὸ αὐτὸ γεγονὸς ἢ μέλλον. οὐδὲ δὴ τὸ νῦν τὸ αὐτό· πολλαχῇ γὰρ διαιρετὸς ὁ χρόνος. ὥστ' εἰ ταῦτα ἀδύνατα ὑπάρχειν τῷ νῦν, ἀνάγκη τὸ αὐτὸ εἶναι τὸ ἐν ἑκατέρῳ νῦν. 6 Ἀλλὰ μὴν εἰ ταὐτό, φανερὸν ὅτι καὶ ἀδιαίρετον· εἰ γὰρ διαιρετόν, πάλιν τὰ αὐτὰ συμβήσεται ἃ καὶ ἐν τῷ πρότερον. 7 Ὅτι μὲν τοίνυν ἐστί τι ἐν τῷ χρόνῳ ἀδιαίρετον, ὃ φαμὲν εἶναι τὸ νῦν, δῆλον ἐκ τῶν εἰρημένων. 8 Ὅτι δ' οὐδὲν ἐν τῷ νῦν κινεῖται, ἐκ τῶνδε φανερόν. εἰ γάρ ἐστιν, ἐνδέχεται καὶ θᾶττον κινεῖσθαι ἐν αὐτῷ καὶ βραδύτερον. ἔστω δὴ τὸ νῦν, ἐφ' ᾧ ν. καὶ κεκινήσθω δ' ἐν αὐτῷ τὸ θᾶττον, τὴν α β. οὐκοῦν τὸ βραδύτερον ἐν τῷ αὐτῷ, ἐλάττω τῆς α β κινηθήσεται, οἷον τὴν α γ. ἐπεὶ δὲ τὸ βραδύτερον ἐν ὅλῳ τῷ νῦν κεκίνηται τὴν α γ, τὸ θᾶττον ἐν ἐλάττονι τούτου κινηθήσεται. ὥστε διαιρεθήσεται τὸ νῦν· ἀλλ' ἦν ἀδιαίρετον. οὐκ ἄρα ἔστι κινεῖσθαι ἐν τῷ νῦν. 9 Ἀλλὰ μὴν οὐδ' ἠρεμεῖν· ἠρεμεῖν γὰρ ἐλέγομεν, τὸ πεφυκὸς κινεῖσθαι μὴ κινούμενον ὅτε πέφυκε, καὶ οὗ, καὶ ὥς. ὥστ' ἐπεὶ ἐν τῷ νῦν οὐδὲν πέφυκε κινεῖσθαι, δῆλον ὅτι οὐδ' ἠρεμεῖν. 10 Ἔτι δ', εἰ τὸ αὐτὸ μέν ἐστι τὸ νῦν ἐν ἀμφοῖν τοῖν χρόνοιν, ἐνδέχεται δὲ, τὸν μὲν κινεῖσθαι, τὸν δὲ ἠρεμεῖν ὅλον· τὸ δ' ὅλον κινούμενον τὸν χρόνον ἐν ὁτῳοῦν κινηθήσεται τῶν τούτου, καθ' ὃ πέφυκε κινεῖσθαι, καὶ τὸ ἠρεμοῦν ὡσαύτως ἠρεμήσει, συμβήσεται τὸ αὐτὸ ἅμα ἠρεμεῖν καὶ κινεῖσθαι· τὸ γὰρ αὐτὸ ἔσχατον τῶν χρόνων ἀμφοτέρων, τὸ νῦν. 11 Ἔτι δ', ἠρεμεῖν μὲν λέγομεν τὸ ὁμοίως ἔχον καὶ αὐτό, καὶ τὰ μέρη, νῦν καὶ πρότερον· ἐν δὲ τῷ νῦν, οὐκ ἔστι τὸ πρότερον· ὥστε οὐδ' ἠρεμεῖν.

2. Ἀνάγκη ἄρα καὶ κινεῖσθαι, τὸ κινούμενον, ἐν χρόνῳ, καὶ ἠρεμεῖν τὸ ἠρεμοῦν. A

Κίνησις δ᾽ ἐστὶ διαιρετὴ διχῶς, ἕνα μὲν τρόπον, τῷ χρόνῳ· ἄλλον δέ, κατὰ τὰς τῶν μερῶν τοῦ κινουμένου κινήσεις. MOtus autem bifariàm eſt diuiduus: vno modo, ratione temporis: altero, ſecundùm motus partium eius quod mouetur. 2 Vtputa ſi α γ mouetur totum, etiam *pars* α β mouebitur, & *pars* β γ. Eſto igitur partis α β, motus δ ε: partis autem β γ, motus ε ζ. ergo neceſſe *eſt*, totum δ ζ eſſe motum ipſius α γ: mouebitur enim ſecundùm hunc *motum*: quandoquidem vtraque pars mouetur ſecundùm vtrumque: nihil autẽ mouetur alius *rei* motu. quapropter totus motus eſt totius magnitudinis motus. 3 Præterea ſi omnis motus *eſt* alicuius: totus autem motus δ ζ nec eſt alterutrius partis, (nam *vtriuſque* partis *eſt* vtraque *pars motus*) nec alius cuiuſpiam: (cuius enim totius *eſt* totus *motus*, etiam partes *ſunt* partium: partes autem *motus* δ ζ, ſunt *partium* α β, β γ, non aliorum: quia plurium non eſt vnus motus) profectò etiam totus motus erit magnitudinis α β γ. 4 Præterea ſi alius eſt motus totius: velut, in quo *eſt* θ ι, auferetur ab eo motus vtriuſque partis. hi verò *motus* æquales erunt *ipſis* δ ε, ε ζ: quandoquidem vnus motus *eſt* vnius. quocirca ſi totus *motus* θ ι diuidetur in partium motus, æqualis erit *motus* θ ι, *motui* δ ζ. Si quid autem reſtat: velut, κ ι, hic nullius erit motus. nam nec totius, nec partium, propterea quòd vnus eſt vnius, nec alius cuiuſpiam; quia continuus motus eſt aliquorum continuorum. Itidemque ſi ſuperat ſecundùm diuiſionem. Quare ſi hoc *eſt* impoſſibile, neceſſe *eſt* eundem eſſe & æqualem. 5 Hæc igitur diuiſio eſt ex partium motibus: ac neceſſe eſt eam eſſe cuiuſvis partes habentis. 6 Alia verò *ſumitur* ex tempore. cùm enim omnis motus *ſit* in tempore, omne autem tempus *ſit* diuiduum, & minori tempore motus *ſit* minor: neceſſe *eſt* omnem motum diuidi pro ratione temporis.

Cap. V.

A CVm autẽ quicquid mouetur, in aliquo moueatur & in aliquo tempore; & cuiuſcumque rei quæ mouetur, ſit motus: neceſſe *eſt* eaſdem eſſe diuiſiones & temporis, & motus, & ipſius moueri, & eius quod mouetur, *& eius* in quo *fit* motus: quamquam non ſimiliter *diuiſio eſt omnium eorũ* in quibus eſt motus; ſed quantitatis *eſt* per ſe: qualitatis verò, ex accidenti. 2 Sumatur enim tempus quo mouetur, vbi *a*: & motus, vbi *b*. ſi igitur totum motum toto tempore confecit: *certè* dimidia parte *temporis* minorem *motum conficiet*. & rurſus hoc *minore tempore* diuiſo, *conficiet motum* hoc minorem: atque ita ſemper. 3 Similiterque ſi motus *eſt* diuiduus, etiam tempus B *eſt* diuiduum. nam ſi totum *motum* toto *tempore conficit*, *etiam* dimidiam *partem motus* dimidia *parte temporis conficiet*: ac rurſus minorem *motum* minori *tempore*. 4 Eodem modo etiam ipſum moueri diuidetur. eſto namque moueri, vbi *γ*. ergo ſecundùm dimidiam motus partem erit minus toto: & rurſus ſecundùm dimidiam dimidiæ: atq; ita perpetuò. 5 Licet etiam expoſito ipſo moueri ſecundùm vtrunque motum, veluti ſecundùm *δγ*, & *γε*, dicere totum *moueri* fore ſecundùm totum *motum*. nam ſi aliud *ſit*, plura erunt moueri ſecundùm eũdem motum, ſicut oſtendimus etiam motum diuiduum eſſe in motus partium. ſum- C pto enim ipſo moueri ſecundùm vtrumque *motum*, certè totum erit continuum. 6 Itidem etiam probabitur longitudinẽ *eſſe* diuiduam. & omnino id omne in quo eſt mutatio, (niſi quòd nonnulla ex accidenti *diuidantur*) quia quod mutatur, eſt diuiduum. etenim ſi vnum diuiditur, omnia diuidentur. 7 Et quantum ad hoc vt finita ſint vel infinita, ſimiliter *ſe res* habet in omnibus. 8 Omnia verò diuidi, & eſſe infinita, maximè conſequens eſt ex eo quod mutatur. ſtatim enim ineſt ei quod mutatur, *eſſe* diuiduum, & infinitum. diuiduum igitur *eſſe*, probatum eſt anteà: infinitas verò in ſequentibus erit manifeſta.

Ἐπεὶ δὲ πᾶν τὸ κινούμενον ἔν τινι κινῆται, καὶ χρόνον τινά, καὶ παντὸς τοῦ κινουμένου ἐστὶ κίνησις, ἀνάγκη τὰς αὐτὰς εἶναι διαιρέσεις, τοῦ τε χρόνου καὶ τῆς κινήσεως, καὶ τοῦ κινεῖσθαι καὶ τοῦ κινουμένου, καὶ ἐν ᾧ ἡ κίνησις. πλὴν οὐ πάντων ὁμοίως, ἐν οἷς ἡ κίνησις, ἀλλὰ τοῦ μὲν ποσοῦ, καθ' αὑτὸ· τοῦ δὲ ποιοῦ, κατὰ συμβεβηκός. 2 Εἰλήφθω γὰρ ὁ χρόνος ἐν ᾧ κινεῖται ἐφ' ᾧ α, καὶ ἡ κίνησις ἐφ' ᾧ β. εἰ οὖν τὴν ὅλην ἐν τῷ παντὶ χρόνῳ κεκίνηται, ἐν τῷ ἡμίσει, ἐλάττω· καὶ πάλιν τούτου διαιρεθέντος, ἐλάττω ταύτης, καὶ ἀεὶ οὕτως. 3 Ὁμοίως δὲ καὶ εἰ ἡ κίνησις διαιρετή, καὶ ὁ χρόνος διαιρετός. εἰ γὰρ τὴν ὅλην ἐν τῷ παντί, τὴν ἡμίσειαν ἐν τῷ ἡμίσει, καὶ πάλιν τὴν ἐλάττονα ἐν τῷ ἐλάττονι. 4 Τὸν αὐτὸν δὲ τρόπον καὶ τὸ κινεῖσθαι διαιρεθήσεται. ἔστω γὰρ ἐφ' ᾧ γ, τὸ κινεῖσθαι. κατὰ δὴ τὴν ἡμίσειαν κίνησιν, ἔλαττον ἔσται τοῦ ὅλου· καὶ πάλιν κατὰ τὴν τῆς ἡμισείας ἡμίσειαν. καὶ ἀεὶ οὕτως. 5 Ἔστι δὲ καὶ ἐκτιθέμενον τὸ καθ' ἑκατέραν τὴν κίνησιν κινεῖσθαι, οἷον κατά τε τὴν δγ, καὶ τὴν γε λέγειν,* ὅτι τὸ ὅλον ἔσται κατὰ τὴν ὅλην. εἰ γὰρ ἄλλο, πλείω ἔσται κινεῖσθαι κατὰ τὴν αὐτὴν κίνησιν, ὥσπερ ἐδείξαμεν καὶ τὴν κίνησιν διαιρετὴν εἰς τὰς τῶν μορίων κινήσεις οὖσαν. ληφθέντος γὰρ τοῦ κινεῖσθαι καθ' ἑκατέραν, συνεχὲς ἔσται τὸ ὅλον. 6 Ὡσαύτως δὲ δειχθήσεται καὶ τὸ μῆκος διαιρετόν, καὶ ὅλως πᾶν ἐν ᾧ ἐστιν ἡ μεταβολή· πλὴν ἔνια κατὰ συμβεβηκός, ὅτι τὸ μεταβάλλον ἐστὶ διαιρετόν· ἑνὸς γὰρ διαιρουμένου, πάντα διαιρεθήσεται. 7 Καὶ ἐπὶ τοῦ πεπερασμένα εἶναι ἢ ἄπειρα, ὁμοίως ἕξει κατὰ πάντων. 8 * Ἠκολούθηκε δὲ μάλιστα τὸ διαιρεῖσθαι πάντα, καὶ ἄπειρα εἶναι, ἀπὸ τοῦ μεταβάλλοντος· εὐθὺς γὰρ ὑπάρχει τῷ μεταβάλλοντι τὸ διαιρετὸν καὶ τὸ ἄπειρον. τὸ μὲν οὖν διαιρετὸν δέδεικται πρότερον, τὸ δ' ἄπειρον ἐν τοῖς ἑπομένοις ἔσται δῆλον.

Quicquid eſt mutatum, id cùm primùm mutatum eſt, in eo eſſe in quod eſt mutatum.

Cap. VI.

D QVia verò quicquid mutatur, ex aliquo in aliquod mutatur: neceſſe *eſt*, id quod eſt mutatum, cùm primum eſt mutatum, eſſe *in eo* in quod eſt mutatum. quod enim mutatur, exit ex eo ex quo mutatur, ſeu ipſum relinquit: & vel idem eſt mutari ac relinquere; vel ipſi mutari conſequens eſt relinquere; & ipſi mutatum eſſe, *conſequens eſt* reliquiſſe: quia ſimiliter vtrumque affectum eſt ad vtrumque. Quoniam igitur mutationum vna *eſt*, quæ in contradictione *cernitur*, quando mutatum eſt ex non ente in ens, reliquit non ens. erit igitur in ente: quia rem omnem neceſſe eſt aut eſſe aut non eſſe. Perſpicuũ *eſt* igitur, in ea mutatione, quæ in contradictione *ſpectatur*, id quod eſt mutatum, eſſe in eo, in quod eſt mutatum. quod ſi *ita* eſt in hac *mutatione*, *certè* etiam in aliis. ſimilis enim ratio eſt vnius & aliarum.

Ἐπεὶ δὲ πᾶν τὸ μεταβάλλον, ἔκ τινος εἴς τι μεταβάλλει, ἀνάγκη τὸ μεταβεβληκός, ὅτε πρῶτον μεταβέβληκεν, εἶναι ἐν ᾧ μεταβέβληκε. τὸ γὰρ μεταβάλλον, ἐξ οὗ μεταβάλλει, ἐξίσταται ἢ ἀπολείπει αὐτό· καὶ ἤτοι ταὐτόν ἐστι τὸ μεταβάλλειν καὶ τὸ ἀπολείπειν, ἢ ἀκολουθεῖ τῷ μεταβάλλειν τὸ ἀπολείπειν· τῷ δὲ μεταβεβληκέναι, τὸ ἀπολελοιπέναι· ὁμοίως γὰρ ἑκάτερον ἔχει πρὸς ἑκάτερον. ἐπεὶ οὖν μία τῶν μεταβολῶν ἡ κατ' ἀντίφασιν, ὅτε μεταβέβληκεν ἐκ τοῦ μὴ ὄντος εἰς τὸ ὄν, ἀπολέλοιπε τὸ μὴ ὄν. ἔσται ἄρα ἐν τῷ ὄντι· πᾶν γὰρ ἀνάγκη ἢ εἶναι, ἢ μὴ εἶναι. φανερὸν οὖν ὅτι ἐν τῇ κατ' ἀντίφασιν μεταβολῇ, τὸ μεταβεβληκὸς ἔσται ἐν ᾧ μεταβέβληκεν. εἰ δ' ἐν ταύτῃ, καὶ ἐν ταῖς ἄλλαις· ὁμοίως γὰρ ἐπὶ μιᾶς καὶ τῶν ἄλλων.

2 Ἐπεὶ δὲ καὶ καθ' ἑκάστην λαμβάνουσι φανερόν, εἰ γὰρ ἀνάγκη τὸ μεταβεβληκὸς εἶναί που, ἐξ οὗ μεταβέβληκεν, ἢ ἐν τινι· ἐπεὶ γὰρ ἐξ οὗ μεταβέβληκεν, ἀπολέλοιπεν, ἀνάγκη δὲ εἶναί που, ἢ ἐν τούτῳ, ἢ ἐν ἄλλῳ ἔσται. εἰ μὲν οὖν ἐν ἄλλῳ, οἷον ἐν τῷ γ, τὸ εἰς τὸ β μεταβεβληκὸς, πάλιν ἐκ τοῦ γ μεταβάλλει εἰς τὸ β· οὐ γὰρ ἦν ἐχόμενον τοῦ β· ἡ γὰρ μεταβολὴ, συνεχής. ὥστε τὸ μεταβεβληκὸς ὅτε μεταβέβληκε, μεταβάλλει εἰς ὃ μεταβέβληκε· τοῦτο δ' ἀδύνατον· ἀνάγκη ἄρα τὸ μεταβεβληκὸς εἶναι ἐν τούτῳ, εἰς ὃ μεταβέβληκε. 3 Φανερὸν οὖν ὅτι καὶ τὸ γεγονὸς, ὅτε γέγονεν, ἔσται, καὶ τὸ ἐφθαρμένον οὐκ ἔσται· καθόλου τε γὰρ εἴρηται περὶ πάσης μεταβολῆς, καὶ μάλιστα δῆλον ἐν τῇ κατὰ ἀντίφασιν. 4 Ὅτι μὲν τοίνυν τὸ μεταβεβληκὸς, ὅτε μεταβέβληκε πρῶτον, ἐν ἐκείνῳ ἐστὶ, δῆλον. A

2 Præterea etiam ſingillatim ſumentibus perſpicuum *erit*: ſiquidem neceſſe *eſt*, id quod eſt mutatum, eſſe alicubi ſiue in aliquo. nam quia deſeruit id ex quo eſt mutatum, neceſſe autem *eſt*, vt ſit alicubi: *certè* aut in hoc, aut in alio erit. Si igitur in alio, puta, in γ, *id ſit* quod eſt mutatum in β, ruſus ex γ mutatur in β: non cohærebat enim ipſi β: quia mutatio *eſt* continua. quapropter quod mutatum eſt, quando mutatum eſt, mutatur in id in quod eſt mutatum: quod eſt impoſſibile. Neceſſe igitur *eſt*, vt quod eſt mutatum, ſit in hoc in quod eſt mutatum. 3 Perſpicuum igitur *eſt*, etiam id quod eſt factum, tunc eſſe, cùm eſt factum: & quod interiit, *tunc* non eſſe, *cùm interiit*: quoniam vniuerſaliter dictum eſt de omni mutatione: & maximè *eſt* in ea manifeſtum, quæ in contradictione *conſiſtit*. 4 Ergo quod eſt mutatum, cùm primùm eſt mutatum, in illo eſſe conſtat.

Id in quo primo mutatum eſt, eſſe indiuiduum.

IAm verò id, in quo primum mutatum eſt, bifariam dicitur: alterum, in quo primo perfecta eſt mutatio: tunc enim verè dicitur mutatum eſſe: alterum autem, in quo primo cœpit mutari. Quod igitur ſecundùm finem mutationis primum dicitur, ineſt, atque eſt: poteſt enim perfici mutatio: & eſt finis mutationis, quem probatum eſt eſſe indiuiduum, propterea quòd eſt terminus. 3 Quod verò ratione principij dicitur, omnino non eſt: quia non eſt principium mutationis, nec in quo primo temporis mutatum ſit. eſto namque primum, vbi α δ. hoc igitur indiuiduum non eſt: quoniam eueniet vt momenta ſint cohærentia. Præterea ſi in toto α γ tempore quieſcit: (ponatur enim quieſcere) etiam in α quieſcit. quapropter ſi α δ eſt indiuiduum, ſimul quieſcet & mutatum erit. etenim in α quieſcit: in δ autem mutatum eſt. Quia verò partibus non caret: neceſſe *eſt* vt ſit diuiduum, & in quavis eius *parte* mutatum fuerit. diuiſo enim ipſo α δ, ſiquidem in neutra *parte* mutatum fuerit, *certè* nec in toto: ſi verò in vtriſque mutatur, etiam in toto. at ſi in altero mutatum eſt, non in toto primo *eſt mutatum*.

quare neceſſe *eſt* in quavis *parte* mutatum fuiſſe, perſpicuum igitur *eſt*, non eſſe in quo primo eſt mutatum: quoniam diuiſiones *ſunt* infinitæ. 4 Neque igitur eius quod eſt mutatum, eſt aliquid primum quod mutatum ſit. eſto namque δζ, primum quod ſit mutatum δε: quicquid enim mutatur, probatum eſt diuiduum eſſe. tempus verò, quo δζ eſt mutatum, ſit vbi θι. Ergo ſi δζ eſt toto *tempore* mutatum: quod dimidia *parte temporis* mutatum *erit*, minus erit, & prius ipſo δζ: rurſúſque hoc aliud *prius*: illo aliud: & ita perpetuò. quocirca eius quod mutatur, nihil erit primum quod mutatum ſit. 5 Ergo nec eius quod mutatur, nec temporis quo mutatur, eſſe quicquam primum, perſpicuum *eſt* ex iis quæ dicta ſunt. 6 Id autem quod mutatur, vel ſecundùm quod mutatur, non ampliùs ſimiliter *ſe* habebit. tria namque ſunt, quæ in mutatione ſpectantur, quod mutatur, & in quo, & ſecundùm quod mutatur: vt homo, ac tempus, & album. homo igitur ac tempus diuidua *ſunt*. albi autem *eſt* alia ratio. niſi quòd ex accidenti *ſunt* omnia diuidua: quia cui qualitas, aut albor accidit, illud eſt diuiduum. nam quæcumque per ſe dicuntur diuidua, non ex accidenti, nec in his primum erit: vt in magnitudinibus: eſto enim magnitudo, vbi αβ: & moueatur ex β in γ primum. ergo, ſi βγ erit indiuiduum: id quod partibus vacat, ei quod partibus vacat, cohærebit. ſi verò diuiduum: erit aliquid prius quam γ, in quod eſt mutatum, & rurſus illo aliud, & ita ſemper, proptereà quòd numquam deficit diuiſio. quare non erit primum, in quo mutatum ſit. ſimiliter etiam *ſe res habet* in quantitatis mutatione: etenim hæc quoque in continuo eſt. Perſpicuum *eſt* igitur, in eo ſolo motu, qui in qualitate *ſpectatur*, eſſe poſſe indiuiduum per ſe.

Cap. IX.

QVoniam autem quicquid mutatur, in tempore mutatur; dicitur autem in tempore mutari, & vt in primo, & vt ſecundùm alterum; vt in anno, quia in die mutatur: ſanè, in quo primo tempore mutatur id quod mutatur, neceſſe *eſt* vt in quavis eius temporis parte mutetur. 2 Manifeſtum igitur *hoc* eſt ex definitione; primum enim ita appellabamus. 3 Sed ex his quoque perſpicuum *fiet*. ſit enim in quo primo mouetur id quod mouetur, vbi χρ: & diuidatur in κ: omne enim tempus *eſt* diuiduum. ergo in χκ tempore aut mouetur, aut non mouetur. itidémque rurſus in κρ. ſi igitur in neutro mouetur, quieſcet vtique in toto: moueri enim, quod in nulla huius parte mouetur, impoſſibile *eſt*. quòd ſi in altero ſolo mouetur, non in primo χρ mouebitur: quia motus *eſt* ſecundùm aliud. neceſſe igitur *eſt* in quavis parte, τοῦ χρ moueri.

D ἘΠεὶ δὲ τὸ μεταβάλλον ἅπαν ἐν χρόνῳ μεταβάλλει, λέγεται δ' ἐν χρόνῳ μεταβάλλειν, καὶ ὡς ἐν πρώτῳ, καὶ ὡς καθ' ἕτερον· οἷον ἐν τῷ ἐνιαυτῷ, ὅτι ἐν τῇ ἡμέρᾳ μεταβάλλει· ἐν ᾧ πρώτῳ χρόνῳ μεταβάλλει τὸ μεταβάλλον, ἐν ὁτῳοῦν ἀνάγκη τούτου μεταβάλλειν. δῆλον μὲν οὖν ἐκ τοῦ ὁρισμοῦ· τὸ γὰρ πρῶτον οὕτως ἐλέγομεν. ἀλλὰ δὴ καὶ ἐκ τῶνδε φανερόν. ἔστω γὰρ ἐν ᾧ πρώτῳ κινεῖται τὸ κινούμενον, ἐφ' ᾧ χρ, καὶ διῃρήσθω κατὰ τὸ κ· πᾶς γὰρ χρόνος διαιρετός. ἐν δὴ τῷ χκ χρόνῳ, ἤτοι κινεῖται, ἢ οὐ κινεῖται. καὶ πάλιν ἐν τῷ κρ, ὡσαύτως. εἰ μὲν οὖν ἐν μηδετέρῳ κινεῖται, ἠρεμοίη ἂν ἐν τῷ παντί· κινεῖσθαι γὰρ ἐν μηδενὶ τῶν τούτου κινούμενον, ἀδύνατον. εἰ δ' ἐν θατέρῳ μόνῳ κινεῖται, οὐκ ἂν ἐν πρώτῳ κινοῖτο τῷ χρ· καθ' ἕτερον γὰρ ἡ κίνησις. ἀνάγκη ἄρα ἐν ὁτῳοῦν τοῦ χρ κεκινῆσθαι.

Quicquid mutatur, antea mutatum eſſe: & quicquid mutatum eſt, antea mutari.

A ſi in χ ρ tempore primo motum eſt per magnitudinē κ λ, in dimidia parte tēporis id quod æquè celeriter mouetur & ſimul moueri incipit, per dimidiam partem magnitudinis motum erit. quod ſi æquè velox hoc tempore per aliquam partem eſt motum: neceſſe eſt etiam alterum per eandem magnitudinem eſſe motum. quare motum erit, quod mouetur. 2 Præterea ſi in toto tempore χ ρ motum eſſe dicimus, vel omnino fuiſſe in quovis tempore, eo quòd ſumitur extremum ipſius momentum: hoc enim eſt, quod terminat: & quod momentis eſt interiectum, eſt tēpus: certè etiam in aliis dici poteſt motum eſſe. Atqui diuiſio eſt dimidij extremum. quare etiam in dimidio motum B erit. & omnino in quavis parte: ſemper enim vna cum ſectione eſt tempus terminatum à momentis. ſi igitur omne tempus eſt diuiduum; & quod momentis eſt interiectum, eſt tempus: quicquid mutatur, infinities erit mutatum. 3 Præterea ſi id quod continenter mutatur, & neque interiit, neque ceſſauit à mutatione, vel mutari vel eſſe mutatum in quovis neceſſe eſt, in momento autem non poteſt mutari: neceſſe eſt mutatum eſſe in ſingulis momentis. quare ſi momenta ſunt infinita: quicquid mutatur, erit infinities mutatum. 4 Non ſolùm autem neceſſe eſt vt quod mutatur, mutatum ſit: ſed etiam eſt neceſſe vt quod mutatum eſt, antea mutetur. quicquid enim ex aliquo in aliquod eſt mutatum, in tempore eſt C mutatum. eſto namque in momento mutatum ex α in β. ergo in ipſo momento, in quo eſt in α, non eſt mutatū: alioqui ſimul eſſet in α & in β. quod enim mutatum eſt, quando mutatum eſt, non eſſe in hoc, probatum antea fuit. quod ſi eſt in alio, tempus eſt interiectum: quia momenta non cohærent. Quoniam igitur in tempore eſt mutatum, omne autem tempus eſt diuiduum: certè in dimidio aliud erit mutatum: & rurſus in illius dimidio aliud: & ita ſemper. quare priùs mutabitur. 5 Præterea quòd continua eſt magnitudo, in qua mutatur id quod mutatur. ſit enim aliquid mutatum ex γ in δ. ergo ſi γ δ ſit indiuiduum: ea quæ partibus vacant, inter ſe cohærebunt. D quia verò hoc eſt impoſſibile; neceſſe eſt, id quod eſt interiectum, eſſe magnitudinem, & in infinitas partes poſſe diuidi. quare in illas antea mutatur. 6 Neceſſe eſt igitur, vt quicquid mutatum eſt, antea mutetur. eſt enim eadem demonſtratio etiam in non continuis: vt in contrariis, & in contradictione. ſumemus enim tempus, quo mutatum eſt: & rurſus eadem dicemus. 7 Quare neceſſe eſt id quod eſt mutatum, mutari, & quod mutatur, mutatum eſſe: & prius eſt mutatum eſſe, quàm mutari: item prius eſt mutari, quàm mutatum eſſe: nec vnquam primum ſumitur. 8 Huius cauſa eſt: quòd partibus vacans partibus vacanti non cohæret: quippe cùm diuiſio fiat in infinitum, quemadmodum in literis quæ augentur, & quibus detrahitur. E 9 Perſpicuum igitur eſt, neceſſe eſſe, vt quod factum eſt, antea fiat: & quod fit, factum ſit, quæcunque ſcilicet ſunt diuidua & continua: non tamen ſemper quod fit, ſed interdū aliud, vt illius aliquid, puta domus fundamentum. Similiter etiam ſe res habet in eo quod interit, & eo quod interiit. cùm enim id quod fit, & quod interit, ſit cōtinuum: ſtatim ineſt ei quædam infinitas: nec poteſt aliquid fieri, quod non ſit factum: nec eſſe factum, quod non fiat. Similiter ſe res habet in ipſo interire, & ipſo interiiſſe. nam ſemper interiiſſe eſt priùs quàm interire, & interire priùs quàm interiiſſe. Patet igi-

tur neceſſe *eſſe*, vt quod factum eſt, anteà fiat: & quod fit, factum ſit. omnis enim magnitudo, & omne tempus, ſemper diuidua *ſunt*. quapropter in quo ſunt, non poſſunt in eo eſſe tamquam primo.

D Quoniam autẽ id omne aut mouetur aut quieſcit, quod natura aptum eſt, quando natura eſt aptum, & vbi, & quomodo: *idcirco* neceſſe *eſt*, id quod ſiſtitur, quando ſiſtitur, moueri. niſi enim moueatur, quieſcet. ſed non poteſt tendere ad quietem quod quieſcit. 2 Hoc autem demonſtrato, perſpicuum quoque *eſt* neceſſe eſſe, vt in tempore ſiſtatur. quod enim mouetur, in tempore mouetur: quod autem ſiſtitur, probatum eſt moueri: quare neceſſe *eſt* in tempore ſiſti. 3 Præterea ſi celerius & tardius, in tempore dicimus: ſiſti autem eſt celerius & tardius. 4 In quo autem tempore primo ſiſtitur id quod ſiſtitur, neceſſe *eſt* vt in quavis huius temporis *parte* E ſiſtatur: diuiſo enim tempore, ſi in neutra parte ſiſtitur, nec in toto *ſiſtetur*. quare non ſiſteretur, quod ſiſtitur. ſi verò in altera, non in primo toto ſiſteretur: ſecũdùm alteram enim *partem* in hoc ſiſtitur, quemadmodum antea quoque dictũ fuit, de eo quod mouetur. 5 Sicut autem non eſt in quo primo mouetur, id quod mouetur: ita etiam non *eſt* in quo primo ſiſtatur id quod ſiſtitur: quia neque ipſius moueri, neque ipſius ſiſti, eſt aliquid primum. eſto namque, in quo primo ſiſtitur, vbi α β. hoc igitur non poteſt vacare partibus: quia motus non eſt in eo quod partibus vacat, propterea quòd per aliquid ipſius motum eſt: quod autem ſiſtitur, moueri probatum fuit.

atqui ſi diuiduũ eſt, in quavis eius parte ſiſtitur: hoc A enim antea probatum fuit, in quo primo ſiſtitur, in quavis eius *parte* ſiſti. quoniam igitur tempus eſt, in quo primo ſiſtitur, non indiuiduum, omne autem tempus in infinita ſecari poteſt: nõn eſt, in quo primo ſiſtitur. 6 Nec igitur eſt, quando primùm quieuerit id quod quieſcit: quoniam in eo quod partibus vacat, non quieuit, propterea quòd non eſt motus in indiuiduo: in quo autem *eſt* quieſcere, *in eo* etiam *eſt* moueri: tunc enim dicimus quieſcere, quando & in quo natura aptum eſt moueri, non mouetur id quod natura moueri aptum eſt. Præterea tunc quoque dicimus quieſcere, cùm ſimiliter *ſe* habet nunc atque B priùs, tamquam non vno aliquo iudicantes, ſed minimùm duobus. quapropter id in quo quieſcit, partibus non carebit. Quòd ſi in partes diuidi poteſt, vtique erit tempus, & in quavis ipſius parte quieſcet: eodem namque modo probabitur, quo etiam in ſuperioribus. quocirca nihil erit primum. 7 Huius verò cauſa *eſt*: quia res omnis quieſcit & mouetur in tempore: non eſt autem primum tempus, nec *prima* magnitudo, nec omnino vllum cõtinuum, quoniam omne *continuum* ſecari poteſt in infinitum.

Cap. XIII.

CVm autem quicquid mouetur, in tempore mo- C ueatur, & ex aliquo in aliquid mutetur: impoſſibile *eſt*, vt id quod mouetur, quo tempore per ſe mouetur, nõ quia in aliqua eius *temporis parte* moueatur, tunc ſit in aliquo primo. 2 Hoc enim eſt quieſcere, aliquo tempore in eodem eſſe tam ipſam rem, quàm ſingulas eius partes. ita namque dicimus quieſcere, quando in alio atque alio momento verè dicitur in eodem eſſe tam rem ipſam quàm eius partes. ſi verò hoc eſt quieſcere; id quod mutatur, non poteſt in tempore primo totũ eſſe in aliquo. nam omne tempus eſt diuiduum. quare in alia atque alia eius parte verè dicetur in eodem eſſe & rem ipſam & eius par- D tes. 3 Niſi enim ita ſit, ſed in vno tantùm momento: *certè* non erit vllo tempore in aliquo, ſed in termino temporis. 4 Iam verò in momento ſemper quidem in aliquo manet, non tamen quieſcit: quia nec moueri, nec quieſcere eſt in momento: ſed non moueri quidem in momento, verum eſt, & eſſe in aliquo: in tempore autem non poteſt eſſe vt quieſcens: quoniam eueniret, vt id quod fertur, quieſcat.

Εἰ δὲ τοῦτ᾽ ἐστὶ τὸ ἠρεμεῖν, οὐκ ἐνδέχεται τὸ μεταβάλλον κατά τι εἶναι ὅλον, κατὰ τὸν πρῶτον χρόνον· ὁ γὰρ χρόνος, διαιρετὸς D ἅπας. ὥστε ἐν ἄλλῳ καὶ ἄλλῳ αὐτοῦ μέρει ἀληθὲς ἔσται εἰπεῖν, ὅτι ἐν τῷ αὐτῷ ἐστὶ καὶ αὐτὸ, καὶ τὰ μέρη. 3 Εἰ γὰρ μὴ οὕτως, ἀλλ᾽ ἐν ἑνὶ μόνῳ τῷ νῦν, οὐκ ἔσται χρόνον οὐδένα κατά τι, ἀλλὰ κατὰ τὸ πέρας τοῦ χρόνου. ἐν δὲ τῷ νῦν, ἔστι μὲν ἀεὶ κατά τι μένον, οὐ μέντοι ἠρεμεῖ· οὔτε γὰρ κινεῖσθαι, οὔτε ἠρεμεῖν ἐστὶν ἐν τῷ νῦν, ἀλλὰ μὴ κινεῖσθαι μὲν ἀληθὲς ἐν τῷ νῦν, καὶ εἶναι κατά τι. ἐν χρόνῳ δ᾽ οὐκ ἐνδέχεται εἶναι, κατὰ τὸ ἠρεμοῦν· συμβαίνει γὰρ τὸ φερόμενον ἠρεμεῖν.

A probat nõ moueri, quoniam oportet, id quod fertur, prius peruenire ad dimidium, quàm ad finem, quam rationem in ſuperioribus diſputationibus diuiſimus. 4 Secunda eſt, quæ vocatur Achilles. eſt autem hæc: quia tardius numquam comprehendetur curſu à velociſſimo. nam prius neceſſe *eſt* vt id quod perſequitur, eò perueniat, vnde id, quod fugit, diſceſſit: quapropter neceſſe *eſt*, vt ſemper quod eſt tardius, aliquantum progrediatur. 5 Sed hæc ratio eadem eſt, atque ea quæ in duas partes ſecat: differt tamen, quatenus aſſumptam magnitudinem non bifariam diuidit. ergo non comprehendi quod eſt tardius, ratione concluditur: ſed ob idem efficitur, atque in ſe-
B ctione in duas partes: in vtriſque enim euenit, vt non perueniatur ad finem, diuiſa aliquo modo magnitudine. ſed in hac *ratione* adiicitur tragicè ne quidem velociſſimè perſequendo *aſſequi* quod tardius eſt. 6 Quare neceſſe *eſt* ſolutionem quoque eandem eſſe. Quod autem exiſtimat, id, quod progreditur, non comprehendi; falſum *eſt*. quando enim progreditur, non comprehenditur: verumtamen comprehenditur, ſi quidem concedet pertranſiri *ſpatium* finitum. 7 Hæ igitur *ſunt* duæ rationes. 8 Tertia verò *eſt*, quæ nunc dicta fuit; quia ſagitta, quæ fertur, ſtat. *hoc* autem ex eo colligitur, quod ſumit tempus conſtare ex momentis. nam hoc non conceſſo, ſyllogiſmus non erit. 9 Quarta ratio *eſt* de æqualibus *molibus*, quæ in
C ſtadio mouentur ex contrario iuxta *moles* æquales, aliæ quidem à fine ſtadij, aliæ verò à medio, celeritate æquali. in quo euenire putat, vt tempus dimidium ſit æquale duplo. 10 Sed eſt rationis fallacia in eo *poſita*, quòd ſibi concedi poſtulat alterum iuxta id quod mouetur, alterum iuxta quieſcens, æquali celeritate moueri æquali tempore per æqualem magnitudinem. hoc autẽ eſt falſum. vt puta ſtent æquales moles, in quibus *ſunt* α α α α: *moles* autem, in quibus *ſunt* β β β β, incipiant *moueri* à medio ipſorum α, cùm his ſint æquales numero & magnitudine: *moles* verò, in quibus γ γ γ γ, incipiant moueri ab extremo, cùm his ſint æquales numero & magnitudine,
D eadémque celeritate moueantur atque ipſa β. accidit ergo, vt primum β & primum γ ſimul ſint in extremo (α,) cùm iuxta ſe moueantur. euenit igitur, vt γ pertranſierint omnia α: ſed β *pertranſierint* dimidiam partem: adeò vt etiam tempus dimidium ſit: vtrumque enim iuxta ſingula eſt æquale. ſimul autem accidit, vt β pertranſierint omnia γ (ſimul enim primum γ & primum β ſunt in extremis contrariis) cùm æquale tempus conſumatur iuxta ſingula β, quantum *conſumatur* iuxta ipſa α, vt *Zeno* ait, quoniam ambo æquali tempore mouentur iuxta ipſa α. 12 Ratio igitur hæc eſt: euenit autem propter falſitatem, quæ dicta eſt. 13 Nec itaque ſecundùm mutationem quæ in contradi-
E ctione *ſpectatur*, vllum impoſſibile nobis eueniet: velut, ſi ex non albo in album mutatur, & in neutro eſt, neque album igitur fore neque non album. non enim ſi totum non eſt in vtrovis, non dicetur album, vel non album: quandoquidem album dicimus, aut non album, non quia totum ſit tale, ſed quia pleræque, aut præcipuæ partes. nec idem eſt, non eſſe in hoc, & totum non eſſe in hoc. Similiter *res* habebit etiam in ente & non ente, & cæteris quæ in contradictione *ſpectantur*: non enim neceſſariò *erit* totum in oppoſitorum altero, ſed ſemper in neutro. 14 Rurſus in circulo, & in globo, & omnino in iis quæ mouentur in ſe ipſis,

Id quod partibus vacat, moueri non poſſe.

Cap. XV.

His demonſtratis, dicimus, id quod partibus vacat, non poſſe moueri, niſi ex accidenti: veluti moto corpore, vel magnitudine in quo ineſt: quẽadmodum ſi id quod *eſt* in nauigio, moueatur nauigij latione, aut pars moueatur totius motu. Partibus autem vacare dico, quod eſt ſecundùm quantitatem indiuiduum. 3 Etenim partium motus diuerſi ſunt ſecundùm ipſas partes, & ſecundùm totius motionem. quod diſcrimen etiam in globo maximè videre aliquis poteſt: quia non eadem celeritas erit *partium* quæ ſunt ad cẽtrum, & externarum, & totius *globi*, tãquam non vnus ſit motus. 4 Quemadmodum igitur diximus, ita poteſt moueri quod partib. vacat, vt is qui in nauigio ſedet, nauigio currente mouetur: per ſe autem *moueri* non poteſt. mutetur enim ex α β in β γ: ſiue ex magnitudine in magnitudinem, ſiue ex forma in formam, ſiue ſecundùm contradictionem. ſit autem tempus, in quo primo mutatur, vbi δ. ergo neceſſe *eſt*, quo tempore illud mutatur, aut eſſe in α β, aut in β γ, aut partem eius in hoc, partem in altero: quicquid enim mutatur, ita *ſe* habebat. in vtroque igitur non erit aliquid ipſius: quia partibus conſtaret. ſed nec erit in β γ: quia mutatum erit: ſupponitur autem mutari. relinquitur ergo, vt id ſit in α β, quo tempore mutatur. quieſcet igitur. nam in eodem eſſe *per* aliquod tempus, quieſcere erat. quocirca quod caret partibus, non poteſt moueri, nec omnino mutari. 5 Vno enim modo ſic eſſe poteſt eius motio, ſi tempus conſtet ex momentis: ſemper enim in momento *res* mota eſt & mutata: adeò vt nunquam moueatur, ſed ſemper mota ſit. Hoc autem eſſe impoſſibile probatum antea fuit: quia nec tempus ex momentis *conſtat*, nec linea ex punctis, nec motus ex terminis, qui vocantur κινήματα. nihil enim aliud facit, qui hoc dicit, quàm motum conſtare ex iis quæ partibus carent: perinde ac ſi tempus *conſtitueret* ex momentis, aut magnitudinem ex punctis. 6 Præterea ex his quoque perſpicuum *eſt*, nec punctum nec vllum aliud indiuiduum poſſe moueri. quicquid enim mouetur, non poteſt priùs trãſire maius ſe ipſo, quàm tranſeat vel æquale, vel minus. quod ſi *eſt*, apparet etiam punctum primò tranſiturum aut minus aut æquale. quia verò *eſt* indiuiduum, non poteſt priùs tranſire minus: *tranſibit* igitur *lineam* ſibi æqualem. quapropter linea conſtabit ex punctis: quia punctum ſemper æqualem *ſibi* tranſeundo metietur totam lineam. quod ſi *eſt* impoſſibile, etiam moueri quod eſt indiuiduum, *eſt* impoſſibile. 7 Præterea ſi omnis res in tempore mouetur, in momẽto autem nihil *mouetur*,

Ἀποδεδειγμένων δὲ τούτων, λέγομεν, ὅτι τὸ ἀμερὲς οὐκ ἐνδέχεται κινεῖσθαι, πλὴν κατὰ συμβεβηκός· οἷον κινουμένου τοῦ σώματος, ἢ τοῦ μεγέθους, τῷ ἐνυπάρχειν, καθάπερ ἂν εἰ τὸ ἐν τῷ πλοίῳ κινοῖτο ὑπὸ τῆς τοῦ πλοίου φορᾶς, ἢ τὸ μέρος τῇ τοῦ ὅλου κινήσει. 2 Ἀμερὲς δὲ λέγω, τὸ κατὰ ποσὸν ἀδιαίρετον. 3 Καὶ γὰρ αἱ τῶν μερῶν κινήσεις ἕτεραί εἰσι κατ' αὐτά τε τὰ μέρη, καὶ κατὰ τὴν τοῦ ὅλου κίνησιν. ἴδοι δ' ἄν τις καὶ ἐπὶ τῆς σφαίρας μάλιστα τὴν διαφοράν· οὐ γὰρ ταὐτὸ τάχος ἔσται τῶν τε πρὸς τῷ κέντρῳ, καὶ τῶν ἐκτός, καὶ τῆς ὅλης, ὡς οὐ μιᾶς οὔσης κινήσεως. 4 Καθάπερ οὖν εἴπομεν, οὕτω μὲν ἐνδέχεται κινεῖσθαι τὸ ἀμερές, ὡς ὁ ἐν τῷ πλοίῳ καθήμενος τοῦ πλοίου θέοντος, καθ' αὑτὸ δ' οὐκ ἐνδέχεται. μεταβαλλέτω γὰρ ἐκ τοῦ α β, εἰς τὸ β γ, εἴτ' ἐκ μεγέθους εἰς μέγεθος, εἴτ' ἐξ εἴδους εἰς εἶδος, εἴτε κατ' ἀντίφασιν. ὁ δὲ χρόνος ἔστω ἐν ᾧ πρώτῳ μεταβάλλει, ἐφ' οὗ δ. οὐκοῦν ἀνάγκη αὐτὸ καθ' ὃν μεταβάλλει χρόνον, ἢ ἐν τῷ α β εἶναι, ἢ ἐν τῷ β γ, ἢ τὸ μὲν αὐτοῦ ἐν τούτῳ, τὸ δέ τι ἐν θατέρῳ· πᾶν γὰρ τὸ μεταβάλλον οὕτως εἶχεν. ἐν ἑκατέρῳ μὲν οὖν, οὐκ ἔσται τι αὐτοῦ· μεριστὸν γὰρ ἂν εἴη. ἀλλὰ μὴν οὐδ' ἐν τῷ β γ· μεταβεβληκὸς γὰρ ἔσται· ὑπόκειται δὲ μεταβάλλειν. λείπεται δὴ αὐτὸ ἐν τῷ α β εἶναι, καθ' ὃν μεταβάλλει χρόνον. ἠρεμήσει ἄρα· τὸ γὰρ ἐν τῷ αὐτῷ εἶναι χρόνον τινά, ἠρεμεῖν ἦν. ὥστ' οὐκ ἐνδέχεται τὸ ἀμερὲς κινεῖσθαι, οὐδ' ὅλως μεταβάλλειν. 5 Μοναχῶς γὰρ ἂν οὕτως ἦν αὐτοῦ κίνησις, εἰ ὁ χρόνος ἦν ἐκ τῶν νῦν· ἀεὶ γὰρ ἐν τῷ νῦν κεκινημένον ἂν ἦν, καὶ μεταβεβληκός. ὥστε κινεῖσθαι μὲν μηδέποτε, κεκινῆσθαι δ' ἀεί. τοῦτο δ' ὅτι ἀδύνατον, δέδεικται καὶ πρότερον· οὔτε γὰρ ὁ χρόνος ἐκ τῶν νῦν, οὔθ' ἡ γραμμὴ ἐκ στιγμῶν, οὔθ' ἡ κίνησις ἐκ κινημάτων. οὐθὲν γὰρ ἄλλο ποιεῖ ὁ τοῦτο λέγων, ἢ τὴν κίνησιν ἐξ ἀμερῶν, καθάπερ ἂν εἰ τὸν χρόνον ἐκ τῶν νῦν, ἢ τὸ μέγεθος ἐκ στιγμῶν. 6 Ἔτι δὲ καὶ ἐκ τῶνδε φανερόν, ὅτι οὔτε στιγμήν, οὔτ' ἄλλο ἀδιαίρετον οὐδὲν ἐνδέχεται κινεῖσθαι. ἅπαν γὰρ τὸ κινούμενον, ἀδύνατον πρότερον μεῖζον κινηθῆναι ἑαυτοῦ, πρὶν ἂν ἢ ἴσον, ἢ ἔλαττον. εἰ δὲ τοῦτο, φανερὸν ὅτι καὶ ἡ στιγμὴ ἔλαττον ἢ ἴσον κινηθήσεται πρότερον. ἐπεὶ δ' ἀδιαίρετος, ἀδύνατον ἔλαττον κινηθῆναι πρότερον· ἴσην ἄρα ἑαυτῇ. ὥστε ἔσται ἡ γραμμὴ ἐκ στιγμῶν· ἀεὶ γὰρ τὸ* ἴσον κινουμένη, τὴν πᾶσαν γραμμὴν στιγμὴ καταμετρήσει. εἰ δὲ τοῦτο ἀδύνατον, καὶ τὸ κινεῖσθαι τὸ ἀδιαίρετον, ἀδύνατον. 7 Ἔτι δ', εἰ ἅπαν ἐν χρόνῳ κινεῖται, ἐν δὲ τῷ νῦν μηδέν,

* γρ. ἴσην κ.

ἅπας δὲ χρόνος διαιρετός, εἴη ἄν τις χρόνος ἐλάττων ὁτῳοῦν τῶν κινουμένων ἐν ᾧ κινεῖται ὅσον αὐτό. ἔτι μὲν γὰρ ἔσται ὁ χρόνος ἐν ᾧ κινεῖται, διὰ τὸ πάντα ἐν χρόνῳ κινεῖσθαι· χρόνος δὲ πᾶς διαιρετὸς δέδεικται πρότερον. εἰ δὲ ἄρα ἡ στιγμὴ κινεῖται, ἔσται τις χρόνος ἐλάττων ἐν ᾧ αὐτὴ ἐκινήθη. ἀλλ' ἀδύνατον· ἐν γὰρ τῷ ἐλάττονι ἔλαττον ἀνάγκη κινεῖσθαι. ὥστε ἔσται διαιρετὸν τὸ ἀδιαίρετον εἰς τὸ ἔλαττον, ὥσπερ καὶ ὁ χρόνος εἰς τὸν χρόνον. 8 Μοναχῶς γὰρ ἂν κινοῖτο τὸ ἀμερὲς καὶ ἀδιαίρετον, εἰ ἦν ἐν τῷ νῦν κινεῖσθαι δυνατὸν τῷ ἀτόμῳ· τοῦ γὰρ αὐτοῦ λόγου, ἐν τῷ νῦν κινεῖσθαι, καὶ ἀδιαίρετόν τι κινεῖσθαι.

A omne verò tempus eſt diuiduum: vtique erit [illegible] mobili aliquod tempus *eo* minus, in quo m[illegible] per *ſpatium* ſibi æquale. hoc enim erit tempus [illegible] mouetur; propterea quòd omnis res in tēpo[illegible]uetur; omne autem tempus *eſſe* diuiduum an[illegible]batum fuit. ſi igitur punctum mouetur, erit aliquod tempus minus *eo tempore*, quo ipſum punctum mouebatur. atqui *hoc eſt* impoſſibile. nam in minori tempore neceſſe *eſt per* minus *ſpatium moueri*. quapropter quod indiuiduum eſt, diuiduū erit in minus, quemadmodum & tempus in tempus. 8 Vno enim modo fieri poteſt, vt moueatur, quod partibus caret & eſt indiuiduum, ſi moueri poſſit in momento indiuiduo: quippe eiuſdem rationis *eſt*, in momento moueri, & aliquod indiuiduum moueri.

Vtrùm mutatio infinita eſſe poſſit?

B Porrò nulla mutatio eſt infinita: quandoquidem omnis *eſt* ex aliquo in aliquid, tam ea quæ in contradictione, quam ea quæ in contrariis *ſpectatur*. 2 Quare *mutationum* earum quæ in contradictione *ſpectantur*, affirmatio & negatio *eſt* terminus: vt generationis, ens: interitus autem, non ens. 3 Earum autem quæ in contrariis *ſpectantur*, contraria *ſunt termini*. hæc enim ſunt extrema mutationis. 4 Quocirca & omnis variationis. nam variatio ex contrariis quibuſdam *eſt*. 5 Similiter etiam accretionis & deminutionis. accretionis enim terminus *eſt* finis magnitudinis, quæ *eſt* ſecundùm propriam naturam, C deminutionis verò, ab hac *magnitudine* receſſus. 6 Latio autem ita non eſt terminata: nōn enim omnis in contrariis *cernitur*. ſed quia quod non poteſt ſectum eſſe, ita vt nō poſſit euenire vt ſectum ſit (multis enim modis impoſſibile dicitur) quod, *inquam*, ita eſt impoſſibile, non poteſt ſecari: & omnino quod non poteſt eſſe factum, *non poteſt* fieri: *profectò* nec quod non poteſt eſſe mutatum, poterit mutari in id in quod non poteſt eſſe mutatum. Quidquid mouetur, ab aliquo moueri.

Cap. I.

QVICQVID mouetur, neceſſe *eſt* A vt ab aliquo moueatur. 2 Nam ſi in ſe ipſo non habet principium motus, ab alio moueri perſpicuum *eſt*. 3 Si verò in ſe ipſo *habet*, ſumatur, vbi α β, id quod mouetur, non quia *pars* eius aliqua moueatur. primùm igitur exiſtimare α β à ſe ipſo moueri, quia totum mouetur, & à nullo externo moueatur: perinde eſt ac ſi quis, cùm τὸ δ ε moueat ε ζ, & ipſum quoque moueatur, exiſtimet δ ε ζ à ſe ipſo moueri, quia non perſpiciat vtrum ab vtro moueatur, *id eſt*, vtrum τὸ δ ε, moueatur ab ε ζ, an τὸ ε ζ *moueatur* à δ ε. 4 Præterea quod à ſe ipſo mo- B uetur, nunquam moueri deſinet, eo quòd aliud quiddam motum ſiſtatur. neceſſe *eſt* igitur, ſi quid moueri deſinit, eo quòd aliud quiddam ſiſtatur, hoc ab altero moueri. quod cùm perſpicuum factum ſit, neceſſe *eſt* quicquid mouetur, moueri ab aliquo. 5 Nam quia ſumptum eſt τὸ α β moueri, diuiduum erit. quicquid enim mouetur, diuiduum erat. diuidatur igitur ratione ipſius γ: ergo neceſſe *eſt*, cùm τὸ β γ quieſcit, etiam τὸ α β quieſcere. niſi enim *ita ſit*, ſumatur moueri. ergo cùm β γ quieſcente, mouebitur τὸ α γ. non igitur per ſe mouetur τὸ α β. verùm ſupponebatur per ſe moueri primùm: patet igitur, futurum vt C quieſcente γ β, quieſcat etiam τὸ β α, ac tum moueri deſinat. 6 Atqui ſi quid ſiſtitur & moueri deſinit eo quòd aliud quieſcit, hoc ab altero mouetur. perſpicuum igitur *eſt*, quicquid mouetur, ab aliquo moueri. quicquid enim mouetur, diuiduum eſt: & parte quieſcente, totum quieſcet. 7 Quoniam autem quicquid mouetur, ab aliquo mouetur, neceſſe *eſt* etiam quicquid mouetur in alio, moueri ab alio. 9 Ergo & quod mouet, ab altero *mouetur*, quando ipſum quoque mouetur: & rurſus hoc ab altero.

Ac numero quidem dico eundem motum *eſſe eum* qui ex eodem in idem numero fit in tempore quod eſt idem numero: vt ex hoc albo, quod eſt vnum numero, in hoc nigrum, hoc tempore quod vnum numero eſt: nam ſi alio *tempore* non erit ampliùs vnus *motus* numero, ſed ſpe-B cie. Genere autem idem motus *eſt*, qui *fit* in eadem categoria *ſiue* ſubſtantiæ, ſiue *alius* generis. Specie verò, qui fit ex eodem ſpecie, in idem ſpecie: vt ex albo in nigrum, aut ex bono in malum. ſed hæc etiam in ſuperioribus tradita fuerunt. 6 Sumatur igitur motus τοῦ α, & ſit vbi τὸ ε: & *motus* τοῦ β, vbi τὸ ζ: & *motus* τοῦ γ δ, vbi τὸ η θ. 7 Et tempus, quo mouetur τὸ α, ſit κ. 8 Cùm igitur motus τοῦ α *ſit* definitus, etiam tempus κ erit finitum, non infinitum. atqui eodem tempore mouebatur τὸ α, & τὸ β, & cęterorum vnumquodque: accidit igitur, vt motus ε ζ η θ, cum ſit infinitus, fiat finito tempore κ. nam quo *tempore* τὸ α mouebatur, etiam reliqua omnia quæ *poſt* α deinceps C *ſibi*, mouebantur, cùm ſint infinita, quocirca eodem *tempore* mouentur. 9 Etenim vel æqualis erit motus τοῦ α *motui* τοῦ β & reliquorum, vel maior. 10 Sed nihil refert. nam omnino accidit infinitum motum finito tempore fieri: quod eſt impoſſibile. 11 Sic igitur videri poteſt probari quod ab initio *fuit quæſitum*: non tamen probatur, propterea quod nihil abſurdi accidit. poteſt enim finito tempore motus infinitus eſſe, non tamen idem, ſed alius atque alius, cùm multæ & infinitæ res moueantur: quod quidem euenit etiam *in* his quæ nunc *ſumpſimus*. 12 Verùm ſi id quod primo ſecundùm locum & corporali motu cietur, neceſſe *eſt* vt tangat vel continuum ſit ei quod mouet, quemadmodum videmus in omnibus D hoc accidere: (nam totum erit ex omnibus vnum, aut continuum) hoc igitur quod eſſe poteſt, ſumitur, ac ſit magnitudo vel continuum, vbi α β γ δ: huius autem motio ſit ε ζ η θ. nihil autem intereſt vtrum finitum *ſit*, an infinitum: æquè enim finito *tempore* mouebitur vel infinitum, vel finitum: quorum vtrumque *eſt* impoſſibile. 13 Perſpicuum igitur *eſt*, fore aliquando vt ſiſtatur, nec progredi in infinitum ſemper ab alio *moueri*. ſed fore aliquid, quod primum mouebit. 14 Nihil autem intereſt, ſuppoſito aliquo, hoc probari: quia poſito eo quod eſſe poteſt, nihil abſurdi euenire oportet.

Mouens, & quod mouetur, ſimul eſſe. Cap. III.

Τὸ δὲ πρῶτον κινοῦν, μὴ ὡς τὸ οὗ ἕνεκεν, ἀλλ' ὅθεν ἡ ἀρχὴ τῆς κινήσεως, ἅμα ἐστὶ τῷ κινουμένῳ. ἅμα δὲ λέγω, διότι οὐδέν ἐστιν αὐτῶν μεταξύ. τοῦτο γὰρ κοινὸν ἐπὶ παντὸς κινουμένου καὶ κινοῦντός ἐστιν. 2 Ἐπειδὴ τρεῖς εἰσι κινήσεις, ἥτε κατὰ τόπον, καὶ κατὰ τὸ ποιὸν, καὶ κατὰ τὸ ποσὸν, ἀνάγκη καὶ τὰ κινούμενα τρία.

E Qvod autem primum mouet, non vt id cuius gratia, ſed vnde principium motus, ſimul eſt cum eo quod mouetur. ſimul autem dico, quia nihil eſt his interiectum. hoc enim commune eſt omni rei quæ mouetur & quæ mouet. 2 Cùm autẽ tres ſint motus, *nempe* in loco, in quantitate, & in qualitate: neceſſe *eſt* tria quoque eſſe quæ mouentur.

motus igitur qui *fit* in loco, *eſt* latio. qui autem in qualitate, variatio. qui verò in quantitate, accretio & deminutio. 3 Primùm igitur de latione dicamus: hic enim eſt motuum primus. 4 Quicquid igitur fertur, vel à ſe mouetur, vel ab alio. 5 Quæcumque igitur ipſa à ſe ipſis mouentur, in his perſpicuum *eſt*, ſimul eſſe quod mouetur & quod mouet: ineſt enim ipſis id quod primum mouet. quare nihil eſt interiectum. 6 Quæcumque verò ab alio mouentur, quatuor modis moueri neceſſe *eſt*: quatuor enim ſũt ſpecies lationis quæ ab alio *fit*, tractus, pulſus, vectio, conuerſio. omnes enim motus qui in loco *fiunt*, ad hos reducuntur. Etenim impulſio eſt pulſus quidam, cùm id quod à ſe pellit, ſequitur rem quam pellit. Depulſio verò eſt, cùm non ſequitur mouendo. Iactus autem, cùm vehementiorem motũ efficit *quo rem à ſe pellit*, quàm fit illius rei latio naturalis, & *ea res* eò vſq; fertur, donec motio vim ſuam retinet. Rurſus depulſio & compulſio ſunt depulſio & tractus. nam diſpulſio *eſt* depulſio: quandoquidem depulſio eſt vel à ſe, vel ab alio. Compulſio verò *eſt* tractus: quoniam tractus *eſt* ad ſe & ad aliud. Quocirca & quæcumque *ſunt* horum *motuum* ſpecies, *eòdem referri debent*, vt telæ denſatio, & contextus: illa namq; *eſt* compulſio: hic verò *eſt* diſpulſio. Similiter etiam aliæ concretiones & ſecretiones *eòdem ſunt referendæ*: omnes enim erunt diſpulſiones, aut compulſiones, exceptis iis quæ in ortu & interitu ſunt. Simul autem perſpicuum *eſt*, cõcretionem & ſecretionem non eſſe aliud quoddam genus motus: nam omnes diſtribuuntur in aliquos ex iis *motibus* qui dicti fuerunt. Præterea inſpiratio eſt tractus: exſpiratio autem eſt pulſus. Similiter etiam excreatio, & quicũq; alij motus per corpus *fiunt*, quibus vel aliquid excernitur, vel ſumitur. nam hi *ſunt* tractus: illi verò *ſunt* depulſiones. Oportet autem & alios *motus* qui in loco *fiunt*, reducere: quoniam omnes in hos quatuor cadunt. 7 Rurſus ex his *motibus* vectio & conuerſio *referuntur* ad tractum & pulſum. 8 Nam vectio eſt aliquo ex his tribus modis. quod enim vehitur, ex accidenti mouetur, quia eſt in eo quod mouetur, aut ſuper aliquo quod mouetur. quod autem vehit, mouetur, vel pulſum, vel tractum, vel conuerſum. Quapropter communis his omnibus tribus eſt vectio. 9 Conuerſio autem conſtat ex tractu & pulſu: quia neceſſe *eſt* vt id quod conuertit, partem trahat, partem pellat: partem enim à ſe, partem ad ſe ducit. 10 Quare ſi id quod pellit, & quod trahit, ſimul *eſt* cum eo quod pellitur, & eo quod trahitur: patet ei quod in loco mouetur, & *ei* quod mouet, nihil eſſe interie*ctum*. Atq; hoc manifeſtũ *eſt* etiam ex definitionibus. nã pulſus eſt motus, *qui* vel à ſe vel ab alio *fit* ad aliud. tractus autem, qui *fit* ab alio, ad ſe, vel ad aliud, cùm celerior eſt motus eius quod trahit, qui à ſe inuicem ſeparat ea quæ ſunt continua: ſic enim alterũ ſimul attrahitur. (fortaſſis autem videri poteſt eſſe quidam tractus etiam alio modo. nam lignũ trahit ignem nõ hoc modo: nihil autem intereſt vtrùm moueatur, an maneat id quod trahit. quandoq. enim *eò* trahit vbi eſt: quandoque, vbi erat) ſed impoſſibile eſt, vel à ſe ad aliud, vel ab alio ad ſe mouere, non tãgendo. quare perſpicuum *eſt*, ei quod in loco mouetur, & ei quod mouet, nihil eſſe interiectum. 11 Sed nec ei quod variatur, & ei quod variat. hoc autem ex inductione manifeſtum *eſt*. in omnibus enim accidit vt ſimul ſint, quod extremum variat, & quod primum variatur. 12 Aut enim quod calefit, aut quod dulceſcit, aut quod denſatur, aut quod exſiccatur,

D ΟΤι δὲ τὸ ἀλλοιούμενον ἅπαν ἀλλοιοῦται ὑπὸ τῶν αἰσθητῶν, * καὶ ἐν τούτοις μόνοις ἀλλοίωσις λέγεται ὅσα καθ᾽ αὑτὰ πάσχει, ἐκ τῶνδε θεωρητέον. τῶν γὰρ ἄλλων * μάλιστα ἄν τις ὑπολάβοι, ἔν τε τοῖς σχήμασι, καὶ ἐν ταῖς μορφαῖς, καὶ ἐν ταῖς ἕξεσι, καὶ ταῖς τούτων λήψεσι καὶ ἀποβολαῖς, ἀλλοίωσιν ὑπάρχειν· ἐν οὐδετέροις δ᾽ ἐστί. 2 Τὸ μὲν γὰρ σχηματιζόμενον ὅταν ἐπιτελεσθῇ, οὐ λέγομεν ἐκεῖνο ἐξ οὗ ἐστιν, οἷον τὸν ἀνδριάντα χαλκόν, ἢ τὴν πυραμίδα, κηρόν, ἢ τὴν κλίνην, ξύλον· ἀλλὰ παρωνυμιάζοντες, τὸν μὲν χαλκοῦν, τὸν δὲ κήρινον, τὸ δὲ ξύλινον. τὸ δὲ πεπονθὸς καὶ ἠλλοιωμένον, προσαγορεύομεν· ξηρὸν γὰρ, καὶ ὑγρὸν, καὶ σκληρὸν, καὶ θερμὸν, τὸν χαλκὸν λέγομεν, καὶ τὸν κηρόν. καὶ E οὐ μόνον οὕτως, ἀλλὰ καὶ τὸ ὑγρὸν καὶ τὸ θερμὸν χαλκὸν λέγομεν, ὁμωνύμως τῷ πάθει προσαγορεύοντες τὴν ὕλην. ὥστ᾽ εἰ κατὰ μὲν τὸ σχῆμα καὶ τὴν μορφὴν οὐ λέγεται τὸ γεγονὸς ἐν ᾧ ἐστι τὸ σχῆμα, κατὰ δὲ τὰ πάθη καὶ τὰς ἀλλοιώσεις λέγεται, φανερὸν ὅτι οὐκ ἂν εἶεν αἱ γενέσεις αὗται ἀλλοιώσεις. 3 Ἔτι δὲ καὶ εἰπεῖν οὕτως ἄτοπον ἂν δόξειεν, ἀλλοιοῦσθαι τὸν ἄνθρωπον, ἢ τὴν οἰκίαν, ἢ ἄλλο ὁτιοῦν τῶν γεγενημένων· ἀλλὰ γίνεσθαι μὲν, ἴσως ἕκαστον ἀναγκαῖον, ἀλλοιουμένου τινός. οἷον τῆς ὕλης πυκνουμένης, ἢ μανουμένης, ἢ θερμαινομένης, ἢ ψυχομένης. οὐ μέντοι τὰ γινόμενα ἀλλοιοῦται, οὐδ᾽ ἡ γένεσις αὐτῶν ἀλλοίωσίς ἐστιν. 4 Ἀλλὰ μὴν οὔτε αἱ ἕξεις, * οὔτε αἱ τοῦ σώματος ἀρεταί. αἱ μὲν γὰρ ἀρεταί, αἱ δὲ κακίαι, τῶν ἕξεων.

QVicquid autem variatur, variari à ſenſibilibus, & in his ſolis eſſe variationem, quæ per ſe dicuntur pati à ſenſibilibus, ex his diſpiciendum *eſt*. nam aliorum maximè quiſpiam exiſtimare poſſit in figuris, & in formis, & in habitibus, horúmque ſumptionibus & amiſſionibus variationem ineſſe. ſed in neutris eſt. 2 Quod enim figuratur, cùm perfectum fuerit, non dicimus *eſſe* id ex quo eſt: veluti ſtatuam *non dicimus eſſe* æs: aut pyramidem, ceram: aut lecticam, lignum: ſed denominãtes *dicimus* aliud eſſe æneum, aliud cereum, aliud ligneum. quod verò paſſum & variatum eſt, appellamus: nam dicimus *eſſe* aridum, & humidum, & durum, & calidum: item ceram. nec ſolùm ita, ſed etiam ipſum humidum, & E ipſum calidum dicimus *eſſe* æs, eodem nomine appellantes materiam, quo affectionem. Quapropter ſi ſecundùm figuram & formam nõ dicitur id quod eſt factum in quo eſt figura, ſecundùm autem affectiones & variationes dicitur: perſpicuum *eſt*, has generationes non eſſe variationes. 3 Præterea & ſic dicere, abſurdum videri poteſt: *nimirum* aut variari hominem, aut domum, aut quoduis aliud eorum quæ fiunt. ſed fortaſſe neceſſe *eſt*, vnumquodq; fieri aliquo variato, veluti materiâ denſatâ, aut rarefactâ, aut calefactâ, aut refrigeratâ: non tamen ea quæ fiunt, variantur, nec generatio ipſorum eſt variatio. 4 Quin nec corporis, nec animi habitus, *ſunt* variationes. etenim habituum alij *ſunt* virtutes, alij vitia:

verùm neque virtus neque vitium eſt variatio: ſed virtus *eſt* perfectio quædam: cùm enim vnumquodque propriam ſuam virtutem acceperit, tunc dicitur perfectum. tunc enim maximè id quod *eſt* ſecundùm naturam, *adeſt*: vt circulus perfectus *dicitur*, cùm maximè factus eſt circulus optimus. Vitium autem eſt *huius* interitus & amotio. quemadmodum igitur nec domus perfectionem vocamus variationem: (abſurdum enim *eſt*, ſi faſtigium ac tegula *ſit* variatio: vel ſi domus, cùm accipit faſtigium ac tegitur, variatur, ac non potius perficitur) eodem modo *ſe res habet* etiam in virtutibus & vitiis, & *in* habentibus & ſuſcipientibus *virtutes vel vitia*. nam illæ *ſunt* perfectiones: hæ verò *ſunt* amotiones: quare non *ſunt* variationes. 5 Præterea dicimus omnes virtutes in eo conſiſtere quod eſt ad aliquid aliquo modo affectum eſſe. corporis enim *virtutes*, vt ſanitatem, & firmam corporis conſtitutionem, in temperatione ac ſymmetria calidorum ac frigidorum collocamus, *ita vt* vel ipſa interna inter ſe *conferantur*, vel ad id quod continet. ſimiliter autem & pulchritudinem & robur, & alias virtutes, ac vitia. quælibet enim in eo conſiſtit quod eſt ad aliquid aliquo modo affectum eſſe: & ad proprias affectiones bene vel malè diſponit id in quo eſt. propriæ verò *affectiones dicuntur*, à quibus rem gigni & perimi comparatum natura eſt. quoniam igitur quæ ad aliquid *referuntur*, nec ipſa ſunt variationes, nec ipſorum eſt variatio, nec generatio, nec omnino vlla mutatio: perſpicuum *eſt*, neque habitus neque habituum amiſſiones & ſuſceptiones eſſe variationes. 6 Sed fieri fortaſſe hæc atque interire variatis quibuſdam neceſſe *eſt*, quemadmodum & ſpeciem ac formam, vtputa calidis & frigidis, vel ſiccis & humidis, vel in quibus primis inſunt. in his enim dicitur quodcumque vitium & virtus, à quibus natura aptum eſt variari id quod ea habet. virtus enim efficit impatibile, vel vt oportet patibile: vitium verò contrario modo patibile, & impatibile. 7 Similiter etiam *res habet* in animæ habitibus. hi namque omnes *in eo ſpectantur* quod eſt ad aliquid aliquo modo affectum eſſe. 8 Et virtutes quidem *ſunt* perfectiones: vitia verò, amotiones. 9 Præterea virtus bene diſponit ad proprias affectiones: vitium autem, malè. quare neque hæc erunt variationes, neque ipſorum amiſſiones, & ſuſceptiones. Neceſſe *eſt* autem hæc gigni variatâ parte ſenſitiua. variabitur autẽ à ſenſibilibus. omnis enim virtus moralis in voluptatibus & doloribus corporeis *verſatur*: quæ vel in actione, vel in memoria, vel in ſpe *conſiſtunt*. aliæ igitur *voluptates* conſiſtunt in actione ſenſus, adeò vt à ſenſibili aliquo *ſenſus* moueatur: aliæ verò in memoria, & ſpe *conſiſtentes*, ab hac *actione* oriuntur: aut enim recordantes, quæ paſſi ſunt, lætantur; aut ſperantes, quæ expectant. quapropter neceſſe *eſt*, omnem eiuſmodi voluptatem à ſenſibilibus fieri. Quoniam autem cùm voluptas & dolor gignitur, etiam virtus & vitium gignitur: (quandoquidem in his verſantur) voluptates verò & dolores *ſunt* variationes *partis* ſenſitiuæ: perſpicuum *eſt*, neceſſe *eſſe*, vt variato aliquo & hæc amittantur, & ſuſcipiantur. 11 Præterea horum generatio *eſt* cum variatione: ipſa verò non eſt variatio. 12 Sed neque partis intellectiuæ habitus *ſunt* variationes. nam ſciens maximè dicitur eſſe *in* eorum *numero* quæ ad aliquid *referuntur*. hoc autem manifeſtum *eſt*: quia ſcientia in nobis gignitur non ſecundùm aliquam facultatem motis, ſed cùm aliquid inſit. etenim ex particulari experientia

A vniuerſalem ſcientiam accipimus. 13 Neque igitur actio *eſt* generatio : niſi quis & aſpectum, & tactum, generationes *eſſe* inquiat : nam actio *eſt* tale quidpiam. 14 Rurſus ipſius vſus & actionis non eſt generatio : niſi quis etiam ipſius aſpectus ac tactus putet generationem eſſe. atque agere eſt his ſimile. 15 Prima verò ſcientiæ acquiſitio non eſt generatio, nec variatio. nam quieuiſſe ac ſtetiſſe dianœam, *id* vocamus ſcire ac prudentem eſſe. ad quietem autem non eſt generatio : quoniam omnino nullius motionis *eſt*, quemadmodum antea dictum fuit. 16 Præterea ſicuti cùm ex ebrietate, aut ſomno, aut morbo, in contraria quiſpiam eſt mutatus, non dicimus eum iterum ſcientem factum eſſe, quamquam ſcientiâ vti antea non poſſet : ita nec quando ab initio B ſumit *aliquis* habitum. nam eò quòd ſiſtitur anima à morali virtute, fit aliquid prudens, & ſciens. 17 Ideóque pueri nec intelligere poſſunt, nec ſenſibus æquè iudicare, vt ſeniores : quia multa *in eis eſt* perturbatio, & motio. ſedantur autem, & à perturbatione liberantur, quandoque à natura, quandoque ab aliis. 18 Sed in vtriſque *hoc accidit*, dum quædam, quæ corpore *ſunt*, variantur, quemadmodum in expergefactione & actione *euenit*, cùm aliquis ſobrius fit, & expergiſcitur. 19 Perſpicuum igitur *eſt* ex iis quæ dicta ſunt, ipſum variari, & variationem, in rebus ſenſilibus fieri, & in ſenſitiua animæ parte; non in vlla alia, niſi ex accidenti.

De motuum comparatione. Cap. V.

Ἀπορήσειε δ᾽ ἄν τις πότερον ἔσται κίνησις πᾶσα πάσῃ συμβλητή, ἢ οὔ. 2 Εἰ δὴ ἐστὶ πᾶσα συμβλητή, καὶ ὁμοταχὲς τὸ ἐν ἴσῳ χρόνῳ ἴσον κινούμενον, ἔσται περιφερής τις ἴση εὐθείᾳ, καὶ μείζων δὴ καὶ ἐλάττων. 3 Ἔτι, ἀλλοίωσις καὶ φορά τις ἴση, ὅταν ἐν ἴσῳ χρόνῳ, τὸ μὲν ἀλλοιωθῇ, τὸ δ᾽ ἐνεχθῇ. ἔσται ἄρα ἴσον τὸ πάθος μήκει· ἀλλ᾽ ἀδύνατον. ἀλλ᾽ ἄρα ὅταν ἐν ἴσῳ χρόνῳ ἴσον κινηθῇ, τότε ἰσοταχές· ἴσον δὲ οὐκ ἔστι* πάθος μήκει. ὥστε οὐκ ἔστιν ἀλλοίωσις φορᾷ ἴση, οὐδὲ ἐλάττων, ὥστε οὐ πᾶσα συμβλητή. 4 Ἐπὶ δὲ τοῦ κύκλου καὶ τῆς εὐθείας πῶς συμβήσεται; ἄτοπόν τε γὰρ εἰ μὴ ἔσται κύκλῳ, ὁμοίως τοῦτο κινεῖσθαι, καὶ τοῦτο ἐπὶ τῆς εὐθείας· ἀλλὰ εὐθὺς ἀνάγκη ἢ θᾶττον, ἢ βραδύτερον, ὥσπερ εἰ, τὸ μὲν κάταντες, τὸ δ᾽ ἄναντες. 5 Ἔτι οὐδὲν διαφέρει οὐδ᾽ ἐν τῷ λόγῳ, εἴ τις φήσειεν ἀνάγκην εἶναι θᾶττον εὐθὺς ἢ βραδύτερον κινεῖσθαι· ἔσται γὰρ μείζων καὶ ἐλάττων ἡ περιφερὴς τῆς εὐθείας, ὥστε καὶ ἴση. εἰ γὰρ ἐν τῷ α χρόνῳ, τὸ μὲν τὴν β διῆλθε, τὸ δὲ τὴν γ, μείζων ἂν εἴη ἡ β τῆς γ. οὕτω γὰρ τὸ θᾶττον ἐλέγετο. οὐκοῦν καὶ εἰ ἐν ἐλάττονι ἴσον θᾶττον· ὥστ᾽ ἔσται τι μέρος τοῦ α ἐν ᾧ τὸ β τοῦ κύκλου τὸ ἴσον δίεισι, καὶ τὸ γ ἐν ὅλῳ τῷ α τὴν γ. 6 Ἀλλὰ μὴν εἰ ἔστι ξυμβλητά, συμβαίνει τὸ ἄρτι ῥηθὲν ἴσην εὐθεῖαν εἶναι κύκλῳ· ἀλλ᾽ οὐ ξυμβλητά· οὐδ᾽ ἄρα αἱ κινήσεις. 7 Ἀλλ᾽ ὅσα μὴ ὁμώνυμα, ἅπαντα ξυμβλητά. οἷον διὰ τί οὐ ξυμβλητόν, πότερον ὀξύτερον τὸ γραφεῖον, ἢ ὁ οἶνος, ἢ ἡ νήτη; ὅτι γὰρ ὁμώνυμα, οὐ ξυμ-

C Dubitare autem quiſpiam poſſit, an omnis motus ſit omni motui comparabilis, necne. 2 Si igitur omnis *motus* ſit comparabilis; & æquè velox *ſit*, quod æquali tempore per æquale mouetur : *certè* aliqua *linea* circularis erit rectæ æqualis, & maior quoque, & minor. 3 Præterea variatio & latio quædam *erunt* æquales, cùm *ſcilicet* æquali tempore alterum variatum, alterum illatum fuerit. erit igitur æqualis affectio longitudini : quod *eſt* impoſſibile. Verùm cùm æquali tempore per æquale motum fuerit, tunc æquè velox *dicitur*. ſed affectio non eſt longitudini æqualis. quapropter variatio non eſt lationi æqualis, nec minor. Quare non omnis *motus eſt* comparabilis. 4 In circulo autem & recta linea quonam modo accidet? quippe abſurdum *eſt*, niſi poterit ſimiliter hoc moueri circulo, & illud in rectum, D ſed illico neceſſe ſit aut celeriùs aut tardiùs *moueri*. perinde ac ſi alterum eſſet decliue, alterum accliue. 5 Præterea nihil refert, quod ad hanc rationem *attinet*, ſi quis dixerit neceſſe eſſe vt illico celeriùs vel tardiùs moueatur : erit enim maior & minor *linea* circularis, quã recta. quare *erit* etiam æqualis. nam ſi in α tempore alterum conficit *lineam* β, alterum *lineam* γ : vtiquè maior erit *linea* β, quàm γ : ſic enim celeriùs dicebatur. ergo & ſi minori *tempore* æquale *ſpatium conficiat*, celerius *erit*. quocirca erit aliqua pars *temporis* α, qua *mobile* β æqualem circuli *partem* conficit, atque *mobile* γ, toto α *tempore* conficit *lineam* γ. 6 At verò ſi ſint comparabilia, euenit quod nuper dictum fuit, rectam *lineam* eſſe circulo æqualem. atqui *hæc* non *ſunt* comparabilia. proinde neque motus. 7 Sed quæcunque non ſunt homonyma, *ea* omnia *ſunt* comparabilia. veluti, cur non eſt comparabile quodnam ſit acutius, ſtilúſne, an vinum, an nete? quia ſcilicet *ſunt* homonyma, *ideo*, non *ſunt* compa-

rabilia. ſed nete cum proxima chorda cõferri poteſt: quoniam acutum in vtriſque idem ſignificat. num igitur velox non idem ſignificat hic & ibi? multò autem minùs in variatione & latione. 8 An primum quidem hoc non eſt verum, ſi homonyma non *ſunt*, comparabilia *eſſe*? multum enim, idem ſignificat in aqua & aëre: nec *tamen hæc ſunt* comparabilia. Si verò non *ita ſit*, at certè duplum, idem *ſignificat*, nempe duo ad vnum. neque *hæc ſunt* comparabilia. 9 An & in his eſt eadem ratio? nam & multum *eſt* homonymum. ſed quorundam etiam definitiones *ſunt* homonymæ: veluti, ſi quis dicat multum *eſſe* tantum, & ſuper aliud: tantum, & æquale, *eſt* homonymum. ſed & vnum fortaſſis illico *eſt* homonymum: quòd ſi hoc *eſt*, etiam duo: alioqui cur alia *eſſent* comparabilia, alia minimè? ſi ſit vna natura. 10 An quia in alio primo receptaculo? equus igitur & canis ſunt res comparabiles, vtrum *ſcilicet ſit* candidius: quoniam *id*, in quo primo *ineſt candor*, *eſt* idem, *nempe* ſuperficies. & ſecundùm magnitudinem itidem *res ſunt comparabiles*. ſed aqua & vox nequaquam: quoniam *eſt* in alio. 11 An manifeſtum *eſt*, ita fore vt omnia liceat vnum facere, ſed dicere vnumquodque eſſe in alio: atque idem erit æquale & dulce & candidum, ſed in alio. 12 Præterea non quoduis eſt receptaculum, ſed vnum *eſt* vnius primum. 13 Num igitur non ſolùm oportet ea quæ ſunt comparabilia, non eſſe homonyma, ſed etiam neque *id* quod *comparatur*, neque id in quo *illud eſt*, habere differentiam? Verbi gratia, color recipit differentiam, ſeu diuiſionem: ergo non *eſt aliquid* ſecundùm hunc comparabile: veluti vtrum magis coloratum ſit, non ratione alicuius coloris, ſed quatenus eſt color: verùm *eſt comparabile* ratione alboris. 14 Ita etiam in motu æquè velox *dicitur*, quod æquali tempore motum eſt *per* tantum æquale. Si igitur hoc *tempore*, pars magnitudinis variata eſt, pars verò illata: æqualiſne eſt hæc variatio & æquè velox ac latio? ſed *hoc eſt* abſurdum. cauſa verò *eſt*, quia motus habet ſpecies. 15 Quare ſi ea quæ æquali tempore feruntur per æqualem longitudinem, *ſunt* æquè velocia, *linea* recta & circularis erunt æquales. 16 Vtrum igitur cauſa *eſt*, quia latio *eſt* genus, an quia linea *eſt* genus? nam tempus idem *eſt* ſemper indiuiduum ſpecie. An ea ſimul ſpecie differunt? etenim latio ſpecies habet, ſi illud habeat ſpecies, in quo mouetur. 17 Præterea ſi *id* per quod *fit motus*: veluti, ſi *ſint* pedes, ambulatio: ſi alæ, volatus; an non, ſed figuris *tantùm* latio diuerſa *eſt*? 18 Quapropter ea quæ æquali tempore *per* eandem magnitudinem mouentur, *ſunt* æquè velocia: eadem autem *magnitudo eſt*, *quæ* non diuiditur in ſpecies, & motus *ſimiliter idem*, qui non diuiditur in ſpecies. 19 Quocirca hoc *eſt* conſiderandum, quænam *ſit* differentia motus. 20 Atque hic ſermo indicat genus non *eſſe* vnum quid, ſed propter hoc multa latere. 21 Homonymiarum autem aliæ longè diſtant: aliæ quandam ſimilitudinem habent: aliæ *ſunt* propinquæ aut genere, aut proportione: ideo non videntur homonymiæ, cùm *tamen* ſint. 22 Quando igitur ſpecies diuerſa eſt? *vtrùm* ſi eadem *eſt* in alio, an ſi alia in alio? & quæ-*nam eſt* definitio, ſeu quo-*nam* iudicamus album & dulce *eſſe* idem, vel diuerſum? An quia in alio videtur *ſpecies* diuerſa? an quia omnino non *eſt* eadem? 23 Quod igitur ad variationem *attinet*, quo modo altera eſt æquè velox atque altera? Sanè ſi ſanari eſt variari, & fieri poteſt, vt alius celeriter: alius tardè ſanetur: etiam *fieri poteſt*, vt quidam ſimul *ſanentur*. quapropter eſt variatio æquè velox: æquali enim tempore variatum eſt.

VTRVM autem factus eſt aliquando C motus cùm antea non eſſet, & interit rurſus ita vt nihil moueatur: an neque factus eſt, neque interit, ſed ſemper erat, & ſemper erit, atque hoc immortale & indeſinens rebus ineſt, tanquam ſit vita quædam omnibus naturâ cõſtantibus? 2 Eſſe igitur motum omnes aſſerunt, qui de natura aliquid dicunt: propterea quòd mundum faciunt, ac de generatione & interitu his omnibus eſt inſpectio, quæ eſſe nequeunt, niſi motus ſit. 3 Sed quotcumque, infinitos mundos eſſe aiunt, & alios quidẽ mundos fieri, alios verò interire, hi ſemper inquiunt eſſe motũ: quia neceſſe *eſt* eorũ generationes & interitus eſſe cum motu. quicumq; verò vnũ *mundum*, aut non ſemper *eſſe affirmant*, etiam de motu *id* ponunt: *quod eſt ei ſententiæ* conſentaneum. 4 Si igitur fieri poteſt, vt aliquando nihil moueatur, bifariàm neceſſe *eſt* hoc accidere. vel enim, vt Anaxagoras dicit (is enim ait, cùm ſimul omnia eſſent ac quieſcerent infinito tempore, mentem illam produxiſſe motum & ſecreuiſſe) vel, vt inquit Empedocles,

A viciſſim moueri, & rurſus quieſcere: moueri quidem, cùm amicitia ex multis vnum facit, aut diſſidium multa ex vno: quieſcere autem temporibus interiectis: ita inquiens:

-- *Quatenus vnum ex multis conſueuit oriri,*
Aut rurſus ex vno genito plura perficiuntur,
Eatenus fiunt, nec eſt ipſis conſtans æuum:
Quatenus autem mutantur perpetuò, neque deſinunt.
Eatenus ſemper immobiles ſunt in orbem.

Quod enim ait, quatenus mutantur, hinc illuc eum dicere exiſtimandum *eſt*. 5 De his igitur conſiderandum *eſt*, quonam modo ſe habeant: quia veritatem perſpicere non ſolùm confert ad eam contem- B plationem quæ *eſt* de natura, ſed etiam ad methodum quæ *eſt* de primo principio. 6 Primùm autem incipiamus ab iis quæ à nobis antea definita ſunt in Phyſicis. dicimus ergo motum eſſe actum mobilis, quatenus *eſt* mobile. neceſſarium igitur *eſt* res ſubeſſe, quæ poſſint vnoquoque motu cieri. Sed & ſine definitione motus, quilibet fateretur neceſſarium eſſe, vt moueatur, quod poteſt moueri vnoquoque motu: vtputà variari, quod eſt variabile; ferri autem, quod eſt loco mutabile. quapropter oportet priùs eſſe cremabile, quàm crematur: & id quod cremandi vim habet, priùs quàm cremet. 7 Ergo & hæc neceſſe *eſt* aut facta aliquando fuiſſe, cùm non eſſent, aut æterna eſſe. 8 Si igitur factum eſt vnum- C quodque eorum quæ mouere & moueri poſſunt: neceſſe *eſt*, eâ mutatione, quæ ſumpta fuit, aliam priorem factam eſſe mutationem ac motionem, qua factum eſt id quod poteſt mouere & moueri. 9 Quòd ſi ſemper fuerunt, cùm motus non eſſet: abſurdum etiam apparet per ſe iis qui animaduertunt. 10 Sed magis adhuc progredientibus, hoc euenire neceſſe *eſt*: nam ſi cùm alia ſint mobilia, alia quæ mouendi vim habent; aliquando eſt aliquid primum mouens, & quod mouetur; aliquando verò nihil, ſed quieſcit: neceſſe *eſt*, hoc mutari priùs: erat enim aliqua cauſa quietis: quãdoquidem quies *eſt* priuatio motus. quare primâ mutatione erit mu- D tatio prior. 11 Alia namque mouent vno motu, alia contrariis motibus. vt ignis calefacit quidem, non tamen refrigerat: ſcientia verò videtur contrariorum vna eſſe. verumenimuero & illic apparet aliquid ſimile. etenim frigidum calefacit conuerſum aliquo modo ac remotum; ſicuti ſponte peccat ſciens, cùm abutitur ſcientiâ. 12 Sed quæcumque poſſunt facere & pati, vel mouere ac moueri, non omnino *id* poſſunt, ſed ſi ita ſe habeant, & ſibi inuicem propinqua ſint. quocirca cùm propè acceſſerint, alterum mouet, alterum mouetur: & cùm ita fuerint, vt alterum ſit motiuum, alterum mobile. 13 Si igitur non ſemper mouebatur, patet *ea* non fuiſſe ita affecta, vt alterum poſſet moueri, E alterum mouere: ſed oportebat alterum eorum mutari. neceſſe *eſt* enim, in iis quæ ad aliquid *referuntur*, hoc accidere: veluti ſi cùm non eſſet duplum, nunc *eſt* duplum, *neceſſe eſt* vt ſi non ambo, ſaltem alterum ſit mutatum. erit igitur aliqua mutatio prior *mutatione* prima. 14 Ad hæc, prius & poſterius quonam modo erit, niſi ſit tempus: aut tempus, niſi ſit motus? 15 Quòd ſi tempus eſt numerus motus, aut quidam motus: ſiquidem ſemper eſt tempus, neceſſe *eſt* motum quoque ſempiternum eſſe. atqui de tempore, præter vnum, omnes videntur in eadem ſententia conuenire: ingenitum enim eſſe dicunt. ideoque Democritus probat non poſſe omnia eſſe genita

A qui tempus eſt ingenitum. Plato autem ſolus ipſum gignit: ipſum enim ſimul cum cælo genitum eſſe, ac cælum genitum eſſe aſſerit. Si igitur impoſſibile eſt & eſſe & intelligere tempus ſine momento, momentum verò eſt medietas quædam, ſimulque habet principium & finem, principium quidem futuri temporis, finem autem præteriti: neceſſe *eſt*, ſemper eſſe tempus: quia extremum vltimi accepti temporis erit in aliquo momento: quandoquidem nihil licet ſumere in tempore præter momentum. quapropter cùm momentum ſit principium & finis: neceſſe *eſt*, ex vtraque eius parte ſemper eſſe tempus. atqui ſi tempus, patet neceſſe *eſſe* vt ſit etiam motus: ſiquidem tempus *eſt* affectio quædam motus. 16 B Eadem ratio de eo quoque *valet*, quòd motus non ſit interitui obnoxius. 17 Sicut enim eo poſito quòd motus factus fuerit, eueniebat mutationem aliquam eſſe priorem primâ: ita hic *euenit eſſe* poſteriorem poſtremâ: quia non ſimul deſinet eſſe mobile, & moueri; aut eſſe cremabile, & cremari. (poteſt enim eſſe cremabile, quòd non crematur) nec habere vim mouendi, & mouere. 18 Sed & quod interitui eſt obnoxium, oportebit interiiſſe, quando interit. & rurſus poſtea, quod huius interimendi vim habet. etenim interitus eſt mutatio quædam. 19 Ergo ſi hæc *ſunt* impoſſibilia: manifeſtum *eſt* motum eſſe æternum, non interdum eſſe, interdum non *eſſe*. 20 Etenim ſic dicere, C figmento potiùs ſimile videtur. 21 Similiter etiam dicere ſic naturâ eſſe comparatum, & hoc pro principio haberi debere. quod quidem videtur dixiſſe Empedocles, *id eſt*, vt amicitia & diſſidium viciſſim dominentur & moueant, rebus neceſſariò ineſſe, & vt quieſcant tempore intercecto. 22 Fortaſſis autem & qui vnum principium faciunt, vt & Anaxagoras, idem dicerent. 23 At verò nihil ordine vacat ex iis quæ naturâ & ſecundùm naturam *conſtant*: quandoquidem natura omnibus *eſt* cauſa ordinis. infinitum verò ad infinitum nullam rationem habet. omnis autem ordo *eſt* ratio. Ceterùm infinito tempore quieſcere, deinde motum aliquando D eſſe; & huius nullam eſſe differentiam, cur nunc potiùs quàm antea, nec rurſus aliquem ordinem habere; *certè hoc* non *eſt* ampliùs naturæ opus. aut enim ſimpliciter ſe habet, quod naturâ *conſtat*, non modò ſic, modò aliter (vt ignis ſurſum naturâ fertur, nec aliquando *fertur*, aliquando minimè) aut rationem habet, quod non eſt ſimplex. 24 Idcirco meliùs *eſt*, vt Empedocles, & ſi quis alius dixit ita *res ſe* habere, vt vniuerſum viciſſim quieſcat, & rurſus moueatur: iam enim ordinem aliquem habet, quod tale eſt. 25 Sed & qui hoc dicit, non ſolùm id pronuntiare debet, ſed etiam eius cauſam dicere: nec ponere, nec petere ſibi concedi aliquod axioma ſine ratione: E ſed vel inductionem, vel demonſtrationem afferre. 26 Nam ea quæ ſunt ab *Empedocle* ſuppoſita, non *ſunt* cauſæ: neque hæc eſt amicitiæ vel diſſidij eſſentia: ſed illius *eſt* coniungere; huius verò, ſecernere. quod ſi adiungatur illud VICISSIM, dicendum *eſt* in quibus *res* ita *ſe habeat*: veluti quia eſt aliquid, quod homines coniungit, *nempe* amicitia; & inimici ſe inuicem fugiunt. hoc enim ſupponitur eſſe etiam in vniuerſo, quia in quibuſdam ita *eſſe* videtur. Sed illud quoque ÆQVALIBVS TEMPORIBVS, eget aliqua ratione. 27 Omnino autem putare hoc eſſe principium ſufficiens, *nempe* ſemper vel ita eſſe vel fieri, non rectè ſe habet. ad quod Democritus refert naturales cauſas, quia ſic & antea fiebat:

B Quæ verò his ſunt contraria, non *eſt* difficile ſoluere, conſiderantibus autem videri ex his maximè poteſt euenire, vt motus aliquando ſit, cùm omnino non eſſet. 2 Primùm quia nulla mutatio *eſt* æterna: natura enim comparatum eſt, vt omnis mutatio ſit ex aliquo in aliquid: quare neceſſe *eſt* omnis mutationis eſſe terminum, *nempe* contraria, in quibus fit. in infinitum verò nihil moueri. 3 Præterea videmus poſſe moueri, quod nec mouetur nec habet in ſe vllum motum: vt in rebus inanimatis, quorum cùm nec pars vlla, nec totum moueretur, ſed quieſceret, aliquando mouetur. conueniebat autem vel ſemper moueri, vel nunquam, ſi quidem

C non fit *motus* cùm non eſſet. 4 Sed multo maximè tale quippiam in animatis apparet. cùm enim nullus motus interdum in nobis ineſſet, ſed quieſceremus, tamen mouemur quandoque, & fit interdum ex nobiſmet ipſis principium motus, etiamſi nihil extrinſecus mouerit. hoc enim in inanimatis non ſimiliter cernimus; ſed ſemper aliquid aliud, quod extra eſt, ea mouet. animal autem dicimus ſeipſum mouere. quocirca ſi quando totum quieſcit, in immobili motus fieri poteſt à ſe ipſo, non extrinſecus. quòd ſi in animali hoc fieri poteſt, quid prohibet hoc idem euenire etiam in vni-

D uerſo? nam ſi in paruo mundo fit, etiam in magno. & ſi in mundo, etiam in infinito, ſiquidem totum infinitum poteſt moueri & quieſcere. 5 Ex his igitur, quod primo loco dictum eſt, *videlicet* non eſſe eundem ſemper & vnum numero motum, qui fit in oppoſita, rectè dicitur: hoc enim fortaſſe neceſſarium *eſt*, ſi motus vnius & eiuſdem *rei* non poteſt eſſe ſemper vnus & idem numero: dico autem, exempli gratia, vtrùm vnius chordæ *ſit* vnus & idem ſonus, an ſemper alius, cùm *chorda* ſimiliter *ſe* habeat, & moueatur. verumtamen vtrouis tandem modo *hoc ſe* habeat, nihil vetat

E aliquem *motum* eſſe vnum & eundem: quia ſit continuus & ſempiternus. *quod* ex iis quæ poſtea *ſequentur*, magis erit manifeſtum. 6 Moueri autem quod non mouebatur, nihil abſurdi *eſt*, ſi id quod extrinſecus mouet, modò *adſit*, modò non *adſit*. hoc verò quonam modo eſſe poſſit, quærendum *eſt*: vt, inquam, idem ab eodem mouendi vim habente, modò moueatur, modò non *moueatur*. nihil enim aliud in dubium reuocat qui hoc dicit, quàm cur non ſemper alia entia quieſcunt, alia mouentur. 7 Maximè autem videri poteſt tertium illud habere dubitationem, quod euenit in rebus inanimatis, quaſi in nobis fiat motus cùm antea non eſſet. quod enim priùs quieſcebat, poſtea ambulat, nulla re externa mouente, vt videtur. Sed hoc eſt falſum. videmus enim

ſemper aliquid innatum moueri in animali. cur autem hoc moueatur, non ipſum animal *eſt* cauſa, ſed fortaſſe id quod ambit. Ipſum autem dicimus ſeipſum mouere, non quouis motu, ſed eo qui *eſt* ſecundùm locum. Ergo nihil vetat, quin potiùs neceſſarium *eſt*, in corpore fieri multos motus ab eo quod ambit: horum autem aliquos mouere cogitationem vel appetitionem: eam verò iam mouere totum animal. cuiuſmodi accidit in ſomnis. cùm enim nullus ſenſitiuus motus inſit, aliquis tamen *motus* inſit, animalia rurſus expergiſcuntur. Sed & de his perſpicuum erit ex iis quæ ſequentur.

Cap. III.

PRincipium verò conſiderationis erit, quod *fuit* B etiam dubitationis *antea* dictæ, curnam quædam entia modò mouentur, modò rurſus quieſcant. 2 Neceſſe igitur *eſt*, vel omnia ſemper quieſcere; vel omnia ſemper moueri; vel alia moueri, alia quieſcere. & rurſus ex his vel ea quæ mouentur, ſemper moueri, & ea quæ quieſcunt, *ſemper* quieſcere: vel ita naturâ eſſe comparatum, vt omnia æquè moueantur & quieſcant: vel quod reliquum adhuc *eſt* ac tertium: contingit enim quædam entia ſemper eſſe immobilia, nonnulla ſemper moueri, alia vtroque participare. quod quidem nobis dicendum eſt: hoc enim habet ſolutionem eorum omnium de quibus C dubitatum eſt, & eſt nobis finis huius tractationis. 3 *Dicere* igitur omnia quieſcere, & huius rationem quærere, omiſſo ſenſu, eſt infirmitas quædam cogitationis. 4 Ac de toto aliquo, non de parte dubitatio *eſt*. 5 Nec ſolùm aduerſùs Phyſicum, ſed aduerſùs omnes ſcientias, vt *ita* dicam, & omnes opiniones, propterea quòd motu omnes vtuntur. 6 Præterea obiectiones quæ de principiis *fiunt*, ſicut in mathematicis diſputationibus nihil ad Mathematicum *pertinent*, ſimiliterque in aliis: ita nec *obiectio* de eo quod nunc dictum fuit, ad Phyſicum attinet. hypotheſis enim *eſt*, Naturam eſſe principium motus. D 7 Ferè autem & dicere omnia moueri, falſum quidem *eſt*, ſed minùs ab hac methodo alienum. quamquam enim poſitum in *libris* phyſicis eſt, naturam in rebus Phyſicis eſſe principium, vt motionis, ita etiam quietis: tamen quies *eſt* res naturalis. 8 Ac nonnulli aiunt, non alia entia moueri, alia minimè: ſed omnia & ſemper *moueri*, ſed hoc latere noſtrum ſenſum. 9 Quibus, etiam ſi non definiant de quo motu loquantur, an de omnibus, *tamen* non *eſt* difficile occurrere. 10 Neque enim *res* augeri neque diminui poſſunt continenter: ſed eſt etiam medium. Eſt autem hic ſermo ei ſimilis, *quo dicitur* à gutta conſumi, & ab iis E quæ pullulant, diuidi lapides. non enim, ſi tantum abraſit ſiue abſtulit gutta, antea quoque dimidium *abraſit ſeu abſtulit* dimidiato tempore. ſed quemadmodum nauigij tractus *fit*, *ita* etiam tot guttæ tantum mouent: pars autem earum nullo tempore tantum *mouet*. ergo diuiditur quidem id quod ablatum eſt, in plura: ſed nihil horum motum eſt ſeorſum, verùm ſimul. Perſpicuum igitur *eſt*, non eſſe neceſſarium ſemper aliquid abire, quia deminutio diuiditur in infinita, ſed totum aliquando abire. 11 Similiter etiam *ſe res habet* in variatione quacumque. non enim, ſi id quod variatur, infinitè diuidi poteſt,

* γρ. ἔτι δὲ

διὰ τοῦτο καὶ ἡ ἀλλοίωσις· ἀλλ' ἀθρόα γίνεται πολλάκις, ὥσπερ ἡ πῆξις. 12 Ἔτι, ὅταν νοσήσῃ τις, ἀνάγκη χρόνον γενέσθαι ἐν ᾧ ὑγιασθήσεται, καὶ μὴ ἐν πέρατι χρόνου μεταβάλλειν. 13 Ἀνάγκη δὲ εἰς ὑγίειαν μεταβάλλειν, καὶ εἰς ἄλλο μηδέν. ὥστε τὸ φάναι συνεχῶς ἀλλοιοῦσθαι, λίαν ἐστὶ τοῖς φανεροῖς ἀμφισβητεῖν. εἰς τοὐναντίον γὰρ ἡ ἀλλοίωσις. 14 Ὅ, τε λίθος οὔτε σκληρότερος γίνεται, οὔτε μαλακώτερος. 15 Κατά τε τὸ φέρεσθαι θαυμαστὸν, εἰ λέληθεν ὁ λίθος κάτω φερόμενος, ἢ μένων ἐπὶ τῆς γῆς. 16 Ἔτι δ', ἡ γῆ καὶ τῶν ἄλλων ἕκαστον, ἐξ ἀνάγκης μένουσι μὲν ἐν τοῖς οἰκείοις τόποις, κινοῦνται δὲ βιαίως ἐκ τούτων. εἴπερ οὖν ἔνια αὐτῶν ἐστὶν ἐν τοῖς οἰκείοις τόποις, ἀνάγκη μηδὲ κατὰ τόπον πάντα κινεῖσθαι. 17 Ὅτι μὲν οὖν ἀδύνατον, ἢ ἀεὶ πάντα κινεῖσθαι, ἢ ἀεὶ πάντα ἠρεμεῖν, ἐκ τούτων καὶ ἄλλων τοιούτων πιστεύσειεν ἄν τις. *18 Ἀλλὰ μὴν οὔτε τὰ μὲν ἀεὶ ἐνδέχεται ἠρεμεῖν, τὰ δ' ἀεὶ κινεῖσθαι· ποτὲ δ' ἠρεμεῖν, καὶ ποτὲ κινεῖσθαι μηδέν. 19 Λεκτέον δ' ὅτι ἀδύνατον, ὥσπερ ἐπὶ τῶν εἰρημένων πρότερον, καὶ ἐπὶ τούτων. ὁρῶμεν γὰρ ἐπὶ τῶν αὐτῶν γιγνομένας τὰς εἰρημένας μεταβολάς. 20 Καὶ πρὸς τούτοις, ὅτι μάχεται τοῖς φανεροῖς ὁ ἀμφισβητῶν· οὔτε γὰρ αὔξησις, οὔθ' ἡ βίαιος ἔσται κίνησις, εἰ μὴ κινήσεται παρὰ φύσιν τὸ ἠρεμοῦν πρότερον. γένεσιν οὖν ἀναιρεῖ καὶ φθορὰν οὗτος ὁ λόγος. σχεδὸν δὲ καὶ τὸ κινεῖσθαι, γίνεσθαί τι καὶ φθείρεσθαι δοκεῖ πᾶσιν. εἰς ὃ μὲν γὰρ μεταβάλλει, γίνεται τοῦτο, ἢ ἐν τούτῳ· ἐξ οὗ δὲ μεταβάλλει, φθείρεται τοῦτο, ἢ ἐντεῦθεν. 21 Ὥστε δῆλον, ὅτι τὰ μὲν κινεῖται, τὰ δ' ἠρεμεῖ ἐνίοτε. 22 Τὸ δὲ πάντα ἀξιοῦν, ὁτὲ μὲν ἠρεμεῖν, ὁτὲ δὲ κινεῖσθαι· τοῦτο ἤδη συναπτέον πρὸς τοὺς πάλαι λόγους. 23 Ἀρχὴν δὲ πάλιν ποιητέον ἀπὸ τῶν νῦν διορισθέντων, τὴν αὐτὴν ἀφ' ἧσπερ ἠρξάμεθα πρότερον. ἢ γὰρ τοι πάντα ἠρεμεῖ, ἢ πάντα κινεῖται· ἢ τὰ μὲν ἠρεμεῖ, τὰ δὲ κινεῖται τῶν ὄντων. καὶ εἰ τὰ μὲν ἠρεμεῖ, τὰ δὲ κινεῖται τῶν ὄντων, ἀνάγκη ἤτοι πάντα, ὁτὲ μὲν ἠρεμεῖν, ὁτὲ δὲ κινεῖσθαι· ἢ τὰ μὲν ἀεὶ ἠρεμεῖν, τὰ δὲ ἀεὶ κινεῖσθαι αὐτῶν, τὰ δ', ὁτὲ μὲν ἠρεμεῖν, ὁτὲ δὲ κινεῖσθαι. 24 Ὅτι μὲν οὖν τοίνυν οὐχ οἷόν τε πάντα ἠρεμεῖν, εἴρηται μὲν καὶ πρότερον· εἴπωμεν δὲ καὶ νῦν. εἰ γὰρ κατ' ἀλήθειαν οὕτως ἔχει, καθάπερ τινές φασιν, εἶναι τὸ ὂν ἄπειρον καὶ ἀκίνητον, ἀλλ' οὔτι φαίνεταί γε κατὰ τὴν αἴσθησιν, ἀλλὰ κινεῖται πολλὰ τῶν ὄντων. εἴπερ οὖν ἐστὶ δόξα ψευδὴς, ἢ ὅλως δόξα, καὶ κίνησις ἐστὶ, κἂν εἰ φαντασία, κἂν ὁτὲ μὲν οὕτως δοκῇ εἶναι, ὁτὲ δ' ἑτέρως. ἡ γὰρ φαντασία καὶ ἡ δόξα κινήσεις τινὲς δοκοῦσιν εἶναι. 25 Ἀλλὰ τὸ μὲν † περὶ τούτου σκοπεῖν, καὶ ζητεῖν λόγον, ὧν βέλτιον ἔχομεν ἢ λόγου δεῖσθαι, κακῶς κρίνειν ἐστὶ τὸ βέλτιον καὶ τὸ χεῖρον, καὶ τὸ πιστὸν καὶ τὸ μὴ πιστόν, καὶ ἀρχὴν καὶ μὴ ἀρχήν. 26 Ὁμοίως δὲ ἀδύνατον καὶ τὸ πάντα κινεῖσθαι· ἢ τὰ μὲν ἀεὶ κινεῖσθαι, τὰ δ' ἀεὶ ἠρεμεῖν. πρὸς ἅπαντα γὰρ ταῦτα ἱκανὴ μία πίστις· ὁρῶμεν γὰρ ἔνια, ὁτὲ μὲν κινούμενα, ὁτὲ δ' ἠρεμοῦντα. ὥστε φανερὸν ὅτι ἀδύνατον ὁμοίως τὸ πάντα ἠρεμεῖν, καὶ τὸ πάντα κινεῖσθαι συνεχῶς, τῷ τὰ μὲν ἀεὶ κινεῖσθαι, τὰ δ' ἠρεμεῖν ἀεί. 27 Λοιπὸν οὖν θεωρητέον, πότερον πάντα τοιαῦτα οἷα κινεῖσθαι καὶ ἠρεμεῖν,

idcirco etiam variatio *infinitè diuiditur*: ſed contini & ſimul fit ſæpenumero, vt concretio. 12 Præterea cùm aliquis ægrotauerit, neceſſe *eſt* fuiſſe tempus, quo ſanabitur, nec in termino temporis mutari. 13 Porro neceſſe *eſt* mutari in ſanitatem, non in aliquid aliud. quocirca hæc aſſertio, *res* continenter variari, ea in dubium reuocat, quæ ſunt admodum perſpicua: quandoquidem variatio in contrarium *eſt*. 14 Ac lapis nec durior fit, nec mollior. 15 Quod etiam ad lationem *attinet*, admirabile *eſt*, ſi latet lapis, qui deorſum fertur, aut in terra manet. 16 Præterea terra & cæterorum vnumquodque neceſſariò manent in propriis locis, ex his autem vi mouentur. ſi igitur horum nonnulla ſint in propriis locis: neceſſe *eſt*, ne quidem ſecundùm locum omnia moueri. 17 Impoſſibile igitur eſſe, vel ſemper omnia moueri, vel ſemper omnia quieſcere, ex his & aliis huiuſmodi *rationibus* aliquis crediderit. 18 At verò nec fieri poteſt, vt alia ſemper quieſcant, alia ſemper moueantur; nihil autem interdum quieſcat, interdum moueatur. 19 Dicendum autem impoſſibile eſſe, vt in iis quæ antea dicta fuerunt, *ita* etiam in his: quia videmus in iiſdem *rebus* fieri dictas mutationes. 20 Et ad hæc, quia *rebus* perſpicuis repugnat, qui de hoc controuerſatur. neque enim auctio, neque violentus erit motus, niſi moueatur præter naturam, quod antea quieſcebat. generationem igitur tollit & interitum hic ſermo. Ferè autem & ipſum moueri omnibus videtur *nihil aliud eſſe quam* fieri quiddam & interire. in quod enim mutatur, fit hoc, vel in hoc: ex quo autem mutatur, interit hoc, vel hinc. 21 Quare manifeſtum *eſt*, quædam moueri, quædam quieſcere aliquando. 22 Omnia verò exiſtimare quandoque quieſcere, quandoque moueri, hoc iam adiungendum *eſt* ad rationes ſuprà *allatas*. 23 Initium autem poſt hæc quæ nunc definita ſunt, idem iterum ſumendum *eſt*, ex quo antea exorſi ſumus. Aut enim omnia entia quieſcunt, aut omnia mouentur: aut alia quieſcunt, alia mouentur. & ſi alia entia quieſcunt, alia mouentur, neceſſe *eſt*, vel omnia quandoque quieſcere, quandoque moueri; vel alia ſemper quieſcere, alia ſemper moueri; *vel alia ſemper quieſcere, alia ſemper moueri*, alia modò quieſcere, modò moueri. 24 Fieri igitur non poſſe, vt omnia quieſcant, dictum quidem & antea fuit: dicamus tamen & nunc. nam etſi reuera ita ſit, vt nonnulli dicunt, *id eſt*, ens ſit infinitum & immobile, tamen hoc ſenſui non videtur, ſed multa entia mouentur. Si igitur eſt opinio falſa, aut omnino opinio: *certè* eſt etiam motus: necnon ſi *ſit* phantaſia: & ſi quandoque ita videatur, quandoque aliter: quoniam phantaſia & opinio videntur eſſe motiones quædam. 26 Verùm de his conſiderare, & rationem quærere, in quibus ſumus meliùs affecti, quàm vt ratione egeamus, *nihil aliud* eſt *quàm* malè iudicare, quod eſt melius & quod deterius, & quod eſt credibile & quod non credibile, item principium & non principium. 27 Similiter & impoſſibile *eſt*, omnia moueri: aut alia ſemper moueri, alia ſemper quieſcere. nam aduersùs hæc omnia ſufficit probatio vna: quia videmus nonnulla modò moueri, modò quieſcere. quare perſpicuum *eſt*, omnia quieſcere, & omnia moueri continenter, æquè eſſe impoſſibile atque alia ſemper moueri, alia ſemper quieſcere. 28 Relinquitur ergo diſpiciendum, vtrùm omnia ſint eiuſmodi, vt moueantur & quieſcant:

Quicquid mouetur, ab alio moueri. Cap. IV.

MOuentium igitur, & eorum quæ mouentur, alia ex accidenti mouent & mouentur, alia per ſe. ex accidenti quidem, vt quæcumq; eo quòd inſunt mouentibus aut iis quæ mouentur, & quæ per partem. per ſe autem, quæcumque nec eò quòd inſint in mouente aut eo quod mouetur, nec eo quòd aliqua ipſorum pars moueat aut moueatur. 2 Eorum verò quæ per ſe *dicuntur*, alia à ſe ipſis, alia ab alio: & alia naturâ, alia vi & præter naturam. 3 Id enim quod à ſe ipſo mouetur, naturâ mouetur: vt vnumquodque animal: mouetur enim animal à ſe ipſo: *ea* verò, in quibus eſt principium motus, naturâ moueri dicimus. idcirco totum quidem animal naturâ ſeipſum mouet. corpori autem accidit, vt moueatur naturâ, & præter naturam: intereſt enim, & quo motu cieatur, & ex quo elemento conſtet. 4 Et eorum quæ ab alio mouentur, quædam naturâ mouentur, quædam præter naturam. Præter naturam quidem, vt terreſtria ſurſum, & ignis deorſum. 5 Præterea partes animalium ſæpe mouentur præter naturam, propter poſitiones & modos motionis. 6 Ac maximè ab aliquo moueri id quod mouetur, in iis quæ præter naturam mouentur, perſpicuum *eſt*: quia patet ab alio moueri. 7 Poſt *hæc* autem quæ præter naturam *mouentur*, inter ea quæ *mouentur* ſecundùm naturam, *illa ſunt magis manifeſta*, quæ à ſeipſis *mouentur*, vt animalia. non eſt enim hoc obſcurũ, an ab aliquo moueantur, ſed quomodo oporteat diſtinguere ipſum mouens & quod mouetur. nam videtur, vt in nauibus & iis quæ naturâ non conſtant, ita etiam in animalibus eſſe diuiſum id quod mouet & id quod mouetur, atque ita totum mouere ſeipſum. 8 Maximè autem dubitatur de reliquo dictæ poſtremæ diuiſionis *membro*. eorum enim quæ ab alio mouentur, quædam præter naturam moueri poſuimus: alia verò opponenda reſtãt, quia naturâ mouentur. hæc autem ſunt, quæ dubitationem præbere poſſunt, à quo*nam* moueantur: vt leuia, & grauia. nã hæc ad oppoſitos locos vi mouentur: ad proprios autem, nempe leue ſurſum, graue deorſum naturâ *mouentur*. ſed à quo*nam mouea ntur*, nondum liquet, ſicuti cùm mouentur præter naturam. 9 Ipſa namque à ſe ipſis moueri, *eſt* dictu impoſſibile: quoniam hoc *eſt* vitale, & animantium proprium. 10 Et ſiſtere ſe ipſa poſſent. Verbi gratiâ, ſi *quid ſit* ſibi cauſa ambulandi, *erit* etiam non ambulandi. quare cùm in ipſo igne *poſitum ſit* vt ſurſum feratur, manifeſtum *eſt* in ipſo etiam *poſitum eſſe* vt feratur deorſum. 11 Abſurdum quoque *eſt*, vno tantùm motu à ſe ipſis cieri, ſi ipſa ſe ipſa mouent. 12 Præterea qui fieri poteſt, vt continuum quid & copulatum ſeipſum moueat? nam quatenus vnum & continuum non tactu *eſt*, eatenus *eſt* impatibile. ſed quatenus ſeparata ſunt, eatenus naturâ eſt comparatum, vt alterum efficiat, alterum patiatur? neque igitur horum aliquid ſeipſum mouet, quoniam *ſunt* copulata: neque aliud quicquam continuum. ſed neceſſe *eſt*, in vnaquaque re diuiſum eſſe id quod mouet, ab eo quod mouetur: vt in rebus inanimis cernimus, cùm aliquid animatum ea mouet. 13 Sed euenit vt & hæc ab aliquo ſemper moueantur.

A *quod* quidem perſpicuum fiet diuidentibus cauſas. licet autem etiam in mouentibus ſumere ea quæ dicta ſunt. nam alia præter ſuam naturam habent vim mouendi, vt vectis non naturaliter habet vim mouendi ponderis: alia naturaliter, vt id quod eſt actu calidum, vim habet eius mouendi quod eſt calidum poteſtate. ſimiliter etiam in eiuſmodi aliis *ſe res habet*. Sed & mobile itidem naturaliter *eſt*, quod poteſtate *eſt* quale, vel quantum, vel alicubi, cùm habeat eiuſmodi principium in ſeipſo, non ex accidenti. non enim idem poteſt eſſe & quantum, & quale: *ſed* alteri alterum accidit, nec per ſe ineſt. 14 Ignis igitur ac terra mouentur ab aliquo, vi quidem, quan-B do præter naturam; naturaliter verò, quando ad ſuos ipſorum actus mouentur, cùm ſint poteſtate. 15 Quoniam autem *eſſe* poteſtate, dicitur multis modis: hæc *eſt* cauſa, cur non appareat, à quo talia moueantur: vt ignis ſurſum, ac terra deorſum. 16 Eſt verò poteſtate ſciens aliter qui diſcit, & is qui iam ſcientiam habet neque contemplatur. 17 Quotieſcumque autem id quod efficiendi & id quod patiendi vim habet, ſimul ſunt: id quod eſt poteſtate, fit actu. vt is qui diſcit, ex eo quod eſt poteſtate, fit aliud poteſtate. nam qui ſcientia eſt præditus, neque contemplatur, *is* eſt quodammodo poteſtate ſciens, ſed non vt *erat* antequam diſceret. cùm autem ita *ſe* habeat, niſi quid prohibeat, agit & contemplatur, C aut erit in contradictione & ignorantia. ſimiliter autem hæc *ſe* habent etiam in *rebus* naturalibus. nam frigidum *eſt* poteſtate calidum. cùm autem eſt mutatum, iam *eſt* ignis, & comburit, niſi quid prohibeat & impediat. 18 Similiter *ſe res* habet etiam in graui & leui. nam leue fit ex graui, vt ex aqua aër. hoc enim priùs *erat* poteſtate, & iam *eſt* leue, atque aget confeſtim, niſi quid prohibeat. actus autem *rei* leuis *eſt*, alicubi eſſe, & in loco ſupero: ſed prohibetur, quando eſt in loco contrario. Atque hoc ſimiliter *ſe* habet & in quanto, & in quali. 19 Atqui hoc quæritur, cur ad ſua ipſorum loca moueantur grauia & leuia. cauſa verò *eſt*, quia naturâ eſt comparatum, vt *ſint* alicubi atque hæc eſt *rei* leuis & grauis eſſen-D tia, ita vt illa *loco* ſupero, hæc *loco* infero definiatur. 20 Poteſtate autem eſt leue & graue multis modis, ſicuti dictum fuit. cùm enim eſt aqua, poteſtate quodammodo eſt leue: & cùm aër, adhuc eſt poteſtate: quia fieri poteſt, vt impeditum ſupero loco non ſit: verùm ſi auferatur quod impedit, agit, ac ſemper ſurſum tendit. Similiter etiam quale in id mutatur vt ſit poteſtate. nam ſciens ſtatim contemplatur, niſi quid impediat. Et quantum extenditur, niſi quid impediat. 21 Qui verò id amouet quod ſubeſt & prohibet, aliquo modo mouet, aliquo modo non *mouet*: veluti qui columnam ſubtraxit, aut qui lapidem exemit ex vtre in aqua: ex accidenti namque E mouet: ſicut & pila repercuſſa, non à pariete mota eſt, ſed ab eo qui proiecit. 22 Patet igitur nihil horum ſeipſum mouere: ſed motus principium habere, *id eſt*, non mouendi, nec faciendi, ſed patiendi. 23 Si igitur quæcumque mouentur, aut naturâ mouentur, aut præter naturam & vi; atque ea quæ vi & præter naturam, omnia ab aliquo & ab alio *mouentur*; eorum rurſus quæ natura, tam ea quæ à ſeipſis mouentur, ab aliquo mouentur, quàm ea quæ non à ſeipſis, vt leuia & grauia: (aut enim mouentur ab eo qui genuit & fecit leue ſeu graue, aut ab eo quod impedientia & prohibentia amouit) profectò quæcumque mouentur, ab aliquo mouentur.

Cap. V.

A HOc autem bifariàm. aut enim non per ipſum mouens, ſed per aliud à quo mouens mouetur, aut per ipſum. atque hoc vel *eſt* primum poſt vltimum, vel per plura *mouet*. vt baculus mouet lapidem, & à manu mouetur, quæ mouetur ab homine: hic autem non ampliùs *mouet* eo quòd ab alio moueatur. 2 Vtrumque igitur mouere dicimus, & quod eſt poſtremum, & quod eſt primum inter mouentia: ſed magis quod eſt primum: quippe quod mouet poſtremum, ſed ab eo non mouetur. & ſine primo quidem poſtremum non mouebit: illud autem ſine hoc *mouebit*: vt baculus non mouebit, niſi homo moueat. B 3 Si igitur neceſſe *eſt*, quicquid mouetur, ipſum ab aliquo moueri: etiam *neceſſe eſt* vel ab eo *moueri* quod ab alio mouetur, vel non *ab eo*. & ſi *mouetur ab* eo quod ab alio mouetur: neceſſe *eſt* eſſe aliquod mouens primum, quod non *mouetur* ab alio. ſi verò primum eiuſmodi *eſt*, non *eſt* neceſſe alterum *eſſe*. Impoſſibile enim *eſt*, id quod mouet, ipſúmq; ab alio mouetur, in infinitum abire: quandoquidem infinitorum nihil eſt primum. 4 Si igitur quicquid mouetur, ab aliquo mouetur; primum autem mouẽs mouetur quidem, non tamen ab alio mouetur: neceſſe *eſt* ipſum à ſeipſo moueri. 5 Prǽterea ſic quoque licet eandem diſputationem aggredi. quicquid C enim mouet, & aliquid mouet, & aliquo. quod enim mouet, aut ſeipſo mouet, aut alio: vt homo ſeipſo, aut baculo: & ventus vel ipſe deiecit, vel lapis quem *ventus* impulit. 6 Impoſſibile autem *eſt*, id quod mouet, ſine eo mouere quod ſeipſo mouet. ſed ſi ipſum ſeipſo moueat, non *eſt* neceſſe aliud eſſe, quo moueat: ſi verò ſit alterum, *nempe* id quo mouet, eſt etiam aliquid quod mouebit, non aliquo, ſed ſeipſo: aut in infinitum *hæc abibunt*. 7 Si quid igitur, cùm moueatur, mouet: neceſſe *eſt* conſiſtere, non in infinitum *abire*. nam ſi baculus mouet eo quòd mouetur à manu, manus mouet baculum: ſi verò & hac aliud D mouet: eſt etiam aliquid aliud quod hanc mouet. cùm igitur aliud aliquo mouet, neceſſe *eſt*, eſſe prius id quod ſeipſo mouet. 8 Ergo ſi hoc mouetur, nec eſt aliud quod ipſum moueat: neceſſe *eſt*, ipſum ſe mouere: quapropter etiam ex hac ratione vel ſtatim id quod mouetur, ab eo quod ſe ipſo mouet, mouetur, aut tãdem peruenit ad tale quidpiam. 9 Prǽter hæc quæ dicta ſunt, etiam ita conſiderantib. hæc eadem euenient. nã ſi quicquid mouetur, ab eo, quod mouetur, moueatur: vel hoc rebus ineſt ex accidẽti, vt id quod mouetur moueat, nõ quia ipſum moueatur: vel non *ex accidenti*, ſed per ſe. 10 Primum igi- E tur, ſi ex accidenti *eſt*, non *eſt* neceſſe moueri id quod mouet. hoc autem ſi *concedatur*, patet fieri poſſe, vt nihil moueatur: quoniam accidens non *eſt* neceſſarium, ſed poteſt non eſſe. 11 Itaque ſi ponamus eſſe quod *eſt* poſſibile: nihil impoſſibile eueniet, ſed fortaſſe falſum. at motum non eſſe *eſt* impoſſibile: quoniam hoc antea probatũ fuit, neceſſe *eſſe* vt motus ſemper ſit. 12 Atque hoc rationi conſentaneum accidit. tria namq; eſſe neceſſe eſt: *nimirum* id quod mouetur, & id quod mouet, & id quo mouet. id igitur quod mouetur, neceſſe *eſt* quidem moueri, ſed mouere non *eſt* neceſſe. id autem quo mouet, *neceſſe eſt* & mouere & moueri: hoc enim vnà mutatur, cùm ſimul & in eodem ſit cũ eo quod mouetur:

A Τοῦτο δὲ διχῶς· ἢ γὰρ οὐ δι' αὐτὸ τὸ κινοῦν, ἀλλὰ δι' ἕτερον ὃ κινεῖ τὸ κινοῦν· ἢ δι' αὐτό. καὶ τοῦτο, ἢ πρῶτον μετὰ τὸ ἔσχατον, ἢ διὰ πλειόνων, οἷον, ἡ βακτηρία κινεῖ τὸν λίθον, καὶ κινεῖται ὑπὸ τῆς χειρὸς κινουμένης ὑπὸ τοῦ ἀνθρώπου· οὗτος δ', οὐκέτι τῷ ὑπ' ἄλλου κινεῖσθαι. 2 Ἄμφω δὴ κινεῖν φαμὲν καὶ τὸ τελευταῖον καὶ τὸ πρῶτον τῶν κινούντων, ἀλλὰ μᾶλλον τὸ πρῶτον· ἐκεῖνο γὰρ κινεῖ τὸ τελευταῖον, ἀλλ' οὐ τοῦτο τὸ πρῶτον· καὶ ἄνευ μὲν τοῦ πρώτου, τὸ τελευταῖον οὐ κινήσει, ἐκεῖνο δ' ἄνευ τούτου· οἷον, ἡ βακτηρία οὐ κινήσει, μὴ κινοῦντος τοῦ ἀνθρώπου. nec non quod mouetur quidem, ſed ab alio, non à
ſeipſo: rationi conſentaneum *eſt*, ne dicamus ne-
ceſſarium, vt tertium quoque ſit, quod mouet, cùm
ſit immobile. 13 Idcirco & Anaxagoras rectè ait,
mentem inquiens eſſe impatibilem & non mixtam:
quoniam eam facit principium motus: hoc enim
duntaxat modo mouere poteſt, cùm ſit immobilis;
& dominari, cùm non ſit mixta. 14 At verò ſi non

ſuperiore mouente moueri, & *quidem* magis *moueri*
ab eo quod inter mouentia prius eſt. At verò hoc *eſt*
impoſſibile. euenit enim vt docens diſcat: quorum
alterum habere, alterum non habere ſcientiam, ne-

hæc à ratione alienum: quoniam euenit, vt quicquid
mouendi vim habet, mobile ſit: ſiquidem quicquid
D mouetur, ab eo moueatur quod mouetur: erit enim
mobile: perinde ac ſi quis diceret, quicquid ſanandi

Cap. VI.

ΩΣτε τοῦτο σκεπτέον λαβοῦσιν ἄλλην ἀρχὴν, εἴ τι κινεῖ αὐτὸ αὑτὸ, πῶς κινεῖ, καὶ τίνα τρόπον. 2 Ἀναγκαῖον δὴ τὸ κινούμενον ἅπαν εἶναι διαιρετὸν εἰς ἀεὶ διαιρετά.

QVapropter hoc *eſt* conſiderãdum, ſumpto alio initio, ſi quid ſeipſum mouet, quo pacto & quomodo moueat. 2 Neceſſarium itaque *eſt*, quicquid mouetur, eſſe diuiduum in ſemper diuidua:

hoc enim antea probatum fuit in *libris* vniuerſalibus de natura, quicquid per ſe mouetur, continuum *eſſe*. 3 Impoſſibile igitur *eſt*, vt id quod ſeipſum mouet, vt totum moueat ſeipſum. nam totum ferretur & ferret eadem latione, cùm ſit vnum & indiuiduum ſpecie: & variaretur & variaret: quare doceret & doceretur ſimul: & ſanaret & ſanaretur eadem ſanitate. 4 Præterea definitum fuit, moueri id quod eſt mobile: hoc autem, dum mouetur, eſſe poteſtate, non actu: quod autem poteſtate *eſt*, ad actum progredi: motum verò eſſe actum imperfectum *rei* mobilis: quod autem mouet, iam actum eſt: vt puta calidum calefacit: & omnino quod habet formam, gignit. quare ſimul idem, & ſecundùm idem, erit calidum & non calidum. ſimiliterq; *ſe habebit* vnumquodque aliorum, quorum mouens neceſſariò habet id quod eſt ſynonymum. 5 Eius igitur quod ſe ipſum mouet, aliud mouet, aliud mouetur. Non poſſe autem idem ſe ipſum ita mouere, vt vtraque pars ab vtraque moueatur, ex his perſpicuum *eſt*: quia nullum erit primum mouens, ſi vtraque *pars* vtramque moueat. quod enim eſt prius, magis *eſt* cauſa mouendi, & magis mouebit, quàm id quod hæret. 7 Bifariàm enim erat mouere. nam quoddam *erat mouens*, quod ab alio mouetur; quoddam verò *mouebat* ſe ipſo. ſed quod eſt remotius à re quæ mouetur, *id* propinquius *eſt* principio quàm medium. 8 Præterea non *eſt* neceſſe, vt id quod mouet, moueatur, niſi a ſe ipſo. alterum igitur ex accidenti inuicē mouet, proinde ſumebam contingere, vt non moueret. erit igitur aliud, quod mouetur, aliud, mouens immobile. 9 Præterea non *eſt* neceſſe, vt id quod mouet, inuicem moueatur: ſed vel neceſſe *eſt* aliquod immobile moueri, vel ipſum à ſeipſo moueri, ſiquidem neceſſe *eſt* ſemper motum eſſe. 10 Præterea quo motu mouet, eodem etiam moueretur. quare calefaciens calefieret. 11 At verò nec eius quod primùm ſe ipſum mouet, aut vna pars aut plures mouebunt ſingulæ ſeipſas. nam ſi totum moueatur a ſemetipſo: vel ab aliqua ſui ipſius *parte* mouebitur, vel totum à toto. ergo ſi *ideò mouetur*, quòd aliqua eius pars à ſe mouetur: certè hæc *pars* erit id quod primum ſeipſum mouet: quia ſi ſeparata fuerit, ipſa quidem ſeipſam mouebit, ſed totum non ampliùs *ſe mouebit*. Quòd ſi totum à toto moueatur: ex accidenti hæ *partes* ſe ipſas mouebunt. quare ſi non neceſſariò, ſumatur *eas* à ſe ipſis non moueri. totius igitur altera pars mouebit, cùm ſit immobilis: altera verò mouebitur. nam hoc tantùm modo fieri poteſt, vt aliquid ſui mouendi vim habeat. 12 Præterea ſi tota *linea* moueat ſe ipſam: altera eius *pars* mouebit, altera mouebitur. itaque *linea* α β & à ſe ipſa mouebitur, & ab α. 13 Cùm autem aliud moueat, quod mouetur ab alio; aliud, quod eſt immobile: cúmque aliud moueatur, quod etiam mouet; aliud, quod nullam rem mouet: neceſſe *eſt* vt id quod ſe ipſum mouet, conſtet ex eo quod eſt immobile, ſed mouet, & præterea ex eo quod mouetur, nec neceſſariò mouet, ſed prout accidit. eſto namque τὸ α, quod mouet quidem, ſed eſt immobile: τὸ β verò, quod mouetur ab α, & mouet id in quo *eſt* γ. hoc autem moueatur quidem à β, ſed nullam rem moueat. licèt enim etiam per plura aliquando perueniet ad γ, *tamen* eſto per vnum tantùm. totum igitur α β γ, ſe ipſum mouet. verùm ſi detraxero τὸ γ, certè τὸ α β ſeipſum mouebit, (nam τὸ α *eſt id* quod mouet; τὸ β, *id* quod mouetur) τὸ γ verò non mouebit ſe ipſum, nec omnino mouebitur. at verò nec pars β γ mouebit

A AT verò eſſe poſſe aliquem *motum* infinitum, cùm ſit vnus & continuus: & hunc eſſe eum qui fit in orbem, nunc dicamus. 2 Quicquid enim fertur, aut in orbem mouetur, aut *per lineam* rectam, aut *per* mixtam. 3 Quocirca ſi neuter illorum *eſt* continuus, ne quidem is continuus eſſe poteſt, qui ex vtriſque conſtat. 4 Id autem quod fertur *per lineam* rectam & finitam, non ferri continenter, manifeſtum *eſt*: quoniam recurrit: quod autem *per* rectam recurrit, contrariis motibus cietur. ſunt enim contraria ſecundùm locum *motus* ſurſum verſùs, *motui* deorſum verſùs: & *motus* in interiorem *partem*, *motui* in poſteriorem: & motus dextrorſum B motui ſiniſtrorſum. loci namque contrarietates hæ *ſunt*. quis autem ſit vnus & continuus motus, definitum antea fuit, nempe qui *eſt* vnius, & in vno tempore, & in eo quod non habet formæ differentiam. tria namque ſunt: *videlicet* id quod mouetur, vt homo, vel Deus: & quando, vt tempus: & tertium, *id eſt* id in quo *fit motus*: hoc autem eſt locus, vel affectio, vel forma, vel magnitudo. atqui contraria differunt ſpecie, nec *ſunt* vnum. loci verò differentiæ *ſunt*, quæ commemoratæ fuerunt. 5 Indicat autem motum ab α ad β, eſſe contrarium *motui* à β ad α: quia ſe mutuò ſiſtunt, & ceſſare faciunt, ſi ſimul fiant. C Itidémque in circulo: veluti *motus* ab α ad β, *eſt contrarius* motui ab α ad γ: quoniam *ſe mutuò* ſiſtunt, etiamſi continui ſint, nec fiat recurſus: propterea quòd ea quæ ſunt contraria, ſe inuicem interimunt & impediunt: ceterùm *motus* in latus, non eſt contrarius *motui* ſurſum verſùs. 6 Maximè autem perſpicuum *eſt*, fieri non poſſe, vt motus ſuper recta ſit continuus: quia quod recurrit, neceſſe *eſt* conſiſtere non ſolùm ſuper recta, ſed etiam ſi ſuper orbe feratur. 7 Non *eſt* enim idem, in orbe ferri, & ſuper orbe. nam id quod mouetur, aliquando continuat *motum*, aliquando verò, cùm ad idem peruenerit, à quo diſceſſit, rurſus retrocedit. 8 Neceſſe autem D *eſſe* vt conſiſtat, non ſolùm ſenſus fidem facit, ſed etiam ratio. 9 Principium autem hoc *eſt*: Cùm enim tria ſint, principium, medium, finis; medium cum vtroque *collatum*, eſt vtrumque: & numero quidem *eſt* vnum, ratione verò duo. 10 Præterea aliud eſt, *eſſe* poteſtate, & *eſſe* actu. quocirca rectæ *lineæ* quoduis punctum, quod *eſt* inter extrema, poteſtate quidem eſt medium, actu verò non eſt, niſi hanc diuidat, &, cùm conſtiterit, rurſus cœperit moueri. ſic autem id quod eſt medium, fit principium & finis, principium quidem poſterioris, finis autem prioris *motus*. 11 Verbi gratiâ, ſi α E quod fertur, conſiſtat in β, & rurſus feratur ad γ. cùm autem continenter fertur, nec poteſt acceſſiſſe α ad punctum β, nec *ab eo* receſſiſſe, ſed tantùm eſſe in momento, non in vllo tempore, præterquam in eo toto cuius diuiſio eſt momentum illud. 12 Quòd ſi quis poſuerit acceſſiſſe & receſſiſſe, α quod fertur, ſemper ſtabit: quoniam impoſſibile *eſt*, α ſimul acceſſiſſe ad β, & *ab eo* receſſiſſe: in alio igitur & alio puncto temporis. tempus igitur erit, quod *eſt* interiectum. quare α quieſcet in β. ſimiliter autem & in aliis punctis: nam eadem *eſt* omnium ratio.

A 13 Cùm autem id quod fertur, *nempe* α, vtetur ipso β, *vt* medio, & fine, & principio: neceſſe *eſt*, vt conſiſtat, quia duo facit, perinde ac ſi animo conciperet. 14 Sed ab α puncto, *id eſt*, à principio, receſſit, ad γ verò acceſſit, cùm perfecerit *motum* & ſteterit. 15 Ideóque ad dubitationem hoc dicendum *eſt*. exiſtit enim hæc dubitatio: quoniam ſi ſit *linea* ε *linea* ζ æqualis, ac τὸ α feratur continenter ab extremo ad γ, ſimul autem ſit τὸ α in puncto β, ac τὸ δ feratur ab extrema *linea* ζ ad η æquabiliter, & eâdem celeritate, quâ *mouetur* τὸ α: *certè* τὸ δ priùs perueniet ad η quàm τὸ α ad γ. quod enim priùs receſſit & abiit, priùs perueniat, neceſſe *eſt*. 16 Non ſimul igitur B acceſſit τὸ α ad β, & ab eo receſſit: idcirco ſeriùs ad finem peruenit. nam ſi ſimul *recederet*, non perueniret ſeriùs. ſed neceſſe *eſt* vt conſiſtat. 17 Non *eſt* igitur ponendum, quando τὸ α acceſſit ad β, ſimul τὸ δ moueri à ζ extremo. nam ſi τὸ α acceſſit ad β, fiet vt & receſſerit, nec ſimul. ſed erat in ſectione temporis, non in tempore. hic igitur impoſſibile *eſt* ita dicere, *nempe* in eo quod eſt continuum. 18 In eo autem quod recurrit, neceſſe *eſt* ita dicere. nam ſi τὸ η feratur ad δ, & rurſus, cùm retroceſſerit, deorſum feratur: *certè* vſum eſt extremo δ vt fine & principio, *nimirùm* vno puncto quaſi duobus. idcirco ſtetiſſe neceſſe *eſt*: nec ſimul acceſſit ad δ, & receſſit à δ. illic enim ſimul eſſet, & non eſſet C eodem momento. 19 At verò ſolutio ſuprà allata, non *eſt hîc* afferenda. nam dici non poteſt, τὸ η in δ eſſe in ſectione temporis, & neque acceſſiſſe, neque receſſiſſe: neceſſe *eſt* enim, vt perueniat ad finem, qui ſit actu, non poteſtate. *punctum* itaque, quod eſt in medio, poteſtate: hoc autem *eſt* actu: & *eſt* quidem finis *loci*, *ſi ſpectetur ab* infero *ad ſuperum*: principium verò, *ſi à* ſupero. eodem igitur modo *eſt* etiã *principium & finis* motionum. 20 Ergo neceſſe *eſt*, vt id quod ſuper recta regreditur, cõſtiterit. quare non poteſt eſſe continuus æternus motus ſuper recta. 21 Eodem modo occurrendum *eſt* iis qui rationem Zenonis interrogant, ac poſtulant *ſi* ſemper dimidiũ D pertranſire oporteat. hæc verò (*inquiunt*) *ſunt* infinita: infinita autem impoſſibile *eſt* pertranſire. 22 Vel, vt nonnulli eandem rationem aliter interrogant, qui ſimul cum eo *quod* priùs moueri dimidiam, ſibi concedi poſtulant *licere* numerare dimidium, prout vnumquodque fit. quare cùm *mobile* totam *lineam* confecerit, euenit vt numerauerit numerum infinitum. hoc autem *omnium* conceſſione *eſt* impoſſibile. 23 In primis itaque ſermonibus qui de motu *ſunt*, eo ſoluebamus, quòd tempus habet in ſe infinita. nihil enim abſurdi *eſt*, ſi infinito tempore infinita quiſpiam pertranſeat: ſimiliter autem infinitas & in longitudine ineſt, & in tempore. 24 Verùm hæc ſolutio aduerſus interrogantem quidem ſatisfacit: in- E terrogabat enim, an *tempore* finito poſſint infinita pertranſiri, vel numerari. *quod* autem ad rem & ad veritatem *attinet*, non ſatisfacit. nam ſi quis omiſſa longitudine, & interrogatione illa an finito tempore poſſint infinita pertranſiri, percontetur hæc de ipſo tempore: (habet enim tempus infinitas diuiſiones) hæc ſolutio non ampliùs ſatisfaciet. 25 Sed veritas dicenda *eſt*, quam in proximis ſermonibus diximus. ſi quis enim *lineam* continuam diuidat in duo dimidia, hic vno puncto vtitur quaſi duobus: quoniã id facit & principium & finem. ſic autem facit, & qui numerat, & qui in dimidia diuidit. ſic autem *eo* diuidente, nec linea nec motio erit continua. etenim cõtinua motio *eſt* continui. in continuo autem inſunt

quidem infinita dimidia, non tamen actu, ſed poteſtate. quod ſi faciet actu, non faciet continuum, ſed ſtabit: quod quidem in eo qui dimidia numerat, perſpicuè accidit: quandoquidem neceſſe *eſt*, vt hic vnũ punctum quaſi duo numeret: quoniam alterius dimidij principium alterius verò finis erit, ſi non vnam *lineam* continuam numeret, ſed duas dimidiatas. 26 Quocirca ad eum qui interrogat, an poſſint pertranſiri infinita vel in tempore vel in longitudine, dicendum *eſt*, partim poſſe, partim non *poſſe*. nam quæ actu ſunt, non poſſe: *quæ* verò poteſtate, poſſe. etenim qui continenter mouetur, ex accidẽti infinita pertranſit, ſimpliciter autem minimè. accidit enim lineæ, vt ſint infinita dimidia: ſubſtantia verò atque eſſentia diuerſa eſt. 27 Quinetiam perſpicuum *eſt*, niſi quis temporis punctum, quo prius & poſterius diuiditur, ſemper poſteriori attribuat, ratione ipſius rei habita: idem ſimul fore ens & non ens: item cùm factum erit, non fore. Punctum igitur *eſt* vtriſque commune, tam priori quàm poſteriori: atque *eſt* vnum & idem numero: definitione verò non eſt idem. alterius enim *eſt* finis, alterius verò principium. quod autem ad rem attinet, ſemper eſt poſterioris affectionis. 28 Eſto tempus, vbi α β γ: res, vbi δ. hæc in tempore α *eſt* alba, in tempore autem β non alba: in γ igitur *eſt* alba & non alba. in quouis enim *puncto* ipſius α verè dicebatur alba, ſi toto hoc tempore erat alba: & in β non alba: *ipſum* γ verò *eſt* in vtriſque. Non igitur dandum *eſt* in toto, ſed excipiendum extremum momentum, vbi γ: hoc autem iam *eſt* poſterius. 29 Et ſi fiebat non album, & ſi peribat album in toto α: factum eſt, vel perit in γ. quapropter album, vel non album, in eo primùm verè dicitur: aut quando factum eſt, non erit: & quando perit, erit: aut neceſſe *eſt* vt ſimul ſit album & nõ album, ens & nõ ens. 30 Iam verò ſi neceſſe *eſt* id quod erat antea non ens, fieri ens; & quando fit, non eſt: *certe* non poteſt in indiuidua tempora tempus diuidi. nam ſi in α tempore ipſum δ fiebat album, ſimul autem eſt factum, & eſt in alio indiuiduo tempore cohærente, *id eſt* in β: ſi in α fiebat, non erat: in β autem eſt: generationem quandam oportet eſſe *interiectam*. quapropter etiam tempus erat, quo fiebat. 31 Non erit enim eadem ratio etiam iis qui dicunt non *eſſe* indiuidua *tempora*: ſed in ipſius temporis, quo fiebat, extremo puncto eſt factum & eſt: cui *puncto* nihil cohæret, aut eſt deinceps: ſi verò *ſint* indiuidua tempora, deinceps *erunt*. 32 Perſpicuum igitur *eſt*, ſi in toto α tempore fiebat, non eſſe maius tempus quo fiebat & factum eſt, quàm quo toto fiebat dumtaxat. 33 Quibus igitur tanquam propriis rationibus *ductus* credat aliquis, hæ ac tales quædam ſunt. Logicè autem conſiderantibus, etiam ex his alicui videri poſſit hoc idem effici. 34 Quicquid enim continenter mouetur, ſi à nullo impediatur, ad quod latione peruenit, ad id etiam priùs ferebatur. vtputa ſi ad β peruenit, etiam ferebatur ad β. neque *tunc ſolum* cùm vicinum erat, ſed ſtatim accepit moueri. cur enim potiùs nunc quàm priùs? Similiter autem in aliis *ſe res habet*. Atqui quod ab α in γ fertur, rurſus veniet in α, cùm moueatur continenter. quando igitur ab α ferebatur in γ, tunc etiam fertur in α eo motu qui *eſt* à γ. quapropter ſimul contrariis motibus *cietur*: contrarij namque *ſunt*, qui fiunt ſuper recta. 35 Item ex hoc mutatur in quo non eſt. ſi igitur hoc *eſt* impoſſibile, neceſſe *eſt* vt conſiſtat in γ. non *eſt* igitur motus vnus: nam qui intercipitur ſtatu, non eſt vnus.

A 36 Inſuper ex his quoque perſpicuum eſt magis vniuerſaliter de omni motu. nam ſi quicquid mouetur, aliquo ex commemoratis motionibus cietur, etiam quieſcit *aliqua* ex oppoſitis quietibus, quia non erat alia præter has. quod verò non ſemper hoc motu cietur (dico autem *motus* qui *ſunt* diuerſi ſpecie, non ſi qua eſt pars totius) neceſſe *eſt* priùs quieſcere oppoſita quiete: nam quies eſt priuatio motus. 37 Quare ſi contrarij motus *ſunt*, qui fiunt per *lineam* rectam; ſimul autem non poteſt *aliquid* contrariis motibus cieri: *profectò* quod fertur ab α ad γ, non poteſt ſimul ferri etiam à γ ad α. quia verò non ſimul fertur, hoc autem motu cietur: neceſſe *eſt*
B antea quieuiſſe in γ: hæc enim eſt quies oppoſita motui αγ. manifeſtū *eſt* igitur ex iis quæ dicta ſunt, motum non eſſe continuum. 38 Præterea eſt hæc ratio magis propria quàm eæ quæ dictæ fuerunt. ſimul enim interiit non album, & factum eſt album. ſi igitur variatio in album, & ex albo, ſit continua, nec maneat aliquo tempore: ſimul interiit non album & factum eſt non album: trium namque erit idem tempus. 39 Præterea non ſi tempus eſt continuum, *propterea* etiam motus *eſt continuus*, ſed eſt deinceps. 40 Quomodo autem poteſt eſſe idem extremum contrariorum, vt alboris & nigroris? 41 *Motus* autem qui fit ſuper *linea* orbiculata, erit vnus & continuus: quia nihil impoſſibile accidit. quod
C enim ex α mouetur ſimul ad α mouebitur eodem impetu: ad quod enim veniet, ad id etiam mouetur. ſed non mouebitur ſimul contrariis aut oppoſitis *motibus*. non enim omnis *motus* qui fit ex hoc, eſt contrarius ei qui fit ad hoc, nec oppoſitus. ſed is eſt contrarius, qui fit ſuper recta: quoniam huic ſunt contraria ſecundùm locum: veluti qui fit per diametrum: plurimùm enim diſtant. oppoſitus autem *eſt*, qui *fit* per eandem longitudinem. quocirca nihil prohibet continenter moueri, ac nullo tempore intermitti. 42 Nam conuerſio eſt motus, qui *fit* ab eodem in idem. *motus* autem per rectam, ab eodem in aliud. 43 Et conuerſio quidem nunquam in iiſdem
D *fit*. qui verò ſuper recta *fit*, ſæpe *eſt* in iiſdem. *motu* igitur qui ſemper in alio atque alio fit, poteſt *aliquid* moueri continenter: eo autem qui in eiſdem ſæpe fit, non poteſt: quia neceſſe *eſt* ſimul oppoſitis *motibus* cieri. 44 Quapropter nec in ſemicirculo, nec in vlla alia circumferentia poteſt continenter moueri: quia neceſſe *eſt* per eadem ſæpe moueri, & contrariis mutationibus mutari: non coniungit enim finem cum principio: conuerſio verò coniungit, & ſola eſt perfecta. 45 Quinetiam ex hac diuiſione perſpicuum *eſt* ne alios quidem motus eſſe poſſe continuos, quoniam in omnibus accidit *per* eadem ſæpe moueri: vt in variatione, *per media* interiecta: & in *mutatione* quantitatis, *per* medias magnitudines:
E itidemque in generatione & interitu. nihil enim refert, pauca an multa *ea* facere, in quibus eſt mutatio: nec medium aliquid addere, vel detrahere: quoniam vtroque modo accidit *per* eadem ſæpe moueri. 46 Ex his igitur manifeſtum *eſt*, nec eos qui de natura diſſerunt, rectè dicere, qui omnia ſenſilia inquiunt ſemper moueri. etenim neceſſe *eſt* aliquo horum motuum cieri: & maximè ſecundùm illos variari: nam fluere ſemper aiunt, & imminui: præterea generationem & interitum, variationem appellant. præſens autem diſputatio vniuerſaliter de omni

motu oſtendit nullo motu poſſe aliquid continenter cieri, præterquam conuerſione. quapropter nec variatione, nec auctione. 47 Quod igitur neque infinita ſit vlla mutatio, neque continua, tot à nobis dicta ſunto.

RAtioni autem conſentaneum hoc euenit, vt *motus* qui *fit* in orbem, ſit vnus & cōtinuus: non is qui *fit* ſuper recta. nam eius qui *fit* ſuper recta, definitum eſt & principium, & medium, & finis: atque hæc omnia in ſe habet. quocirca eſt, vnde incipiet id quod mouetur, & vbi deſinet. in extremis enim quælibet res quieſcit, *id eſt*, vel vnde vel quò *mouetur*. conuerſionis autem non *ſunt* hæc diſtincta. cur enim quoduis eorum quæ ſunt in conuerſione, potiùs *quàm cetera, ſit* extremum? quia ſimiliter vnumquodque *eſt* & principium, & medium, & finis: adeo vt ſemper aliqua ſint in principio & in fine, & numquam. idcirco mouetur & quieſcit quodammodo globus, quoniam occupat eundem locum. 2 Cauſa verò *eſt*: quia hæc omnia centro accidunt: quoniam & principium eſt, & medium magnitudinis, & finis. quare cùm hoc ſit extra circumferentiam, non eſt, vbi id quod fertur, quieſcet, quaſi pertranſierit: ſemper enim fertur circa medium, non ad extremū. Ideóque totum manet ſemper & quieſcit quodammodo, & *nihilominus* mouetur continenter. 3 Euenit autem reciprocè. nam & quia conuerſio eſt menſura motuum, neceſſe *eſt* eam eſſe primam: omnia namque primum metitur, & quia *eſt* prima, eſt menſura aliorum *motuum*. 4 Præterea ſola conuerſio poteſt eſſe æquabilis, nam quæ ſuper recta *mouentur*, inæqualiter à principio feruntur, & ad finem: quoniam omnia, quo longiùs diſtant ab eo quod quieſcit, *eo* celeriùs feruntur. naturâ autem eſt comparatum vt ſolius conuerſionis nec principium, nec finis

D Neceſſe autem eſſe, vt hoc vacet partibus, & nullam habeat magnitudinem, nũc explicemus, iis priùs definitis quæ hoc *ſunt* priora. 2 Horum autem vnum *eſt*, fieri non poſſe vt aliquid finitum moueat tempore infinito. 3 Tria namque ſunt, id quod mouetur, & id quod mouet, & tertium quo mouetur, *nempe* tempus: hæc autem vel *ſunt* omnia infinita, vel omnia finita, vel aliqua, vt duo, vel vnum. 4 Eſto igitur α, mouens: id autem quod mouetur, β: tempus, infinitum, in quo γ. itaque δ moueat aliquam partẽ ipſius β, quæ *pars ſit* vbi ε. non *mouebit* igitur *tempore* quod ſit æquale ipſi γ: quia maiori tempore maius E *mouet*. quocirca non *eſt* infinitum tempus ζ. ſic igitur ipſi δ adiectione facta, conſumam τὸ α: & ipſi ε *adiectione facta, conſumam* τὸ β: tempus autem non conſumam, ſemper æquale detrahendo, quia *eſt* infinitum. quapropter vniuerſa *virtus* α mouebit totam *magnitudinem* β finito tempore, *quod eſt pars* ipſius γ. fieri igitur nequit vt à re finita quicquam moueatur motu infinito. fieri ergo non poſſe vt finitum moueat tempore infinito, perſpicuum *eſt*. 5 Omnino autem non poſſe in magnitudine finita eſſe vim infinitam, ex his manifeſtum *eſt*. 6 Sit enim maior vis ſemper, quæ æquale minori tempore facit, vtputà calefacit, aut dulcedinem affert, aut proiicit & omnino mouet. neceſſe *eſt* igitur, vt ab eo quod

finitum quidem eſt, ſed infinitam vim habet, aliquid patiens patiatur, & quidem magis quàm ab alio *pateretur*, quoniam vis infinita eſt maior. 7 At verò tempus nullum eſſe poteſt. nam ſi ſit tempus α, quo infinita vis calefecit, aut pepulit; *ſit autem tempus* α ϛ, *quo* finita aliqua *vis id fecit*: ad hanc ſemper maiorem adiiciens finitam, perueniam tandem ad id quod ipſo α tempore mouit. nam ſi ad finitum ſemper adiecero, ſuperabo quoduis finitum: itidemque ſi detraxero, deminuam. æquali igitur tempore mouebunt magnitudo finita & infinita. hoc autem *eſt* impoſſibile. nihil igitur finitum poteſt habere vim infinitam. 8 Neque igitur in infinito poteſt *eſſe virtus* finita. 9 Atqui poteſt in minori magnitudine maior vis eſſe. ſed adhuc multò maior *erit* in maiori. 10 Eſto igitur, vbi α ϛ, infinitum. itaque τὸ ϐ γ vim quandam habet, quæ aliquo tempore mouit τὸ δ, *nimirum* tempore ε ζ. ergo ſi ipſius β γ, duplum accipiam, mouebit dimidio temporis ε ζ. ſit enim hæc proportio. quare mouebit *tempore* ζ θ. ſic igitur ſemper accipiens, nunquam pertranſibo magnitudinem α ϛ: ſed dato tempore ſemper minus accipiam. Vis igitur erit infinita: quia ſuperat omnem vim finitam. omnis autem virtutis finitæ neceſſe *eſt* finitum eſſe etiam tempus. nam ſi *tempore* aliquo *mouet*, quæ tanta eſt: *certè* maior minori quidem, finito tamen tempore mouebit, ſecundùm conuerſionem proportionis. vniuerſa autem vis *eſt* infinita, quemadmodum & multitudo, & magnitudo, quæ ſuperat omnem finitam. 11 Licet autem ſic quoque hoc probare. ſumemus enim in magnitudine finita aliquam vim, quæ ſit eiuſdem generis, atque ea quæ eſt in magnitudine finita, *&* quæ vim illam in magnitudine infinita *collocatam* metiatur. 12 Eſſe igitur non poſſe infinitam vim in magnitudine finita, nec finitam in infinita, ex his manifeſtum *eſt*. 13 De his autem quæ feruntur, rectè habet dubitationem quandam primùm proponere. Nam ſi quicquid mouetur, ab aliquo mouetur: quæcumque non ſe ipſa mouent, *horum* nonnulla quomodo continenter mouentur, nō tangente eo quod mouet? veluti quæ proiiciuntur. 14 Quòd ſi is qui mouet, ſimul etiam aliud quodpiam moueat, vt aërem, qui dum mouetur, mouet: ſimiliter impoſſibile *eſt*, primo non tangente, nec mouente, moueri: ſed ſimul omnia moueri: & ceſſare, cùm mouens primum ceſſauerit, etiamſi faciat vt lapis ille, nempe vt id moueat quod mouit. 15 Sed neceſſe *eſt* hoc dicere, primum mouens efficere vt poſſit mouere vel aër talis, vel aqua, vel aliud quidpiam tale, quod naturâ aptum eſt mouere & moueri. non tamen ſimul & deſinit mouere & moueri: ſed *deſinit* moueri, ſimul ac mouens deſinit mouere: adhuc tamen eſt mouens: idcirco mouet aliquid aliud, quod hæret. atque huius eadem *eſt* ratio. ceſſat autem, quando minor vis mouendi imprimitur in eo quod hæret. tandem verò deſinit, quando id quod eſt prius, non facit ampliùs vt moueat, ſed ſolùm vt moueatur. Verùm neceſſe *eſt* hæc ſimul deſinere, id quod mouet, & id quod mouetur, ac totum motum. 16 Hic igitur motus fit in iis quæ poſſunt modò moueri, modò quieſcere. 17 Nec *eſt* continuus, ſed videtur. aut enim *eſt* eorum quæ deinceps ſunt, aut quæ ſe tangunt: quādoquidem non eſt vnum, quod mouet, ſed *multa* ſibi inuicem cohærentia. 18 Ideóque huiuſmodi motus fit in aëre, & in aqua.

Quid doceat ſcientia naturalis: quòd corpus ſit perfecta magnitudo: quòdque vniuerſum perfectum eſſe neceſſe ſit.

SCientia naturalis ferè plurima, circa corpora, magnitudines, atque horum affectus, motúſve, & inſuper circa principia, quæ ſunt ſubſtantię talis, verſari videtur. Eorum enim, quæ natura ſunt, alia ſunt corpora, magnitudinéſve, alia corpora ac magnitudinẽ habent, alia principia habentium ſunt. Continuũ igitur eſt, quod in diuiſibilia sẽper diuiſibile eſt. Corpus autem eſt, quod eſt diuiſibile omni ex parte. at B magnitudinis ea quidem quæ ad vnum eſt diuiſibilis, linea eſt: ea verò, quæ ad duo, ſuperficies: at ea quæ ad tria, eſt corpus. atque præter has nulla alia prorſus eſt magnitudo, propterea quòd ipſa tria omnia ſunt, & ter ipſum omni ex parte. Nam, vt Pythagorici etiam inquiũt, ipſum omne, ac omnia tribus ſunt definita. Finis enim, medium atque principium, ipſius omnis numerum habent: hæc autem trinitatis. Quapropter hoc à natura numero ſumpto, perinde atque quadã illius lege, & in deorum ſacrificiis celebrandis vti ſolemus. aſſignamus inſuper & appellationes, hoc modo: duo enim ambo dicimus, & duos ambos, atque vtroſque, non omnes: at de tribus hanc appellationẽ dicimus primò. Hęc autẽ ita dicimus, quia ſequimur, vti diximus, ipſam C ſic proficiſcentem naturam. Quare cùm omnia, omne, atque perfectum inter ſeſe non differant forma, niſi materia tantùm, & hiſce, de quibus dicuntur: corpus profectò magnitudinum ſolum perfectum erit. Solum enim, iſtis tribus eſt definitum, hoc autem, eſt omne: atque cùm ſit tribus ex partibus diuiſibile, omni ex parte, atque omnino eſt diuiſibile. Cæterarum autem magnitudinum, altera ad vnũ, altera ad duo eſt diuiſibilis. Nam vt numerum ſubeunt, ſic & diuiſionis cõtinuationiſve participes ſunt. alia enim ad vnum cõtinua eſt, alia ad duo, alia omni ex parte, atq; omnino eſt talis. Quæ igitur magnitudinum ſunt diuiſibiles, eæ continuæ quoque ſunt. at ſi omnes quoque cõtinuæ diuiſibiles ſint, nondum ex hiſce, quę nunc diximus, patet.

CAPVT II.

Quòd præter corpora quatuor ſimplicia, quæ recto motu feruntur, ſit corpus ſimplex reliquis omnibus præſtantius, quod ſuapte natura in orbem vertitur.

DE ipſius igitur vniuerſi natura, ſiue ſit magnitudine infinita, ſiue tota mole finita, poſteriùs conſideremus oportet. Nunc de partibus ipſius per ſpeciem dicendum eſſe videtur, hinc exordio ſumpto. Omnia namque corpora naturalia, magnitudinéſve mobiles per ſe loco dicimus eſſe. Naturã enim, C principiũ ipſis inſitũ eſſe motus aſſerimus. Omnis autẽ motus ad locũ accõmodatus, quẽ lationem conſueuimus appellare, aut rectus eſt, aut circularis, aut ex hiſce miſtus. Simplices enim ij duo ſunt ſoli, propterea quòd & magnitudines hæ ſolũ ſimplices ſunt, recta & circularis. Circularis igitur is eſt, qui circa mediũ ſit. Rectus autẽ, quo ſurſum itur, atque deorſum. atque eo ſurſum ire dico, quo è medio pergitur: eo verò deorſum, quo ad mediũ itur. Quare lationum ſimpliciũ, aliam è medio, aliã ad medium, aliã circa medium eſſe neceſſe eſt. atque hoc cum ratione, ea, quæ initio dicta ſunt, ſecutum eſſe videtur. Nam & corpus tribus confectũ D eſt, & ipſius etiam motus. Cùm autẽ corporum, alia ſimplicia ſint, alia ex hiſce cõpoſita, (atque ea ſimplicia dico, quæ motus ſecundùm naturã principiũ habent, vt ignẽ, terrã, horúmque ſpecies, & ea quæ ſunt hiſce propinqua) motiones etiam alias ſimplices, alias quodammodo miſtas eſſe neceſſe eſt: ſimplicium quidem ſimplices, compoſitorum autẽ miſtas, mouerique compoſita nutu eiuſce ſimplicis, quod in his ipſis dominatur, ac ſuperat. Si igitur ſimplex in ratione rerum eſt motus conuerſio, cõuerſio autẽ motus eſt ſimplex, atque corporis ſimplicis ſimplex eſt motus, & ſimplex motus corporis ſimplicis eſt (nam ſi compoſiti ſit, per id illi ſimplex, quod ſuperat, cõpetit) ſimplex quippiã eſſe corpus E in ratione rerũ, profectò neceſſe eſt, quod quidẽ ſit aptum circulari motu ſuapte natura ferri. Etenim fieri poteſt vt vi quippiam eo moueatur motu, qui ad aliud & aliud corpus accommodatur: at vt eo moueatur ſecundùm naturam, fieri nequit, ſi vniuſcuiuſque corporis ſimplicis vnus ſit motus ei competens ſecundũ naturam. Si is præterea motus, qui præter naturam eſt, ei, qui ſecundùm naturam eſt, aduerſatur, vnúmque vni contrariũ eſt, cùm cõuerſio ſit motio ſimplex, ſi non ſecundùm naturam ei corpori, quod fertur, ineſt, præter naturam inſit eidem neceſſe eſt. Si igitur ignis ſit quod aduerſatur, aut quippiã aliud tale, naturalis ipſius motus cõuerſioni contrarius erit. at vnum vni contrarium eſt:

atque

atque motus ij, quibus infera ſuperáque loca petũtur, inter ſeſe contrarij ſunt. Sin verò quippiã aliud corpus adſit, quod præter naturã in orbem fertur, erit alius quiſpiã motus ipſius ſecundùm naturam. At id eſſe nõ poteſt. Nam ſi ſit is motus, quo ſurſum itur, ignis vel aër erit: ſin is quo deorſum acceditur, terra erit, vel aqua. At verò talem lationem & primam eſſe neceſſe eſt. perfectum enim, imperfectũ antecedit natura. Atque circulus quidem perfectũ eſt, linea verò recta, nulla eſt ſanè perfecta. Neque enim infinita: terminum enim atque finẽ haberet: neque finitarum vlla ratio: eſt enim quippiã extra omnes, quippe cùm fieri poſſit vt cuiuis incrementum addatur. Quare ſi prior quidẽ motus corporis ſit prioris natura, conuerſio verò prior ſit recto, atq; ipſe rectus corporũ ſit ſimpliciũ motus (ignis enim loca recto motu ſupera petit, & terrea corpora eodem ad infera mediũmque feruntur) & ipſam ſanè conuerſionem cuiuſpiã corporis ſimplicis eſſe neceſſe eſt. Miſtorum enim lationẽ, eiuſce nutu ſimplicis fieri diximus quod in miſtione dominatur, ac ſuperat. Ex his igitur patet, aliam quãdam in ratione rerũ corporis ſubſtantiã eſſe, præter eas corporum conſtitutiones, quæ hìc ſunt, diuiniorẽ his vniuerſis, atque priorem. Præterea, ſi motus omnis, aut ſecundùm naturam, aut præter naturam eſt, & qui motuum eſt cuipiam præter naturam, is alij naturalis eſt: (quod quidem intueri licet in hiſce motibus, quibus ſurſum itur, atq; deorſum: alter enim igni, alter terræ, ſecũdùm naturam & præter naturã eſt:) conuerſionem etiam, cùm horum reſpectu ſit præter naturam, alij cuipiam competere ſecũdùm naturam, neceſſe eſt. Inſuper, ſi conuerſio cuipiam competit ſecundùm naturam, patet eſſe quippiam corporum ſimplicium atque priorum, quod quidẽ ſic ſuapte natura verſatur: vt ignis ſurſum, & terra deorſum fertur. Si verò corpora, quæ verſantur circa medium, præter naturam ferũtur, mirabile ſanè, metáſque penitus egredi rationis videtur, hunc ſolum motuum continuum eſſe, perpetuúmque, qui quidem præter naturã illis corporibus ineſt. In cæteris enim ea quæ præter naturam ſunt, citiſſimè corrumpi periróque videntur. Quare ſi ignis ſit id quod verſatur, vt quidã inquiunt, non minùs hæc motio præter naturam eſt ipſi, quàm ea qua infera loca petuntur. Ignis enim eum eſſe motum videmus, quo rectà pergitur è medio ſurſum. Quapropter ex his omnibus quiſpiam rationibus, corpus quippiam aliud eſſe crediderit, præter ea corpora, quæ hìc, & circa nos ſunt, ſeparatum, tanto præſtabiliorem habens naturam, quanto plus ab iſtis corporibus diſtat.

CAPVT III.

Corpus ſimplex, quod circumferri dictum eſt, neque graue neque leue eſſe. Quódque nec genitum ſit nec corruptibile, neque augmentum ſuſcipiens, neque decrementum neque alterationem vllam.

CVm eorũ, quæ dicta sũt, alia ſuppoſita ſint, alia demonſtrata: patet, nõ omne corpus leuitatẽ aut grauitatẽ habere. Atque ſupponatur quidnam id quod leue, & quid id quod graue nuncupamus, oportet, quo ad ſatis eſt ad vſum præſentẽ. Exactiùs autem rurſus dicemus, cùm ſubſtantiã ipſorũ conſiderandam aggrediemur. Graue igitur id ſit, quod aptũ eſt ad mediũ ferri. Leue id, quod aptum eſt è medio ferri. Grauiſſimum id, quod ſub iis omnibus collocatur, quæ deorſum feruntur. Leuiſſimum id, quod ſuper omnia collocatur, quæ ſurſum pergũt.

A Omne autē quod fertur ſurſum aut deorſum, aut leuitatem aut grauitatem habeat, aut vtrunque, at non ad idē neceſſe eſt. Ad alia namque grauia ſunt, leuiáque, vt aër ad aquam, & aqua ad terrā. Corpus igitur id, quod verſatur, impoſſibile eſt grauitatem aut leuitatē habere. Fieri enim non poteſt vt ipſum aut ſecundùm naturā, aut præter naturā ad mediū aut è medio moueatur. Latio enim recta, non competit ipſi natura: nam vniuſcuiuſque corporis ſimplicis, vna eſſe latio dicebatur. Quare erit idē quod ignis, aut cæterorum quippiā corporum, quæ recto motu cientur. Quòd ſi præter naturam feratur, ſi ea latio, qua deorſum itur, ſit præter naturam, ea ſanè, qua ſurſum pergitur, ipſi competit ſecundùm B naturam. Si præter naturam ſit iſta, ſecundùm naturam illa competet ſanè. Poſuimus enim ſi cōtrariorum motuum alter eſt cuipiam præter naturam, alterū eidem competere ſecundùm naturam. Cùm autem ad idem totum & pars ſecundùm naturā feratur, veluti tota terra, paruáque gleba, primò quidem fit, vt neque grauitatē neque leuitatē habeat vllā. Nam aut ad mediū, aut è medio ſanè ferri ſuapte natura poſſet. Deinde fieri nequit vt ipsū moueatur motu ad locum accommodato, aut ſurſum aut deorſum ſubiens detractionem. Neque enim ſecundùm naturam, neque præter naturā alio motu moueri poteſt, aut ipſum, aut pars vlla. Eadem enim eſt ratio de toto, & parte. Simili modo ratio- C ni conſentaneum eſt, & ingenerabile, atque incorruptibile ipſum eſſe exiſtimare, neque incrementa decrementaq; ſuſcipere, neque alterationibus ſubiici poſſe: propterea quòd omne quod generatur, ex contrario, & ex ſubiecto fit quodam: & identidē quod corrumpitur, ſubiecta materia & à contrario & ad cōtrarium ſanè corrumpitur, vt primis in ſermonibus diximus. Contrariarum verò rerum, & lationes contrariæ ſunt. Si igitur nihil huic contrarium eſſe poteſt, propterea quòd & cōuerſioni nullus eſt contrarius motus: natura rectè id à cōtrariis excepiſſe videtur, quod ingenerabile atque incorruptibile eſt: generatio namque corruptióq; in ipſis cōtrariis eſt. At verò & id quod accreſcit, à propin- D quo quodam accedēte, ſubeuntéque reſolutionē, in materiam augetur: hoc autem non habet id ex quo eſt ortum. Quod ſi neque accreſcere, neque corrumpi poteſt, eiuſdem eſt profectò ſententiæ, & alterationibus ipſum ſubiici nō poſſe putare: alteratio enim, motio eſt in qualitate. Qualitatis autem habitus quidem, & diſpoſitio, non ſinē mutationibus in paſſionibus fiunt, vt ſanitas, atque morbus. Quæ verò naturalium corporum in paſſionibus mutantur, ea vniuerſa incremēta ſuſcipere, decrementaque videmus, vt animalium corpora, parteſque ipſorum, atque plantarum etiam, & elemētorū ſimili modo. Quare ſi corpus, quod verſatur, neque incrementa, neque decremēta ſuſcipere po- E teſt, expers ipſum & alterationum eſſe, conſentaneum eſt rationi. Patet igitur ex hiſce, quæ dicta ſunt, id quod primum eſt corporum, perpetuū eſſe, & neque accreſcere, neque decreſcere, neque ſeneſcere, neque alterationibus, neque paſſionibus ſubiici, ſi quiſpiā hiſce, quæ ſunt ſuppoſita, credit. Videtur autem & ratio teſtis iis eſſe quæ apparent, & quæ apparent teſtes eſſe etiam rationi. Omnes enim homines de Diis exiſtimationē habēt, & vniuerſi, qui Deos eſſe putant, tā Græci quam Barbari, ipſum ſupremum locum Diis tribuerūt, propterea quòd immortale ad immortale eſt accommodatū.

alio namque modo, eſt impoſſibile. Si igitur quippiam eſt diuinum, quemadmodum & eſt: ea ſane, quę de prima corporum ſubſtantia dicta ſunt, bene rectéque ſunt dicta. Emergit autem hoc & per ſenſum reſpectu fidei humanæ ſufficienter. In toto namque præterito tempore per traditam ſucceſſione memoriam poſteris, non mutatum vllo pacto fuiſſe videtur, aut in toto vltimo cælo, aut in ſuarum partium vlla. Videtur autem & ipſum nomen vſque ad hoc tempus ab antiquis hæc opinatis, quæ & nos dicimus, ſucceſſione traditum eſſe. Non enim ſemel, neque bis, ſed infinities eaſdem opiniones ad nos accedere putare oportet. Quapropter quia primum corpus diuerſum quiddam eſt à terra, igne, aëre, atque aqua, ætherem ſuperum locum appellauerunt, à ſemper currendo perpetuo tempore poſita appellatione. Anaxagoras verò, hoc nomine abutitur non rectè: pro igne enim, ætherem dicit. Patet autem ex dictis, & cur impoſſibile eſt, numero plura eſſe ea quæ ſimplicia corpora dicuntur. Simplicis enim corporis motum, ſimplicem eſſe neceſſe eſt. Solos autem motus hoſce ſimplices dicimus eſſe, circularem, & rectum: & huius duas partes, vnam, qua à medio, alteram, qua ad medium pergitur.

CAPVT IV.

Quòd motui circulari rectus motus non ſit contrarius, nec diuerſorum circulorum motus eſſe contrarios, ſi ab eiſdem ſignis verſus eadem fiant, & alij itidem, qui videntur.

NOn eſſe autem aliam lationem conuerſioni contrariam, ex compluribus quiſpiam ſumere fidem poteſt. Primò quidē ex eo, quia circumflexæ lineæ rectā opponi maximè ponimus. Concauum enim, & curuum, non ſolùm inter ſeſe oppoſita eſſe videntur, ſed etiam recto coniuncta ſimúlque ſumpta. Quare ſi qua eſt contraria latio, eum motum maximè, qui fit ſuper linea recta, conuerſioni contrarium eſſe neceſſe eſt. At ij qui ſuper linea recta fiunt, inter ſeſe oppoſiti ſunt ob loca. Suprà enim, & infrà, differentia loci, atque contrarietas eſt. Deinde ſi quiſpiam eandem etiā rationem & in recta linea, & in circumflexa (lationem enim ab a ad b, ei contrariā eſſe dicit, qua à b ad a pergitur) is eam lationē dicit, quæ ſuper linea recta fit: hæc enim finita eſt. Circūflexæ autē, circa eadē puncta infinitæ eſſe poſſunt. Similiter & in ſemicirculo vno, velut à c ad d, & à d ad c. eſt enim illa, quæ ſuper diametro fit. Semper enim vnumquodque per lineā rectam diſtare ponimus. ſimiliter res ſeſe habēt, & ſi quiſpiam circulo facto lationē eam, quæ ſuper altero fit ſemicirculo, ei contrariam poſuerit lationi, quæ ſuper altero fit: veluti toto in circulo eam, qua ab e ad f itur ſuper g ſemicirculū, ei, qua ad f ad e pergitur in ſemicirculo h. Quòd ſi & hæ ſunt cōtrarię, at non eæ ſunt ob hoc inter ſeſe contrarię lationes, quæ ſuper toto circulo fiūt. At verò neque ea latio circularis, qua b ab a petitur, ei contraria eſt, qua ab a ad b proficiſcitur. Ad idem enim, hæc ex eodem eſt motio: cōtraria verò latio, contrariis eſt locis definita: à cōtrario enim ad cōtrariū itur. Quòd ſi circularis motio, circulari eſſet cōtraria, fruſtra altera eſſet, ad idē enim fit profectio per vtraſq;. Præterea id, quod verſatur, à quocunque ſigno inceperit,

CAPVT V.

B *Probat, nihil quod in orbem moueatur, poſſe eſſe infinitum.*

ATque primò conſiderandum eſt, vtrùm ſit corpus quippiam infinitum, vt complures antiquorum putarunt, an id ipſum vnum quid ſit eorum quæ fieri nequeunt: hoc enim an illo modo res ſeſe habeat, non parum, ſed totum ad veritatis contemplationem vtique refert. Etenim hoc ferè contrarietatum omnium, hiſce qui de natura tota aliquid dixerunt, principium & fuit, & fieri ſanè poteſt. Siquidem & paruus exitus à veritate fit hiſce, qui exorbitauerunt, ſi longè progrediantur, decies millies maior. Veluti ſi quiſpiam magnitudiné aliquam minimam dixerit eſſe. Hic enim minima C magnitudine introducta, maximas rerũ mathematicarum vtique dimouebit. Atque huius cauſa eſt, principiũ vi maius, quàm magnitudine eſſe. Idcirco quod in principio paruũ eſt, id in fine valde magnum emerget. Infinitũ autem, & principij vim, & quantitatis maximam habet. Quare non eſt abſurdum, neque egreditur rationẽ, admirabilem differentiã eſſe ex infiniti poſitione, ſi quiſpiã ſumpſerit infinitum corpus in ratione rerum quodpiam eſſe. Quamobrẽ à principio repetẽtes, de ipſo dicamus oportet. Omne itaque corpus aut ſimplex, aut cõpoſitũ eſſe neceſſe eſt. Quare & infinitũ ipſum, aut ſimplex, aut compoſitũ erit: atqui patet, ſi ſimplicia ſint finita, compoſitũ neceſſariò finitũ eſſe. Quod enim ex multitudine finitis ac magnitudine con- D ſtat, id & multitudine, & magnitudine eſt finitum. Tantum enim erit, quanta ſunt ea ex quibus componitur, atque conſtat. Reſtat igitur videre vtrum ſimpliciũ quippiam corporum infinitum magnitudine eſſe poſſit, an hoc fieri nequeat. Atque priùs hoc de primo corpore viſo ac pertractato, de reliquis deinceps conſideremus. Corpus igitur, quod verſatur, neceſſariò omne finitum eſſe ex hiſce patere poteſt. Nam ſi corpus, quod verſatur, eſt infinitum, infinitæ profectò erunt & rectæ lineæ, quæ è medio protrahuntur. Infinitarũ autẽm interuallũ infinitum etiam eſt. Atque interuallum linearũ id dico, extra quod nulla magnitudo tangens lineas E ſumi poteſt. Hoc igitur infinitum eſſe neceſſe eſt. Finitarũ enim interuallum ſemper finitũ erit. Fieri præterea poteſt, vt eo maius ſemper ſumatur, quod datum eſt. Quare eadẽ ratio eſt & de ſpatio: quemadmodum numerum ex eo dicimus infinitũ, quia maximus non eſt. Si igitur fieri nequit, vt in infinito tranſitus fiat, atque ſi cælum ſit infinitum, interuallum etiam infinitum eſſe neceſſe eſt: fieri profectò non poteſt vt ipſum cælum verſetur. At verſari cælum videmus, rationéque iam definiuimus, conuerſionem corporis motionem cuiuſpiam eſſe.

Præterea ſi à finito tempore finitum tēpus abſtuleris,& reliquum finitum eſſe, principiúmque habere neceſſe eſt. Si tempus autem ambulationis principium habet, & motionis etiam principium eſt. Quare principium & magnitudinis eius erit, ſuper qua ambulatio fuit. Eadē eſt & in cæteris ratio. Sit itaque a b c linea,altera ex parte infinita,quia ipſum eſt c: & rurſus alia infinita vtraque ex parte d e. Si igitur ab a centro,circulū,linea a b c deſcribat,lineā ſecans d e, in orbem aliquando lato finito in tēpore erit. Totū enim tēpus, quo verſatū eſt cælum, finitū eſt: & id ergo tempus finitum eſt, quod eſt ablatum, in quo ſecās linea ferebatur. Erit igitur principium quoddam,quo primùm a b c linea, d e lineā ſecuit. At eſſe non poteſt. Non ergo fieri poteſt vt infinitum verſetur:quare neque Mūdus,ſi infinitus eſſet. Præterea,ex his etiā patet,fieri non poſſe vt infinitum motu ſit agitatum. Sit enim linea a, quæ propter b lineam feratur, finita, inquam,propter finitam. Simul igitur a lineā à b,& b ab a abſolutam fore, neceſſe eſt. Quantū enim alterius altera occupabit, tātum illius & altera occupabit. Si igitur ambæ in contrarium moueantur, citiùs abſoluentur:ſin altera prope manentem alteram moueatur, tardiùs:ſi modò eadem quod prope illam mouetur celeritate feratur. Verùm illud eſt manifeſtum, fieri nō poſſe vt finito in tēpore quicquam tranſeat in infinitum:tranſibit ergo in tēpore infinito. Hoc enim eſt demonſtratū priùs in hiſce, quæ de motu ſunt pertractata. Nihil autem intereſt, finita prope infinitā feratur, an infinita prope finitam. Nam cùm hæc prope illam mouetur, & illa per hāc tranſire videtur. Similiter,& ſi moueatur,& ſi non moueatur. Verùm ſi moueātur ambæ, citiùs abſoluentur. Quanquam nihil prohibet, eam interdum, quæ prope quieſcentem mouetur, citiùs, quàm eam quæ fertur cōtrà, tranſire, ſi quiſpiā eas quidem, quæ cōtrà mouentur, vtraſque ferri tardè poſuerit, eam verò, quæ prope quieſcentem mouetur, multo celeriùs illis ferri. Nullum igitur rationi prorſus impedimentum afferetur, ſi prope quieſcētem altera moueatur: cùm fieri poſſit, vt a, ſi prope b lineam moueatur, motionē & ipſam etiā ſubeūtem, tardiùs tranſeat, vti diximus. Si igitur id infinitum eſt tempus, quo finita ſubiens motū abſoluitur: & id ſanè, quo infinita finitam tranſiuit, infinitum eſſe pari ratione neceſſe eſt. Vt infinitum ergo ſit motum, minimè fieri poteſt. Nam tēpus fiat infinitum neceſſe eſt, etiam ſi per minimū fuerit motum. At cælum tempore finito verſatur, totúmque fertur in orbē. Quare totam eam tranſit circunferentiā, quæ eſt intus, ceu a b finitam. Impoſſibile eſt ergo, id infinitum eſſe, quod ſubit conuerſionē. Præterea, vt eſſe nō poteſt linea infinita ex ea parte, qua finis eſt, niſi ad longitudinē ſine careret: ſic & ſuperficies infinita eſſe nō poteſt ex ea parte, qua finis. Cùm verò fuerit terminata, nulla ex parte eſt infinita. Quadratū enim, aut circulum, aut ſphærā infinitā eſſe non dixeris, quemadmodū neque lineā bipedalem. Si igitur neque ſphæra, neque circulus, neque quadratū eſt infinitū, atque circulus nō eſt, conuerſio nō erit: & ſi infinitus non eſt, infinita nō erit: ſi ipſe circulus infinitus nō eſt, verſari profectò corpus infinitum non poteſt. Præterea, ſi c ſit centrum, a b verò ſit infinita, & c ſit erecta ad rectos angulos infinita, & inſuper infinita ſit c d ſubiens motum, nunquam ipſa c d ab c linea abſoluetur, ſed ſemper perinde atque a b linea, ſeſe habebit.

Sit enim cælum quidem, quod manet, infinitum: id autem, quod in hoc mouetur, æquale. Quare ſi verſatum fuerit, cùm ſit infinitum, æquale ſibi infinitum tempore finito tranſibit. At hoc eſſe impoſſibile dicebatur. Atqui dicere contrà etiam licet. Cùm finitum ſit id tempus, in quo eſt verſatum, magnitudinem quoque finitam eſſe neceſſe eſt eam quam conuerſione tranſiuit. At æquale ſibi conuerſione tranſiuit: & ipſum ergo cælum finitum eſt. Corpus igitur id, quod verſatur, exitu non vacare, nec infinitum eſſe, ſed finem habere, B ex hiſce, quæ iam diximus, patuit.

CAPVT VI.

Probat neque id quod ad medium, neque id quod à medio fertur, eſſe poſſe infinitum.

At verò neque id, quod è medio, neque id, quod ad medium fertur, infinitionem ſubibit. Lationes enim eas, quibus ſurſum itur atque deorſum, contrarias eſſe conſtat. Contrariis autem contraria loca petuntur. Atque contrariorum ſi alterũ definitum eſt, & alterum definitum erit. Medium verò, eſt definitum. Nam ſi vndeuis deorſum feratur id quod ſub omnibus collocatur, fieri non poteſt vt vltra medium ipſum progrediatur. Cùm igi- C tur medium ſit definitum, & ſuperum locum definitum eſſe, neceſſe eſt. Quòd ſi loca ſunt definita, atque finita, & corpora ſanè erunt finita. Præterea, ſi ſuperus ac inferus locus eſt definitus, & id quod eſt inter hæc, definitũ eſſe neceſſe eſt: nã ſi definitũ non eſt, motus infinitus erit profectò. Hoc autẽ impoſſibile eſſe, antea demõſtrauimus: ergo medium ipſum eſt definitũ. Quare & id corpus definitũ eſt ſanè, quod in hoc eſt, aut fore poteſt. At id corpus, quod ſurſum & deorſum fertur, in hoc fore poteſt. Aliud enim è medio, aliud ad medium ferri ſuapte natura poteſt. Ex his igitur patet, corpus infinitum in rationem rerum eſſe non poſſe. Et inſuper ſi pondus nõ ſit infinitum, neque quicquam horum corporum infinitum eſſe profectò poteſt. Infiniti nam- D que corporis pondus, infinitum eſſe neceſſe eſt. Eadem fuerit ratio & de corpore leui: nam ſi eſt grauitas infinita, eſt & leuitas infinita, ſi id eſt infinitũ, quod ſuper omnia eminet. Quod quidem ex hiſce patere poteſt. Sit enim finitum, atque ſumatur infinitum quidem corpus a b, põdus autem ipſius c: ab infinito igitur magnitudo finita auferatur b d, atque pondus ipſius ſit e: ipſum igitur b pondus, minus erit ipſo pondere c. Minoris enim magnitudinis, pondus minus nimirum eſt. Minus itaque pondus, maius menſuret numero aliquo repetitũ. Itaque vt minus ſeſe habet ad maius, ita b d ſeſe E habet ad b f magnitudinem. Fieri enim poteſt vt quantauis ab infinita auferatur. Si igitur magnitudines ſimilitudinem rationum ſubeũt cum ponderibus, & minus pondus minoris eſt magnitudinis, maius etiam magnitudinis erit maioris. æquale ergo finiti pondus erit, ac infiniti. Si maioris præterea corporis maius eſt põdus, ipſius b d pondus maius erit pondere corporis ipſius b f. Quare finiti pondus, maius erit pondere infiniti. Inæqualiũ etiã magnitudinũ, idẽ fuerit põdus. Finitũ enim ac infinitũ inæqualia eſſe cõſtat. Nihil autẽ intereſt, commenſurabilia ipſa pondera, an incommenſurabilia ſint.

Etenim eadem erit ratio, ſi incommenſurabilia ſint. Veluti ſi e pondus menſurans c pondus, ter repetitum exuperet. Nam ſi tres totæ magnitudines b d ſumantur, pondus ipſarum maius erit pondere c. Quare idem eueniet impoſſibile. Præterea, fieri poteſt vt commenſurabilia ipſa ſumantur. Nihil enim intereſt, à pondere an à magnitudine initium fiat. Velut ſi e pondus commenſurabile ſumatur ipſi ponderi c, atque ab initio ea magnitudo auferatur, quæ habet ipſum e pondus, ceu b d. Deinde allata fuerit alia magnitudo, ceu b f, ad quam ita b d magnitudo ſe habet, vt pondus ſe habet ad pondus. Fieri enim poteſt vt ſi magnitudo a b ſit infinita, quantauis ab ea magnitudo auferatur. His enim ſumptis, tam magnitudines quàm pondera inter ſeſe ſanè commenſurabilia erunt. At verò nihil ad demonſtrationem etiam refert, ſimilis ipſa magnitudo ponderis, an diſſimilis ſit. Semper enim æqualis corpora ponderis, magnitudinis ipſius b d ponderi quotquotuis ab infinito ſumere, aut auferendo aut addendo licet. Quare patet ex his, quæ diximus, corporis infiniti pondus finitum non eſſe: erit igitur infinitum. Quòd ſi hoc eſſe non poteſt, nec infinitum quicquam in ratione rerum corpus etiam eſſe poteſt. Atqui pondus infinitum quid in ratione rerum eſſe non poſſe, ex hiſce patere poteſt. Si enim tantum pondus per tantum ſpatium hoc in tempore motu cietur, tantum & inſuper, in minore ſanè mouebitur. Atque tempora rationem eam, quam habent pondera, contra ſanè habebunt. Veluti ſi dimidium pondus hoc in tempore mouetur, duplum in dimidio huiuſce mouetur. Præterea, pondus finitum omne, finitum ſpatium finito quodam in tempore tranſit. Quæ cùm ita ſint, ſi quodpiam pondus ſit infinitum, moueatur *ipſum*, & non moueatur neceſſe eſt. Moueatur enim neceſſe eſt, quo tantum eſt, quantum finitum: & inſuper non moueatur rurſus neceſſe eſt, quo exceſſiuum quidem ratione ipſum moueri oportet. contráque maius in minore moueri. Ratio verò infiniti, nulla eſt ad finitum. Temporis autem minoris eſt ad maius tempus finitum, ſed in minore ſemper. Minimum autem nõ eſt. Neque ſi eſſet, vtilitas vlla eſſet. Sumptum enim fuiſſet quippiam finitum maius in eadem ratione, in qua reſpectu temporis infinitum ad minus eſſet. Quare æquali in tempore, per ſpatium æquale, finitum ac infinitũ vtique moueretur: at fieri non poteſt. at neceſſe eſt, ſi infinitum quantouis, finito tamen tempore moueatur, aliud etiam pondus finitum in hoc eodem, per ſpatium finitum quoddam moueri. Impoſſibile eſt ergo, pondus infinitum eſſe, & ſimiliter leuitatem. Et corpora ergo infinitum pondus habentia, leuitatémve, in ratione rerum eſſe non poſſunt. Patet igitur corpus infinitum non eſſe: & ſi hoc modo contemplatio de ipſo fiat per rationes particulares, & ſi vniuerſaliter conſideretur, non ſolùm per rationes eas quæ in ſermonibus de principiis à nobis ſunt dictæ. Determinatum eſt enim & illo in loco de infinito vniuerſaliter priùs, quomodo eſt, & quomodo non eſt: ſed etiam nunc, alio modo. Poſt hæc autem conſiderandum eſt, ſi infinitum quidẽ vniuerſum corpus non ſit, tantum tamen ſit, vt plures ſint cæli. Forſitan enim hoc quiſpiam dubitauerit, nihil obſtare, vt hic, qui nos circundat, Mundus eſt conſtitutus, ſic & plures alios eſſe cælos, plures quidem vno non tamen infinitos. Priùs autem, vniuerſaliter de infinito dicamus.

CAPVT VII.

Quòd vniuerſitatis corpus non poſſit eſſe infinitum.

Omne itaque corpus, aut infinitũ aut finitũ eſſe neceſſe eſt. Et ſi infinitum eſt, aut ſimiliũ, aut diſſimiliũ partium eſſe. Et ſi diſſimiliũ partium eſt, aut ex finitis ſpecie, aut ex infinitis conſtare. Patet igitur ex infinitis conſtare non poſſe, ſi quiſpiã nobis primas ſuppoſitiones manere ſinat. Nã ſi primi motus finiti ſint, ſpecies quoque ſimpliciũ corporum finitas eſſe neceſſe eſt. Etenim ſimplicis quidẽ corporis motio, ſimplex eſt. Simplices autẽ motiones, finitæ ſunt: atq; omne naturale corpus motionem habere neceſſe eſt. At verò ſi infinitum ex infinitis erit, & quamque partium infinitam eſſe neceſſe eſt. Dico autem aquam, vel ignẽ. At hoc eſſe non poteſt: demonſtratum eſt enim, neque pondus neque leuitatem in ratione rerum infinitam eſſe. Præterea, loca quoque ipſarum, magnitudine infinita eſſe neceſſe eſt: quare & motus omnium infinitos eſſe. Hoc autem eſſe nequit, ſi primas ſuppoſitiones poſuerimus veras eſſe, & neque id quod deorſum, neque id quod ſurſum fertur, in infinitũ moueri poſſit. Impoſſibile eſt enim fieri id quod ortum ſubire non poteſt, tam in qualitate, quàm quantitate, quàm etiã in vbi. Dico autẽ hoc pacto: Si impoſſibile eſt, album quippiã fore, aut pedale, aut in Ægypto eſſe, & fieri quicquam horũ impoſſibile eſt: impoſſibile eſt igitur, & illuc etiam quicquã ferri, quò nullũ corpus peruenire poteſt ſubiẽs lationem. Præterea & ſi ſeiũcta ſunt, non minùs tamen hiſce, qui eſt ex omnibus ignis, infinitus eſſe poteſt. At corpus eſt id quod omni ex parte dimẽſionem habet. Quare qui fieri poteſt vt plura quidem ſint diſſimilia, vnumquodque autem ipſorum ſit infinitum? Omni enim ex parte, quodque infinitum eſſe oportet. At verò neque diſſimilium partium, infinitum eſſe poteſt. Primò enim nõ eſt alius præter hos, motus: horum igitur vnum habebit. Quòd ſi hoc cõcedetur, eueniet ſanè, grauitatem, aut leuitatem infinitam in ratione rerum eſſe. Atqui impoſſibile eſt, id quod verſatur, infinitũ eſſe. Fieri enim non poteſt vt infinitum ipſum verſetur: nihil enim intereſt, hoc, an cælum infinitum eſſe dicatur. Hoc autem demonſtratum eſt, impoſſibile eſſe. At verò fieri omnino non poteſt, vt infinitum ſubeat motum. Aut enim ſecundùm naturam aut vt motu ciebitur. Atque ſi vi moueatur, eſt ipſius profectò & ſecundùm naturam motus. Quare & locus proprius alius erit, ad quem ipſum ſuapte natura feretur. At hoc, impoſſibile eſſe conſtat. Omnino autem fieri non poſſe, vt infinitum à finito patiatur, aut in quippiam finitum agat, ex hiſce patere poteſt. Sit enim infinitum quidem a, finitum autem b, & tempus, in quo finitum mouit, ac infinitum eſt motum, c. Si igitur ipſum a calefactum eſt, aut pulſum à b, aut aliud quippiam paſſum in tempore c, ſit d ipſo b minus, atque minus æquali in tempore moueat minus: ſit autem e, ab ipſo d alteratum. Quod igitur d eſt ad b, id ipſum e ad finitum aliquod erit, puta f. Atque alterare ponatur, æquale quidem æquali in tempore æquale, minus autem in æquali minus, & maius etiam maius, atque tantum ſanè, quantum ratio flagitabit, quam habet maius ad minus. A nullo ergo finito, vllo in tempore mouebitur infinitum,

Minus enim aliud, æquali in tẽpore à minore mouebitur, ad quod id quod rationem ſubit, finitum nimirum erit. Infinitum enim, ad finitum nullam rationem ſubire poteſt. At verò neque infinitũ, vllo in tempore finitum mouebit. Sit enim infinitum quidem a, finitum verò b, tempus autem c. Igitur d in c tempore, minus b ipſo mouebit. Sit illud f: atque quam rationem b totum habet ad f, eam habeat e ad d: ergo e mouebit ipſum b f in tempore c. Finitum ergo & infinitũ æquali in tẽpore alterabunt. At fieri non poteſt. Supponebatur enim maius, minore in tẽpore alterare: atque tẽpus ſumptum idem faciet ſemper. Quare nullum erit tempus, in quo mouebit. At verò fieri non poteſt, vt tempore infinito moueat, aut etiam moueatur: finem enim non habet: actio autẽ atque paſſio habent. Atqui neque fieri poteſt, vt infinitũ ab infinito aliquid patiatur. Sit enim tam a quam b infinitum, c d autem tempus, in quo paſſum eſt b ab a: pars igitur infinitæ, quæ eſt e, quoniam totum a fuit paſſum, non æquali tempore paſſa eſt idẽ. Supponatur enim minus tempore minore moueri, ſit e motum ab a, in tẽpore d f. Quod igitur eſt ipſum f d ad c d, id eſt ipſum e ad quippiã finitum ipſius b. Hoc igitur ab a, in c d tẽpore motũ eſſe, neceſſe eſt. Supponatur enim, ab eodem in maiore tempore, atque minore maius, minúſve pati, quę quidẽ diuiſa ſunt per temporis rationem. Nullo ergo tẽpore finito, infinitum ab infinito moueri poteſt: in infinito ergo. Sed infinitum quidẽ tempus, finẽ nõ habet. Id autem, quod eſt motum, habet. Si igitur omne ſenſibile corpus, actiuam, aut paſſiuam, aut vtranque potẽtiam habet, impoſſibile eſt, corpus infinitũ, ſenſibile eſſe. At verò quæ corpora etiã ſunt in loco, omnia ſenſibilia ſunt. Non ergo corpus vllum, extra cælum infinitum erit: at neque etiam finitum. Nullum ergo corpus omnino eſt extra cælum. Nam ſi intelligibile ſit, erit ſanè in loco. Extra enim, & intus, locũ ſignificat. Quare ſenſibile corpus erit: ſenſibile autem nullum, eſt nõ in loco. Licet etiã & rationes afferre magis logicas huiuſmodi. Neque enim verſari poteſt infinitum ſi ſit ſimilium partium, quippe cùm non ſit medium infiniti: id verò, quod verſatur, circa medium moueatur. Neque rectà moueri: oportebit enim alium tãtum infinitum eſſe locum, ad quem ſuapte natura mouebitur: & alium item tantùm, ad quem præter naturam feretur. Præterea, ſiue natura motum habeat rectà pergẽdi, ſiue vi moueatur, vtroque profectò modo mouentes vires infinitas eſſe oportet. Vires enim infinitæ ſunt infiniti, & infiniti vires ſunt infinitæ. Quare & id quod mouet, infinitum eſſe neceſſe eſt. Eſt autem in hiſce, quæ de motu ſunt dicta, ratio quædam, qua demonſtratur, nihil finitorum potentiam infinitam, neque quicquam infinitorum finitam habere. Si igitur id quod ſecundùm naturam mouetur, & præter naturam moueri poteſt: erunt infinita duo, id, inquam, quod ſic mouet, & id quod mouetur. Præterea, quid eſt id quod infinitum mouet? Nam ſi ipſum ſe ipſum mouet, animatum erit profectò. Hoc autem, quònam pacto infinitum animal eſſe poteſt? Sin aliud quippiam eſt, duo erunt infinita profectò: id, inquam, quod mouet, & id, quod mouetur, forma, potentiaque diuerſa. Si vniuerſum autem non ſit continuum, ſed, vt Democritus dicit, ac Leucippus, corpora vacuo ſint diſtincta, vnum omnium eſſe motum neceſſe eſt Sunt enim figuris diſtincta.

CAPVT VIII.

Quòd cæli plures eſſe non poſſint.

Nvnc autē dicamus, cur & plures eſſe cæli non poſsūt. Hoc enim conſiderandū diximus eſſe, ſi quiſpiā demonſtratū eſſe de corporibus vniuerſaliter non putet, extra mundū hunc nihil ipſorū eſſe poſſe, ſed ſermonē dictum eſſe duntaxat exiſtimet de hiſce corporibus, quæ indefinitè ponuntur. Omnia itaque corpora, & vi, & natura, & manent, & etiam mouentur. atque quo in loco non vi manēt, ad eum ſecundùm naturam feruntur, & ad quem non vi feruntur, in eo manent natura. Quo verò in loco vi manent, ad eum & vi ſanè feruntur: & ad quē vi feruntur, in eo vi quoque manēt. Præterea, ſi hæc latio vi fit, contraria cōpetit ſecūdùm naturam. atque ſi ad hoc medium illinc vi terra feretur, hinc illuc ſecundùm naturā feretur. Et ſi hic terra nō vi manet, & huc natura ſanè feretur. Vnū enim eum motum, qui ſecundùm naturā competit, eſſe conſtat. Præterea, Mūdos vniuerſos ex eiſdē corporibus conſtare, cùm ſint eiuſdē naturæ, neceſſe eſt. Corporū etiam vnūquodq; potentiā eandē habere neceſſe eſt: vt terrā, ignē, & ea quæ inter hæc collocantur. Nā ſi hæc ſolo conueniunt nomine, & non forma, eadē ea quæ illic & hîc ſunt, dicuntur, vniuerſum quoque nomine profectò tantùm Mundus dicetur. Patet igitur, ipſorū aliud è medio, aliud ad medium aptum eſſe ſuapte natura ferri, ſi ignis omnis eiuſdē eſt formæ, & vnumquodque etiam cæterorum, quemadmodū & eæ partes ignis, quæ hoc in Mundo ſunt. Hæc autem ita ſeſe habere neceſſariò, ex ſuppoſitionibus hiſce patet, quas de motibus priùs attulimus. Nam & motiones finitæ ſunt, & vnumquodque elementorū per vnumquemque motuum dicitur. Quare ſi motiones eædē ſunt, & elemēta ſint eadē vbique, neceſſe eſt. Partes igitur terræ, quæ in alio Mūdo ſunt, ad hoc medium aptæ ſunt ferri: & ignis etiā, qui eſt ibi, ad hoc vltimū ferri ſuapte natura poteſt. at impoſſibile eſt. Si enim hoc eueniat, ſurſum quidē terrā ſuo in mūdo, ignē autem ad medium ferri neceſſe eſt. Similimodo & terram, quæ eſt hîc, è medio ſecundùm naturam ferri, medium illius mundi petentem, neceſſe eſt,

A propterea quòd mundi inter ſeſe talẽ habent poſitionẽ. Aut enim ponendũ non eſt, eandem corporũ naturã ſimplicium in cælis pluribus eſſe: aut ſi eandem eſſe ponamus, ipſum mediũ vnum, & vltimũ itidem vnum faciamus, neceſſe eſt. Quòd ſi hoc abſurdũ eueniat, vno plures eſſe mundos impoſſibile eſt. Cenſere autẽ aliam ſimplicium eſſe naturam, ſi minùs, aut plùs à propriis locis diſtent, metas egredietur rationis. Quid enim refert, tãta longitudine, an tanta diſtent? Different enim tanto ratione magis, quanto plus diſtent: formã autem eandem habent. At verò motum ipſorũ aliquem eſſe, neceſſe eſt: patet enim, ipſa moueri. Omnibúſne igitur motibus vi moueri, contrariiſque dicemus? At quod omnino moueri aptum non eſt, id vt vi moueatur B fieri nequit. Si igitur eſt quiſpiam motus ipſorũ ſecundùm naturã, & eorum ſanè, quæ ſunt eiuſdem formæ, & ſingulorũ ad vnum numero locũ, ad hoc, inquam, mediũ, & ad hoc vltimũ, motionẽ eſſe neceſſe eſt. Si verò ad eadẽ ſpecie, plura autẽ numero motus ipſorum ſit, propterea quòd & ſingula plura quidem ſunt, ſpecie verò non differunt: non huic quidẽ partium tale, huic autẽ non tale, ſed ſimiliter omnibus idẽ accommodabitur. Eadẽ enim omnes inter ſeſe ſpecie conſtat eſſe, numero verò quáuis à quauis differre. Hoc autẽ ideo dico, quia partes, quæ hic ſunt, & partes, quæ in altero mundo ſunt, inter ſeſe ſimiliter habent, & ea quæ hinc eſt ſumpta, nullã differentiã ad earum partiũ vllam habet, C quæ in alio, & in eodem ſunt mundo, ſed eodem ſe habet ad omnes: quippe cùm inter ſe non differant forma. Quare aut haſce ſuppoſitiones mouere, aut medium vnum, & vltimum vnum eſſe, neceſſe eſt. Quod ſi ſit, & cælũ his eiſdem profectò ſignis, eiſdémque neceſſitatibus vnũ ſolũ, & non plures eſſe neceſſe eſt. Eſſe autẽ quippiam, quò ferri terra eſt apta, ac ignis, ex cæteris etiã patet. Omnino enim id quod mouetur, ex quopiã in quippiam mutatur. Atque hæc ex quo, inquã, & in quod, ſpecie differũt. Omnis autem mutatio, finita eſt ſanè. Id enim quod ſanatur, ex morbo it ad ſanitatem: & id quod accreſcit, è quãtitate parua ad magnã accedit: & id D ergo, quod fertur, legẽ eandẽ ſubit: etenim hoc ex loco in locũ eũdo fit. Id ergo, ex quo, & id, ad quod aptũ eſt ferri, ſpecie differre oportet, quemadmodũ id quod ſanatur, nõ quouis ſine vllo diſcrimine pergit, neq; quò vult is, qui mouet. Et ignis ergo, & terra, non in infinitũ, ſed in oppoſita ſanè feruntur. Supra autẽ, & infra, sũt ea quæ in loco ſubeunt oppoſitionem. Quibus efficitur vt hæc lationis ſint fines. Nam & cõuerſio, oppoſita quodã modo habet ea quæ per diametrũ diſtãt: toti verò, nõ eſt cõtrariũ quicquã. Quare & ex hiſce motio, quodã modo in oppoſita fit, atq; finita. Si igitur quiſpiã exitus, & non ſine fine ferãtur, neceſſe eſt. Nõ ferri autẽ hæc in infinitũ, ſignũ etiã hoc eſſe videtur. Terra náq;, & ignis, quò propinquiora sũt locis ſuis, illa quidẽ E medio, ignis verò ſupero loco, eo celeriùs porrò ferũtur. Quòd ſi infinitus eſſet ſuperus locus, infinita nimirũ & celeritas eſſet. Et ſi celeritas infinita eſſet & grauitas etiã & leuitas infinita eſſet. Nam vt id, quod inferiùs pergeret, celeritate differens, grauitate celere eſſet: ſic ſi infinita eſſet huius accretio, & incrementum ſanè celeritatis infinitum etiam eſſet. At verò neque ab alio, neque vi, vt quidã inquiunt, extruſum, ſurſum alterũ ipſorum, deorſum alterum fertur. Tardiùs enim maior ignis ſurſum, & maior terra deorſum vtique moueretur. Nunc autem contrarium fit. Ignis enim maior, & terra etiam maior celeriùs ſemper proprium locum petit.

Ὅτι εἷς οὐρανός ἐστι καὶ ἀΐδιος.

ΟΤι δ᾽ οὐ μόνον εἷς ἐστιν [οὐρανὸς,] ἀλλὰ καὶ ἀδύνατον γενέσθαι πλείους· ἔτι δ᾽, ὡς ἀΐδιος ἄφθαρτος ὢν καὶ ἀγένητος, λέγωμεν, πρῶτον διαπορήσαντες περὶ αὐτοῦ. δόξειε γὰρ ἂν ὧδε σκοπουμένοις ἀδύνατον ἕνα καὶ μόνον εἶναι αὐτόν· ἐν ἅπασι γὰρ καὶ τοῖς φύσει καὶ τοῖς ἀπὸ τέχνης γεγενημένοις καὶ συνεστῶσιν, ἕτερόν ἐστιν αὐτή τε καθ᾽ αὑτὴν ἡ μορφὴ καὶ μεμιγμένη μετὰ τῆς ὕλης· οἷον, τῆς σφαίρας ἕτερον τὸ εἶδος, καὶ ἡ χρυσῆ, καὶ ἡ χαλκῆ σφαῖρα· καὶ πάλιν κύκλου ἑτέρα ἡ μορφὴ καὶ ὁ χαλκοῦς καὶ ὁ ξύλινος κύκλος· τὸ γὰρ τί ἦν εἶναι λέγοντες σφαίρᾳ ἢ κύκλῳ, οὐκ ἐροῦμεν ἐν τῷ λόγῳ χρυσὸν ἢ χαλκὸν, ὡς οὐκ ὄντα ταῦτα τῆς οὐσίας· ἂν δὲ τὴν χαλκῆν ἢ χρυσῆν ἐροῦμεν, καὶ ἐὰν μὴ δυνώμεθα νοῆσαι μηδὲ λαβεῖν ἄλλο τι παρὰ τὸ καθ᾽ ἕκαστον· (ἐνίοτε γὰρ οὐδὲν κωλύει τοῦτο συμβαίνειν· οἷον, εἰ μόνος εἷς ληφθείη κύκλος.) οὐδὲν γὰρ ἧττον ἄλλο ἔσται τὸ κύκλῳ εἶναι, καὶ τῷδε τῷ κύκλῳ, καὶ τὸ μὲν εἶδος, τὸ δὲ εἶδος ἐν τῇ ὕλῃ, καὶ τῶν καθ᾽ ἕκαστον. ἐπεὶ οὖν ἐστιν ὁ οὐρανὸς αἰσθητὸς, τῶν καθ᾽ ἕκαστον ἂν εἴη· τὸ γὰρ αἰσθητὸν ἅπαν, ἐν τῇ ὕλῃ ὑπῆρχεν. Εἰ δὲ τῶν καθ᾽ ἕκαστον, ἕτερον ἂν εἴη τῷδε τῷ οὐρανῷ εἶναι, καὶ οὐρανῷ ἁπλῶς· ἕτερον ἄρα ὅδε ὁ οὐρανὸς καὶ οὐρανὸς ἁπλῶς. καὶ τὸ μὲν ὡς εἶδος καὶ μορφὴ, τὸ δ᾽ ὡς τῇ ὕλῃ μεμιγμένον. ὧν δ᾽ ἐστὶ μορφή τις καὶ εἶδος, ἤτοι ἐστὶν, ἢ ἐνδέχεται πλείω γενέσθαι τὰ καθ᾽ ἕκαστα. εἴτε γὰρ ἐστὶν εἴδη, καθάπερ φασί τινες, ἀνάγκη τοῦτο συμβαίνειν· εἴτε καὶ χωριστὸν μηδὲν τῶν τοιούτων, οὐδὲν ἧττον. ἐπὶ πάντων γὰρ οὕτως ὁρῶμεν, ὅσων ἡ οὐσία ἐν ὕλῃ ἐστὶ, πλείω καὶ ἄπειρα ὄντα τὰ ὁμοειδῆ.

Præterea per rationes etiã, quæ ex prima Philoſophia adduci poſsũt, & ex ipſa conuerſione (quã quidē hic ſimiliter, & in cæteris mũdis perpetuam eſſe, neceſſe eſt) hoc idē demõſtrari profectò poteſt. Fuerit inſuper manifeſtũ, cælũ neceſſariò vnũ eſſe, etſi hoc cõſiderabimus modo. Nã cùm tria ſint elemēta corporea, tria nimirũ & loca elementorũ erũt. At nullum eſt aliud corpus [illegible] rerum, vt patuit. In ipſo ergo medio, qui eſt [illegible] dicta loca, hoc eſſe neceſſe eſt. Huius autem ipſius quænam ſint differentiæ, poſteriùs explicabimus.
C De corporeis igitur elementis quænam, & quot ſunt, & quis cuiuſque locus, & quot inſuper ſunt multitudine ipſa loca, ex his quæ diximus, patuit.

CAPVT IX.

Non ſolùm non eſſe plures mundos, ſed & fieri non poſſe vt ſint plures. Cælum ex omni ſenſibili materia conſtare. Non contingere extra cælum corpus vllum factum eſſe.

DIcamus autem deinceps oportet, Mundum non ſolùm vnum eſſe, ſed etiam plures eſſe non poſſe, & inſuper perpetuum eſſe, cùm neque corruptionem, neque generationem ſubire poſſit: primò dubitatione de ipſo allata. Nam ſi hoc pacto conſiderabimus, impoſſibile eſſe videbitur, vnum ipſum ac ſolum eſſe. Vniuerſis enim rebus, quæ aut
D à natura, aut ab arte ſunt factæ, aliud eſt ipſa per ſe ipſã forma, & quæ eſt cũ materia miſta, ceu ſphæræ forma alia eſt, & aurea, atque ænea ſphera: & circuli rurſus alia eſt ipſa forma, & æneus circulus, ligneúſve. Sphæræ namq; quidditatē, aut circuli aſſignãtes, non aurũ, nõ æs in ratione dicemus: quippe cùm hæc ſubſtantiæ huiuſce non ſint. ſi verò æneã aut aureã ſphæram dicemus, etiamſi præter ſingulare quicquã aliud intelligere, aut ſumere non poſſumus: (interdũ enim vt hoc accidat, nihil obſtat: veluti ſi ſolus vnus circulus fuerit ſumptus:) nõ minùs enim aliud eſſe circuli, & huius circuli erit, & illud quidē forma, hoc autē in materia forma erit, ac ſingulare. Cùm igitur cælũ ſenſibile ſit, ſingula-
E re erit profectò. Sēſibile enim omne, in materia eſt. Si ſingulare autē eſt, aliud eſſe huiuſce cæli, & cæli ſimpliciter, erit. Eſt ergo aliud, hoc cælum, & ſimpliciter cælum: atque hoc eſt vt ſpecies, atque forma, illud vt cum materia miſtum. Quorum autem forma quædam, & ſpecies eſt, eorum aut ſunt, aut eſſe plura ſingulariter poſſunt. Nam ſi ſint, vt quidam inquiunt, formæ: hoc accidere ſanè neceſſe eſt. Sin nihil ſit talium ſeparatum, non minùs idem euenire neceſſe eſt. In omnibus enim hiſce, quorum ſubſtantia in materia eſt, plura eſſe, & infinita ea quæ ſunt eiuſdem ſpeciei, videmus.

Quare aut plures ſunt cæli, aut plures eſſe profectò poſſunt. Ex his igitur quiſpiam exiſtimauerit, & eſſe plures cælos, & etiam eſſe poſſe. Conſiderandum autem rurſus eſt, quidnam horum dicitur rectè, & quid non rectè. Aliam igitur eſſe formæ rationem, eam quæ ſine materia eſt, aliam, eam quæ in materia eſt, rectè profectò dicitur: atque verum eſſe ponatur. Nulla tamen ob id ipſum mundos aut plures eſſe, aut plures eſſe poſſe, neceſſitas eſt: ſi hic vniuerſa ex materia cōſtat, vt & conſtare videtur. Hoc autem modo forſitā id quod dicitur, magis patebit. Si enim ſimitas, concauitas eſt in naſo, aut in carne, caróque materies eſt ſimitatis: ſi omnibus ex carnibus vna fieret caro, atque in hac ſimitas eſſet orta, nullum aliud ſimū aut eſſet, aut fore omnino poſſet. Simili quoq; modo ſi materies in homine caro eſt, atque oſſa, ſi vniuerſa ex carne atq; oſſibus fieret homo, atque illa diſſolui nō poſſent, alius homo profectò eſſe non poſſet. Eadem fuerit & in cæteris ratio. Omnino enim quorum ſubſtantia in ſubiecta materia quadam eſt, eorum nihil oriri poteſt, ſi non aliqua materia ſit. Cælum autem, eſt quidē ſingulare, & ex materia conſtat. Sed ſi nō ex ipſius materiei parte, ſed ex vniuerſa materia conſtat, eſſe quidem ipſius cæli, atque huiuſce cęli, aliud eſt. Non tamen aut aliud erit, aut plures fieri poſſunt: propterea quòd vniuerſam hoc materiā eſt complexum. Reſtat ergo hoc demonſtrare, ex vniuerſo, inquam, ipſum naturali corpore, ſenſibilique conſtare. Dicamus autem primùm quidnam cælū eſſe dicimus, atque quot modis: quò magis id nobis manifeſtum, quod quæritur, fiat. Vno igitur modo cælum dicimus, ſubſtantiam vltimæ vniuerſi conuerſionis: aut id naturale corpus, quod eſt in vltima vniuerſi conuerſione. Vltimum enim, ſuperúmque corpus, cælum maximè conſueuimus appellare, in quo & vniuerſum diuinum dicimus eſſe. Alio modo cælū id corpus dicimus, quod eſt proximum vltimę vniuerſi conuerſioni, in quo Luna, & Sol, & nōnullæ ſtellarum ſunt collocatæ: hæc enim in cælo dicimus eſſe. Inſuper alio modo dicitur cælum, id corpus quod à conuerſione vltima cōtinetur: totum enim, ac vniuerſum, cælum dicere cōſueuimus. Cùm igitur cælum tribus modis dicatur, totum id quod ab extrema conuerſione continetur, ex vniuerſo naturali, ſenſibilique corpore conſtare neceſſe eſt: propterea quòd extra cælū neque eſt quicquā corpus, neque eſſe omnino poteſt. Nam ſi extra vltimam conuerſionem corpus ſit naturale, ipſum aut ſimplicium quippiam corporum, aut compoſitorum eſſe, & aut ſecundùm naturam, aut præter naturam ſeſe habere, neceſſe eſt. Simplicium igitur corporum quicquam omnino non erit. Demonſtratum eſt enim, id quod orbe fertur, mutare ſuum locum non poſſe. At neque id eſſe poteſt, quod è medio fertur, neque etiam id quod ſub omnibus collocatur. Etenim natura quidem ibi non erunt: alia namque ſunt ipſorum propria loca. Si verò præter naturam ſunt, alij cuipiam corporum exterus ille locus competet ſecundùm naturam. Qui namque huic præter naturā tribuitur, is alij cōpetat ſecundū naturam, neceſſe eſt. At nullum aliud præter hæc in ratione rerū ſimplex eſt corpus. Impoſſibile eſt ergo, corporū extra cælum quicquā ſimplicium eſſe. Quòd ſi corpus ſimplex nequeat vllum eſſe, neque quicquam miſtorum etiam eſſe poteſt. Sint enim & ſimplicia, ſi ſit miſtum, neceſſe eſt. At verò neque fore etiam poteſt. Aut enim præter naturam,

CAPVT X.

De ortu & interitu mundi ſententias veterum examinat.

Hiſce determinatis, conſideremus deinceps oportet, vtrùm mundus ingenerabilis ſit, an generabilis, & incorruptibilis, an corruptibilis: E priùs cæterorum opinionibus recitatis. Demonſtratione enim contrariorum, dubitationes de contrariis ſunt. Inſuper & dicenda, magis credentur, ſi ſententiarum earum, quę in controuerſiam veniũt, iura priùs fuerint audita. Abſentes enim condemnari minùs vtiq; videbuntur. Etenim eos, qui bene iudicare volunt de veritate, non aduerſarios, ſed arbitros eſſe oportet. Omnes itaque factum quidem aſſerunt eſſe: ſed factum quidam perpetuum, quidam caducũ, perinde vt quoduis aliud eorum quæ natura conſtant, inquiunt eſſe. Quidam viciſſim interdum hoc, interdum alio modo ſeſe habere ſubeuntem corruptionem, idque ſemper hoc fieri modo dicunt, vt Agrigentinus Empedocles,

vt Epheſius Heraclitus dicit. Igitur factū quidem eſſe, perpetuum tamen eſſe aſſerere, ex iis eſt profectò, quæ nequeunt eſſe. Ea namque ſola ponenda ſunt, quæ in multis, aut in omnibus eſſe videmus. De hoc autem, cõtrarium accidit. Vniuerſa enim quæ fiunt, & corruptionem ſubire videntur. Præterea, quod non habet principium hoc habēdi modo, ſed aliter habere priùs vniuerſa æternitate non poteſt, id & mutari profectò nequit: erit enim aliqua cauſa, quæ quidem ſi priùs eſſet, aliter id ſeſe habere poſſet, quod aliter ſeſe habere non poteſt. Quòd ſi Mundus ex aliter priùs habentibus conſtat, ſi ſemper ſic ſe habentibus, & non potentibus aliter ſe habere, factus ipſe profectò non eſt: ſi verò eſt factus, & illa aliter ſeſe habere poſſe, & nõn ſemper ita ſeſe habere, neceſſe eſt. Quare & conſtituta diſſoluentur, & diſſoluta antè conſtiterunt: atque hoc infinities, aut ſic ſe habuit, aut poterat ſic habere. Quod ſi ita eſt, non vacabit ſanè corruptione, neque ſi olim aliter ſeſe habebat, neque ſi aliter ſeſe habere poſſit. Subſidium autem, quod quidam eorum, qui dicunt Mundum incorruptibilem quidem eſſe, attamen factum eſſe, ſibi ipſis enituntur ferre, verum non eſſe videtur. Inquiunt enim, & ſe, perinde vt geometræ, qui deſignationes deſcribunt, de generatione Mundi dixiſſe: non quia aliquando Mundus eſt ortus, ſed gratia doctrinæ, quia diſcentes magis cognoſcunt, ſi vt deſignationem viderint factum. Hoc autem non idem eſt, vti dicimus. Nam in deſignationum quidem effectione, omnibus poſitis eſſe ſimul accidit idem. In horum autem demonſtrationibus, non idem, ſed impoſſibile ſanè accidit. Ea namque, quæ priùs poſteriúſve ſumuntur, ſubcontraria ſunt. Ex inordinatis enim olim, inquiūt ordinata fuiſſe. Vt autem idem ordinatum ſit ſimul, atque inordinatum, fieri nequit, ſed generationem eſſe quæ ſeparat, tempúſve, neceſſe eſt. In deſignationibus verò, nihil eſt tempore ſeparatum. Eſſe igitur impoſſibile, perpetuum ipſum ſimul, ac factum eſſe, ex his quæ diximus, patet. Conſtituere verò mundum viciſſim, atque diſſoluere, nil aliud eſſe videtur quàm ipſum ſempiternum quidem, formam autem mutantem extruere: perinde atque ſi quis interdum corrumpi interdum eſſe putaret quempiam, qui vir, ex puero, & ex viro fieret puer. Eſt enim perſpicuum, ſi elementa inter ſeſe conueniunt, non quēuis, ſed eundem ordinem, eandémque fieri conſtitutionem: præſertim ſecundùm eos, qui hanc ſententiam dicunt, qui quidem vtriuſque diſpoſitionis contrariū ipſum cauſam inquiunt eſſe. Quare ſi totū quidem corpus continuum permanens, interdum hoc, interdum illo diſponitur modo, ac perornatur, conſtitutio verò totius Mundus eſt, atque cælum nõ vtique mundus, ſed diſpoſitiones ipſius fiunt, ac corrumpuntur. Hoc autem, ortum, inquam, Mundum, omnino corruptum iri, & non redire, ſi ſit quidem vnus, impoſſibile eſt. Nam antea quàm ortus eſſet, cõſtitutio præcedens ipſum, ſemper nimirum erat: quam quidem haud factam, mutari non poſſe dicimus. Sin verò ſint infiniti, magis fieri poteſt. At verò hoc etiam ſi fieri poſſit necne, perſpicuū ex hiſce quæ poſteriùs dicentur, euadet. Sunt enim, quibus fieri poſſe videtur, vt & ingenerabile quippiā corrumpatur, & ortum vacet corruptione: vt in Timæo aſſeritur. Illic enim Timæus cælum eſſe quidem ortum, non tamen eſſe caducum, ſed reliquo ſemper fore tempore dicit: ad quos, naturaliter quidem de cælo ſolū eſt dictū: ſi verò de omnibus vniuerſaliter conſiderauerimus, de hoc quoq; fuerit manifeſtū.

A καὶ Ἡράκλειτος ὁ Ἐφέσιος. τὸ μὲν οὖν γενέσθαι μέν, ἀΐδιον δ' ὅμως εἶναι φάναι, τῶν ἀδυνάτων. μόνα γὰρ ταῦτα θετέον εὐλόγως, ὅσα ἐπὶ πολλῶν ἢ πάντων ὁρῶμεν ὑπάρχοντα. περὶ δὲ τούτου συμβαίνει τοὐναντίον. ἅπαντα γὰρ τὰ γινόμενα καὶ φθειρόμενα φαίνεται. ἔτι δὲ τὸ μὴ ἔχον ἀρχὴν τοῦ ὡδὶ ἔχειν, ἀλλ' ἀδύνατον ἄλλως ἔχειν πρότερον τὸν ἅπαντα αἰῶνα, ἀδύνατον καὶ μεταβάλλειν· ἔσται γάρ τι αἴτιον, ὃ εἰ ὑπῆρχε πρότερον, δυνατὸν ἂν ἦν ἄλλως ἔχειν τὸ ἀδύνατον ἄλλως ἔχειν. εἰ δὲ πρότερον, ἐξ ἄλλως ἐχόντων συνέστη ὁ κόσμος, εἰ μὲν ἀεὶ οὕτως ἐχόντων, καὶ ἀδυνάτων ἄλλως ἔχειν, οὐκ ἂν ἐγένετο. εἰ δὲ γέ-B γονεν, ἀνάγκη δηλονότι κἀκεῖνα δυνατὰ εἶναι ἄλλως ἔχειν, καὶ μὴ ἀεὶ οὕτως ἔχειν· ὥστε καὶ συνεστῶτα διαλυθήσεται, καὶ διαλελυμένα συνέστη ἔμπροσθεν. καὶ τοῦτ' ἀπειράκις ἢ οὕτως εἶχεν, ἢ δυνατὸν ἦν. εἰ δὲ τοῦτο, οὐκ ἂν εἴη ἄφθαρτος, οὔτ' εἰ ἄλλως εἶχέ ποτε, οὔτ' εἰ δυνατὸν ἄλλως ἔχειν. ἣν δέ τινες βοήθειαν ἐπιχειροῦσιν ἐπιφέρειν ἑαυτοῖς τῶν λεγόντων ἄφθαρτον μὲν εἶναι, γενόμενον δέ, οὐκ ἔστ' ἀληθής· ὁμοίως γάρ φασι τοῖς τὰ διαγράμματα γράφουσι, καὶ σφᾶς εἰρηκέναι περὶ τῆς γενέσεως, οὐχ ὡς γενομένου ποτέ, ἀλλὰ διδασκαλίας χάριν, ὡς μᾶλλον γνωριζόντων, ὥσ-C περ τὸ διάγραμμα γιγνόμενον θεασαμένους. τοῦτο δ' ἐστὶν ὥσπερ λέγομεν, οὐ τὸ αὐτό· ἐν μὲν γὰρ τῇ ποιήσει, τῶν διαγραμμάτων πάντων τεθέντων εἶναι ἅμα, τὸ αὐτὸ συμβαίνει· ἐν δὲ ταῖς τούτων ἀποδείξεσιν, οὐ ταὐτόν. ἀλλ' ἀδύνατον· τὰ γὰρ λαμβανόμενα πρότερον καὶ ὕστερον ὑπεναντία ἐστίν· ἐξ ἀτάκτων γάρ ποτε τεταγμένα φασὶ γενέσθαι. ἅμα δὲ τὸ αὐτὸ τεταγμένον εἶναι καὶ ἄτακτον ἀδύνατον. ἀλλ' ἀνάγκη γένεσιν εἶναι τὴν χωρίζουσαν, καὶ χρόνον· ἐν δὲ τοῖς διαγράμμασιν οὐδὲν τῷ χρόνῳ κεχώρισται. ὅτι μὲν οὖν ἀδύνατον ἅμα ἀΐδιον αὐτὸν εἶναι καὶ γενέσθαι, φανερόν. τὸ δ' ἐναλλὰξ συνίστασθαι καὶ διαλύειν, οὐδὲν ἀλλοιότερον ποιεῖν ἐστιν, ἢ τὸ κατασκευάζειν αὐτὸν ἀΐδιον μέν, ἀλλὰ μεταβάλλοντα τὴν D μορφήν· ὥσπερ εἴ τις ἐκ παιδὸς ἄνδρα γινόμενον, καὶ ἐξ ἀνδρὸς παῖδα, ὁτὲ μὲν φθείρεσθαι, ὁτὲ δ' εἶναι οἴοιτο· δῆλον γὰρ ὅτι καὶ εἰς ἄλληλα τῶν στοιχείων συνιόντων, οὐχ ἡ τυχοῦσα τάξις γίνεται, καὶ σύστασις, ἀλλ' ἡ αὐτή· ἄλλως τε καὶ κατὰ τοὺς τοῦτον τὸν λόγον εἰρηκότας, οἳ τῆς διαθέσεως ἑκατέρας αἰτιῶνται τὸ ἐναντίον. ὥστ' εἰ τὸ ὅλον σῶμα συνεχὲς ὄν, ὁτὲ μὲν οὕτως, ὁτὲ δ' ἐκείνως διατίθεται καὶ διακεκόσμηται, ἡ δὲ τοῦ ὅλου σύστασίς ἐστι κόσμος καὶ οὐρανός, οὐκ ἂν ὁ κόσμος γίγνοιτο καὶ φθείροιτο, ἀλλ' αἱ διαθέσεις αὐτοῦ. τὸ δ' ὅλως γενόμενον φθαρῆναι, καὶ μὴ ἀνακάμπτειν ὄντος μὲν ἑνός, ἀδύνατόν ἐστι. πρὶν γὰρ γενέσθαι ἀεὶ ὑπῆρχεν ἡ πρὸ αὐτοῦ σύ-E στασις, ἣν μὴ γενομένην οὐχ οἷόν τ' εἶναι φαμὲν μεταβάλλειν· ἀπείρων δ' ὄντων τῶν κόσμων ἐνδέχεται μᾶλλον. ἀλλὰ μὴν καὶ τοῦτο πότερον ἀδύνατον ἢ δυνατόν, ἔσται δῆλον ἐκ τῶν ὕστερον· εἰσὶ γάρ τινες οἷς ἐνδέχεσθαι δοκεῖ καὶ ἀγένητόν τι ὂν φθαρῆναι, καὶ γενόμενον ἄφθαρτον διατελεῖν, ὥσπερ ἐν τῷ Τιμαίῳ· ἐκεῖ γάρ φησι τὸν οὐρανὸν γενέσθαι μέν, οὐ μὴν φθαρτόν, ἀλλ' ἔσεσθαί γε τὸν λοιπὸν ἀεὶ χρόνον. πρὸς οὓς φυσικῶς μὲν περὶ τοῦ οὐρανοῦ μόνον εἴρηται, καθόλου δὲ περὶ ἅπαντος σκεψαμένοις, ἔσται καὶ περὶ τούτου δῆλον.

CAPVT XI.

Quot modis aliquid dici ſoleat generabile aut non generabile; & corruptibile aut incorruptibile, & poſſibile aut impoſſibile.

PRimùm autem diſtinguamus oportet, quomodo generabilia, & ingenerabilia, & corruptibilia, & incorruptibilia dicimus. Nam cùm multipliciter dicantur, etſi nihil ad rationem refert, mentem indefinitè ſeſe habere neceſſe eſt, ſi quiſpiam vt indiuiſibili eo vtatur, quod multis diuiditur modis. Non eſt enim manifeſtum, per quam ipſorum
B naturam id accidit, quod eſt dictum. Dicitur itaq; ingenerabile vno modo, ſi ſit quippiam nunc, quod antea non erat, ſine generatione, mutationéve: vt ipſum tangi quidam inquiunt atque moueri. Dicunt enim, nõ poſſe tangẽs generari: neque [illegible] motum. Alio modo ſi fieri vel ortum eſſe quippiam poſſit, & nõ ſit. Nam hoc ingenerabile dicitur, quia ortum ſubire poteſt. Alio modo, ſi quippiam omnino factum eſſe impoſſibile ſit, vt interdum ſit, interdum non ſit. Impoſſibile autem dupliciter dicitur. Aut enim quia non verum eſt dicere ortũ eſſe poſſe, aut quia non facilè, nec citò, nec bene oriri poteſt. Eodem modo & generabile vno dicitur modo,
C ſi ſit quippiã poſteriùs, quod priùs non erat, ſiue per generationem, ſiue ſine generatione. Alio modo ſi poſſibile ſit, ſiue veritate, ſiue facilitate poſſibile ipſum ſit definitũ. Alio modo ſi generatio ſit ipſius ex eo quod non eſt, ad id quod eſt, ſiue iam ſit, per generationem autem ſit, ſiue & nõdum ſit, eſſe autem poſſit. Corruptibile etiam, & incorruptibile ſimiliter dicitur. Nam ſi quippiam priùs erat, poſtea verò non eſt, aut eſt quidem, non eſſe autem poteſt, ſiue per corruptionẽ, mutationémve, ſiue ſine corruptione, corruptibile illud dicimus eſſe. Interdum & id, quod per corruptionem non eſſe poteſt, corruptibile eſſe dicimus. Et inſuper alio modo, id quod facilè corrumpitur, quod quidem quiſpiam
D facilè corruptibile dixerit. De incorruptibili, eadẽ eſt etiam ratio. Aut enim id quod ſine corruptione interdũ eſt, interdũ nõ eſt, incorruptibile dicimus: quo pacto tactus incorruptibiles eſſe dicuntur, propterea quod priùs erãt, & poſtea nõ sũt ſine corruptione. Aut id, quod quidem eſt, non eſſe autẽ non poteſt: aut nõ eſt futurũ vnquã, nũc autẽ eſt. Tu n. es nũc, & tactus eſt etiã nũc: corruptibiles tamen eſtis, quia erit aliquãdo tẽpus quãdo nec te eſſe, nec hæc tangere verè dicetur. Id verò maximè propriè incorruptibile dicitur, quod quidẽ eſt, nõ poteſt autẽ ſic corruptũ eſſe, vt nũc quidẽ ſit, poſtea verò nõ ſit, aut non eſſe poſſit: aut & id, quod nondũ corru-
E ptũ eſt, nõ eſſe autẽ poſterius poteſt. Dicitur etiam incorruptibile & id quod non facilè corrũpitur. Si igitur hæc ita ſint, conſiderandũ eſt quomodo poſſibile & impoſſibile dicimus. Nã & quod propriiſſimè incorruptibile dicitur, ex eo dicitur ſanè, quia corrũpi non poteſt, neq; quãdoque eſſe, quãdoque non eſſe. Et ingenerabile id propriiſſimè dicitur, quod ſic generari nõ poteſt, vt priùs quidẽ non ſit, poſteriùs verò ſit: qualis eſt diameter cõmenſurabilis lateri. Si igitur quippiã per decẽ millia paſſuum moueri poteſt, aut pondus leuare, id, quod maximũ poteſt, dicere ſẽper ſolemus: velvti centũ leuare libras, aut per decẽ millia paſſuũ ambulare: quanquã & partes, quæ citrà ſunt, poteſt, ſi & exceſſũ poteſt.

Quo patet, ad finem, atque exceſſum, definiri potentiam oportere. Id igitur quod poteſt tot per exceſſum, & ea quæ ſunt citrà, neceſſe eſt: ceu ſi centum libras leuare poteſt, & duas poſſe: & ſi per decem millia paſſuũ ambulare poteſt, & per duo ambulare poſſe. Potentia verò, ipſius exceſſionis eſt, & ſi quippiam tantum non poteſt, eo per exuperationem dicto, & plura non poteſt. Qui namque centum paſſus tranſire non poteſt, is & centum & vnũ non poteſt. Nihil autem nos conturbet. id enim quod propriè poteſt, per finem exceſſionis ſit definitum. Forſitan enim quiſpiam dicet, id quod dictum eſt, non neceſſariò ita eſſe. Qui namque magnitudinem decem paſſuum videt, is non & magnitudines eas quæ ſunt citrà, videbit: ſed contrà potiùs, qui punctum videre poteſt, aut paruum audire ſonum, is & maiorum ſenſum habebit. Verùm nihil ad rationem refert: ipſa enim exuperatio, aut in potentia, aut in re ipſa ſit definita. Id enim, quod dicitur, patet. Nam viſus quidem is, qui eſt minoris, excedit: celeritas autem ea, quæ eſt maioris.

A ὡς δέον ὁρίζεσθαι πρὸς τὸ τέλος καὶ τῆς ὑπεροχῆς τὴν δύναμιν. ἀνάγκη μὲν οὖν τὸ δυνατὸν καθ' ὑπεροχὴν τοσαδὶ, καὶ τὰ ἐντὸς δύνασθαι· οἷον εἰ τάλαντα ἑκατὸν αἴρει, καὶ δύο κἂν εἰ στάδια ἑκατὸν, καὶ δύο δύνασθαι βαδίσαι. ἡ δὲ δύναμις τῆς ὑπεροχῆς ἐστί· κἂν εἴ τι ἀδύνατον τοσονδὶ καθ' ὑπερβολὴν εἰπόντων, καὶ τὰ πλείω ἀδύνατον· οἷον ὁ χίλια βαδίσαι στάδια μὴ δυνάμενος, δῆλον ὅτι καὶ χίλια καὶ ἕν. μηδὲν δ' ἡμᾶς τὸ τελευταῖον ἂν δύναιτο, παρενοχλείτω. διωρίσθω γὰρ κατὰ τῆς ὑπεροχῆς τὸ τέλος λεγόμενον τὸ κυρίως δυνατόν. τάχα γὰρ ἐνσταίη τις ἂν ὡς οὐκ ἀνάγκη τὸ λεχθέν. ὁ γὰρ ὁρῶν στάδιον, οὐκ ἂν τὰ ἐντὸς B ὄψεται μεγέθη· ἀλλὰ τοὐναντίον μᾶλλον ὁ δυνάμενος ἰδεῖν στιγμὴν, ἢ ἀκοῦσαι μικροῦ ψόφου, καὶ τῶν μειζόνων ἕξει αἴσθησιν. ἀλλ' οὐδὲν διαφέρει πρὸς τὸν λόγον. διωρίσθω γὰρ ἢ ἐπὶ τῆς δυνάμεως, ἢ ἐπὶ τοῦ πράγματος ἡ ὑπερβολή. τὸ γὰρ λεγόμενον δῆλον· ἡ μὲν γὰρ ὄψις ἡ τοῦ ἐλάττονος, ὑπερέχει· ἡ δὲ ταχυτὴς, ἡ τοῦ πλείονος.

CAPVT XII.

Probat fieri non poſſe vt aut interitu careat quod ortum habet: aut intereat quod ortu caret.

His autem determinatis, dicenda ſunt ea quæ deinceps ſequuntur. Si igitur aliqua ſint, quæ eſſe, & non eſſe poſſunt, quoddam tempus maximum & eſſendi, & non eſſendi, definitum eſſe neceſſe eſt. Atque dico rem eſſe poſſe, & non eſſe poſſe, in vnoquoque prædicamento: vt hominem, aut album, aut tricubitum, aut aliquid aliud tale. Nam ſi non erit definitum quiddam, ſed ſemper propoſito maius, & quo non eſt minus: idem erit profectò poſſibile eſſe tempore infinito, & non eſſe alio tempore infinito. At hoc eſſe nequit. Principiũ autem hinc ſumatur. Impoſſibile enim, & falſum, nõ idem ſignificant. Eſt autem impoſſibile, & poſſibile, & falſum, ac verum, ex ſuppoſitione. Velut triangulum impoſſibile eſt ſuos tres angulos duobus rectis æquales habere: ſi hæc ſint, & diameter commenſurabilis eſt. Sunt autem ſimpliciter & poſſibilia, & impoſſibilia, & vera, & falſa. Non eſt igitur idem, falſũ aliquid eſſe ſimpliciter, & ſimpliciter impoſſibile. Te namque dicere ſtare, falſum eſt quidem, ſed non impoſſibile. Similiter & eum, qui citharam quidem pulſat, non autem cantat, cãtare dicere falſum eſt, ſed non impoſſibile eſt. Simul autem ſtare, atque ſedere, & diametrum commenſurabilem eſſe, nõ ſolùm eſt falſum, ſed etiam impoſſibile. Non igitur idẽ eſt ſupponere falſum, ac impoſſibile. Impoſſibile autẽ, ex impoſſibili accidit. Sedendi itaq; quippiam, ſtandique ſimul potentiam habet: quia quando habet illam, & alteram habet: at non vt ſimul ſtet, atque ſedeat, ſed in alio tempore. Si verò quippiam plurium potentiam habeat tempore infinito, non eſt in alio tempore, ſed ſimul. Quare ſi quippiam, quod eſt tempore infinito, eſt corruptibile, illud, vt non ſit, potentiam habet. Si igitur eſt tempore infinito, ſit id quod poteſt. Simul ergo erit atque non erit actu. Falſum igitur accidit, quia falſum ſuppoſitum eſt. Sed ſi impoſſibile non eſſet, nõ id vtique, quod accidit, etiam impoſſibile, eſſet. Omne ergo, quod ſemper eſt incorruptibile, ſimpliciter eſt. Similiter & ingenitũ eſt. Nam ſi generabile eſt, erit poſſibile aliquo in tẽpore nõ eſſe.

* χ. τὸ ἀεὶ μὴ εἶναι.

A Corruptibile enim id eſt quod priùs quidem erat, nunc verò non eſt: aut quod nunc quidem eſt, poteſt autem aliquando poſteriùs non eſſe. Generabile verò id, quod priùs non eſſe poteſt. At non eſt tẽpus aut infinitum, aut finitum, in quo id quod ſemper eſt, non eſſe poteſt. Etenim finito tempore eſſe poteſt, quippe cùm eſſe & tempore infinito poſſit. Non ergo contingit idem ac vnum, & ſemper eſſe, & ſemper non eſſe poſſe, at neque non ſemper eſſe, quod patet eſſe negationẽ. Impoſſibile eſt ergo, & ſemper quippiam eſſe, & corruptibile eſſe. Pari modo nec generabile. Nam ſi duo ſint termini, poſteriórque ſine priore ineſſe nõ poſſit, ſi ille competere B non poteſt, & poſterior etiam cõpetere nequit. Quare ſi id, quod eſt ſemper, non eſſe aliquãdo non poteſt, impoſſibile eſt & generabile eſſe. Cùm autẽ negatio quidem eius, quod ſemper eſſe poteſt, ſit id, quod non ſemper eſſe poteſt, contrarium autem id, quod non ſemper eſſe poteſt, & negatio eſt id quod non ſemper non eſſe poteſt: negationes amborum competere eidem neceſſe eſt, & eſſe medium eius, quod ſemper eſt, & eius, quod ſemper non eſt, id, quod eſſe, & non eſſe poteſt. Vtriuſque namque negatio quandoque competet, ſi non ſemper ſit. Quare ſi id, quod non ſemper non eſt, erit quandoque, atque non erit, & id, quod non ſemper eſſe po-C teſt, ſed quandoq; eſt vt & nõ ſit, erit ſanè atque nõ erit. Idem ergo poſſibile erit eſſe atque non eſſe. & hoc eſt medium vtrorumque. Ratio autem vniuerſalis hæc eſt: Nam a & b, nulli eidem ineſſe poſſint: a verò aut c, & b aut d, cuilibet inſint. Cui igitur neque a, neque b ineſt, ei c b cuilibet inſint, neceſſe eſt. Sit autẽ id, quod inter a & b medium eſt, e: id enim, quod neutrum contrariorum eſt, eorumdẽ medium eſſe conſtat. Ambo igitur, c, inquã, & d, huic inſint neceſſe eſt. Nam aut a, aut c cuilibet ineſt. quare & ipſi e. Cùm igitur a impoſſibile ſit eſſe, inerit ipſum c. Eadem eſt & in ipſo d ratio. Neque igitur id, quod ſemper eſt, neque id D quod ſemper non eſt, generabile aut corruptibile eſt. Patet autẽ & ſi generabile, aut corruptibile ſit, non perpetuũ eſſe. Simul enim poterit ſemper eſſe, & non ſemper eſſe. hoc autem priùs demonſtratum eſt impoſſibile eſſe. Si igitur ingenerabile quippiã eſt, atque eſt ens, idnẽ ſempiternum eſse neceſse eſt? & pari modo, ſi incorruptibile eſt? Dico autẽ ingenerabile, & incorruptibile, ea quæ propriè dicũtur. Ingenerabile quidem id quod nũc eſt, & priùs non erat verum dicere haud eſse. Incorruptibile verò, quod nunc eſt, & poſteriùs verum non erit dicere haud eſse. at ſi hæc mutuò ſe ſequuntur, at-E que ingenerabile eſt incorruptibile, & incorruptibile, ingenerabile, ipſum etiam perpetuũ vtrumque ſequatur, neceſse eſt.* Et ſi eſt quippiam ingenerabile, & ſi eſt quippiam incorruptibile, ſit continuò ſempiternum neceſse eſt. Hoc ita eſse, & ex definitione ipſorum patet. Etenim ſi corruptibile eſt, generabile eſse neceſse eſt: aut .n. ingenerabile, aut generabile eſt. at ſi ingenerabile eſt, incorruptibile eſse ſupponitur: & ſi generabile eſt, & corruptibile eſse neceſse eſt. aut .n. corruptibile, aut incorruptibile eſt. at ſi incorruptibile eſt, ingenerabile eſse ſanè ſupponebatur. Sin verò mutuò ſe non ſequũtur incorruptibile, atq; ingenerabile, nõ neceſse eſt aut ipſũ ingenerabile, aut incorruptibile, perpetuũ eſſe. Sequi aũt hęc ſeſe mutuò neceſſariò, ex his emergere poteſt. generabile .n. & iorruptibile, mutuò ſe ſequuntur. Manifeſtum eſt autem & hoc, ex anteà dictis. Eſt enim id medium inter id quod ſemper eſt, &

A id quod ſemper non eſt, quod neutrum ſequitur: hoc autem eſt, generabile ipſum, ac corruptibile. Vtrumque enim, definito tempore quodam & eſſe, & non eſſe poteſt. Si igitur quippiam aut generabile, aut corruptibile ſit, id medium eſſe neceſſe eſt. Sit enim id quidem, quod ſemper eſt, a, id autẽ quod ſemper non eſt, b. c, verò ſit generabile, & d, ſit corruptibile: c igitur inter a & b medium eſſe neceſſe eſt. Illorum enim ad neutrum vltimũ tempus eſt, in quo a ipſum non erat, aut b ipſum erat. Generabile autem, aut actu, aut potentia neceſſe eſt eſſe: ipſis verò a b, neutro modo. Tempore igitur quodam, a definito, c ipſum & erit & rurſus nõ erit. Similiter eſt dicendum & de ipſo corruptibili B d. Generabile ergo, corruptibileve, vtrumque eſt. Generabile ergo, corruptibileve, mutuo ſe ſequuntur. Sit itaque ingenerabile e, generabile f: incorruptibile g, & corruptibile h. Eſt igitur demonſtratum, f atque h ſeſe mutuò ſequi. Quãdo autem ſic aliqua vt hæc iacent, velvt f quidem, & h ſeſe mutuo ſequuntur, e verò & f nulli eidem competunt, ſed alterum omni competit, & ſimili modo ipſa g, atque h, tunc & e g mutuo ſe ſequãtur neceſſe eſt. e namque ipſum g non ſequatur: ergo f ipſum ſequetur, quippe cùm cuilibet ipſum e aut f cõpetat. At g etiam id ſequetur, quod ſequitur ipſum f: ergo h ſequetur g ipſum. At impoſſibile eſſe ſupponebatur. Eadem ratione & g ſequi ipſum e, de- C monſtrabitur. At ſic ſe habet ingenerabile e, ad generabile f, & incorruptibile g, ad corruptibile h. Dicere autem nihil prohibere generatum quippiam incorruptibile eſſe, & ingenerabile quippiam corruptum eſſe, ſemel illo generato, hoc corrupto, tollere eſt aliquid eorum quæ data ſunt. Aut enim infinito, aut quodam definito tempore, omnia aut agere, aut pati, aut eſſe, aut non eſſe poſſunt: & infinito, propterea quòd tempus infinitum aliquo modo eſt definitum, quo nõn eſt maius. Id verò, quod aliqua ex parte eſt infinitum, neq; infinitum eſt, neque etiam definitum. Prçterea cur magis hoc in ſigno corruptum eſt id, quod antea ſemper erat, D aut generatum eſt id quod priùs non erat tempore infinito? Nam ſi non magis in hoc quàm in alio, & ipſa ſigna ſunt infinita, erat quippiam, vt patet, generabile, & corruptibile tempore infinito: ergo non eſſe tempore infinito poteſt. Simul enim, vt non ſit, & ſit, potentiam ſanè habebit, ipſum quidem prius, ſi corruptibile eſt: ipſum autem poſterius, ſi generabile eſt. Quare ſi poſuerimus eſſe quæ poſſunt, oppoſita ſimul erunt. Atque hoc inſuper in omni ſigno ſimiliter erit. Quare vt non ſit, & ſit tempore infinito, potentiam ſanè habebit. At demonſtratum eſt, hoc impoſſibile eſſe. Præterea ſi actum potentia antecedit, vniuerſo tempore erit, & quod ingenerabile erat, atque non ens tempore infinito, E fieri autẽ potens. Simul igitur non erat, & vt ſit potentiã habebat, & vt tũc ſit, & poſtea tẽpore infinito. Patet autem & alio modo impoſſibile eſſe, quippiam corruptibile non aliquãdo corrumpi. Semper enim ſimul, & corruptibile & incorruptibile erit actu. Quare ſimul erit poſſibile, ſemper eſſe, & non ſemper eſſe. Corruptibile ergo aliquando corrũpitur: & ſi generabile eſt, ortũ eſt. Poſſibile. n. eſt ortũ eſſe, & non ſemper eſſe. Poſſumus autẽ & hoc contemplari modo impoſſibile eſſe, aut ſi ortũ aliquando quippiam eſt, incorruptibile eſſe, aut ſi ingene-

A rabile eſt,& antea ſemper erat, corruptionē ſubire. Nihil enim caſu, aut incorruptibile, aut ingenerabile eſse poteſt. Quod enim caſu eſt, atque fortuna, eſt præter id quod ſemper aut plerumque, aut eſt, aut fit. Quod verò infinito tempore aut ſimpliciter, aut ab aliquo tempore eſt, id aut ſemper aut plerumque eſt ens. Talia igitur interdū eſse, interdum nō eſse natura, neceſse eſt. Talium autem eadem potentia eſt contradictionis, & vt ſint, & non ſint, cauſa, materies eſt. Quare oppoſita ſimul eſse actu neceſse eſt. At verò neque verum eſt dicere nunc, tranſacto in anno eſse, neque tranſacto in anno nunc eſse. Impoſſibile eſt ergo, ſi aliquando non
B eſt, poſterius perpetuum eſse: habet enim poſterius, & potentiam non eſsendi. Verùm non vt tunc non ſit, quando eſt (eſt enim ens actu) ſed in anno præterito, temporéque tranſacto. Sit igitur id actu, cuius potentiam habet. Verum igitur erit, ſi tranſacto in anno non eſse dicatur. At impoſſibile eſt: nulla nempe potentia eſt reſpectu ipſius fuiſse: ſed eſse, vel fore. Similiter & ſi prius ſempiternum erat, & poſterius non eſt: habebit enim potentiam eius quod actu non eſt. Quare ſi poſuerimus id quod poteſt, verè dicetur nunc hoc eſse tranſacto in anno, in temporéq; omnino exacto. Naturaliter etiā, & non vniuerſaliter ſi conſideremus, impoſſibile ſanè videbitur, aut corrumpi poſterius, quod per-
C petuum prius erat, aut poſterius ſempiternum eſse, quod priùs non erat. Corruptibilia enim, & generabilia, & alterabilia ſunt vniuerſa: alterantur autem contrariis, & ex quibus conſtant ea quæ ſunt natura, & ab iis ipſis corrumpuntur.

CAPVT I.

D *Probat ſuperiori libro expoſitam de mundo ſententiam etiam aliter ſentientis teſtimonio poſſe confirmari.*

CÆlum igitur vniuerſum neque ortum eſse, neque corrumpi poſse, vt quidam inquiunt, ſed vnum eſse, ac ſempiternum principium quidem, & exitum æternitatis vniuerſæ non habens, infinitum autem habens, & continens in ſe ipſo tempus: & ex hiſce quæ dicta ſunt, & per opinionem eorum qui aliter
E dicunt, ipſumque generant, fidem ſumere licet. Nam ſi ſic quidem ſeſe habere poteſt, eo autem modo, quem illi dicunt, non poteſt, magnum & hoc vtique momentum ad faciendam fidem de immortalitate æternitatéque ipſius habet. Quare bene ſeſe habet, quemque ſibi perſuadere, veteres, & maiorum maximè noſtrorum ſententias veras eſse, quæ quidem aſserunt, eſse quippiam eorum immortale, atque diuinum, quæ motum quidem ſubeunt, talem tamen vt nullus ipſius ſit finis, ſed potiùs ipſe cæterorum ſit finis. Et finem enim ex his eſse conſtat, quæ continent. Et hic cùm ſit perfectus, imperfectos continet, & eos, qui finem habent atque ceſsationem.

Ipſe namque neque principium, neque exitum vllum habet, ſed inceſſabilis eſt tempore infinito. Cæterorum autem, aut eſt principij cauſa, aut ſuſcipit exitum, ceſſationémve. Atque ſuperum locum cælúmque veteres quidem diis tribuerunt, propterea quòd ſolum eſt immortale. Præſens autem oratio teſtis eſt, incorruptibile ac ingenerabile eſſe, vacaréque præterea omni difficultate mortali. Et inſuper eſſe ſine labore, propterea quòd nullius indiget vim inferentis neceſſitatis, quæ quidem prohibens detineret ipſum aptum alio modo ferri. Omne namque tale, laborioſum eſt, quo magis perpetuum eſt, & optimæ diſpoſitionis expers. Idcirco neque putandum eſt, ipſum in ſeſe habere, vt veterum fabula dicit, qui quidem ſalutem ipſius Atlante quodam inquiunt indigere. Et ij namque, qui hanc ſentẽtiam attulerunt, idem, quod poſteri, videntur exiſtimaſſe. Nam quaſi pondus haberent ſupera corpora omnia, terreáque eſſent, neceſſitatem animæ participem ipſi fabuloſè ſuppoſuere. Neque igitur hoc modo, neque ob conuerſionem (propterea quòd lationem habet motu ſuopte celeriorem, vt Empedocles dicit) conſeruari putãdum eſt adhuc ipſum tempore tanto, atque incolumem eſſe. At verò nec ab anima cogente ſempiternum manere, conſentaneum eſt rationi. Neque enim talis ipſius animæ vita, ſine dolore, beatáque eſſe poteſt. Et motum enim, qui eſt cum vi, ſi mouet corpus primum aliter aptum ferri, continuéque mouet, negotioſum, atque ab omni voluptate mentis ſemotum eſſe neceſſe eſt, ſi neque vt animæ mortalium animalium requies ineſt ea, quæ circa ſomnum fit corporis relaxatio: ſed Ixionis fatum cuiuſdam ipſam perpetuum inſuperabiléque detinere neceſſe eſt. Si igitur (vti diximus) res dicto modo de prima latione ſeſe habere poteſt, non ſolùm concinnius eſt ita de æternitate ipſius exiſtimare, ſed etiam hoc modo dumtaxat conſentaneas magis ei vaticinationi, quam de diis habemus, ſententias poſſumus certò proferre. Sed de his hactenus.

CAPVT II.

Quæ ſit cæli partium inuicem ratio: & an alia dextra ſit, alia ſiniſtra eius pars.

CVm autem ſint, qui dextrum ipſius cæli quippiam, & læuum inquiunt eſſe, vt ij qui Pythagorici nuncupantur, (eſt enim hæc illorum ſententia) conſiderandum eſt, vtrùm res ſic ſeſe habeat, vt illi dicunt, an alio potiùs modo, ſi hæc principia corpori ipſius vniuerſi ſunt adiungenda. Continuò namque ſi dextrum ineſt ei, læuúmque, priora principia priùs in ipſo eſſe exiſtimandum eſt. Determinatum igitur de his eſt in iis quæ de animalium motibus ſunt tractata, propterea quòd hęc propria ſunt illorum naturæ, atque accommodata, manifeſtè namque animalibus ineſſe videntur quibuſdam omnes iſtiuſmodi partes, (dextrum, inquam, atque ſiniſtrum) quibuſdam nonnullæ: plantis verò, ſupera atque infera ſolùm. Quòd ſi cælo talium quippiam eſt adiungendum, & id ipſi competere, quod primum (vt dicimus) in animalibus ineſt, conſentaneum eſt rationi. Vnumquodque enim trium, (dico autem trium, ſuperum inferúmque, ipſum ante atque oppoſitũ, & dextrum læuúmque) vt principium quoddam eſſe videtur.

Περὶ τῶν κατὰ τὰς διαστάσεις μορίων, καὶ τῶν κατὰ τόπον ὡρισμένων, καὶ ὅτι τοῦ οὐρανοῦ οὐδὲν δεξιὸν καὶ ἀριστερόν.

ΕΠεὶ δὲ τινές εἰσιν, οἵ φασιν εἶναί τι δεξιὸν καὶ ἀριστερὸν τοῦ οὐρανοῦ, καθάπερ οἱ καλούμενοι Πυθαγόρειοι (ἐκείνων γὰρ οὗτος ὁ λόγος ἐστί,) σκεπτέον πότερον οὕτως ἔχει τὸν τρόπον, ὡς ἐκεῖνοι λέγουσιν, ἢ μᾶλλον ἑτέρως· εἴπερ δεῖ προσάπτειν τῷ τοῦ παντὸς σώματι ταύτας τὰς ἀρχάς· εὐθὺς γὰρ πρῶτον, εἰ τὸ δεξιὸν ὑπάρχει, καὶ τὸ ἀριστερὸν, ἔτι E πρότερον τὰς προτέρας ὑποληπτέον ὑπάρχειν ἀρχὰς ἐν αὐτῷ. διώρισται μὲν οὖν περὶ τούτων ἐν τοῖς περὶ τὰς τῶν ζῴων κινήσεις, διὰ τὸ τῆς φύσεως οἰκεῖα τῆς ἐκείνων εἶναι· φανερῶς γὰρ ἔν γε τοῖς ζῴοις ὑπάρχοντα φαίνεται, τοῖς μὲν πάντα τὰ τοιαῦτα μόρια· λέγω δ' οἷον τό, τε ἀριστερὸν καὶ τὸ δεξιόν· τοῖς δ' ἔνια· τοῖς δὲ φυτοῖς τὸ ἄνω καὶ τὸ κάτω μόνον. εἰ δὲ δεῖ καὶ τῷ οὐρανῷ προσάπτειν τι τῶν τοιούτων, καὶ τὸ πρῶτον, καθάπερ εἴπομεν ἐν τοῖς ζῴοις ὑπάρχειν, εὔλογον ὑπάρχειν ἐν αὐτῷ· τριῶν γὰρ ὄντων, ἕκαστον οἷον ἀρχή τίς ἐστι. λέγω δὲ τρία, τὸ ἄνω καὶ τὸ κάτω, καὶ τὸ πρόσθεν καὶ τὸ ἀντικείμενον, καὶ τὸ δεξιὸν καὶ τὸ ἀριστερόν·

ταύτας γὰρ τὰς διαστάσεις εὔλογον ὑπάρχειν τοῖς σώμασι τοῖς τελείοις πάσας. ἔστι δὲ τὸ μὲν ἄνω τοῦ μήκους ἀρχή, τὸ δὲ δεξιὸν τοῦ πλάτους, τὸ δ' ἔμπροσθεν τοῦ βάθους. ἔτι δὲ ἄλλως κατὰ τὰς κινήσεις. ἀρχαὶ γὰρ ταύτας λέγω, ὅθεν ἄρχονται πρῶτον αἱ κινήσεις τοῖς ἔχουσιν. ἔστι δὲ ἀπὸ μὲν τοῦ ἄνω, ἡ αὔξησις· ἀπὸ δὲ τῶν δεξιῶν, ἡ κατὰ τόπον· ἀπὸ δὲ τῶν ἔμπροσθεν, ἡ κατὰ τὴν αἴσθησιν. ἔμπροσθεν δὲ λέγω, ἐφ' ὃ αἱ αἰσθήσεις. διὸ καὶ οὐκ ἐν ἅπαντι σώματι τὸ ἄνω καὶ τὸ κάτω, καὶ τὸ δεξιὸν καὶ τὸ ἀριστερόν, καὶ τὸ ἔμπροσθεν καὶ τὸ ὄπισθεν ζητητέον· ἀλλ' ὅσα ἔχει κινήσεως ἀρχὴν ἐν ἑαυτοῖς ἔμψυχα ὄντα· τῶν γὰρ ἀψύχων ἐν οὐθενὶ ὁρῶμεν, ὅθεν ἡ ἀρχὴ τῆς κινήσεως. τὰ μὲν γάρ, ὅλως οὐ κινεῖται· τὰ δέ, κινεῖται μέν, ἀλλ' οὐ πανταχόθεν ὁμοίως· οἷον, τὸ πῦρ ἄνω μόνον· καὶ ἡ γῆ ἐπὶ τὸ μέσον. ἀλλ' ἐν μὲν τούτοις λέγομεν τὸ ἄνω καὶ τὸ κάτω, καὶ τὸ δεξιὸν καὶ τὸ ἀριστερὸν πρὸς ἡμᾶς ἐπαναφέροντες. ἢ γὰρ κατὰ τὰ ἡμέτερα δεξιά, ὥσπερ οἱ μάντεις· ἢ καθ' ὁμοιότητα τοῖς ἡμετέροις, οἷον τὰ τῶν ἀνδριάντων· ἢ τὰ ἐναντίως ἔχοντα τῇ θέσει, δεξιὸν μὲν τὸ κατὰ τὸ ἡμέτερον ἀριστερόν· ἀριστερὸν δὲ τοὐναντίον· καὶ ὄπισθεν τὸ κατὰ τὸ ἡμέτερον ἔμπροσθεν. ἐν αὐτοῖς δὲ τούτοις οὐδεμίαν ὁρῶμεν διαφοράν. ἐὰν γὰρ ἀνάπαλιν στραφῇ, τὰ ἐναντία ἐροῦμεν δεξιὰ καὶ ἀριστερά, καὶ ἄνω καὶ κάτω, καὶ ἔμπροσθεν καὶ ὄπισθεν. διὸ καὶ τῶν Πυθαγορείων ἄν τις θαυμάσειεν, ὅτι δύο μόνας ταύτας ἀρχὰς ἔλεγον, τὸ δεξιὸν καὶ τὸ ἀριστερόν· τὰς δὲ τέτταρας παρέλιπον οὐδὲν ἧττον κυρίας οὔσας· οὐδὲν γὰρ ἐλάττω διαφορὰν ἔχει τὰ ἄνω πρὸς τὰ κάτω, καὶ τὰ ἔμπροσθεν πρὸς τὰ ὄπισθεν, ἢ τὰ δεξιὰ πρὸς τὰ ἀριστερὰ ἐν ἅπασι τοῖς ζώοις· τὰ μὲν γάρ, τῇ δυνάμει μόνον διαφέρει· τὰ δέ, καὶ τοῖς σχήμασι. καὶ τὸ μὲν ἄνω καὶ τὸ κάτω πᾶσι τοῖς ἐμψύχοις ἐστὶν ὁμοίως ζώοις καὶ φυτοῖς· τὸ δὲ δεξιὸν καὶ τὸ ἀριστερὸν οὐχ ὑπάρχει τοῖς φυτοῖς. ἔτι δ' ὡς τὸ μῆκος τοῦ πλάτους πρότερον, εἰ τὸ μὲν ἄνω, τοῦ μήκους ἀρχή· τὸ δὲ δεξιόν, τοῦ πλάτους· ἡ δὲ τοῦ προτέρου ἀρχὴ προτέρα· πρότερον ἂν εἴη τὸ ἄνω τοῦ δεξιοῦ κατὰ γένεσιν· ἐπειδὴ πολλαχῶς λέγεται τὸ πρότερον. πρὸς δὲ τούτοις, εἰ τὸ μὲν ἄνω ἐστὶ τὸ ὅθεν ἡ κίνησις· τὸ δὲ δεξιόν, ἀφ' οὗ· τὸ δ' εἰς τὸ ἔμπροσθεν, ἐφ' ὅ, κἂν οὕτως ἔχοι τινὰ δύναμιν ἀρχῆς τὸ ἄνω πρὸς τὰς ἄλλας ἰδέας. διά τε δὴ τὸ παραλιπεῖν τὰς κυριωτέρας ἀρχάς, δίκαιον αὐτοῖς ἐπιτιμᾶν· καὶ διότι ταύτας ἐν ἅπασιν ὁμοίως ἐνόμιζον ὑπάρχειν. ἡμῖν δ' ἐπειδὴ ἀφώρισται πρότερον, ὅτι ἐν τοῖς ἔχουσιν ἀρχὴν κινήσεως αἱ τοιαῦται δυνάμεις ὑπάρχουσιν· ὁ δ' οὐρανὸς ἔμψυχος, καὶ ἔχει κινήσεως ἀρχήν· δῆλον ὅτι ἔχει τὸ ἄνω καὶ τὸ κάτω, καὶ τὸ δεξιὸν καὶ τὸ ἀριστερόν. οὐ δεῖ γὰρ ἀπορεῖν διὰ τὸ σφαιροειδὲς εἶναι τὸ σχῆμα τοῦ παντός, ὅπως ἔσται αὐτοῦ τὸ μὲν δεξιόν, τὸ δὲ ἀριστερόν, ὁμοίων γε ὄντων τῶν μορίων ἁπάντων καὶ κινουμένων τὸν ἅπαντα χρόνον· ἀλλὰ νοεῖν, ὥσπερ ἂν εἴ τις ἐν οἷς ἔχοι τὸ δεξιὸν πρὸς τὸ ἀριστερὸν διαφοράν, καὶ τοῖς σχήμασιν εἶτα περιθείη σφαῖραν. ἕξει μὲν γὰρ τὴν δύναμιν διαφέρουσαν· δόξει δ' οὐ διὰ τὴν ὁμοιότητα τοῦ σχήματος. τὸν αὐτὸν δὲ τρόπον καὶ περὶ τῆς ἀρχῆς τοῦ κινεῖσθαι. καὶ γὰρ εἰ μηδέποτ' ἤρξατο, ὅμως ἔχειν ἀναγκαῖον ἀρχήν, ὅθεν ἂν ἤρξατο, εἰ ἤρχετο κινούμενον κινεῖσθαι. κἂν εἰ σταίη, κινηθείη γε ἂν πάλιν.

A Has enim omnes dimenſiones, perfectis corporibus ineſſe conſonum eſt rationi: atque ſuperum quidem longitudinis, dextrum autem latitudinis, ipſum verò ante, altitudinis principium eſt. Inſuper aliò modo motuum ratione. hæc enim principia dico, vnde motus iis incipiunt, quæ hæc habent. Eſt autem ab ipſo quidem ſupero accretio, à dextris autem ea motio, quæ loco accommodatur: ab hiſce verò, quæ ante ſunt, ea motio quæ fit ſenſu. Atque id ante dico, in quo ſunt ſenſus. Quapropter & non omni in corpore quærendum eſt ſupernum, atque inferum, & dextrum læuúmque, atque ante, & retro: ſed in hiſce quæ cũ animata ſint, motus in ſe ipſis principium habent. In nullo enim eo-B rum, quæ vocant inanima, id cernimus, vnde eſt principium motus. Quædam enim omnino non mouentur: quædam mouentur quidem, ſed omni ex parte ſimili modo: velut ignis ſurſum ſolùm, & terra ad medium. Sed in his ſuperum & inferum, dextrum læuúmque dicimus, ad nos ipſos referentes. Nam aut reſpectu noſtri, dextri læuique, vt augures dicunt: aut ſimilitudine noſtri, vt ea quæ ſunt ſtatuæ, aut ea quę contrario modo ſeſe habent poſitione. Etenim dextrum quidem id dicimus, quod opponitur noſtro ſiniſtro, læuum autem, contrarium, & retro, ac ante, ſimili modo. In his autem ipſis, nullam differentiam cernimus. Si contrà nam-C que vertantur, contraria dextra læuáque, ſupera ac infera, & ante retróque ſanè dicemus. Quapropter & Pythagoricos quiſpiam mirabitur, ſola hæc duo principia dixiſſe, dextrum, inquam, atque ſiniſtrum: cæteras autem quatuor differentias omiſiſſe, non minùs rationem principij ſubeuntes. Non enim minorem ad infera, ſupera, & ad ea quæ ſunt retro, ea quæ ſunt ante, quàm ad læua, dextra vniuerſis in animalibus differentiam habent. Hæc enim vi ſolùm, illa figura etiam differunt. Et ſuperum quidem, ac inferum, omnibus animantibus ineſt, tam animalibus, quàm etiam plantis. Dextrum autem læuúmque plantis non ineſt. Præterea vt longitu-D do latitudinem antecedit, ſic prius erit generatione ſuperum, dextro, cùm multipliciter prius dicatur. Si longitudinis quidem ſuperum, latitudinis verò dextrum principium eſt, atque prioris principium antecedit. Inſuper ſi ſuperum quidem eſt id, vnde eſt motio, dextrum autem àquo, & antè, ad quod: hoc quoque modo vim quandam principij ſuperum ad cæteras ſpecies habet. Increpandi ſunt igitur Pythagorici, & quia maximè propria principia omiſerunt, & quia in vniuerſis hæc ſimiliter ineſſe putabant. Cùm autem à nobis ſit antea definitum, tales potentias iis ineſſe, quæ principium motus habent: & cælum ſit animatum, atque principium habeat motus: patet, ipſi ſuperum inferúmque, & dextrum atque læuum ineſſe. Non E enim dubitare oportet ob vniuerſi rotundam figuram, quónam pacto aliud ipſius dextrum, aliud læuum erit, ſi partes ſint ſimiles vniuerſæ, perpetuóque motu cieantur. Sed intelligere perinde oportet, atque ſi quiſpiam in hiſce quæ dextri ad læuum, figuris quoque differentiam habent, circumpoſuerit ſphæram. Habebunt enim potentiam differentem: at ob figuræ ſimilitudinem habere non videbuntur. Eodem modo, de principio quoque motus intelligamus oportet. Etenim & ſi nunquam moueri cælum incœpit, principium tamen habeat ipſum neceſſe eſt, vnde incœpiſſet, ſi inciperet moueri: & rurſus cietur motu, ſi ſtabit.

Dico autem longitudinem ipſius quidem eam eſſe, quæ inter polos, diſtātiam: & polorum alterum ſuperam, alterum inferam partem. Differētiam enim in ſolis his hemiſphæriorum cernimus, ex eo quia poli non mouentur, & inſuper in Mundo nō ipſum ſuperum, atque inferum, ſed ea, quæ ſunt præter polos, latera dicere conſueuimus. Quo patet, hanc ipſius cæli longitudinem eſſe. Id eſt enim latus, quod eſt præter ſuperum, inferúmque. Polorum autem is quidem, qui apud nos videtur, pars infera eſt: is autem qui nobis manifeſtus non eſt, partis rationem ſuperæ ſubit. Dextrum enim vniuſcuiuſque id eſſe dicimus, vnde principium ad locum accommodatæ motionis emerget. Conuerſionis verò cæli principium id eſt, vnde oriuntur ſtellæ. Quare hoc erit dextrum: id verò, vbi ſiunt occaſus, læuum. Si igitur à dextris incipit & circumfertur ad dextra, polum eum qui non videtur, ſuperum eſſe neceſſe eſt. Si enim erit is, qui videtur, motus, ad partes erit ſiniſtras: quod quidem non dicimus. Patet igitur, eum polum, qui non videtur à nobis, cæli partem ſuperam eſſe: & eos quidem, qui illic habitant, in hemiſphærio ſupero eſſe, atque in dextris, nos autē in infero, ac ſiniſtris, contrà atque Pythagorici dicunt. Illi enim nos ſupra faciunt, dextráque in parte, illos infra, atque in læuis. Contrarium autem accidit. Verùm ſecundę conuerſionis, velvti vagarum ſtellarum, nos quidem in ſuperis dextriſque ſumus, illi verò in inferis ſunt, atq; ſiniſtris. Eſt enim hiſce principium motionis contra, propterea quòd lationes contrariæ ſunt. Quare ſit vt nos in principio ſimus, illi in fine ſint collocati. De partibus igitur per dimenſiones locóve definitis tot à nobis ſint dicta.

CAPVT III.

Quam ob rēm plures ſint circulorum lationes.

CVm autem conuerſio non ſit contraria, conſiderandū cur plures ſint lationes. Quanquam eminus facere inquiſitionem conamur, eminúſque nō adeo loco, ſed multò magis hoc ipſo quod accidentium ipſis cęlis perpaucorum ſenſum habemus. Dicamus tamen, atque de ipſis cauſam hinc ſumamus oportet. Eorū quodque, quorū eſt opus, operis ipſius eſſe gratia cōſtat. Dei verò operatio, immortalitas eſt, hoc autem eſt perpetua vita. Quare Deo perpetuum ineſſe motum neceſſe eſt. Cùm autem cælum ſit tale (eſt enim corpus quoddā diuinum) ideo corpus rotundum habet, quod ſuapte natura ſemper cōuertitur. Cur igitur totū corpus cæli tale non eſt? Quia corporis eius, quod verſatur, aliquid, id inquā quod eſt in medio, manere neceſſe eſt. Huius autē manere nulla pars, aut omnino, aut in medio poteſt. Naturalis enim ipſius motus, ad ipſum mediū eſſet. At ipſum ſuapte natura verſatur. Motus enim ſempiternus non eſſe, quippe cùm nihil præter naturā ſit ſempiternū. Id enim, quod eſt pręter naturā, poſterius eſt eo quod eſt ſecundū naturā: atque id quod eſt præter naturā, exceſſus quidā eſt in ipſa generatione, eius quod eſt ſecundū naturā. Sit igitur terra neceſſe eſt: hæc enim in medio ſanè quieſcit. Atque nunc quidē hoc ſupponatur: poſteriùs autē de ipſo dicetur. At ſi terram eſſe neceſſe eſt, ignem etiam eſſe neceſſe eſt. Contrariorum enim ſi alterum eſt natura, & alterū eſſe natura neceſſe eſt, ſi ſit contrarium, atque aliquam ipſius eſſe naturā. Eſt enim eadem contrariorū materies:

A & affirmatio priuatione eſt prior, velvti calidum frigido. Quies verò, ac graue, per leuitatis motuſve priuationem dicũtur. Atqui ſi terra eſt, atque ignis, ea quoque corpora eſſe, quæ ſunt inter ipſa, neceſſe eſt. Elementorum enim vnumquodque contrarietatem ad quodque nimirum habet. Atque hoc etiã nunc ſupponatur: poſterius autem eſt demonſtrandum. Hęc cùm ſint, patet neceſſario generationem eſſe, propterea quòd nihil ipſorum perpetuum eſſe poteſt. Agunt enim inter ſeſe contraria ipſa, mutuóque à ſeſe patiuntur, ac corrumpuntur. Non eſt propterea conſentaneum rationi, mobile quippiam perpetuum eſſe, cuius motus ſecundùm naturam

B perpetuus eſſe non poteſt. At horum eſt motus. Ex his igitur patet, neceſſariò generationẽ eſſe. Quòd ſi generationem eſſe neceſſe eſt, & aliam lationem aut vnam, aut plures eſſe neceſſe eſt. Nam vt ſeſe habet totius motio cæli, ſic elementa corporũ inter ſeſe reſpectu generationis habere neceſſe eſt. Et hoc etiam in ſequentibus dilucidiùs declarabitur. Nunc tantùm patet, quam ob cauſam plura ſunt corpora, quæ verſantur: generationem eſſe enim neceſſe eſt: & generationem, ſi & ignem eſſe neceſſe eſt: & hunc, cæteraque, ſi & terram: & hanc, propterea quòd conſiſtat aliquid, maneátque ſemper neceſſe eſt, ſi moueri quippiam ſemper oportet.

CAPVT IV.

Quòd cælum figura ſit ſphærica.

Figuram autem cælum rotundam habere neceſſe eſt. Hæc enim eſt accommodatiſſima ſubſtantiæ ipſius, & natura etiam prima. Dicamus autem vniuerſaliter quænam & in planis & in ſolidis figura ſit prima. Omnis itaque figura plana, aut à rectis lineis, aut à circũferentia cõtinetur: & illa quidem à pluribus, hæc ab vna linea ſolùm. Cùm vnũ igitur in vnoquoque genere prius ſit multis natura, compoſitióque ſimplex, figurarum planarum profectò circulus erit prima. Præterea, ſi perfectum id eſt, extra quod nihil eorum quæ ſunt ipſius, acci-

D pi poteſt, quemadmodum priùs eſt definitum, & lineæ quidem rectæ ſemper additio fieri poteſt, lineæ verò circulari nunquam: patet, perfectam eam lineam eſſe, quæ ipſum circulum continet. Quare ſi perfectum prius eſt imperfecto, ob hæc & circulus prima erit figura. Eodem & ſphæra modo, ſolidarum figurarum prima erit figura. Sola namque ab vna ſuperficie continetur: rectarum verò linearum figuræ à pluribus continentur. Vt enim in planis circulus ſeſe habet, ſic in ſolidis ſphæra. Qui præterea ſolida diuidunt in plana, atque ex planis corpora generant, his teſtes fuiſse videntur. Solam enim figuram ſolidarum ſphæram non diuidunt,

E vt non plures ſuperficies, quàm vnam habentem. Diuiſio enim in plana non perinde efficitur, vt quiſpiam diuidens in partes diuidet totum, ſed vt in ſpecie diuerſa. Patet igitur, ſphæram figurarum eſſe ſolidarum primam. Eſt inſuper maximè conſonum rationi, ſi ordo per numerum etiam aſſignetur, hoc ipſam modo diſponere, vnitatem quidem circulo, dualitatem autem triangulo tribuendo: cùm duobus æquales ſuos angulos habeat rectis. Si verò vnitas triangulo tribuatur, circulus non erit ſanè figura. Cùm autem prima figura primi ſit corporis, primum verò corpus id ſit, quod eſt vltima in cõuerſione, rotundũ id erit ſanè, quod fertur cõuerſione. Et id ergo quod illi hæret: quod.n.

hæret

hæret rotundo, id rotundum etiam eſt. Similiter & ea, quæ in medio collocantur: ea namque quæ à rotundo corpore continentur, ac tangunt, rotunda eſſe cuncta neceſſe eſt. At quæ ſunt ſub vagarum ſphæra, ſuperam ſphæram tangunt. Quare ipſum vniuerſum rotundum erit: omnia namque tangunt, hærentque ſphæris. Præterea cùm videatur ac ſupponatur, vniuerſum ipſum verſari, demonſtratúmque ſit extra conuerſionem extimam neque locum, neque vacuum eſſe, rotundum ipſum eſſe ob hæç etiam ipſa neceſſe eſt. Nam ſi rectarum linearum erit figura, eueniet & locum eſſe, & corpus, & vacuum extima: nam cùm rectarum linearũ figura verſatur, nunquam eundem occupabit locum, ſed vbi priùs erat corpus, nunc non erit, & vbi nunc non eſt, rurſus ob angulorum tranſitionem erit. Eadem euenient, & ſi quiſpiam aliquam figuram aliam ipſi tribuerit, non habentem eas lineas, quæ ex medio progrediuntur æquales, veluti lentis figuræ ſimilem, aut oui. In omnibus enim eueniet & locum eſſe, & vacuũ extra cælum, propterea quòd totum non eundem occupat locũ. Præterea ſi cæli latio quidem menſura eſt motuum, propterea quòd ſola continuus eſt, & vniformis, ſempiternúſque motus, in vnoquoque autem genere menſura id eſt, quod eſt minimum, minimus verò motus, is eſt celerrimus: patet, cæli motum omnium motuum celerrimum eſſe. At eorum, quæ ab eodem ad idem pergunt, minima ipſius circuli linea eſt, per minimã autem, eſt motus celerrimus. Quare ſi cælum conuertitur, celerriméque mouetur, rotundum ipſum eſſe neceſſe eſt. Sumere etiam quiſpiam & ex hiſce corporibus, quæ circa mediũ collocantur, hanc fidem poteſt. Si enim aqua quidem eſt circa terram, aër autem circa aquam, & ignis circa aërem collocatur, & ſupera corpora per rationem eandem ita ſe habent. Etenim continua quidem non ſunt, tangunt autem hæc. Aquæ verò ſuperficies rotunda eſt ſanè: atque quod rotundum tangit, circáque rotundum eſt ſitum, & ipſum tale eſſe neceſſe eſt. Patet hac etiam ratione, cælum rotundum eſſe. At verò ſuperficiem aquæ talem eſſe patebit, ſi ſuppoſitionem ſumpſerimus, aquam ſuapte natura ſemper ad magis concauum locum cõfluere, & eum locum magis concauum eſſe, qui eſt propinquior centro. Ducantur igitur ex a centro rectæ lineæ a b, & a c, & ex b in c. linea producatur b c, ad quam ab a perpendicularis ducatur a d, & protrahatur in e: patet itaque, lineam a d, minorem eſſe lineis a b, & a c. ergo hic locus, magis concauus eſt: quare affluet aqua, quouſque fuerit in æqualitatem redacta. At a e, æqualis eſt hiſce, quæ à centro ſunt ductæ. Quare aquam ipſam in hiſce eſſe, quæ ſunt ex centro ductæ, neceſſe eſt. tunc enim quieſcit. At ea, quæ tãgit eas, quæ ſunt ex centro ductæ, circumferentia eſt. Rotunda eſt ergo ſuperficies aquæ, quæ quidem eſt b e c. Patet igitur ex hiſce, quæ dicta ſunt, Mundum eſſe rotundum, atque adeò exactè, vt nihil eorum quæ manu conficiuntur, nec aliud quicquam eorum, quæ apud nos oculis cernuntur, ſit tam exactè rotundum. Nihil eorum, ex quibus conſtat, adeo vniformitatem, exactámve rotunditatem ſuſcipere poteſt, vt ipſius corporis obeuntis natura. Manifeſtum eſt enim, rationem eam ſubire, quam aqua ſubit ad terram, & elementa ea, quæ plus ſemper remota ſunt, atque diſtant.

CAPVT V.

Cur potiùs cælum ab A ad C moueatur, quàm contrà, quæſtio.

Cvm autem in circulo duo motus fieri poſſint, vt ab a vnus ad b, alter ad c: non eſſe quidem hos contrarios, priùs eſt dictum. Sed ſi nihil in æternis eſſe fortuitò, aut à caſu poteſt, cælum verò perpetuum eſt, atque ipſa conuerſio, quam ob cauſam ad altera, & non ad altera fertur? Nam & hoc principium eſſe, aut ipſius principium eſſe, neceſſe eſt. De nonnullis igitur, atque de o-
B mnibus eniti quippiam dicere, nihilque prætermittere, aut inſignis ſtultitiæ forſitan, aut valde parati animi videbitur eſſe. Non tamen omnes ſimiliter ſunt increpandi. Sed dicendi cauſam, quænam ſit, videre oportet. Et quo præterea modo ſe habet in credẽdo, vtrùm humanè, an ita vt aſſerat, atque perſiſtat. Cùm igitur quiſpiam exactiores neceſſitates fuerit nactus, tunc hiſce, qui inueniũt, gratias agere oportet. Nunc autem id, quod videtur, dicendum eſt. Natura ſemper id facit, quod eſt optimum eorum quæ fieri poſſunt. Vt autem lationum rectarum ea præſtabilior eſt, qua locus ſuperus petitur, (eſt enim diuinior locus ſuperus infero) ſic & ea qua itur versùs anteriora, præſtabilior eſt ea qua itur retrorſum: ſiquidem ita ſeſe
C habent & dextrum, atque ſiniſtrum, vt priùs eſt dictum. Atque dubitatio dicta declarat, prius poſteriúſve cælum habere: hæc enim cauſa dubitationem ſoluit. Nam ſi ſeſe habet vt poteſt optimè, hæc erit profectò cauſa eius, quod diximus. Eſt enim optimum ſanè ſimplici ac inceſſabili motu cieri, atque hoc ad id quod præſtabilius eſt.

CAPVT VI.

Quòd cæli lationem, & quæ prima lationum eſt, regularem eſſe ſit cenſendum.

Poſt hæc motum ipſius vniformem, & non difformem eſſe, demonſtremus oportet. Atq; hoc
D dico de primo cælo, de lationéque prima. In his enim, quæ ſunt ſub illo, plures lationes in vnum iam conuenêre. Nam ſi difformiter mouebitur, patet, intenſionem lationis, ſtatum, remiſſionemque fore: omnis enim difformis latio, remiſſionem, intenſionem, ac ſtatum habet. Status autem eſt, aut vnde mobile fertur, aut ibi, quò fertur, aut in medio. Veluti forſitan hiſce quidem, quæ natura feruntur, in eo, ad quod mouentur: in his autem, quæ præter naturam feruntur, in eo, vnde mouentur: hiſce verò, quæ proiiciuntur, in medio. At conuerſionis, neque vnde, neque quò, neque medium eſt. Neque enim ipſius
E principium, neque finis, neque medium eſt abſolutè. Nam & tempore eſt ſempiterna, & longitudine coacta, nec frangetur. Quare ſi lationis cæli ſtatus non eſt, neque difformitas erit. Difformitas enim ob remiſſionem intenſionémve fieri ſolet. Præterea, ſi omne quod mouetur, ab aliquo moueatur, difformitas motionis ob id quod mouet, aut ob id quod mouetur, aut ob vtrumque fiat, neceſſe eſt. Nam & ſi id quod mouet, non eiſdem viribus moueat, & ſi id quod mouetur, alteretur, nec idem permaneat, & ſi vtrumque mutetur, nihil prohibet id quod mouetur, difformi motu cieri.

Nihil autem horum, circa cælum euenire poteſt. Id enim quod mouetur, & primum, & ſimplex, & ingenerabile, atque incorruptibile, & omnino immutabile, demonſtratum eſt eſſe. Id etiam quod mouet, longè magis tale eſſe, conſentaneum eſt rationi. Primi namque primum, & ſimplicis ſimplex, & incorruptibilis ingenerabiliſve, incorruptibile ingenerabileve motiuum eſt. Cùm igitur id, quod mouetur, non mutetur, etſi eſt corpus: nec id quod mouet, mutari poteſt, corpore vacans. Quare impoſſibile eſt, lationem eſſe difformem. Etenim ſi ſit difformis, aut ipſa tota mutatur, & interdum celerior, interdum tardior fit, aut ipſius partes. Patet igitur, partes difformes non eſſe. Iam enim diſtantia ſtellarum in tempore infinito fuiſſet, ſi alia tardiùs alia celeriùs moueretur. At nulla in diſtantiis aliter ſeſe habere videtur. At neque tota mutari poteſt. Remiſſio namque cuiuſque ob imbecillitatem fieri ſolet: imbecillitas verò res eſt profectò præter naturam. Etenim omnes imbecillitates, quæ in animalibus inſunt, præter naturam eſſe videntur: vt ſenectus, & decrementum. Tota namque fortaſſe conſtitutio animalium, ex talibus conſtat, quæ propriis differunt locis. Nulla enim partium, eſt ſuo in loco. Si igitur in hiſce quæ prima ſunt, non eſt id quod præter naturam ineſt (ſimplicia namque ſunt, & non miſta, & ſuis in locis ſunt, atque nihil prorſus eſt contrarium ipſis) neque profectò imbecillitas erit in ipſis: quare neque remiſſio, neque intenſio. Nam ſi intenſio fuerit, & remiſſio etiam erit. Præterea cancellos etiam egreditur rationis, id quod mouet, viribus carere tempore infinito, & rurſus alio tempore infinito vires habere. Nihil enim tempore infinito præter naturam eſſe videtur: & imbecillitas res eſt, vt patet, præter naturam. Nec æquali in tempore præter naturam, & ſecundùm naturam eſt, nec omnino potens, ac imbecille. Si verò motus remittatur, infinito in tempore remittatur neceſſe eſt. at verò neque fieri poteſt in quippiam vt ſemper intendatur, aut rurſus remittatur. Erit enim infinitus indeterminatúſque ipſe motus. Omne autem ex quopiam in quippiam eſſe dicimus, definitúmve. Præterea hoc idem emerget, ſi quiſpiam ſumpſerit tempus quoddam minimum eſſe, in minore quo cælum moueri non poteſt. (Vt enim neque ambulare quiſpiam, neque pulſare citharam quouis in tempore poteſt, ſed vniuſcuiuſque actionis definitum eſt minimum corpus in non exuperando, ſic neque cælum moueri quouis in tempore poteſt.) Si igitur hoc verum eſt, non erit ſanè lationis ſemper intenſio. Quòd ſi non erit intenſio, neque remiſſio erit. Similiter enim ambo erunt ac alterum, ſi eadem celeritate, aut maiore intenditur, atque tempore infinito. Reſtat igitur dicere, motui celeritatem viciſſim ac tarditatem ineſſe. Hoc autem ratione penitus vacat, & figmento eſt ſimile. Inſuper & rationi magis conſentaneum eſt, nos id ipſum, ſi ita ſit, non latere. Ea namque quæ iuxta ſe ponuntur, faciliùs ſanè ſenſu percipiuntur. Vnicum igitur cælum eſſe, & hoc ingenerabile, ac ſempiternum, & vniformi ſemper motu cieri, per ea ſatis, quæ iam diximus, patuit.

CAPVT VII.

Quòd rationi conſentaneum ſit, aſtra eius naturæ, cuius ſit corpus, in quo ſunt fixa.

DE his autem, quæ ſtellæ vocantur, [illegible] dicendum eſſe videtur, ex quibus conſtent, quáſque figuras habent, & quæ ſunt motiones ipſarum. Conſonum eſt itaque maximè rationi, & iis, quæ dicta ſunt, cõmitatur, vnamquamque ſtellarum ex hoc aſſerere eſſe corpore, in quo lationem habet: cùm quippiam eſſe dicamus, quod aptum eſt ſuapte natura ferri cõuerſione. Vt enim qui dicunt igneas eſſe, ideo dicunt, quia ſuperum cor-
B pus ignem inquiunt eſſe: quippe cùm conſonum ſit rationi, ex iis vnamquamque conſtare, in quibus eſt quæque: ſic & nos hanc in ſententia noſtra dicimus. Caliditas autem ab ipſis, lumenque ideo fit, quia aër ab illarum motione fricatur. Motus enim, & ligna, & lapides, & ferrum ignire ſolet. Magis igitur conſentaneum eſt rationi, id quod eſt propinquius igni, propinquius verò eſt, aër, quale fit & in hiſce ſagittis, quæ feruntur. Hæ namque adeo igniuntur, vt ipſum plumbum quod eſt in ipſis, liqueſcat. Atque cùm in ipſis hoc fiat, circundans etiam ipſas aër hoc idem patiatur neceſſe eſt. Hæc igitur ideo calefiunt, quia in aëre feruntur, qui quidem ob ictum motione fit ignis. Supero-
C rum autem corporum vnumquodque fertur in ſphæra, vt ipſa quidem non igniantur: ſed aër cùm ſub obeuntis corporis ſphæra ſit, ob illius motum neceſſariò calefiat, & maximè hac, in qua ſol eſt infixus. Quocirca cùm propius accedit, ac oritur, & ſuper nos eſt, fit & calor. Hæc igitur à nobis ſint dicta de ipſis, quibus patet, neque igneas ipſas eſſe, neque in igne ferri.

CAPVT VIII.

Quòd aſtra non moueantur proprio motu ſecundum cæli circulum.

CVm autem & ſtellæ transferri videantur, & totum cælum, aut vtriſque quieſcentibus, aut vtriſque ſubeuntibus motum, aut altero qui-
D eſcente, altero ſubeunte motum, hinc fieri mutationem neceſſe eſt. Ambo igitur quieſcere, terra quieſcente, impoſſibile eſt. Non enim fierent, quæ videntur. At ſupponatur, terram quieſcere: reſtat igitur, ambo moueri, aut alterum quieſcere, alterum motu cieri. Si igitur ambo mouebuntur, ratione profectò vacat, eaſdem ſtellarum, aut circulorum eſſe celeritates. Vnaquæque enim æquè celeris erit, atque circulus, in quo fertur. Simul enim cum circulis, in idem redire videtur. Accidit igitur, ſimul ſtellam circulum transiuiſſe, & circulum lationem ſuam egiſſe, ſuámque circumferentiam tranſiiſſe. Non eſt autem con-
E ſentaneum rationi, celeritates ſtellarum, & magnitudines circulorum, eandem rationem habere. Circulos enim, non eſt abſurdum, ſed neceſſarium, celeritates habere, rationem ſubeuntes eandem, quam & magnitudines ſubeunt: ſtellarum autem earum quamque, quæ ſunt in iſtis, nullo modo conſentaneum eſt rationi. Nam ſi neceſſariò ea celerior erit, quæ per maiorem circulum fertur, patet quòd ſi circulos ſtellæ ſuos mutabunt, alia celerior, alia tardior erit: hoc autem modo motionem propriam non habere,

A ſed ab ipſis orbibus ferri videntur. Sin caſu accidit, neque hoc pacto conſonum eſt rationi, vt in omnibus ſimul & circulus ſit maior, & latio ſtellæ, quæ eſt in ipſo, celerior. Vnam enim, vel duas hoc modo ſeſe habere, non eſt abſurdum. Vniuerſas verò ſimili modo ſeſe habere, figmento eſt ſimile. Et inſuper in hiſce quæ ſunt natura, non eſt id quod fit caſu: neque id quod vbique, & in omnibus eſt, proficiſcitur à fortuna. At verò ſi orbes quieſcant, ſtellæ autem moueantur, eadem abſurda & ſimiliter erunt. Eueniet enim celerius eas moueri, quæ ſunt extra, & celeritates per orbium magnitudines eſſe. Cùm igitur neque vtraque, neque ſtellam ſolùm moueri conſentaneum ſit rationi, reſtat, orbes quidem moueri, ſtellas verò quieſcere, & infixas in B ipſis orbibus ferri: hoc enim modo duntaxat nihil accidit, quod rationis fines egrediatur. Et velocitatem enim orbis maioris celeriorem eſſe, conſentaneum eſt rationi, circa idem centrum in orbibus ſtellis infixis. Vt enim in cæteris maius corpus celeriùs latione propria fertur, ſic & in orbibus ipſis. Pars enim orbis maioris, maior eſt hiſce partibus, quæ auferuntur ab eo plano, quod per centrum extenditur. Quare congruè æquali tempore maior orbis circunferetur: & cælum accidet non diuelli, & propter hoc ipſum, & quia demonſtratum eſt, totum ipſum continuum eſſe. Præterea cùm ſtellæ ſint rotundæ, quemadmodum & cæteri dicunt, & nos etiam vt in noſtris conſonum ſententiis dici- C mus, ex illo corpore ipſas generantes: rotundique ipſius duæ ſint per ſe motiones, volutio, & conuerſio: ſi ſtellæ per ſe mouerentur, harum altera motione mouerentur, at neutra moueri videntur. Si verſarentur enim, eodem in loco ſanè manerent, locúmve non mutarent. Videntur autem locum mutare, ac omnes dicunt. Præterea, omnes quidem conſentaneum eſt rationi eodem motu cieri. Sol autem ſtellarum ſolus hoc facere videtur, cùm oritur, atque occidit: & hic non per ſe, ſed ob noſtri ſenſus remotionem. Viſus enim longè ſeſe extendens, verſatur ob imbecillitatem: quæ quidem fortaſſe cauſa eſt, vt & ſtellæ quidem fixæ micare, vagántes autem non micare videantur. Vagæ nam- D que ſtellæ ſunt prope: quare viſus ſui compos ad ipſas accedit. Ad fixas autem longè valde ſeſe extendens, ob longitudinem tremit. Tremor autem ipſius, facit vt hæc motio ſtellæ ipſius eſſe videatur. Nihil enim intereſt, viſus, an id quod cernitur, moueatur. At verò nec volui ſtellas perſpicuum eſſe videtur. Id enim, quod voluitur, verſetur neceſſe eſt. At id, Lunæ quod facies nuncupatur, ſemper videtur. Quare, cùm conſonum ſit rationi, ſtellas hiſce motibus, qui ad ipſas ſunt accommodati, moueri, ſi per ſe moueantur, his autem moueri non videantur, patet, ipſas per ſe non moueri. Inſuper nullum ipſis inſtrumentum ad motum tribuiſſe naturam, metas egreditur ratio- E nis. Nihil enim caſu Natura facit. neque animalia quidem ipſi curæ fuere: adeo verò præſtabiles res deſpexit: ſed vniuerſa videtur, tanquam de induſtria, abſtuliſſe, quibus per ſe procedere ipſa poſſent, atque ab hiſce quæ inſtrumenta ad motum habent, quàm plurimùm ſe mouiſſe. Quapropter & totum cælum rotundum cum ratione, & vnaquæque ſtellarum eſſe videbitur. Sphæra enim figurarum maximè vtilis eſt ad eum motum, qui eodem in loco ſit. Sic enim & celerrimè moueri, & eundem maximè locum occupare poteſt.

A Ad motum autem cum quo ad ea pergitur loca quæ ſunt ante, maximè inutilis eſt. Eſt enim minimè ſimilis hiſce quæ per ſe ipſa mouentur. Nihil enim dependens, nihil eminens habet, vt rectarum linearum figura: ſed plurimùm à corporibus hiſce quæ progrediuntur, figura ſemota eſt. Cùm igitur cælum quidem in ſe ipſo moueri oporteat, ſtellas autem non per ſe ipſas procedere, cum ratione nimirum ſit vtrumque vt figuræ rotundæ ſit. Sic enim alterum quidem motu ciebitur, alterum verò quieſcet.

Quòd præter rationem ſit Pythagoricorum opinio, ponentium corpora cæleſtia rotatu ſonum harmoniámque efficere.

B EX his autem patet, id quod dictum eſt à quibuſdam, horum, inquam, latione concentum fieri, ſonis emergentibus inde ratione rata diſtinctis, lepidè quidem eſſe dictum, atque concinnè, non tamen eſſe verum, nec ita rem ſe habere. Sunt enim, quibus neceſſarium eſſe videtur, ſonum fieri tantorum corporum latione, quippe cùm & eorum corporum motu, quæ apud nos ſunt, neque molem habentium æqualem, neque talem motionis celeritatem, qualis eſt Solis, & Lunæ, ſonus efficiatur: & inſuper cùm tot multitudine, tantæque magnitudine ſtellæ, tanta celeritate motus ferantur, impoſſibile eſt, ſonum non fieri grandem. Hæc autem C ſupponentes, & celeritates inſuper concentuũ rationes ex interuallis habere, varios æqualiter ſonos ſtellarum conuerſione fieri dicunt. Quoniam verò rationis fines egredi videbatur, nos hunc ſonitum non audire, cauſam huius inquiunt eſſe, continuò ſonum hunc eſſe cùm orimur, vt non ſit ad ſilentium contrarium manifeſtus. Vocis enim, ſilentiive perceptionẽ, viciſſitudine fieri dicunt. Quare vt hiſce, qui mulcent ferrum, ob conſuetudinem nihil intereſſe videtur, ſic & hominibus idem accidere aiunt. Hoc vti dictum priùs eſt, concinnè quidem muſicéque dicunt: impoſſibile eſt autem ita ſeſe habere. Nõ enim ſolùm hoc eſt abſurdum, nihil, inquam, nos audire, quod quidem ſoluere aggredientes D dictam cauſam, afferunt: ſed etiam illud ſine ſenſu nihil omnino pati. Exuperantes enim ſoni, & inanimatorum corporum moles offendunt. Tonitrui namq; ſonus, lapides, & robuſtiſſima corpora ſcindit. Quòd ſi tot feruntur corpora, atque ad eam magnitudinem, quæ fertur, multiplicẽ ſonitus magnitudinẽ tranſit: huc profectò perueniat ipſe ſonus, ac ipſius violentiæ magnæ ſint admodũ vires, neceſſe eſt. Sed nõ ſine ratione neque nos audimus, neque corpora pati quicquam violentum videntur: propterea quòd nullum ſtellæ motione ſonum efficiunt, atque ſimul iſtorum cauſa patet, & teſtis eſt hiſce quæ à nobis ſunt dicta, veráque E eſſe declarat. Id enim, quod dubitatum eſt, Pythagoricóſve compulit hanc ſententiam ferre, ſtellarum, inquam, latione concentum fieri, indicium efficitur nobis. Quæ namque per ſe feruntur, ea ſonitum ictúmve faciunt. Quæ verò in eo quod fertur, infixa ſunt aut inſunt, vt in nauigio partes, ea ſonum elicere nequeunt, neque ipſum nauigium, ſi in fluuio feratur. Et tamen eadem dicere licebit abſurdum eſſe ſi tãtæ nauis malus motione puppiſve, aut ipſum nauigium vehementem non faciet ſonum. Quod verò fertur, in eo quod nõ fertur, id facit ſonum: at quod eſt in eo quod fertur, ictúmve non facit, id efficere ſonum impoſſibile eſt.

Quare dicendum eſt hîc, ſi ſtellarum corpora per aerem fuſum per vniuerſum, aut ignem (vt omnes aiunt) ferātur, neceſſariò vehementem fieri ſonum, atque huc peruenire, & hæc offendere corpora. Sed cùm fieri nō videatur, neque animantis motu, neque violento, vllam ſtellarum ferri, quaſi futuris ipſa prouidente natura. Quòd ſi hoc modo non ſeſe haberet motus ſtellarum, nihil prorſus eorum eſſet, quæ hoc in loco ſunt, quod ſimili modo ſeſe haberet. Stellas igitur eſſe rotundas, & per ſe ipſas non moueri, ſatis iam diximus.

CAPVT X.

Ordinem quempiam orbium eſſe, & illum ex aſtronomia notum eſſe.

DE ordine verò ipſarum, quomodo quæque diſpoſita eſt, vt quædam ſint priores, quædam poſteriores, & quomodo ſeſe habent interuallis, ex hiſce quæ in aſtrologia dicuntur, contemplemur oportet, dicitur enim ibi ſufficienter. Accidit autem per rationem ſingularum fieri motiones, ipſis nimirum interuallis, vt aliæ ſint celeriores, aliæ tardiores. Nam cùm ſupponatur, extimam quidem cæli lationem ſimplicem, atque celerrimam eſſe, cæteras verò tardiores, ac plures, (quæque namque ſtella, motu fertur contrario atque cælum, ſuo in orbe) conſentaneum iam eſt rationi, eam quidem, quæ propinquiſſima eſt ſimplici, primæque conuerſioni, plurimo in tempore ſuum orbem tranſire: eam verò, quæ remotiſſima eſt, in minimo. Cæterarum autem ſemper eam quæ eſt propinquior, in maiore: eam verò, quæ eſt remotior, in minore. Propinquiſſima namque maximè ſuperatur, remotiſſima verò minimè omnium, ob remotionem. At media, per diſtantiæ iam rationem, vt mathematici quoque demonſtrant.

CAPVT XI.

Quòd aſtra ſphærica figura ſint.

ATqui figuram vniuſcuiuſque ſtellarum rotundam, maximè non abſque ratione quiſpiam eſſe exiſtimabit. Nam cùm demonſtratum ſit, ſtellas haud aptas eſſe per ſe moueri: Naturáque nihil abſque ratione, fruſtráque faciat: patet, eam figuram ipſam immobilibus tribuiſſe, quæ minimè eſt motiua. Talis autem eſt rotunda, propterea quòd inſtrumentum nullum habet ad motum. Quare patet, ſtellarum molem rotundam eſſe. Præterea, ſimiliter ſeſe habent omnes ac vna. At Luna per ea quæ circa viſum accidunt, rotunda eſſe oſtenditur. non enim accreſcens, atque decreſcens, pluries quidem altera ex parte curua, altera concaua fieret, aut vtraque ex parte curua, ſemel autem duas in partes æquales bipartita videretur, & rurſus per aſtrologiam. non enim Sol cùm deficit, concauus ea ex parte qua deficit, videretur. Quare ſi ſtella vna eſt talis, patet & cæteras omnes rotundas eſſe.

CAPVT XII.

Ob quam cauſam cæleſtium corporum motus multiplicentur iuxta diſtantiam à primo orbe. Et quare in primo orbe ſint plures ſtellæ, in reliquis ſingulæ.

A cere, quod nobis videtur. Atque hunc omnium veneratione potiùs dignum quàm temerarium arbitrari oportet, ſi quiſpiam ob philoſophiæ ſitim exiguas etiam in hiſce rebus facultates amet, de quibus maximas dubitationes habemus. Eſt autem in talibus, quæ multa ſunt, non minimè admirabile. Quam ob cauſam non ſemper hæ ſtellæ, quæ magis à prima latione diſtant pluribus motibus, ſed mediæ plurimis mouentur. Conſentaneum enim rationi videbitur, primo corpore vnam lationem ſubeunte, propinquiſſimum minimis motibus moueri, ceu duobus: id autem, quod hæret illi, tribus: aut aliquo alio ordine tali. Nunc verò contrarium accidit: paucioribus enim Sol, & Luna mouentur, quàm ſtellarum nonnullæ vagarum, quæ tamen

B longiùs à medio diſtant, & propinquiores primo corpori ſunt. Manifeſtum autem hoc de nonnullis etiam ipſo viſu fuit. Lunam enim vidimus dimidia parte lucidam, Martis ſtellam ſubiſſe, quæ celata quidem fuit in parte obſcura, egreſſa autem per lucidam partem. Similiter & de cæteris ſtellis Ægyptij & Babylonij dicunt, qui plurimis iam annis antè hæc obſeruauerunt, & à quibus multa fide digna de ſingulis ſtellis accepimus. Hoc etiam non iniuria quiſpiam dubitauerit, quam ob cauſam etiam in prima quidem conuerſione tanta eſt multitudo ſtellarum, vt vniuerſus ordo ſubire non poſſe numerum videatur: in cæteris autem vna ſeorſum eſt ſtella, duæ verò aut plures eodem in orbe non

C videntur eſſe infixæ. De his igitur bene ſeſe habet, & maiorem quærere cognitionem, etſi paruæ occaſiones habentur, tantaque eſt eorum remotio, quæ accidunt circa ipſa: ſi tamen ex talibus contemplemur, non egredi metas rationis videbitur id quod nunc dubitatur. Sed nos de ipſis, vt de corporibus, ac vnitatibus ordinem quidem habentibus, inanimatis autem penitus, cogitamus. Oportet autem ipſa viuentia eſſe exiſtimare, atque actionem habere. Sic enim id quod accidit, non videbitur à ratione exorbitare. Nam ei quidē, quod optimè ſeſe habet, ineſſe ipſum bonū ſine actione videtur: ei verò, quod illi eſt propinquiſſimum, per paruam, ac vnam. At hiſce quæ ſunt remotiſſima, per plures, quemadmodum & in corporibus fieri

D ſolet. Aliud enim bene ſeſe habet, nullum exercitium ſubiens, aliud ſeui deambulatione facta, aliud & curſu indiget, & luctatione, ac puluere: alij rurſus neque quouis exercendi modo, hoc vnquam inerit bonum, ſed aliud quippiam conſequitur. Rectè autem agere, aut multa, aut ſæpe, difficile eſt, veluti talos Coenſes mille proijcere, impoſſibile eſt: ſed vnum, vel duos, facilius eſt. Et rurſus cùm hoc quidem illius gratia, illud autem ob aliud, & illud item ob aliud eſt faciendum: in vno quidem, duobúſve, faciliùs quiſpiam finem attinget. Ac quò per plura procedit, eò illum difficiliùs aſſequetur: quapropter & ſtellarum actio-

E nem talem exiſtimare oportet, qualis animalium eſt, ac plantarum. Etenim hic hominis actiones, plurimæ ſunt. Multa enim bona conſequi poteſt. Quare multa agit, & aliorū nimirū gratia. Ei verò, quod quàm optime ſeſe habet, non eſt opus actione. Eſt enim id, gratia cuius cætera agūt. Actio verò ſemper in duobus cōſiſtit, quādo & id gratia cuius agitur, eſt, & id quod huius gratia agit. At cæterorū animaliū, pauciores ſunt. Et plantarum, parua quædā eſt, ac vna fortaſſe. aut enim vnū quidē eſt, quod cōſequi poſſunt, quemadmodū & homo: aut & ipſa multa, omnia antecedūt ad ipſū optimū conſequendū.

Aliud igitur habet optimum ipſum, & particeps eſt ipſius: aliud per pauca prope accedit, aliud per multa: aliud non aggreditur, ſed ſatis eſt prope ad ipſum vltimum peruenire. veluti ſi ſanitas eſt finis, aliud ſemper eſt ſanum, aliud macie affectum, aliud curſu facto in maciem deductum, aliud & aliquo quopiam acto ipſius gratia curſus: quare plures ipſius ſunt motiones. Eſt & id quod ad ſanitatem ipſam accedere nequit, ſed ad curſum ſolum, aut ad maciem: atque horum alterum, eſt ipſis finis. Nam maximè quidem eſt optimum omnibus, illum conſequi finem. Quòd ſi hoc non fiat, ſemper melius eſt, quanto optimo propinquius eſt. Et idcirco terra quidem non mouetur omnino, propinqua verò paucis motibus mouentur. Non enim ad vltimum ipſum perueniunt, ſed quouſque conſequi diuiniſſimum ipſum principium poſſunt. Primum autem cælum, continuò per vnum motum illud aſſequitur. At eæ, quæ ſunt in medio primi, ac vltimorum, perueniunt quidem, per plures tamen motiones perueniunt. Illud autem in prima quidem latione magnam copiam eſſe ſtellarum, cæterarum verò ſtellarum quamque ſeorſum proprias motiones habere, quod quidem dubitatio eſt ſecunda: ob vnum quidem primum quiſpiam cum ratione eſſe putabit. Primæ namque vitæ & principij cuiuſque primi, magnam ad cætera intelligere exceſſionem eſſe oportet. Hoc autem accidere per rationem videtur. Prima namque vna quidem eſt, multa autem diuinorum corporum mouet: cæteræ verò multæ quidem ſunt, vnum tamen quæque tantummodo mouet: vagarum enim ſtellarum quæque pluribus lationibus fertur. Hoc igitur pacto natura ipſa in æqualitatem hæc redigit, atque ordinem quendam facit, vni quidem lationi multa corpora, vni corpori lationes complures reddens. Et inſuper ob hoc vnum cæteræ ſphæræ corpus habent, quòd multa corpora mouent, & quæ ſunt ante vltimam, & quæ vnam poſſident ſtellam. In multis enim ſphæris, vltima ſphæra ligata fertur. Sphæra autem quæque corpus eſt. Illius igitur ipſum opus commune erit. Etenim cuiuſque propria natura latio. Ipſa autem quaſi adiacet, ad finitum verò, finiti corporis omnis potentia eſt. Sed de ſtellis quidem, quæ conuerſione feruntur, qualéſnam ſubſtantia ſint, atque figura, & de loco ipſarum, atque ordine, ſatis iam diximus.

CAPVT XIII.

Veterum ſententias expendit de terræ poſitione & ſitu, an moueatur an quieſcat, & de figura eius.

RESTAT autem de terra dicere, vbinam iaceat, & vtrùm ex hiſce ſit, quæ quieſcunt, an ex his, quæ mouentur, & de ipſius quoque figura. De ſitu itaque ipſius non eandem omnes opinionem habent: ſed plurimi quidem in medio iacere dicunt, qui totum cælum infinitum inquiunt eſſe; hi verò, qui Italiæ partem habitant, Pythagoricique vocantur, contrarium aſſerunt. Nam in medio quidem ignem eſſe aiunt, terram autem vnam eſſe ſtellarum, ferrique circa medium, atque hoc pacto noctem ac diem efficere. Aliam autem huic contrariam terram conficiunt, quam terram aduerſam vocant: non ad ea quæ videntur, rationes cauſaſque quærentes,

Αἱ τῶν παλαιῶν δόξαι περὶ τῆς θέσεως τῆς γῆς, καὶ πότερον ἠρεμεῖ ἢ οὔ· καὶ περὶ τοῦ σχήματος αὐτῆς.

ΛΟιπὸν δὲ περὶ τῆς γῆς εἰπεῖν, οὗ τε τυγχάνει κειμένη, καὶ πότερον τῶν ἠρεμούντων ἐστὶν ἢ τῶν κι- E νουμένων, καὶ περὶ τοῦ σχήματος αὐτῆς. περὶ μὲν οὖν τῆς θέσεως, οὐ τὴν αὐτὴν ἔχουσιν ἅπαντες δόξαν· ἀλλὰ τῶν πλείστων ἐπὶ τοῦ μέσου κεῖσθαι λεγόντων, ὅσοι τὸν ὅλον οὐρανὸν πεπερασμένον εἶναί φασιν, ἐναντίως οἱ περὶ τὴν Ἰταλίαν, καλούμενοι δὲ Πυθαγόρειοι, λέγουσιν· ἐπὶ μὲν γὰρ τοῦ μέσου πῦρ εἶναί φασι, τὴν δὲ γῆν ἓν τῶν ἄστρων οὖσαν, κύκλῳ φερομένην περὶ τὸ μέσον, νύκτα τε καὶ ἡμέραν ποιεῖν. ἔτι δ' ἐναντίαν ἄλλην ταύτῃ κατασκευάζουσι γῆν, ἣν ἀντίχθονα ὄνομα καλοῦσιν, οὐ πρὸς τὰ φαινόμενα τοὺς λόγους καὶ τὰς αἰτίας ζητοῦντες,

ἀλλὰ πρός τινας δόξας καὶ λόγους αὐτῶν τὰ φαινόμενα προσέλκοντες, καὶ πειρώμενοι συγκοσμεῖν. πολλοῖς δ' ἂν καὶ ἑτέροις συνδόξειε, μὴ δεῖν τῇ γῇ τὴν τοῦ μέσου χώραν ἀποδιδόναι, τὸ πιστὸν οὐκ ἐκ τῶν φαινομένων ἀθροῦσιν, ἀλλὰ μᾶλλον ἐκ τῶν λόγων. τῷ γὰρ τιμιωτάτῳ οἴονται προσήκειν τὴν τιμιωτάτην* ὑπάρχειν χώραν· εἶναι δὲ πῦρ μὲν γῆς τιμιώτερον, τὸ δὲ πέρας τῶν μεταξύ. τὸ δ' ἔσχατον καὶ τὸ μέσον, πέρας· ὥστε ἐκ τούτων ἀναλογιζόμενοι οὐκ οἴονται ἐπὶ τοῦ μέσου κεῖσθαι* τῆς σφαίρας αὐτήν, ἀλλὰ μᾶλλον τὸ πῦρ. ἔτι δ' οἵ γε Πυθαγόρειοι καὶ διὰ τὸ μάλιστα προσήκειν φυλάττεσθαι τὸ κυριώτατον τοῦ παντός· τὸ δὲ μέσον εἶναι τοιοῦτον· ὁ Διὸς φυλακὴν ὀνομάζουσι, τὸ ταύτην ἔχον τὴν χώραν πῦρ. ὥσπερ τὸ μέσον ἁπλῶς λεγόμενον, καὶ τὸ τοῦ μεγέθους μέσον, καὶ τοῦ πράγματος ὂν μέσον, καὶ τῆς φύσεως· καίτοι καθάπερ ἐν τοῖς ζώοις οὐ ταὐτὸ τοῦ ζώου καὶ τοῦ σώματος τὸ μέσον, οὕτως ὑποληπτέον μᾶλλον καὶ περὶ τὸν ὅλον οὐρανόν. διὰ μὲν οὖν ταύτην τὴν αἰτίαν οὐθὲν αὐτοὺς δεῖ θορυβεῖσθαι περὶ τὸ πᾶν, οὐδ' εἰσάγειν φυλακὴν ἐπὶ τὸ κέντρον, ἀλλ' ἐκεῖνο ζητεῖν τὸ μέσον, ποῖόν τι καὶ ποῦ πέφυκεν. ἐκεῖνο μὲν γὰρ ἀρχὴ τὸ μέσον καὶ τίμιον· τὸ δὲ τοῦ τόπου μέσον, ἔοικε τελευτῇ μᾶλλον ἢ ἀρχῇ· τὸ μὲν γὰρ ὁριζόμενον, τὸ μέσον· τὸ δὲ ὁρίζον, τὸ πέρας. τιμιώτερον δὲ τὸ περιέχον καὶ τὸ πέρας, ἢ τὸ περαινόμενον· τὸ μὲν γὰρ ὕλη, τὸ δὲ οὐσία τῆς συστάσεώς ἐστι. περὶ μὲν οὖν τοῦ τόπου τῆς γῆς, ταύτην ἔχουσί τινες τὴν δόξαν. ὁμοίως δὲ περὶ μονῆς καὶ κινήσεως· οὐ γὰρ τὸν αὐτὸν τρόπον πάντες ὑπολαμβάνουσιν· ἀλλ' ὅσοι μὲν μηδὲ ἐπὶ τοῦ μέσου κεῖσθαί φασιν αὐτήν, κινεῖσθαι δὲ κύκλῳ περὶ τὸ μέσον· οὐ μόνον δὲ ταύτην, ἀλλὰ καὶ τὴν ἀντίχθονα, καθάπερ εἴπομεν πρότερον. ἐνίοις δὲ δοκεῖ καὶ πλείω σώματα τοιαῦτα ἐνδέχεσθαι φέρεσθαι περὶ τὸ μέσον, ἡμῖν δὲ ἄδηλα, διὰ τὴν ἐπιπρόσθησιν τῆς γῆς. διὸ καὶ τὰς τῆς σελήνης ἐκλείψεις πλείους ἢ τὰς τοῦ ἡλίου γίνεσθαί φασι· τῶν γὰρ φερομένων ἕκαστον ἀντιφράττειν αὐτήν, ἀλλ' οὐ μόνον τὴν γῆν. ἐπεὶ γὰρ οὐκ ἔστιν ἡ γῆ κέντρον, ἀλλ' ἀπέχει τὸ ἡμισφαίριον αὐτῆς ὅλον, οὐθὲν κωλύειν οἴονται τὰ φαινόμενα συμβαίνειν ὁμοίως μὴ κατοικοῦσιν ἡμῖν ἐπὶ τοῦ κέντρου ὥσπερ κἂν εἰ ἐπὶ τοῦ μέσου ἦν ἡ γῆ· οὐθὲν γὰρ οὐδὲ νῦν ποιεῖν ἐπίδηλον, τὴν ἡμίσειαν* ἀπεχόντων τῆς διαμέτρου. ἔνιοι δὲ καὶ κειμένην ἐπὶ τοῦ κέντρου φασὶν αὐτὴν* ἴλλεσθαι περὶ τὸν διὰ παντὸς τεταμένον πόλον, ὥσπερ ἐν τῷ Τιμαίῳ γέγραπται. παραπλησίως δὲ καὶ περὶ τοῦ σχήματος ἀμφισβητεῖται· τοῖς μὲν γὰρ εἶναι δοκεῖ σφαιροειδής, τοῖς δὲ πλατεῖα, καὶ τὸ σχῆμα τυμπανοειδής· ποιοῦνται δὲ τεκμήριον, ὅτι δύνων καὶ ἀνατέλλων ὁ ἥλιος, εὐθεῖαν ἀλλ' οὐ περιφερῆ τὴν ἀπόκρυψιν φαίνεται ποιούμενος ὑπὸ τῆς γῆς· ὡς δέον εἴπερ ἦν σφαιροειδής, περιφερῆ γίνεσθαι καὶ τὴν ἀποτομήν· οὐ προσλογιζόμενοι τό, τε ἀπόστημα τοῦ ἡλίου πρὸς τὴν γῆν, καὶ τὸ τῆς περιφερείας μέγεθος, ὡς ἐν τοῖς φαινομένοις μικροῖς κύκλοις εὐθεῖα φαίνεται πόρρωθεν. διὰ μὲν οὖν ταύτην τὴν φαντασίαν, οὐθὲν αὐτοὺς ἀπιστεῖν δεῖ, μὴ κυκλοτερῆ τὸν ὄγκον εἶναι τῆς γῆς· ἀλλ' ἔτι προστιθέασι, καὶ φασὶ διὰ τὴν ἠρεμίαν ἀνάγκη τὸ σχῆμα τοῦτ' ἔχειν αὐτήν. καὶ γὰρ δὴ οἱ περὶ τῆς γῆς τῆς κινήσεως, καὶ τῆς μονῆς εἰρημένοι τρόποι, πολλοὶ τυγχάνουσι. τὸ μὲν οὖν ἀπορῆσαι πᾶσιν ἀναγκαῖον ἐπελθεῖν·

A ſed ad quaſdam ſuas rationes opinioneſque ea quę videntur, trahentes, atque ornare conantes. Compluribus etiam aliis non ex his quæ apparent, ſed ex rationibus potiùs ſumentibus fidem, locum reddere terræ medium non oportere, videri poteſt. Præſtabiliſſimum enim corpus, locum occupare præſtabiliſſimum oportere putant: atque ignem quidem præſtabiliorem terra, finem autem medii ipſis præſtabiliſſimum eſſe. Quare ex his ratiocinantes non ipſam in medio ſphæræ iacere, ſed potiùs ignem putant. Præterea Pythagorici, & quia maximè conſeruari oportet id quod eſt maximè præcipuum vniuerſi, medium verò eſt tale, ideo eum ignem, qui locum hunc occupat, cuſtodiam B Iouis appellant. Quaſi medium ſimpliciter diceretur, & medium magnitudinis; & rei medium eſſet, atque naturæ. Enimvero vt in animalibus non idem eſt animalis atque corporis medium, ſic eſt magis & circa ipſum totum cælum exiſtimandum. Igitur propter hanc cauſam non oportet ipſos circa vniuerſum turbari, neque cuſtodiam ad centrum adducere, ſed illud quærere, medium ipſum quale quid eſt, & vbi eſt aptum eſſe. Illud enim medium, principium eſt, ac pretioſum. Medium verò loci, ſimile eſt magis extremo, quàm principio. Medium enim terminatur: terminus autem eſt ipſe finis. Pretioſius autem eſt id, quod continet, & finis, quàm id, quod finitur. Hoc enim materies, illud ſubſtantia conſtitutionis eſt. De loco C igitur terræ hanc habent quidam opinionem, ſimiliter & de quiete, motúve. Non enim eodem modo omnes exiſtimant, ſed qui in medio ipſam non eſſe putant, circa medium moueri dicunt: atque non ſolum hanc, ſed etiam aduerſam terram, vti priùs eſt dictum. Quibuſdam etiam & plura talia corpora circa medium ferri poſſe videtur, nobis immanifeſta ob terræ obiectionem. Quocirca & Lunæ defectiones plures, quam Solis, fieri dicunt. Vnumquodque enim eorum, quæ feruntur, obiicere ſeſe Lunæ inquiunt, non ſolùm terram. Nam cùm terra centrum non ſit, ſed per ipſius totum hemiſphærium diſtet, nihil prohibere putant ea accidere, quæ videntur, ſimiliter non habitan- D tibus nobis in centro, ſicut ſi in medio etiam eſſet terra. Nihil enim neque nunc oſtendit, per dimidiam diametrum diſtantibus nobis. Quidam autem in centro ipſam iacentem volui, & circa ipſum polum per vniuerſum extenſum moueri dicunt, vt in Timæo eſt ſcriptum. Simili modo de figura quoque ipſius contenditur. Quibuſdam enim rotunda eſſe videtur, quibuſdam verò lata, vt tympanum: cui hoc indicium faciunt. Cùm occidit enim, atque oritur Sol, per rectam lineam, ſed non per curuam celari videtur: quippe cùm oporteret, ſi eſſet terra rotunda, diuiſionem fieri curuam: non animaduertentes diſtantiam Solis E ad terram, & circunferentiæ magnitudinem, quomodo in hiſce circulis, qui parui eminus videntur, linea recta apparet. Propter igitur hanc apparentiam, non oportet ipſos terræ molem credere rotundam non eſſe. Addunt inſuper, atque inquiunt, figuram hanc neceſſariò ipſam propter quietem habere. Etenim modi, qui de motione quietéve ſunt dicti, complures ſunt. Omnes igitur de hoc dubitaſſe neceſſarium eſt:

A forſitan enim mentis eſt vacantis ratione, non admirari, curnam parua quædam pars terræ, ſi eleuata dimittatur, fertur, quieſcereque non ſolet, maiórque ſemper celeriùs fertur: vniuerſa autem terra ſi quiſpiam ipſam ſublimem eleuatamque dimittat, ferri non poteſt, nunc verò tantum pondus quieſcit. At verò ſi quiſpiam etiam partes ipſius cùm feruntur, antequam cadant, auferat terram, deorſum ſanè ferentur, ſi nihil obſtiterit. Quare dubitare quidem omnibus ob philoſophiam euenit. Operam autem eos non dediſſe vt ſolutiones non magis abſurdæ, quàm dubitatio videantur, mirum cuipiam ſanè videbitur. Quidam enim ob hoc infinitam inferam terræ partem inquiunt eſſe, in infinitum ipſam radicatam eſſe dicentes, vt Xe- B nophanes Golophonius dixit, ne moleſtias habeant, cauſas quæritantes. Quocirca & Empedocles ſic increpauit: *Infinita ſiquidem eſt profunditas terræ copioſuſque æther, quæ per multa iam ora linguáſque dicta fruſtra ſunt effuſa hominum eorum qui perparum ipſius vniuerſi viderunt.* Quidam ſuper aquam iacere dicunt. Hanc enim ſententiam vetuſtiſſimam accepimus, quam Thaletem Mileſium dixiſſe ferunt, terram inquam, ideo quieſcere, perinde atque lignum, aut quippiam tale natat. Etenim nihil horum ſuper aërem manere eſt aptum, ſed ſuper aquam. Quaſi non eadem ſit de terra ratio, atque aqua, quæ terram vehit. Neque enim aqua ſublimis manere eſt apta, ſed ſuper aliquid ſemper eſt. C Præterea, vt aër leuior eſt aqua, ſic & aqua leuior eſt terra. Quare quónam modo, id quod eſt leuius, inferius eo quod grauius eſt natura, iacere putant? Præterea, ſi tota eſt apta ſuper aquam manere, patet & quamque partem ipſius identidem aptam eſſe. Nunc autem fieri non videtur, ſed pars in fundum, & celeriùs maior fertur. At enim vſque ad quendam terminum quærere videntur, ſed non quouſque dubitationis inquiſitio fieri poteſt. Eſt enim nobis hæc omnibus conſuetudo, non ad rem ipſam quæſtionem facere, ſed ad eum qui contraria dicit. Etenim in ſeipſo eouſque quærit, vltra quod ipſe contra ſeipſum dicere nequit. Quapropter bene quæſiturum, aptum idoneúmque D eſſe ad inferendas generi accommodatas inficiationes oportet. Eſt autem talis, qui vniuerſas differentias eſt contemplatus. Anaximenes autem, & Anaxagoras, & Democritus, latitudinem cauſam manendi ipſam inquiunt eſſe. Non enim diuidere, ſed operire aërem dicunt inferum: quod quidem latitudinem habentia corpora facere videntur. Hæc enim & à ventis cum difficultate moueri poſſunt, propter adhæſionem. Hoc idem igitur latitudine terram inquiunt ad aërem facere, hunc autem non habentem locum, ad quem migrabit, ſufficientem, ſimul infra quieſcere, perinde atque aqua in hiſce vaſis, quæ ſurripiunt aquam. Poſſe verò aërem pondus magnum, ſi com- E prehendatur, inferre, compluribus ſignis oſtendunt. Primum igitur, ſi non lata figura ſit terræ, propter hoc non quieſcet. Quietis tamen non latitudo ſola eſt cauſa ex hiſce quæ dicunt, ſed magnitudo magis: propter enim anguſtiam aëre tranſitum non habente, manet ob multitudinem. Aër autem eſt copioſus ex eo quia à magnitudine comprehenditur magna terræ. Quare hoc ipſum eſt, & ſi rotunda quidem eſt terra, tanta autem mole: ſententia enim illorum manebit. Omnino autem ad eos qui dicūt ita de motu, nō de partibus eſt cōtentio,

A ſed de aliquo toto ac vniuerſo. A principio enim eſt determinatũ, vtrũ ſit quiſpiã motus natura corporib. cõpetens, an nullus ſit: & vtrũ naturalis quidem nullus ſit prorſus, violẽtus autẽ ſit. atque cùm de his ipſis priùs ſint definita, quæ pro facultate præſenti potuimus his, vti veris, vtamur nunc oportet. Nam ſi nullus natura motus cõpetit; neque violentus vllus erit profectò. Si verò neuter eſt, nihil omnino mouebitur. Priùs enim eſt definitũ, neceſſariò hæc euenire. Et inſuper neque quicquã quieſcere poteſt: nã vt & motus natura alius competit, alius eſt violentus, ſic & quies. at ſi motus quiſpiã eſt ſecundùm naturã, non violenta latio ſolùm, nec quies erit. Quare ſi terra, nunc vi quieſcit, violenta quoque latione ob conuerſionẽ ad medium ipſum B acceſſit. Omnes enim hanc cauſam dicũt, ex hiſce quæ in humidis feruntur, & circa aërem accidunt. In his enim maiora ſemper, grauioráque ad ipſum cõuerſionis mediũ pergũt. Idcirco & terrã omnes, qui cælum ortum aſſerunt eſſe, ad ipſum acceſſiſſe mediũ aiunt. Quia verò manet, cauſam quærunt: & dicunt partim hoc modo, latitudinem, inquam, ac magnitudinẽ cauſam ipſius eſſe: partim, vt Empedocles cenſet, cælum conuerſione ſua celeriore, quàm eſt terræ motio, lationẽ ipſius prohibere, vt fit in aqua, quæ in cyathis eſt. Hæc enim cùm cyathus orbe fertur, etſi ſæpe cyathus adeo vertitur, vt ſupra fundũ infra labra fiant, non fertur tamen deorſum, apta deorſum ferri, propter eandẽ cauſã C ſanè. at ſi neque conuerſio, neque latitudo prohibeat, quorſum inde, quæſo, aëre cedente, ac abeunte feretur? Ad mediũ enim vi lata eſt, viqué etiã in ipſo manet: lationẽ verò ipſius eſſe quandã ſecundùm naturam neceſſe eſt. Hæc igitur eſtne ea, qua ſurſum itur, an ea, qua itur deorſum, an alia quædã? aliquã enim eſſe, neceſſe eſt. Quòd ſi non magis eſt ea, quã ſupera loca petũtur, quàm ea, qua itur deorſum, aër verò ſuperior lationẽ eam non prohibet, qua pergitur ſurſum: neque is ſanè, qui eſt ſub terra eandẽ prohibere, qua itur deorſum, poteſt. Eaſdem enim cauſas eiſdem eorundẽ eſſe neceſſe eſt. Præterea illud etiã ad Empedoclem quiſpiam dixerit: Quando enim elementa diſcordiæ expertia erant, quænam cauſa terræ quietis erat? non enim tũc cõ- D uerſionẽ cauſam eſſe dicet. Abſurdũ eſt etiam non intelligere, priùs quidẽ terræ partes ob conuerſionem ad mediũ eſſe latas. Nunc autẽ quam ob cauſam vniuerſa, quæ põdus habent, ad ipſam ferũtur? Non enim cõuerſio nobis propinqua eſt. Præterea, quam ob cauſam ignis etiã ſurſum fertur? Nõ enim ob conuerſionẽ. Quòd ſi hic aptus eſt aliquẽ ad locum ferri, patet putandũ eſſe, terrã etiam identidẽ aptam eſſe definitum quendam petere locum. At verò neque conuerſione graue, leuéque eſt definitum, ſed eorum, quæ priùs erant grauia, leuiáque, alia in ipſum medium veniunt, alia ſuper cætera collocantur ob motũ. Erat ergo & antè quàm con- E uerſio fieret, aliud graue, & aliud leue. Quæ quidẽ quónam erant diſtincta, & quomodo, aut quorſum apta erant ferri? Nam ſi infinitũ eſt, ſuperus locus inferúſque eſſe non poteſt: graue autem atque leue hiſce ſunt definita. Plurimi igitur, circa cauſas haſce verſantur. Sunt autem qui manere ipſam ob ſimilitudinẽ dicunt: vt ex veteribus Anaximander dicebat. Id enim inquiunt, quod eſt in medio collocatum, & æquè ad extrema ſe habet, nõ ad ſupera magis, quàm ad infera, aut versùs latera ferri oportere, & ſimul ad contraria moueri non poſſe:

quare

quare neceſſariò illud manere dicunt. Hoc autem eleganter quidem, non verè tamen eſt dictum. Hac enim ſententia, omne, quod in medio ponetur, maneat in ipſo neceſſe eſt. Quare ignis quieſcet. Id enim, quod dictũ eſt, propriũ terræ non eſt. At verò neque neceſſarium eſt: non enim ſolùm in medio manere videtur, ſed ad medium etiam ferri. Quò enim quæuis ipſius pars fertur, eò totam etiam ferri neceſſe eſt: quò vero fertur ſecundùm naturam, ibi ſecundùm naturam etiam manet. Non ergo ſimiliter quia ſe habet ad extrema, ideo manet: hoc eſt enim vniuerſis commune. Ferri autem ad medium, proprium ipſius eſt terræ. Abſurdum eſt etiam hoc quidem quærere, curnam terra manet in medio: illud autem non quærere, cur ignis in extremo quieſcit. Nam ſi & illi locus extremus natura competit, patet & terræ locum aliquem natura competere, neceſſarium eſſe. Quod ſi hic locus natura terræ non competit, ſed ob ſimilitudinis neceſſitatem in ipſo manet, (vt ea ſententia aſſerit, quæ de capillo affertur, cùm vehementer quidem, ſimiliter autem intenditur vtraque ex parte: dicit enim illum non ruptum fore. Et item ea quæ de ſitiente vehementer, eſurientéque, dicuntur, cùm æquè ab his, quæ eduntur, atque bibuntur, diſtat: quieſcat enim neceſſe eſt) quærendum eſt ipſis de ignis vltimis in locis quiete. Mirabile autem eſt, & de quiete quidem ipſorum quærere, de latione verò non quærere. Quam ob cauſam alterum ſurſum, alterum deorſum ad ipſum medium, ſi nihil impediat, fertur. At verò neque verum eſt, quod dicitur, per accidens tamen hoc verum eſt, neceſſarium eſſe id omne in medio manere, cui non magis huc competit quàm illuc moueri, ſed propter hanc ſententiam non manebit, ſed mouebitur: non tamen totum, ſed diuulſum. Eadem enim & ad ignem accommodabitur ratio. Si enim poſitus in medio fuerit, maneat perinde atque terra neceſſe eſt. Similiter enim ad extremum quoduis punctorum ſeſe habebit: attamen à medio ipſo mouebitur, quemadmodum & ferri (niſi quippiam prohibeat) ad extremum ipſum videtur, verùm non totus ad vnum punctum feretur. Hoc enim ſolùm ex ratione, quæ de ſimilitudine fit, euenire neceſſe eſt, ſed pars ad extremi partem, eiuſdem numirum rationis: veluti quarta pars, ad quartam continentis ipſius partem. Nullum enim corpus eſt punctum. Vt autem ex magno minorem in locum mutari poteſt, ſi condenſetur: ſic & in magnum ex minore, ſi rareſcat. Quare & terra hoc à medio moueretur modo, per ipſius ſimilitudinis rationem, ſi non natura locus hic competeret terræ. Quæ igitur de figura, de loco, de quiete, de motu ipſius exiſtimantur, tot fere eſſe videntur.

CAPVT XIV

Quòd terra in medio ſita non moueatur circum polum in circulum, & quòd quieſcat, & de figura eius ſphærica.

NOs autem primò dicamus, vtrùm habeat motum, an maneat. Nam (vt diximus) quidam ipſam vnam ſtellarum inquiunt eſſe, quidam in medio poſitam volui, mouerique circa polum dicunt. Eſſe autem hoc impoſſibile, patet, hinc principio ſumpto. Si fertur, ſiue in medio ſit, ſiue extra medium, neceſſarium eſt, ipſam hoc motu vi ferri. Non enim ipſius terræ: etenim vnaquæque

A partium, hanc lationem haberet, nunc autem ad mediũ vniuerſæ rectà feruntur. Quocirca cùm violenta ſit, præterque naturam, impoſſibile eſt, perpetuam ipſam eſſe. Ordo autem Mundi perpetuus eſt. Præterea, cuncta, quæ conuerſione feruntur, poſt relinqui videntur, pluribúſque lationibus præter primam ſphæram moueri. Ergo & terram ſiue circa medium, ſiue in medio ſit collocata, duabus lationibus moueri neceſſe eſt. Quod ſi ſit, ſtationes fieri fixarum ſtellarum, regreſſioneſque neceſſe eſt. Hoc autem fieri non videtur, ſed eædem eiſdem in locis ipſius ſemper oriuntur, atque occidunt ſtellæ. Præterea, latio partium iſtius totius ſecundum naturam, ad ipſum eſt medium vni-

B uerſi. ob hoc enim & in ipſo centro nunc iacet. Dubitauerit autem quiſpiam, cùm idem ſit medium vtrorumque, ad vtrum ea, quæ pondus habent, parteſque terræ, ſecundùm naturam ferantur? Vtrùm quia eſt medium vniuerſi, an quia eſt terræ. Ad medium igitur vniuerſi ferantur, neceſſe eſt. Etenim leuia atque ignis, ad contrarium ponderibus terræ pergentia locum, ad vltimum eius loci, qui continet medium ipſum, feruntur. Accidit autem, idem terræ medium eſſe, ac vniuerſi: feruntur enim pondera, & ad medium terræ, ſed per accidens, ea ratione, qua terra medium ſuum habet in ipſo medio Vniuerſi. Ferri autem grauia & ad

C ipſum medium terræ, hoc indicium eſt: Pondera enim quæ ad hanc feruntur, non æquè diſtantia, ſed ad ſimiles angulos feruntur. Quare ad vnum medium vniuerſi terræque feruntur. Patet igitur neceſſario terram in medio eſſe, atque immobilem eſſe, & ob eas, quas diximus, cauſas. Et quia pondera quæ ſurſum iaciuntur, ad idem rurſus per rubricam feruntur, & ſi in infinitum vis illa proueniat. Neque igitur terram moueri, neque extra medium collocatam eſſe, per hæc dilucidum ſunt. Inſuper cauſa quietis ex his quæ dicta ſunt, patet. Nam ſi apta eſt ad medium vndique natura ferri, ſicut videtur, & ignis ad extremum e medio ſimili modo: fieri non poteſt vt vlla pars ipſius e medio feratur,

D vi non illata. Vna eſt enim vnius latio, & ſimplicis ſimplex: ſed non contrariæ. At ea quæ è medio pergitur, contraria eſt ei quæ ad medium itur. Si igitur fieri nõ poteſt vt vlla pars ipſius è medio feratur, patet magis fieri non poſſe vt ex eodem motu feratur. Quò enim pars apta eſt moueri, eodem & totum aptum eſt ferri. Quare ſi impoſſibile eſt ipſam moueri niſi à ſuperioribus viribus, in ipſo medio ipſam manere neceſſe eſt. Teſtes ſunt hiſce & ea quæ à mathematicis circa aſtrologiam dicuntur: eueniunt enim ea quæ apparent, cùm figuræ mutantur, quibus ordo ſtellarum eſt definitus: propterea quòd in medio terra eſt collocata. De loco igitur,

E & quiete, motúve terræ, quomodo ſeſe habent, tot à nobis ſint dicta. Figuram autem rotundam, ipſam habere neceſſe eſt. Vnaquæque enim partium, pondus ad ipſum medium habet: & minor ſi à maiori pellatur, egredi nõ poteſt, ſed premitur potiùs, ac alia alij cedit, donec ad mediũ ipſum perueniat. Intelligere autem oportet, id quod dicitur, perinde fieri atque ſi terra fieret eo modo quo Naturaliũ etiam quidam ipſam inquiunt ortam eſſe. Verùm illi quidem violentiam, lationis ad infera terræ cauſam eſſe dicunt. Præſtat autem veritatem pònere,

atque hoc ideo accidere dicere, quia naturam habet id quod pondus habet, ad ipſum medium ferri. Cùm igitur potentia congeries eſſet, ea quæ ſegregabãtur, vndique ſimiliter ad ipſum medium ferebantur. Siue igitur ſimiliter ab extremis partes diuiſæ ad medium ſunt congregatæ, ſiue alio modo ſeſe habentes, idem facient ſane. Patet igitur, id quod vndique ab extremis ſimiliter ad medium fertur, ſimili neceſſariò omni ex parte fieri mole. Si enim omni ex parte æquè fiat additio, æquè extremum à medio diſtare neceſſe eſt. Hæc autẽ figura, rotunda eſt. Nihil autem ad rationẽ refert, etſi partes ipſius nõ vndique ſimiliter ad mediũ ipſum cõcurrant. Maior enim ſemper minorem, quæ ante ſe eſt, impellat neceſſe eſt, vtriſque momentũ ad mediũ vſque habentibus, & grauiore minus põdus ad hoc impellente. Quod enim quiſpiam dubitauerit, eandem habet ſolutionem. Si enim multiplex pondus additum alteri hemiſphærio fuerit, terræ medium occupantis, atque rotundam habentis figuram, non idem ipſius totius, terræque medium erit. Quare aut non manebit in medio, aut ſi manebit, quieſcet & non habens medium, quo & nunc moueri eſt apta. Quod igitur dubitatur, id eſt. Videre autem non eſt difficile, ſi parum conſiderauerimus, ac diſtinxerimus, quomodo cẽſemus, quantamuis magnitudinem pondus habentem ad ipſum medium ferri. Patet enim non quouſque extremum tangat ipſum centrum, ſed maior pars vincat oportet, quouſque ſuo medio ipſum medium comprehendat: hucvſque enim habet momentum. Nihil igitur intereſt, hoc de gleba, & quauis parte, an de tota terra dicatur. Non enim ob paruitatem aut magnitudinem, id quod accidit, dictum eſt, ſed de omni eo quod ad medium habet momentum. Quare ſiue tota, ſiue per partes aliquo ex loco ferebatur terra, eò vſque ferri ipſam neceſſe eſt, donec vtique vndecumque ſimiliter ſumat medium, adæquatis minoribus à maioribus propulſione inclinationis. Siue igitur facta eſt, hoc neceſſarium factam eſſe modo: quare manifeſtum, quia ſphærica generatio ipſius, ſiue ingenita, ac ſemper manens, eodem modo habet, quo ſi oriretur, primùm orta fuiſſet. Et hac igitur ratione, figuram ipſius rotundam eſſe neceſſe eſt, & quia omnia grauia ſimiles ad angulos, ſed non diſtantia æquè feruntur. Hoc autem aptum eſt ad id quod natura rotundum eſt. Aut igitur eſt rotunda, aut natura rotunda. Vnumquodque autem tale dicere oportet, quale eſſe natura ſolet, & quod eſt, ſed non id quod violentia, & præter naturam eſt. Præterea, & per ea quæ ſenſu videntur. Lunæ namque defectiones, non diuiſiones tales haberent. Etenim nunc quidẽ in hiſce figuris, quæ per menſem efficiuntur, diuiſiones ſuſcipit omnes. Recta. n. fit, & vtraque ex parte curua & cõcaua. In defectionibus verò, ſemper curuam habet lineam, quæ diſtinguit. Quare cùm obiectu terræ deficiat, terræ ſanè circumferentia figuræ cauſa eſt. Præterea, per ea quæ videntur de ſtellis, patet non ſolùm rotundam eſſe, ſed etiam mole magnam non eſſe. Si parua enim migratio Meridiẽ verſùs ac Vrſam fiat; alius manifeſtè fit iſce qui terminat orbis: vt ſtellæ, quæ ſunt ſuper caput, mutationẽ habeãt magnam,

Non enim ſic citò mutationem faceret, migratione adeò breui facta. Quapropter qui locum eum qui circa columnas Herculeas eſt, coniunctum eſſe ei loco qui eſt circa Indicam regionem, exiſtimant, atque hoc modo vnum mare eſſe aſſerunt, non videntur incredibilia valde exiſtimare. Dicunt autem hoc, ex barris etiam coniectantes, genus ipſorum circa extrema vtraque loca eſſe, propterea quòd ipſa extrema ita ſunt ob coniunctionem affecta. Mathematicorũ etiam qui magnitudinem orbis terræ metiri conantur, quadringentis terram cingi ſtadiorum millibus dicunt. Ex quibus, ſi coniectura ſumatur, molem ipſius terræ non ſolùm rotundam eſſe, ſed etiam ad cæterarum ſtellarum magnitudinem magnam non eſſe neceſſe eſt.

ARISTOTELIS STAGIRITÆ, DE CÆLO LIBER III.

CAPVT I.

Opiniones antiquorum quinque de generatione rerum atque interitu. Quòd corpus ex ſuperficiebus componi nequeat.

DE primo igitur cælo, ac partibus, & de ſtellis, quæ in ipſo feruntur, ex quibus conſtant, & qualia ſunt natura, & inſuper ingenita ac incorruptibilia eſſe, priùs iam pertractauimus. Cùm autem eorum quæ natura dicuntur eſſe, alia ſint ſubſtantiæ, alia harum opera affectúſve (atque ſubſtantias quidem dico, ſimplicia corpora, ignem, terram, & quæ eiuſdem ſunt ſeriei, & item ea quæ ex his conſtant, velVti totum cælum, ipſiúſque partes, & animalia, plantáſve, & horum partes: affectus autem, operáve, motiones horum cuiuſque, cæterorúmque, quorum hæc elementa vi ſua ſunt cauſæ, & alterationes) patet, plurimam de natura ſcientiam de corporibus eſſe. Omnes enim ſubſtantiæ naturales, aut corpora ſunt, aut cum corporibus ac magnitudinibus ſiunt. Hoc autem patet & ex definitione, qua emerſere, quæ ſunt natura, & ex ſingulorum etiam contemplatione. De primo igitur elementorum, & quale quid eſt natura, & incorruptibile, ac ingenerabile eſſe, ſatis iam diximus. Reſtat autem dicere de duobus. Quòd ſi de hiſce dicamus, ſiet & de generatione ſimul corruptionéve conſideratio. Generatio enim aut omnino non eſt, aut in hiſce duntaxat eſt elementis, atque in hiſce quæ ex his conſtant. Hoc autem ipſum primum eſt contemplandum, vtrùm ſit, an non ſit. Hi igitur, qui prius de veritate philoſophati ſunt, tam in hiſce ſermonibus, quos nunc nos dicimus, quàm inter ſeſe diſcordes fuere.

Quidam enim ipſorum, generationem è medio corruptionémve tollunt. Nihil enim eorum quæ ſunt, generari, aut corrumpi, ſed ſolùm ita nobis videri dicunt, vt Meliſſus, atque Parmenides: quós, etſi bene cætera dicunt, non naturaliter tamen dicere oportet putare. Eſſe namque rerum aliquas ingenitas, omninoque immobiles, ad aliam magis atque priorem, quàm ad naturalem conſiderationem ſpectat. Illi verò quia nihil aliud præter ſubſtantiam ſenſibilium, eſſe exiſtimabant, & quaſdam primi tales naturas intellexerunt, ſi cognitio aliqua aut prudẽtia erit, ad hæc illinc accommodatas ſententias traduxerunt. Alij verò, quaſi de induſtria, contrariam his habuerunt opinionem. Sunt enim qui nullas rerum ingenerabiles eſſe, ſed omnes fieri dicunt: generatas autem, partim permanere, partim corrumpi. Eſt autem ſententiæ talis maximè quidem Heſiodus, deinde cæterorum ij qui primi de natura dixerunt. Quidam autem, cætera quidem omnia fieri, fluereque dicunt, ac nihil prorſus ſtabile eſſe: vnum autem quid ſolum permanere, ex quo hæc vniuerſa transfigurari ſunt apta, quod quidem, cæterique complures, & Heraclitus Epheſius dicere velle videtur. Sunt & qui corpus omne generabile faciunt: componentes ipſum ex planis, ac diſſoluentes in plana. De cæteris igitur alius erit ſermo. Hiſce verò qui hoc dicunt modo, omniáque corpora ex planis conſtituunt, quod accidit contra ſcientias dicere mathematicas, perfacile eſt videre. Erat tamẽ æquum, aut non dimouere ipſas, aut credibilioribus rationibus, quàm ſuppoſitiones ſunt, dimouere. Deinde patet, eiuſdem eſſe ſententiæ, ſolida quidem ex planis, ex lineis autem plana, & has ex punctis componi. Quæ ſi ita ſint, non neceſſe eſt, partem lineæ lineam eſſe. Sed de hiſce, prius in ſermonibus de motu conſiderauimus. Demonſtrauimus enim, indiuiſibiles nullas longitudines eſſe. Quæ verò de naturalibus corporibus impoſſibilia accidit hiſce dicere, qui lineas indiuiſibiles faciunt, parumper nunc etiam contemplemur. Ea namque impoſſibilia, quæ in illis accidunt, & in naturalibus ſanè ſequentur. At non omnia quæ in his ſequuntur, in illis accident: propterea quòd mathematica quidem abſtractione dicũtur: naturalia verò additione. Complura autem ſunt, quæ indiuiſibilibus competere non poſſunt, naturalibus autem neceſſario competunt: ceu ſi quippiam indiuiſibile eſſe dixerimus. In indiuiſibili enim, diuiſibile eſſe non poteſt. Affectus autem omnes, diuiſibiles dupliciter ſunt: aut ſpecie, aut per accidens. Specie quidem, vt coloris, album & nigrum. Per accidens autem, ſi id, in quo eſt, diuiſibile ſit. Quare qui ſunt affectuum ſimplices, omnes hoc modo ſunt diuiſibiles. Quapropter impoſſibile ipſum in talibus eſt conſiderandum. Si igitur impoſſibile eſt, vtraque parte ponderis nihil habente, totum habere pondus, ſenſibilia verò corpora, aut omnia, aut aliqua pondus habent, ceu terra, & aqua, vt & ipſi etiam dixerint: ſi punctum nihil ponderis habet, patet neque lineas ipſas habere. Quòd ſi hæ non habent, neque plana etiam habent. Quare neque corpus vllum ipſum habet. At verò punctum pondus habere non poſſe, patet. Graue namque omne, grauius etiam, & leue leuius aliquo eſſe poteſt. Grauius autem aut leuius, fortaſſe non neceſſe eſt graue vel leue eſſe. Quemadmodum & magnum quidem eſt maius:

A maius autem non omne magnum eſſe neceſſe eſt. Complura enim ſunt quæ abſolutè quidem ſunt parua, quibuſdam autem aliis ſunt maiora. Si igitur quod, cùm graue ſit, grauius eſt, id pondere maius eſſe neceſſe eſt: & omne graue diuiſibile ſane erit. Punctum autem indiuiſibile ſupponunt eſſe. Præterea, ſi graue quidem eſt denſum, leue autem rarum, &, denſum hoc à raro differt, quòd æquali in mole plura ipſi inſunt: ſi punctum ſit graue, ac leue, & denſum, nimirum & rarum erit. At denſum quidem eſt diuiſibile, punctum autem diuidi nequit. Quòd ſi omne graue, molle aut durum eſſe neceſſe eſt, impoſſibile aliquod ex his inferri facile poteſt. B Eſt enim id molle, quod in ſe ipſum cedit: durum autem id quod non cedit. At quod cedit, diuiſibile eſſe conſtat. At verò neque ex hiſce quæ ponderis expertia ſunt, pondus erit. In quot enim hoc, atque in qualibus accidet, aut quónam modo definient, ſi haud fingere volunt? Et ſi omne maius pondere, pondus pondere maius eſt: & vnumquodque ſanè partibus vacantium pondus habebit. Nam ſi puncta quatuor pondus habent, quod verò ex pluribus conſtat, quàm hoc, graui grauius eſt, atque quod grauius eſt, graue eſſe neceſſe eſt, perinde vt album eſt, quod albo albius eſt: id ſanè, quod maius eſt vno puncto, grauius erit æquali ablato. Quare & vnum punctum pondus habebit. Præterea, ſi plana C ſolùm vt lineæ componi poſſunt, abſurdum eſſe videtur. nam vt & linea ad lineam vtroque modo, & per longitudinem & latitudinem componitur, ſic & cum plano componi planum oportet: linea verò componi cum linea poteſt, ſi ſuperponatur, non ſolùm apponatur. At ſi per latitudinem etiam componi poſſunt, erit quippiam corpus, quod neque eſt elementum, neque ex elementis, ſi ex hoc pacto planis compoſitis componatur. Præterea ſi planorum multitudine corpora ſunt grauiora, vt in Timæo eſt definitum: patet & lineam & punctum pondus habere: ſubeunt enim inter ſeſe rationis ſimilitudinem, vt prius etiam diximus. Sin verò non hoc differunt modo, ſed ex eo quia D terra quidem eſt graue, ignis autem leue: erit & planorum aliud graue, aliud leue, & linearum ſimiliter & punctorum. Etenim terræ planum grauius erit, quàm ignis planum. Omnino autem accidit, aut nullam vnquam magnitudinem eſſe, aut tolli poſſe, ſi ſimiliter ſe habet punctum quidem ad lineam, linea verò ad planum, & hoc ad corpus: omnia enim, ſi reſoluantur, in ipſa reſoluentur nimirum prima. Quare fieri poteſt vt ſola ſint puncta, corpus autem nullum. Inſuper ſi tempus etiam ſimiliter ſeſe habet, tolletur aliquando, vel tolli poteſt. Ipſum enim nunc, indiuiduum eſt, perinde atque lineæ punctum. Idem & iis accidit qui ex nu- E meris cælum componunt. Quidam enim ex numeris Naturam conſtituunt, vt Pythagoricorum nonnulli. Corpora namque naturalia, pondus habere leuitatémque videntur. Vnitates autem, neque corpus facere compoſitæ, neque pondus habere poſſunt.

CAPVT II.

Quòd ſit neceſſe, ſimplicium corporum aliquem motum naturalem eſſe. Quod ſurſum aut deorſum mouetur, omnino eſſe leue, aut graue. Quòd motus quiſpiam naturalis ſit, & quòd aliquis violentus.

ESſe autem neceſſarium, corporibus ſimplicibus natura motum aliquem vniuerſis competere, ex hiſce dilucidum fiet. Nam cùm moueri videantur, vi nimirum ipſa moueri neceſſe eſt, ſi motum non habent. Idem verò eſt, vi moueri, & præter naturam. At ſi præter naturam eſt quiſpiam motus, & ſecundùm naturam eſſe neceſſe eſt, præter quam ille eſt. Et ſi multi ſunt ij qui præter naturam ſunt, vnum eum eſſe qui eſt ſecundùm naturam, neceſſe eſt. Vnumquodque enim ſecundùm quidem naturam ſimpliciter ſe habet, præter autem naturam multos habet motus. Præterea ex quiete hoc idem patet. Etenim aut vi aut ſecundùm naturam quieſcant, neceſſe eſt. Vi autem ibi manent, quò & vi feruntur: & ſecundùm naturam itidem ibi manēt, quò & ſecundùm naturam feruntur. Cùm igitur aliquid in medio manere videatur, ſi ſecundùm naturam, patet, & lationem qua huc fertur, ſecundùm naturam ipſi competere. Sin vi, quid eſt quod prohibet ferri? Si enim id quod prohibet ferri, quieſcit, eadem verba ſanè voluemus. Aut enim id quod primum quieſcit, ſecundùm naturam quieſcit, aut in infinitum abibitur: quod quidem eſt impoſſibile. Sin mouetur, vt Empedocles terram quieſcere dicit conuerſione, aliquem in locum ſanè moueretur, cùm impoſſibile ſit in infinitum ferri. Nullũ enim impoſſibile fit. Impoſſibile autē eſt, infinitum tranſire. Quare ſtet alicubi quod fertur, & illic non vi maneat, ſed ſecundùm naturam, neceſſe eſt. Quòd ſi eſt ſecundùm naturam quies, & motus erit ſecundùm naturam ea latio qua ad hunc itur locum. Quapropter & Leucippus dicat oportet, atque Democritus, qui prima corpora ſemper in vacuo infinitóve moueri dicunt, quonam motu mouentur, & quis eſt ipſorum ſecundùm naturam motus. Nam ſi elementorum aliud ab alio vi mouetur, & ſecundùm naturam etiam aliquem vniuſcuiuſque motum eſſe neceſſe eſt, præter quem eſt is qui violentus eſt: & id quod primum mouet, non vi ſed ſecundùm naturam mouere oportet. In infinitum enim abibitur, ſi nõ erit quicquam primum mouens ſecundùm naturã, ſed ſemper ipſum prius vi ſubiens motum mouebit. Hoc idem accidat neceſſe eſt, & ſi, vt in Timæo eſt ſcriptum, elementa inordinatè mouebantur antea, quàm Mundus ortus eſſet. Motum enim aut violētum, aut ſecũdùm naturam eſſe, neceſſe eſt. Quòd ſi ſecundùm naturam mouebantur, Mundum eſſe neceſſe eſt, ſi quiſpiam velit cum diligentia contemplari. Primum namque mouens mouere neceſſe eſt, ipſum ſecundùm naturam ſubiens motum: & ea quæ mouentur, non vi in ſuis quieſcentia locis, eum, quem nunc habent ordinem facere: ea quidem quæ pondus habent, ad medium: ea verò quæ leuitatem habent, à medio ſuopte pergentia nutu. Hunc autem ordinem Mundus habet. Præterea, tantùm quiſpiam interrogauerit, fierine poterit, an non poterit, vt inordinatè ſubeuntia motum, talibus etiam miſtionibus aliqua miſceantur, ex quibus ea corpora conſtant, quæ ſecundùm naturam conſtituuntur: oſſa, inquam, & caro, & iſtiuſmodi cætera, quemadmodum Empedocles in concordia fieri dicit: ait enim,

Complura capita ſine collo ſunt orta.

A Apud autem eos qui infinita in infinito ea quæ mouentur, faciunt, ſi vnum eſt id quod mouet, vno moueantur motu neceſſe eſt: quare non ſine ordine mouebuntur. Sin verò ea quæ mouent, ſunt infinita, & lationes infinitas eſſe neceſſe eſt. Nam ſi finitæ ſint, ordo quidem erit. Non enim quia in idem non feruntur, inordinatio accidit. Neque enim nunc in idem vniuerſa feruntur, ſed ea tantùm quæ eiuſdem generis ſunt. Præterea, inordinatè quippiam fieri, nil aliud eſt quàm fieri præter naturam. Ordo enim proprius, ſenſibiliũ natura nimirum eſt. At verò & hoc abſurdum eſt, ac B impoſſibile, infinitum, inquam, inordinatum motum habere. Eſt enim ea natura rerum, quam plures, & pluri tempore habent. Contrarium igitur ipſis accidit, inordinationem quidem eſſe ſecundùm naturam, ordinem verò Mundúmve præter naturam: & tamen nihil eorum quæ ſunt ſecundùm naturam, fit forte fortuna. Videtur autem Anaxagoras hoc ipſum beneaccepiſſe. Ex immobilibus enim incipit conficere Mundum. Enituntur autem & cæteri congregantes, aliquo modo rurſus mouere, ac ſegregare. Ex diſtantibus autem ac ſubeuntibus motum generationem facere, non eſt conſonum rationi. Quapropter & Empedocles omittit eum motum, qui eſt in concordia.* Non C enim cęlum conſtituere potuiſſet, ex ſeparatis quidem extruens, ob concordiam autem faciens congregationem. Ex ſegregatis enim elementis Mundus eſt conſtitutus. Quare ex vno fiat, & congregato, neceſſe eſt. Naturalem igitur motum vniuſcuiuſque corporum eſſe, quo non vi mouētur, neque præter naturam, ex hiſce quæ diximus, patuit. Eſſe autem neceſſarium, ponderis nonnulla corpora momentum, ac leuitatis habere, ex his dilucidum fiet. Dicimus enim, neceſſarium eſſe moueri. Si verò id quod mouetur, momentum natura non habet: fieri non poteſt, vt aut è medio aut ad medium moueatur. Sit enim a quidem pondere carens, b D verò habeat pondus, atque tranſeat a quidem c d ſpatium, b verò æquali in tempore ſpatium c e: per maius enim ſpatium, id quod pondus habet, feretur. Si igitur corpus, quod habet pondus, ea ratione qua diuiſum eſt c e ſpatium, diuidatur, (poteſt enim ad partium ſuarum aliquam ſic ſe habere, vt c e ſe habet ad c d) ſi totum per totum c e fertur, pars eodem tempore per c d feratur, neceſſe eſt. Quare id quod pondere vacat, & id quod eſt ponderis particeps, per æquale ſpatium tempore eodem feretur: quod impoſſibile eſt. Eadem & in leuitate ratio fieri poteſt. Præterea, ſi quippiam corpus & ponderis expers, & leuitatis, motum ſubibit, vi moueatur neceſſe eſt. Si verò vi E moueatur, infinitum efficit motum. Nam cùm potentia quædam ſit ea quæ mouet, id autem quod eſt minus ac leuius, plus ab eadem potētia moueatur: ſit motum a quidem pondere carens per c e ſpatium, b verò pondus, æquali in tempore per c d. Si igitur diuiſum fuerit id quod pōdus habet, ea ratione quam c e ad c d habet, fiet vt id quod aufertur ab eo quod pondus habet, æquali in tempore per c e feratur, quoniam totum per c d mouebatur. Celeritas enim minoris ad celeritatē maioris ita ſeſe habebit, vt maius corpus ſe habet ad minus. Per æquale ergo ſpatium & id quod pōdere vacat, & id quod eſt ponderis particeps, tempore eodem feretur: quod quidem fieri nequit. Quare ſi omni quouis propoſito per maius ſpatium id mouebitur quod pondere caret, per infinitum vtique ferri poteſt.

Patet igitur, omne definitum corpus, pondus aut leuitatem habere. Cùm autem natura quidem id ſit principium motus, quod eſt in ipſo, potentia autem id quod eſt in alio, vt aliud eſt, atq; motus alius ſit ſecundùm naturam, alius violentus: naturalem quidem motum celeriorem faciet id quod potentia mouet, vt eum quo lapis deorſum fertur: eum autem qui eſt præter naturã, omnino potentia ipſa. Ad vtrumque autem vtitur aëre ipſo vt inſtrumento: eſt enim hic aptus, & leuis eſſe, & grauis. Lationem igitur eam qua ſurſum itur, faciet vti leuis, cùm pulſus fuerit, principiũmque ſumpſerit à potentia ipſa. Lationem autem eam qua deſcenditur, faciet vti grauis: potentia enim, quaſi vim impreſſam tradit vtrique. Quapropter & non ſequẽte eo, quod mouit, id fertur quod pręter naturam eſt motum. Si enim non tale quid corpus eſſet, violentus motus ſanè non eſſet. Motui quoque ſecundùm naturam cuiuſque, modo eodem conducit, ſuo ad mobilis terga concurſu. Omnẽ igitur corpus, leue eſſe, aut graue, & quomodo ſeſe habent in hiſce motus præter naturam, ex hiſce quę diximus, patet. Eſt autem manifeſtum ex dictis, neque omnium neque nullius ſimpliciter generationem corporis eſſe. Impoſſibile eſt enim, vniuerſi corporis generationem eſſe, ſi non & vacuum eſſe quid ſeparatum poteſt. Quo enim in loco id quod generatur, erit, cùm fuerit ortum, in hoc priùs vacuum eſſe, ſi nullum ſit corpus, neceſſe eſt. Aliud enim ex alio corpus fieri poteſt, velut ex aëre ignis: ſed omnino ex nulla alia antecedente magnitudine fieri impoſſibile eſt. Maximè enim ex potentia corpore, corpus actu fieri poteſt. Sed ſi id quod eſt potentia corpus, non eſt prius aliud corpus actu, ſeparatum vacuum erit.

CAPVT IV.

B *Non eſſe infinit a elementa ſimilarium partium, vt poſuit Anaxagoras. Neque rectè putare Democritum Abderiten, eiúſque ſectatorem Leucippum, de primis magnitudinibus, ex quibus gignunt omnia.*

Conſequens autem eſt, vtrùm ſint finita, an infinita, & ſi finita ſint, quem numerum ſubeāt, conſiderare, ac contemplari. Primùm igitur infinita non eſſe, vt quidam arbitrantur, contemplandum eſſe videtur. Et primùm eos, qui vniuerſa, quæ ſunt ſimilium partium, elementa faciunt, vt Anaxagoras, in medium afferamus. Nemo enim eorum qui ita cenſent, rectè accipit elementum. Videmus enim & multa miſtorum corporum, vt carnem, oſſa, lapidem, lignum, in ſimiles diuidi partes. Qua-
C re ſi compoſitum non eſt elementum, non omne quod eſt ſimilium partium, eſt elementum, ſed id quod in diuerſa ſpecie diuidi nequit, vt antea diximus. Præterea, neque ſic elementum ſumentes, facere infinita neceſſe eſt: omnia enim eadem, etſi quiſpiam ſumpſerit, finita reddentur. Idem enim faciet, etſi duo vel tria talia ſolùm ſint, vt & Empedocles facere conatur. Cùm enim ipſis & hoc pacto non omnia ex ſimiles partes habentibus facere accidit, (faciem enim non ex faciebus faciunt, nec aliud quicquam eorum quæ ſecundùm naturam ſunt figurata) patet longè melius eſſe, principia facere finita, & hæc quàm minima, ſi eadem omnia demonſtrari poſſint, quemadmodum & Mathema-
D tici cenſent. Semper enim aut forma aut quantitate, finita principia ſumunt. Prçterea, ſi corpus à corpore diuerſum propriis differentiis dicitur, corporum autem differentiæ ſint finitæ (ipſis enim ſenſibilibus differunt, atque hæc ſunt finita, quod quidem demonſtretur oportet) patet & elementa neceſſariò eſſe finita. Atverò neque, vt alij quidam dicunt, vt Leucippus, ac Abderites Democritus, ea quæ accidunt, conſentanea ſunt rationi. Primas enim magnitudines, multitudine quidem infinitas, magnitudine autem indiuiſibiles eſſe dicunt: & neque ex vna multa fieri, neque ex multis vnum, ſed harum complexione mutationéve, omnia ge-
E nerari. Et hi namque quodam modo numeros vniuerſa quæ ſunt, atque ex numeris faciunt. etſi enim non dilucidè dicunt, hoc tamen dicere volunt. Et inſuper cùm figuris corpora differant, figuræ verò ſint infinitæ, infinita & ipſa ſimplicia corpora eſſe dicunt. Quænam autem eſt vniuſcuiuſque elementi figura, nihil definierunt, ſed igni ſolùm rotundam tribuere figuram. Aërem verò, aquam, ac cætera, magnitudine paruitatéque diuiſère: quia natura ipſorum eſt, vt omnium ſemen elementorum. Primum igitur idem & ipſos error comitari videtur, non finita ipſa principia ſumere, cùm omnia eadem ipſis dicere liceret. Deinde ſi corporum differentiæ non ſint infinitæ,

pates elementa infinita non eſſe. Præterea indiuiſa corpora eſſe dicentes, Mathematicis ſcientiis aduerſentur, compluráque eorum quæ ſub opinionem omnium cadunt, & eorum quæ ſenſu videntur, è medio tollant, neceſſe eſt. de quibus antea diximus in hiſce quæ de tempore motúve ſunt dicta. Et inſuper contraria ipſos dicere ſibi ipſis neceſſe eſt. Impoſſibile eſt enim, ſi elemẽta ſint indiuidua, aërem, aquam, ac terram, magnitudine paruitateque differre. Eſt enim impoſſibile, ex ſeſe mutuò generari. Corpora namque maxima, ſi ſegregentur, ſemper deficient. At hoc pacto, terram, aquam, & aërem, viciſſim ex ſeſe fieri dicunt. Præterea, neque horum ſententia, infinita ipſa elementa fieri videbuntur: ſi corpora quidem figuris differunt, figuræ verò omnes ex pyramidibus conſtant; rectarũ quidem linearum, ex hiſce quæ ſunt rectarũ linearum: ſphæra autem, ex partibus octo. Sint enim aliqua principia figurarũ, neceſſe eſt. Quare ſiue ſit vnum, ſiue duo, ſiue plura, & ſimplicia corpora multitudinem tantam ſubibunt. Præterea, ſi cuiuſque quidẽ corporis motus eſt proprius quidam, ſimplicíſque corporis motus eſt ſimplex, ſimplices autem motus infiniti non ſunt, propterea quod neque ſimplices lationes plures quàm duæ ſunt, neque loca ſunt infinita, neque hoc pacto ſanè ipſa elementa infinita erunt.

CAPVT V

Opiniones antiquorum de elementis, atque earundem incommoda, & confutatio.

QVoniam autem finita eſſe neceſſe eſt, conſiderare reſtat vtrùm plura ſint an vnum. Quidam enim vnum ſolum eſſe ſupponunt: & horum alij aquam, alij aërem, alij ignem, alij aqua quidem ſubtilius, aëre verò denſius; quod quidem cælos vniuerſos, cùm ſit infinitum, inquiunt continere. Qui igitur hoc vnum aquam aut aërem faciunt, aut aqua quidem ſubtilius, aëre verò denſius, deinde ex hoc, raritate cætera denſitatéque generant, ij ſanè ignorant, aliquid aliud elemento ſe facere prius. Generatio enim ex elementis compoſitio eſt, vt dicunt: ad elementa verò profectio, diſſolutio. Quare & id quod eſt ſubtilium magis partium, natura prius eſſe neceſſe eſt. Cùm igitur omnium corporum ignem ſubtiliſſimum eſſe dicant, ignis natura corporum primum erit. nihil autem refert. Vnum enim quippiam cæterorum, & non medium ipſum, primum eſſe neceſſe eſt. Præterea, raritate ac denſitate cætera generare, & ſubtilitate, atque groſſitie, nihil differt. Subtile enim, rarum: groſſum autem, denſum eſſe volunt. Subtilitate rurſus, atque groſſitie, & magnitudine, ac paruitate idem eſt. Subtile eſt enim, quod paruarum: groſſum, quod magnarum partium eſt. Quod enim ad multum extenditur, id ſubtile eſt: tale autem id eſt, quod ex paruis partibus conſtat. Quare accidit, ipſos magnitudine ac paruitate ſubſtantias diuidere cæterorum. Accidit autem ita definientibus, vniuerſa ad aliquid dicere. Atque abſolutè non erit aliud ignis, aliud aqua, aliud aër: ſed idẽ eſt ad hoc ignis, ad aliquid aliud aër. Quod quidem & iis accidit, qui plura quidem elemẽta eſſe aiunt, magnitudine autem & paruitate differre dicunt. Nam cùm vnũquodque quãtitate ſit definitũ, aliqua ratio nimirũ inter ipſas magnitudines erit. Quare eorum,

A quæ hanc rationem habent, aliud aërem, aliud ignem, aliud terram, aliud aquam eſſe neceſſe eſt: propterea quòd in maioribus rationes minorum inſunt. Qui verò ignem elementum ipſum ſupponunt, hoc quidem euadunt: alia verò ipſis accidere abſurda, neceſſe eſt. Quidam enim ipſorum igni figuram adiungunt, vt ij qui pyramidem faciunt. Quorum quidam ſimpliciùs dicunt, pyramidem quidem dicentes id eſſe quod maximè figurarum incidere poteſt, ignem autem corporum. Quidam probabiliùs, corpora quidem vniuerſa ex eo compoſita eſſe, quod eſt omnino maximè ſubtilium partium, ſolidas verò figuras ex pyramidibus conſtare dicentes. Quare cùm corporum quidem ignis B ſit ſubtiliſſimum, figurarum verò pyramis maximè paruarum eſt partium, atque prima: primaque figura primi ſit corporis: ignis profectò pyramis erit. Quidam de figura quidem nihil dicunt: ſubtiliſſimarum autem partium ſolùm elementum ipſum faciunt, deinde ex hoc compoſitionem ſubeunte, cætera fieri dicunt: perinde vt auri arenæ conflantur. Vtriſque autem hæc difficilia accidunt. Nam ſi primum corpus indiuiduum faciunt, illæ ratiocinationes quas antea diximus, ad hanc eandem materiam, vt patet, redibunt. Præterea, ſi naturaliter contemplari volunt, hoc dicere nequeunt. Nam ſi omne corpus ad corpus quantitate comparabile C eſt, magnitudines autem ſimilitudinem ſubeunt rationis, & ſimilium partium inter ſe, & elementorum, velut vniuerſæ aquæ ad aërem vniuerſum, & elementi ad elementum, & in cæteris eodem modo, & aër maior eſt aqua, & omnino id quod ſubtiliorum eſt partium, eo quod eſt groſſiorum, patet, & elementum aquæ minus quàm aëris, eſſe. Si igitur magnitudo minor ineſt maiori, elementum ſanè aëris diuiſibile erit, & ignis identidem ipſius, & eorum omnino quæ ſubtiliorum partium ſunt. Sin diuiſibile faciunt ij qui igni figuram tribuunt, eueniet, partem ignis ignem non eſſe, propterea quòd pyramis non ex pyramidibus conſtat. Et item, non D omne corpus elementum eſſe, aut ex elementis conſtare. Pars enim ignis, nec ignis eſt, nec aliud elementum vllum. Hiſce verò, qui magnitudine definiunt, prius quid elemento, elementum eſſe, atque hoc in infinitũ abire, ſi omne corpus diuiſibile eſt, & quod paruarũ magis partium eſt elementum. Præterea, & his etiam accidit, idem ad hoc ignem eſſe dicere, ad aliud aërem & aquam rurſus, ac terram. Commune autem peccatum vniuerſis eſt, qui elementum vnum ſupponunt, vnum naturalem ſolum, omniúmque eundem facere motum. Omne namque naturale corpus, principium habere motus videmus. Si igitur omnia corpora vnum quid ſunt, vnus omnium motus erit. Et hoc eo magis E quodque moueri neceſſe eſt, quo maius ſit, quemadmodum & ignis quo maior ſit, eo ſua latione celeriùs fertur. accidit autem, multa deorſum celeriùs ferri. Quare propter hæc ipſa, & inſuper cùm definitum ſit prius, naturales plures eſſe motus, patet vnum elementum eſſe non poſſe. Cùm autem neque infinita ſint, neque vnum ſit elementum, plura eſſe profectò, atque finita eſſe neceſſe eſt.

A

CAPVT VI.

Quòd fieri nequeat vt elementa ſint æterna: nec eſſe commune quodpiam corpus diuerſum ab ipſis, è quo generentur.

CONſiderandum eſt autem primò, vtrùm ſempiterna ſint, an generentur, & corrumpantur. Quo demonſtrato, & quot, & qualia ſunt, patebit. Sempiterna igitur eſſe, impoſſibile eſt. Et ignem enim, & aquam, & vnumquodque ſimplicium corporum diſſolui videmus: diſſolutionem verò, aut infinitam eſſe, aut ſtare, neceſſe eſt. Si igitur infinita eſt, & diſſolutionis tempus infinitum erit, & tempus rurſus compoſitionis. Vnaquæque enim partium, in alio tempore diſſoluitur, atque componitur. Quare fiet vt extra tempus infinitum, tempus ſit aliud infinitum: quandoquidem & compoſitionis tempus eſt infinitum, & prius hoc diſſolutionis tempus, vt extra infinitum ſit infinitum: quod quidem impoſſibile eſt. Sin ſtabit alicubi diſſolutio, aut id corpus in quo diſſolutio ſtabit, indiuiduum erit: aut diuiſibile quidem erit, non tamen vnquam diuidetur, vt Empedocles velle videtur. Indiuiduum igitur non erit, propter rationes antea dictas. At neque diuiſibile quidem erit, nunquam autem diſſoluetur: minus enim corpus, faciliùs quàm maius, corrumpi poteſt. Si igitur & maius hac corruptione corrumpitur, vt in minora diſſoluatur, corpus minus id pati magis conſentaneum eſt rationi. Ignem autem duobus modis corrumpi videmus: nam & à contrario corrumpitur, cùm extinguitur, & ipſe à ſeipſo marceſcens. Hoc autem patitur minor à maiore, & eo celeriùs quo minor eſt. Quare corporum elementa corruptibilia & generabilia eſſe, neceſſe eſt. Cùm autem generabilia ſint, aut ex incorporeo, aut à corpore ipſorum generatio erit: & ſi ex corpore, aut ex alio aut ex ſeſe viciſſim ipſorum generatio erit. Is igitur qui ipſa dicit ex incorporeo generari, vacuū facit. Nam omne quod fit, in aliquo fit: & id in quo eſt generatio, aut incorporeum erit, aut habebit corpus, & ſi habebit corpus, duo corpora ſimul in eodem erunt, id (inquam) quod fit, & id quod præcedit. Sin incorporeum erit, vacuum eſſe definitum, neceſſe eſt: hoc autem impoſſibile eſſe, antea demonſtrauimus. At neque ex corpore quodam elementa fieri poſſunt: eueniet enim, aliud corpus elementis prius eſſe: atque hoc, ſi pondus, aut leuitatem habet, vnum quid erit elementorum. Si nullum habet momentum, immobile ac mathematicum erit: ſi tale autem eſt, in loco non erit. Quo enim in loco quieſcit, in eum & moueri poteſt. Et ſi vi quidem, præter naturam: ſin verò non vi, ſecundùm naturam. Si igitur in loco, atque alicubi erit, elementorum quippiam erit: ſin verò non erit in loco, neque quicquam ex ipſo erit. Id enim quod fit, & id ex quo fit, ſimul eſſe neceſſe eſt. Cùm autem neque ex incorporeo, neque ex alio corpore fieri poſſint, ex ſeſe mutuò fieri reſtat.

Τίς ὁ τρόπος τῆς ἐξ ἀλλήλων γενέσεως.

Πάλιν οὖν ἐπισκεπτέον, τίς ὁ τρόπος τῆς ἐξ ἀλλήλων γενέσεως, πότερον ὡς Ἐμπεδοκλῆς λέγει καὶ Δημόκριτος, ἢ ὡς οἱ εἰς τὰ ἐπίπεδα διαλύοντες,

ἢ ἔστιν ἄλλος τις τρόπος παρὰ τούτους; οἱ μὲν οὖν περὶ Ἐμπεδοκλέα καὶ Δημόκριτον λανθάνουσιν αὐτοὶ ἑαυτοὺς οὐ γένεσιν ἐξ ἀλλήλων ποιοῦντες, ἀλλὰ φαινομένην γένεσιν· ἐνυπάρχον γὰρ ἕκαστον, ἐκκρίνεσθαί φασιν, ὥσπερ ἐξ ἀγγείου τῆς γενέσεως οὔσης, ἀλλ' οὐκ ἔκ τινος ὕλης, οὐδὲ γίγνεσθαι μεταβάλλοντος. ἔπειτα κἂν οὕτως, οὐδὲν ἧττον ἄλογα τὰ συμβαίνοντα. τὸ γὰρ αὐτὸ μέγεθος οὐ δοκεῖ συμπιληθὲν γίνεσθαι βαρύτερον. ἀνάγκη δὲ τοῦτο λέγειν τοῖς φάσκουσιν ἐκκρίνεσθαι τὸ ὕδωρ ἐκ τοῦ ἀέρος ἐνυπάρχον. ὅταν γὰρ ὕδωρ ἐξ ἀέρος γένηται, βαρύτερόν ἐστιν. ἔτι δὲ, τῶν μεμιγμένων σωμάτων οὐκ ἀνάγκη χωρισθὲν θάτερον ἀεὶ πλείω τόπον ἐπέχειν· ὅταν δὲ ἐξ ὕδατος ἀὴρ γένηται, πλείω καταλαμβάνει τόπον· τὸ γὰρ λεπτομερέστερον ἐν μείζονι τόπῳ γίνεται. φανερὸν δὲ τοῦτό γε καὶ ἐν τῇ μεταβάσει. διατμιζομένου γὰρ καὶ πνευματουμένου τοῦ ὑγροῦ, ῥήγνυται τὰ περιέχοντα τοὺς ὄγκους ἀγγεῖα, διὰ τὴν στενοχωρίαν. ὥστ', εἰ μὲν ὅλως μή ἐστι κενὸν, μηδὲ ἐπεκτείνεται τὰ σώματα, καθάπερ φασὶν οἱ ταῦτα λέγοντες, φανερὸν ὅτι ἀδύνατον. εἰ δ' ἐστὶ κενὸν καὶ ἐπέκτασις, ἄλογον τὸ ἐξ ἀνάγκης ἀεὶ πλείω τόπον ἐπιλαμβάνειν τὸ χωριζόμενον· ἀνάγκη δὲ καὶ ὑπολείπειν τὴν ἐξ ἀλλήλων γένεσιν, εἴπερ ἐν τῷ πεπερασμένῳ μεγέθει μὴ ἐνυπάρχει ἄπειρα μεγέθη πεπερασμένα· ὅταν γὰρ ἐκ γῆς ὕδωρ γένηται, ἀφῄρηταί τι τῆς γῆς, εἴπερ * ἐκκρίσει ἡ γένεσις· καὶ πάλιν ὅταν ἐκ τῆς ὑπολειπομένης, ὡσαύτως. εἰ μὲν οὖν ἀεὶ τοῦτ' ἔσται, συμβήσεται ἐν τῷ πεπερασμένῳ ἄπειρα ἐνυπάρχειν. ἐπεὶ δὲ τοῦτ' ἀδύνατον, οὐκ ἂν ἀεὶ γίγνοιτο ἐξ ἀλλήλων· ὅτι μὲν οὖν οὐκ ἔστι τῇ ἐκκρίσει ἡ εἰς ἄλληλα μετάβασις, εἴρηται. λείπεται δὴ εἰς ἄλληλα μεταβάλλοντα γίνεσθαι· τοῦτο δὲ διχῶς· ἢ γὰρ τῷ μετασχηματίζεσθαι, καθάπερ ἐκ τοῦ αὐτοῦ κηροῦ γένοιτ' ἂν σφαῖρα * καὶ κύβος· ἢ τῷ διαλύεσθαι τῷ εἰς τὰ ἐπίπεδα, καθάπερ ἔνιοί φασιν. εἰ μὲν οὖν τῷ μετασχηματίζεσθαι γὰρ, συμβαίνει ἐξ ἀνάγκης ἄτομα λέγειν τὰ σώματα. διαιρετῶν γὰρ ὄντων, οὐκ ἔσται τὸ τοῦ πυρὸς μέρος πῦρ, οὐδὲ τὸ τῆς γῆς γῆ, διὰ τὸ μὴ εἶναι μήτε τὸ τῆς πυραμίδος μέρος πάντως πυραμίδα, μήτε τὸ τοῦ κύβου κύβον· εἰ δὲ τῇ τῶν ἐπιπέδων διαλύσει, πρῶτον μὲν ἄτοπον, τὸ μὴ πάντα γεννᾶν ἐξ ἀλλήλων, ὅπερ ἀνάγκη λέγειν αὐτοῖς, καὶ μὴ λέγουσιν. οὔτε γὰρ εὔλογον ἓν μόνον ἄμοιρον γενέσθαι τῆς μεταβάσεως, οὔτε φαίνεται κατὰ τὴν αἴσθησιν· ἀλλ' ὁμοίως ἅπαντα * μεταβάλλειν εἰς ἄλληλα. συμβαίνει δὲ περὶ τῶν φαινομένων λέγουσι, μὴ ὁμολογούμενα λέγειν τοῖς φαινομένοις. τούτου δὲ αἴτιον τὸ μὴ καλῶς λαβεῖν τὰς πρώτας ἀρχὰς, ἀλλὰ πάντα βούλεσθαι πρός τινας δόξας ὡρισμένας ἀνάγειν· δεῖ γὰρ ἴσως τῶν μὲν αἰσθητῶν αἰσθητὰς, τῶν δὲ ἀϊδίων ἀϊδίους, τῶν δὲ φθαρτῶν φθαρτὰς εἶναι τὰς ἀρχὰς, ὅλως δὲ ὁμογενεῖς τοῖς ὑποκειμένοις. οἱ δὲ διὰ τὴν τούτων φιλίαν ταὐτὸ ποιεῖν ἐοίκασι τοῖς τὰς θέσεις ἐν τοῖς λόγοις διαφυλάττουσιν. ἅπαν γὰρ ὑπομένουσι τὸ συμβαῖνον, ὡς ἀληθεῖς ἔχοντες ἀρχάς· ὥσπερ οὐκ ἐνίας δέον κρίνειν ἐκ τῶν ἀποβαινόντων, καὶ μάλιστα ἐκ τοῦ τέλους. τέλος δὲ τῆς μὲν ποιητικῆς ἐπιστήμης, τὸ ἔργον· τῆς δὲ φυσικῆς, τὸ φαινόμενον ἀεὶ κυρίως κατὰ τὴν αἴσθησιν. συμβαίνει δ' αὐτοῖς τὴν γῆν μάλιστα εἶναι στοιχεῖον, καὶ μόνην ἄφθαρτον,

A ſoluunt, an alius quiſpiam ſit præter hos modus. Empedoclem igitur & Democritum præterit, non generationem ſe mutuam, ſed apparentem facere generationem. Ineſſe enim quæque ac ſegregari dicunt, quaſi è vaſe ſit ipſa generatio, ſed non è materia quadam: neque generari per mutationem. Deinde ſi hoc etiam modo ſit generatio, non minùs ea quæ eueniunt, ſunt abſurda. Eadem enim magnitudo ſi denſetur, grauior fieri non videtur. At hoc dicant ij qui aquam ineſſe in aere, & inde ſegregari dicunt, neceſſe eſt: cùm enim aqua ex aere eſt orta, grauior eſt. Præterea, corporum miſtorum alterum ſeparatum, non neceſſe eſt locum ſemper occupare maiorem. At cùm oritur aer ex aqua, maiorem

B occupat locum. Quod enim ſubtiliorum eſt partium, id maiorem occupat locum. Patet autem hoc & in ipſa migratione. Euaporante enim humido, ſpiritúque turgente, ea vaſa quæ moles continent, ob anguſtiam rumpi videntur. Quare ſi vacuum omnino non eſt, nec extenduntur corpora, vt ij qui hæc dicunt, inquiunt, ipſum impoſſibile patet. Sin vacuum eſt, & extenſio, vacat hoc porrò ratione, id (inquam) quod ſeparatur, maiorem ſemper locum neceſſariò occupare. Generationem etiam mutuam deficere tandem neceſſe eſt, ſi finita in magnitudine infinita, finita non inſint. Cùm enim ex terra fit aqua, ex terra aliquid aufertur, ſi generatio eſt ſegrega-

C tio: & iterum cùm è reliqua ſimili modo oritur aqua. Si igitur hoc ſemper erit, eueniet in corpore finito ineſſe infinita. Cùm autem hoc impoſſibile ſit, non ſemper ex ſeſe mutuò generabuntur. Dictum eſt igitur, elementorum migrationem in ſeſe mutuam, ſegregationem non eſſe. Reſtat autem, ipſa mutationem ſubeuntia in ſeſe, mutuò generari. Atque hoc dupliciter. Aut enim transfiguratione, vt ex eadem cera pila fit teſſeráve. aut diſſolutione in plana, vt quidam aiunt. At ſi transfiguratione generantur, fit vt ipſa corpora neceſſariò indiuidua eſſe dicantur. Si enim diuiſibilia ſint, ignis pars, ignis non erit, neque terræ pars, terra, propterea quod pyramidis pars, pyramis non eſt, neque teſſeræ, teſſera. Sin diſſolutione

D planorum, primò quidem abſurdum eſt, non omnia ex ſeſe mutuò generare. Quod quidem ipſos dicere neceſſe eſt: atque non dicunt. Neque enim conſentaneum eſt rationi, vnam partem expertem eſſe migrationis, neque per ſenſum videtur, ſed omnia in ſeſe mutari videntur mutuò. Accidit autem eos de hiſce quæ apparent, dicentes, non conſentanea hiſce dicere, quæ apparent. Huius autem cauſa eſt, non bene prima principia capere, ſed omnia ad opiniones definitas quaſdam reducere velle. Senſibilium enim principia fortaſſe ſenſibilia ſint, perpetuorum perpetua, corruptibilium corruptibilia, & omnino ſub eodem

E ſint genere, ſub quo ſubiecta collocantur, oportet. Hi vero propter horum amorem idem facere videntur, quod ij faciunt qui poſitiones in rationibus conſeruant. Omne enim quod accidit, tolerant, vt habentes principia vera, perinde quaſi non ex hiſce quæ eueniunt nonnulla, maximéque ex fine diiudicare oporteret. Eſt autem finis effectiuæ quidem ſcientiæ, ipſum opus: naturalis autem, id quod ſemper propriè per ſenſus apparet. Accidit autem ipſis terram elemẽtum maximè eſſe, ſolámque incorruptibilem, ſi id quod indiſſolubile eſt,

incorruptibile eſt, ac elementum. Terra enim ſola in aliud corpus indiſſolubilis eſt. At verò neque in hiſce, quæ diſſoluuntur, triangulorum iuſta ſuſpenſio conſona eſt rationi. Fit autem & hoc in migratione, qua in ſeſe mutuò migrant, propterea quòd ex inæqualibus multitudine triangulis conſtat. Præterea, ij qui hæc dicunt, non è corpore faciant generationem neceſſe eſt. Cùm enim ex planis fuerit ortum, non è corpore erit ortum. Inſuper, non omne corpus diuiſibile ſit, ſed exactiſſimis ſcientiis aduerſentur, neceſſe eſt. Illæ enim & ipſum intelligibile, diuiſibile accipiunt. At hi neque omne ſenſibile diuiſibile eſſe concedunt, propterea quòd ſuppoſitionem ſuam ſeruare volunt. Qui namque figuram cuique tribuunt elemento, & hac ſubſtantias ipſorum diſtingunt, ij indiuiſibilia faciant ipſa neceſſe eſt. Pyramide enim, aut pila aliquo modo diuiſa, non erunt ea quæ reſtant, pyramis, aut pila. Quare aut pars ignis non ignis eſt, ſed erit quid elemento prius, propterea quòd omne corpus elementum eſt, aut ex elementis conſtat: aut non omne corpus diuiſibile eſt.

CAPVT VIII.

Quòd figuras præter rationem accommodent elementis, velut igni ſphæram, aut pyramidem, reliquis alias: quódque nec ob motum, neque aliam affectionem vllam ſint accommodandæ.

OMnino autem eniti ſimplicibus corporibus figuras tribuere, metas egreditur rationis. Primò quidem, quia accidet non repleri totum. In planis autem tres figuræ complere locum videntur, triangulus, quadratum, & ſex angulorum figura: in ſolidis autem duæ ſolæ, pyramis, atque teſſera. Plures autem hiſce ſumantur neceſſe eſt, quia plura faciunt elementa. Deinde corpora ſimplicia vniuerſa, figuram ſuſcipere in loco continenti videntur, & maximè aqua, & aër. Permanere igitur elementi figuram, impoſſibile eſt. Non enim totum tangeret omni ex parte id quod continet ipſum. At ſi in aliam vertetur figuram, non vlteriùs erit aqua, ſi ipſa differebat figura. Quare patet, figuras horum definitas non eſſe. Sed natura hoc ipſum nobis declarare videtur, quod & conſentaneum eſt rationi. Nam vt & in cæteris informe ſubiectum ipſum eſſe oportet, (maximè enim hoc pacto id quod omnia ſuſcipit, formari, figuráſque ſuſcipere poteſt, vt in Timæo eſt ſcriptum) ſic elementa, vt materiam compoſitorum eſſe, putare oportet. Quapropter & mutari in ſeſe mutuò poſſunt, cùm per affectus ipſorum differentiæ ſeparantur. Inſuper quonam modo generari caro, & os, aut quoduis compoſitorum corporum poteſt? Neque enim ex elementis ipſis, quia non fit ex compoſitione continuum, neque ex planis compoſitionem ſubeuntibus. Ipſa enim elementa compoſitione generantur: & non ea quæ ex elementis conſtant. Quare ſi quiſpiam exactè tales ſententias conſiderare voluerit, & non ſine exacta diſcuſſione probare, ac acceptare, generationem ex hiſce, quæ ſunt, haſce tollere profectò videbit. At verò & ad affectus, & potentias, atque motus, figuræ non ſunt accommodatæ corporibus, in quæ maximè reſpicientes, hoc pacto figuras ipſas diſtribuêre. Veluti cùm ignis facilè ſit mobilis, & calefaciat, ac vrat, quidã ſphæram, quidã pyramidem ipſum fecerunt.

A Hæc enim facillimè quidem mouentur, propterea quòd minima tangunt, miniméque ſtabilia ſunt: maximè verò calefaciunt, maximéque vrunt, quòd alterum totum angulus eſt, alterum acutiſſimum angulum habet. Angulis autem calefaciunt, vt aiunt, ac vrunt. Primùm igitur, vtrique de motu peccarunt. Nam tametſi figurarum hæ facillimè mobiles ſunt, non tamen ignis motu facilè mobiles ſunt. Motus enim ignis ad ſupera fit, atque recta: hæ verò facilè ea motione mobiles ſunt, quæ volutio nuncupatur. Deinde ſi terra ideo teſſera eſt, quia ſtabilis eſt, atque manet, non autem vbiuis, ſed ſuo in loco manet, ex alieno verò fertur, niſi prohibeatur: & ignis etiam, & cætera ſimili

B modo: patet, & ignem, & elementorum quodque in alieno quidem loco ſphæram, aut pyramidem quidem eſſe, in proprio verò cubum. Præterea, ſi ignis ob angulos calefacit, ac vrit, vniuerſa elementa calefaciunt ſanè, aliud tamẽ alio forſitan magis. Vniuerſa enim angulos habent, vt id quod duodecim ſedium eſt. Democriti verò ſententiâ ſphæra etiam vrit, quia quidam angulus eſt. Quare maiore different, minoréque gradu: hoc autem falſum eſſe patet. Simul etiam accidet, & mathematica corpora calefacere, vrereque (& illa namque angulos habent, & in ipſis indiuidua, & ſphæræ, & cubi, & pyramides inſunt) præſertim ſi ſint indiuiduæ magnitudines, vti dicunt. Nam ſi illa quidem vrunt,

C illa verò non vrunt, differentia eſt dicenda. Sed non ſic ſimpliciter dicendum eſt, vti dicunt. Præterea, ſi id quod vritur, ignitur, & ignis, aut ſphæra aut pyramis eſt: ea quæ comburuntur, pyramidem fieri, aut ſphæram, neceſſe eſt. Incidere igitur, atque diuidere, ſit accidens per rationem figuræ: pyramidem verò neceſſariò pyramides facere, vel ſphæram ſphæras, à metis penitus egreditur rationis: ſimileque eſt atque ſi quiſpiam gladium in gladios id quod diuidit, diuidere cenſeat, aut ſerram in ſerras. Præterea, ad diuidendum ſolùm igni figuram reddere, ridiculum eſſe videtur. Ignis enim congregare magis, fineſque in vnũ redigere, quàm ſegregare videtur. Segregat enim ea quæ non eiuſ-

D dem generis ſunt: congregat autem ea quæ ſub eodem genere collocantur. Et congregatio quidem per ſe eſt (fines enim in vnum cogere atque vnire, ignis ipſius eſt) ſegregatio verò, per accidens. Congregans enim id quod ſub eodem eſt genere, id quod alienum eſt, excipit. Quare aut ad vtrumque aut potiùs ad congregãdum, figuram igni reddere oportebat. Inſuper cum calidum frigidúmque potentia ſint contraria, reddere frigido figuram aliquam impoſſibile eſt, propterea quòd reddere quidem contrariam figuram oportet. Nihil autem cõtrarium eſt figuræ. Quapropter & omnes omittunt hoc: & tamen aut omnia figuris, aut nihil definire oportebat. Nonnulli autẽ de potentia ipſius dicere

E conati, ſibi ipſis contraria dicunt. Frigidũ enim id inquiunt eſſe quod magnarũ partiũ eſt, propterea quòd premit, & per meatus nõ tranſit. Patet igitur, & calidũ id eſſe, quod tranſit: tale autẽ id erit quod partiũ ſubtiliũ eſt. Quare fit vt paruitate magnitudineq; frigidũ differat, calidúmque, ſed nõ figuris. Præterea, ſi pyramides ſint inæquales, magnæ non ignis erũt, neq; figura erit vrẽdi cauſa, ſed cõtrariũ. Nõ differre igitur elemẽta figuris, ex iiſque diximꝰ, patuit. Cùm autẽ propriiſſimæ differentiæ corporũ

per affectus ſint, & operationes, atque potentias, (cuiuſque enim corporis naturalis opera, affectus potentiáſque dicimus eſſe) primùm de his eſt dicendum, vt poſt horum contemplationem; cuiuſque differentias ad vnumquodque ſumamus.

A αὐτὰ κατὰ τὰ πάθη, καὶ τὰ ἔργα, καὶ τὰς δυνάμεις (ἑκάστου γὰρ εἶναι* φαμὲν τῶν φύσει καὶ ἔργα, καὶ πάθη, καὶ δυνάμεις) πρῶτον ἂν εἴη περὶ τούτων λεκτέον, ὅπως θεωρήσαντες ταῦτα, λάβωμεν τὰς ἑκάστου πρὸς ἕκαστον διαφοράς. * Initio lib.

ARISTOTELIS STAGIRITÆ, DE CÆLO LIBER IV.

CAPVT I.

Quid ſit graue, & quid leue, & quæ vtriuſque natura.

DE graui autem atque leui, quid eſt vtrumque, & quænam eſt natura ipſorum, conſideremus oportet: & propter quam cauſam haſce potentias habent. Contemplatio enim de ipſis, ſermonibus eſt accommodata de motu. Graue enim & leue ex eo dicimus, quia aliquo modo naturaliter moueri poteſt: operationibus autem ipſorum nomina poſita non ſunt, niſi quiſpiam putet tale eſſe ipſum momentum. Quia verò naturalis tractatio eſt de motu, hæc autem motus quaſi fomenta quædam in ſe ipſis habent: ideo vniuerſi quidem potentiis ipſorum vtuntur: non tamen niſi pauci definiuêre. Viſis igitur hiſce primùm quæ ab aliis dicta ſunt, allátis etiam dubitationibus, quæ ad hanc conſiderationem ſunt neceſſariæ, id deinde dicamus quod nobis de ipſis videtur. Grauia leuiáque, partim ſimpliciter partim ad aliud dicũtur. Eorum enim quæ pondus habent, aliud leuius aliud grauius dicimus eſſe, vt æs, grauius dicimus ligno. De his igitur quæ abſolutè dicuntur, nihil à veteribus dictum eſt, ſed de hiſce quæ ad aliud dicuntur. Non enim dicunt quid eſt ipſum leue, ſed quid eſt ipſum grauius, & quid ipſum leuius in hiſce quæ pondus habent. Id autem, quod dicimus, magis dilucidum hoc pacto fiet. Quædam enim à medio ſemper, quædam ad medium ſemper apta ſunt ferri. Horum autem id quidem quod à medio fertur, ſurſum: id autem quod ad medium fertur, deorſum dicimus ferri. Abſurdum eſt enim, in cælo non exiſtimare aliquid ſupra, aliquid infra eſſe, quemadmodum quidam cenſent. Non enim eſſe aliud ſuperum, aliud inferum dicunt, ſi omni ex parte ſimile eſt, & vndique quiſque gradiens aduerſis ipſe ſibi pedibus erit. Nos autem ipſum vniuerſi extremum, ſupra dicimus, quod quidem & poſitione eſt ſupra, & ipſa natura primum. Cùm autem ipſius cæli & quid extremum & medium ſit, patet & ſupra eſſe, ac infra, quemadmodum & multi dicunt, verùm non ſatis. Huius autem cauſa eſt, cælum ipſos non omni ex parte ſimile eſſe, ſed vnum tantùm id hemiſphærium eſſe, quod ſupra nos eſt, putare. Quòd ſi ſumpſerunt cælum omni ex parte tale, & medium ad vniuerſum ſimiliter habere, illud quidem ſuperum, medium autem inferum eſſe dicent. Id igitur abſolutè dicimus leue, quod ſurſum ad extremúmque fertur: id graue, quod ſimpliciter deorſum atque ad medium fertur. Ad aliud autem leue ac leuius, id eſſe dicimus quod aliquò natura deorſum celerius fertur, vtriſque pondus habentibus, æqualémque molem.

CAPVT II.

Refutatio eorum quæ non rectè ab aliis de graui & leui dicta ſunt.

EOrum igitur qui priùs ad horum conſiderationem venerunt, plurimi penè de leuibus hoc pacto grauibúſque ſolis dixere: quorum alterum, vtriſque pondus habentibus, altero leuius eſt. De hoc autem pacto graui leuique facta conſideratione, de ſimpliciter etiam leui grauique determinatum à ſe fuiſſe putant. Sermo tamen ad ipſa non accommodatur. Hoc autem perſpicuum magis erit, ſi vlterius progrediamur. Quidam enim de leuiore grauioreque ſic dicunt, vt in Timæo eſt ſcriptum, Grauius quidem id eſſe, quod ex eiſdem pluribus conſtat: Leuius autem id quod ex eiſdem paucioribus conſtat: quemadmodum plumbo plumbum, & æs ære maius, grauius eſt. Similiter & vnumquodque cæterorum ſimilium forma. In exceſſione enim æqualium partium, quodque grauius eſt. Eodem modo, lignum & plumbum dicunt. Ex quibuſdam enim eiſdem omnia corpora, & vnâ materiâ eſſe aiunt, ſed non videri. Sic autem definitis, non dictum eſt de ſimpliciter leui ac graui. Nunc enim ignis quidem, ſemper eſt leuis, ſurſumque fertur: terra verò, ac terrea cuncta, deorſum, atque ad medium ipſum. Quare non ob triangulorum paucitatem, ex quibus quodque ipſorum conſtare dicunt, ignis aptus eſt ſurſum ferri. Maior enim minùs vtique moueretur, & grauior eſſet, cùm pluribus ex triangulis conſtet. Nunc autem contrarium ſanè videtur. Quo enim maior eſt, eo leuior eſt, & ſurſum celeriùs fertur. De ſupero etiam loco deorſum paruus ignis celeriùs, & tardiùs magnus fertur. Inſuper, cùm id quod pauciora habet ea quæ ſunt generis eiuſdem, leuius eſſe, id verò quod habet plura, grauius eſſe dicant; aërem autem, & ignem, ac aquam ex eiſdem aſſerant triangulis eſſe, ſed paucitate multitudineque differre, quapropter aliud ipſorum leuius, aliud grauius eſſe: aliqua ſanè multitudo aëris erit, quæ grauior erit aqua. At totum contrarium accidit. Semper enim maior aër, magis ſurſum fertur, & omnino pars quæuis aëris ſurſum ex aqua fertur. Quidam igitur ita de graui leuique definierunt. Quibuſdam autem non ſatis viſum eſt hoc pacto diuidere, ſed quamuis ætate vetuſtiores eſſent, de hiſce tamen quæ nunc ſunt dicta, modo magis nouo intellexerunt. Nonnulla namque corpora mole quidem minora, ſed grauiora eſſe videntur. Patet igitur, non ſatis eſſe, ex æqualibus ipſis primis ea quæ ſunt pōderis æqualis, dicere conſtare: eſſent enim æqualia mole. Maius autem ipſorum, grauius eſſe, abſurdū quidem eſt hiſce dicere, qui prima ipſa ac indiuidua, ex quibus ea corporum conſtant, quæ pondus habent, plana inquiunt eſſe: ij autem qui ſolida eſſe dicunt, magis dicere poſſunt. Compoſitorum verò quoniam ſingula non hoc modo ſeſe habere videntur, ſed multa grauiora minora mole eſſe videmus, quemadmodum æs, lana: aliam quidam cauſam & putant eſſe, & aiunt. Vacuum enim comprehenſum leuare corpora dicunt, & interdum maiora facere leuiora, cùm plus habeant, vt inquiunt, vacui. Propterea & molem habere maiorem ex æqualibus ſolidis perſæpe, aut ex minoribus compoſita, dicunt,

B C D E

Et omnino cuilibet leuiori plus ineſſe vacui, cauſam aiunt eſſe. dicunt igitur hoc modo de ipſis. Sed addant neceſſe eſt, qui hoc pacto definiunt, ſi ſit quippiam leuius, non ſolùm vacui plus, ſed & ſolidi minus habere. Si enim talem rationem excedet, leuius ſanè non erit. Ob id enim ipſum & ignem inquiunt leuiſſimum eſſe, quia vacui plurimum habet. Eueniet igitur, magnum aurum plus habens vacui, igne paruo leuius eſſe, niſi & ſolidum ipſum habuerit multiplex. Quare hoc eſt dicendum. Quidam igitur eorum qui non inquiunt vacuum eſſe, nihil de leui grauique determinarunt, vt Anaxagoras & Empedocles. Qui verò determinarunt quidem, non dicunt autem vacuum eſſe, nihil dixere cur alia corporum leuia, alia grauia ſunt, & alia ſurſum, alia deorſum ſemper feruntur. Nullam præterea de hoc mentionem fecerunt, nonnulla, inquam, corporum maiorem habentia molem, leuiora minoribus eſſe. Neque patet ex hiſce quæ dicta ſunt, quonam pacto fiet vt ipſi conſentanea dicant iis quæ apparent. Eos etiam qui leuitatis ignis cauſam vacui multitudinem inquiunt eſſe, eiſdem obnoxios difficultatibus eſſe neceſſe eſt. Minùs enim cæteris corporibus ſolidi, & vacui plus habebit. Attamen erit ignis aliqua multitudo, in qua ſolidum & plenum ea quæ continentur in aliqua parua terra, ſolida exuperabit. Quod ſi & vacui dixerint: quónam modo definient ipſum ſimpliciter graue? Aut enim hoc, quod plurima ſolidorum habet, aut hoc, quod vacui minus habet. Si igitur hoc dicent modo, erit quædam terra adeo parua, vt in illa minus ſit ſolidorum quàm magno in igne. Similiter ſi vacuo etiam definiant, erit quippiam eorum quæ ſemper deorſum feruntur, leuius eo quod ſimpliciter eſt leue, ſemperq; fertur ad ſupera loca. Quod quidem eſt impoſſibile. Id enim quod abſolute eſt leue, leuius eſt ſemper hiſce quæ pondus habet, ac deorſum feruntur. Id autem quod eſt leuius, non ſemper eſt leue: propterea quod & in hiſce quæ põdus habent, aliud alio leuius dicitur eſſe, vt aqua, terrâ. At verò neque hoc, vacuum, inquam, rationẽ ad plenum habere, ſufficiẽns ad ſoluendam dubitationem eſſe videtur. Accidet enim & hunc modum dicẽtibus, ipſum identidẽ impoſſibile. In maiore enim igne, atque minore, eandem ſolidum ad vacuum rationem habebit. at maior ignis, minore ſurſum celeriùs fertur: & maius aurum, plumbúmque, celeriùs deorſum mouetur, & cæterorũ quodque ſimili modo, quæ pondus habent. At hoc accidere profectò non oportebat, ſi hoc pacto graue leuéque eſt definitum. Abſurdum autem, etſi ob vacuum quidem ſurſum ferantur, vacuum autem ipſum non ſurſum feratur. At verò ſi vacuum quidem aptum eſt ſurſum ferri, plenũ verò deorſum: atque ob hoc vtriuſque lationis ſunt ceteris cauſæ: nihil de compoſitis conſiderare oportebat, cur alia corporum grauia, alia leuia ſunt: ſed de his ipſis dicere, cur leue alterum eſt, alterum pondus habet. Et inſuper, quænam eſt cauſa vt plenum vacuúmque non diſtent. Vacat autem ratione, & locum vacuo facere, quaſi ipſum locus quidam non ſit. Quòd ſi vacuum mouetur, eſſe quendam ipſius locum, è quo & ad quem mutatur, neceſſe eſt. Et inſuper, quidnam ipſius motus eſt cauſa? Non eſt enim vacuum ipſum. Non enim ſolùm ipſum,

Nam ſi vna ſit, non erit graue ſimpliciter atque leue, quemadmodum iis accidit qui ex triangulis conſtituunt elementa: Sin contrariæ ſint, vt ʺ qui vacuum plerumque dicunt: dici non poteſt quam ob cauſam ea quæ ſunt inter ſimpliciter grauia, leuiáque, grauiora leuioráque ſunt inter ſeſe, & ſimplicibus etiam ipſis. Magnitudine autem paruitatéque definire, figmento quidem magis quàm priora, eſt ſimile. Sed quia differentiam elementorum quodque facere poteſt, ſecuriùs ad an- B teriores dubitationes ſe habet. Et verò qui naturam vnam eorum facit quæ magnitudine differunt, idem accidere quæ hiſce accidunt, qui materiam faciunt vnam, neceſſe eſt, & neque leue quicquam ſimpliciter eſſe, néque ferri ſurſum, ſed aut poſteriùs ferri, aut extrudi: & multa parua paucis magnis grauiora eſſe. Quòd ſi hoc erit, accidet, magnum aërem, magnúmque ignem aqua terráque parua grauiorem eſſe: quod quidem fieri nequit. Ea igitur quæ ab aliis ſunt dicta, hæc ſunt, atque hoc modo dicuntur.

CAPVT III.

C *Quòd vnumquodque ſenſibilium ita in ſuum locum feratur, vt ad ſpeciem.*

NOs autem primùm id definiamus oportet, quo de maximè quidam dubitant: Cur alia corporum ſurſum, alia deorſum ſemper, alia ſurſum deorſúmque ſecundùm naturam ferantur. Deinde de graui leuique, atque affectibus hiſce qui circa ipſa accidunt, quam ob cauſam fiunt, dicamus. De hoc itaque, ferri (inquam) vnumquodque ſuum in locum, perinde atque de cæteris generationibus exiſtimandum eſſe videtur. Nam cùm tres ſint motus, alius in magnitudine, alius in forma, alius in loco: in horum quôque mutationem è contrariis in contraria, atque in media D fieri, & non in quoduis cuiuſuis mutationem eſſe videmus. Simili modo neque motiuum cuiuſuis quoduis, ſed vt alterabile, ac accreſcibile ſunt diuerſa, ſic & alteratiuum ac accreſcitiuum. Eodem modo & loco motiuum non quoduis cuiuſuis mobilis, exiſtimandum eſt eſſe. Ad ſuperum igitur locum ac inferum motiua quidem ſunt, id quod ponderis, & id quod leuitatis eſt effectiuum: mobile autem, id quod potentia graue eſt, atque leue. Ferri verò quodque ſuum in locum, nihil aliud eſt, quàm in ſuam formam ferri. Atque hoc pacto magis quiſpiam exiſtimauerit id quod antiqui dicebant, ſimile (inquam) in ſimile ferri: hoc E enim non omnino accidit. Non enim ſi quiſpiam terram eo in loco poſuerit vbi nunc eſt Luna, quæque partium ad ipſam feretur, ſed eum in locum vbi etiam nunc eſt collocata. Omnino igitur ſimilibus, & differentiam non ſubeuntibus, hoc accidat eodem motu neceſſe eſt. Quare quò pars vna quædam apta eſt ferri, eò & totum aptum eſt ferri. Cùm autem locus ipſius continentis ſit finis, extremum autem, atque medium omnia quæ ſurſum mouentur deorſúmque, contineat:

atque hoc forma eius quodammodo ſit quod continetur: ſuum in locum ferri nil aliud eſt, quàm in ſimile ferri. Ea enim quæ deinceps ſunt collocata, ſimilia ſunt. Aqua namque, aëri, & hic igni ſimilis eſt. Contrà verò dici in mediis quidem poteſt, in extremis verò non poteſt: velut aërem aquæ, & aquam terræ. Semper enim id, quod ſuperius eſt, ad id quod ſub ipſo collocatur, ſic ſe habet, vt ad materiam forma. Quærere verò cur ignis ad ſupera loca, & terra ad infera fertur, idem quod hoc eſt, cur ſanabile, ſi mouetur, atque mutatur, ea ratione qua eſt ſanabile, in ſanitatem, & non ad albedinem venit. Similiter & cætera alterabilia cuncta. At verò & accreſcibile cùm hoc mutatur, quo eſt accreſcibile, non in ſanitatem, ſed in exceſſionem magnitudinis venit. Similiter & horum vnumquodque, aliud in qualitate, aliud in quantitate mutatur: & in loco, leuia quidem ad ſupera, grauia verò ad infera loca proficiſcuntur: excipitur tamen hoc. Hæc enim, graue, inquam, ac leue, in ſeipſis mutationis principium habere videntur: illa verò non in ſeipſis, ſed foris, ceu ſanabile ac accreſcibile: quanquam & hæc interdum ex ſe ipſis mutantur, & paruo facto in externis motu, alterum in ſanitatem, alterum in incrementum accedit. Et cùm idem ſit ſanabile, ægritudiniſque ſuſceptiuum: ſi ea ratione qua ſanabile eſt, moueatur, in ſanitatem pergit: ſin hoc, quo ægrotabile eſt, in ægritudinem fertur. Magis tamen graue leuéque in ſe ipſis principium habere videntur, propterea quòd horum materia propinquiſſima ſubſtantiæ eſt. Signum cuius eſt, lationem abſolutorum eſſe, & vltimam motuum generatione. Quare motus hic ſubſtantia primus erit. Cùm igitur aër ex aqua fit, atque è graui leue, in ſuperum locum venit. Simul autem eſt leue, & non vlteriùs fit, ſed illic eſt. Patet igitur, cùm potentia ſit ad actum proficiſcens, venire illud & ad tantum, & ad tale, vbi eſt actus, & quanti, & qualis, & vbi. Eadem eſt cauſa, & vt terra ac ignis iam actu ad ſua loca nullo impediente moueantur. Etenim alimentum cùm prohibens, & ſanabile, cùm detinens ſublatum fuerit, continuò fertur: & mouet etiam & id quod initio fecit, & id quod ſubtraxit, aut id vnde reſiluit, vt priùs in ſermonibus, dictum eſt, in quibus definiebamus, nihil horum ipſum ſeipſum mouere. Dictum eſt igitur quam ob cauſam fertur quodque eorum quæ feruntur, & quid eſt, ſuum in locum ferri.

CAPVT IV.

Quòd ſit aliquod ſimpliciter graue, & leue ſimpliciter, & definitio horum. Quódque determinatum ſit medium, ad quod grauia ferantur, atque extremum ad quod leuia.

DIfferentias autem, & ea quæ accidunt circa ipſa, nunc dicamus oportet. Primum igitur ſit definitum, vt vniuerſis videtur, graue quidem ſimpliciter id eſſe, quod omnibus ſubſtat: leue autem id quod ſuper omnia natat. Simpliciter autem dico, in ipſum genus reſpiciens, & in ea in quibus ambo non inſunt. Ignis enim quæuis magnitudo, niſi fortè quippiam aliud prohibeat, ferri ſurſum videtur: & terræ etiam quæuis magnitudo, deorſum eodem modo: & celeriùs id fertur quod maius eſt. Alio verò modo grauia leuiáque ſunt ea

A quibus vtrunque ineſt. Etenim natant ſuper aqua, & ſubſtant, vt aer & aqua. Abſolute namque neutrum horum leue eſt, aut graue: terra enim ambo ſunt leuiora. Quæuis enim pars ipſorum ſubſidet igni. Ad ſeipſa verò ſimpliciter aliud eſt graue, aliud eſt leue. Aër enim quantauis magnitudine, ſemper eſt ſuper aquam: aqua autem quantauis quantitate, ſubſidet aëri ſemper. Quoniam autem & cæterorum alia pondus habent, alia leuitatem, patet, eam differentiam, quæ in ſimplicibus eſt, horum omnium cauſam eſſe. Ex eo namque quia aliud plus, aliud minus illorum ſunt aſſecuta, alia corporum leuia, alia grauia erunt. Quare de illis dicendum eſt. Cætera enim illa prima ſequuntur. B Quod & eos oportere facere dicimus, qui ob plenum graue eſſe dicunt, & ob vacuum leue. Accidit igitur, eadem non vbique grauia leuiáque ob differentiam primorum videri. Lignum enim centum librarum, plumbo vnius libræ in aëre grauius, in aqua leuius erit. Cauſa autem eſt, omnia præter ignem pondus, & leuitatem præter terram, habere. Terram igitur, & quæ terræ plurimum habent, vbique grauitatem habere neceſſe eſt: aquam autem vbique præterquam in terra: & aërē ſimiliter, præterquam in aqua, ac terra. Suo enim in loco grauitatem habent omnia, præter ignem. Signum cuius eſt, vtrem inflatum plus ponderis, quàm vacuum habere. Quare ſi quid plus aëris habet, quàm terra, & aquæ, id in aqua quidem alio leuius, in aëre C verò grauius eſſe poteſt: nam non natat quidem ſuper aërem, natat autem ſuper aquam. Eſſe autem quippiam ſimpliciter graue, atque ſimpliciter leue, ex hiſce perſpicuum eſt. Atque leue ſimpliciter id dico, quod ſemper ſurſum aptum eſt, niſi prohibeatur: & graue id quod ſemper deorſum aptum eſt ferri. Sunt enim aliqua talia, & non omnia pondus habent, vt quidam putant. Nam & aliis quibuſdam graue eſſe videtur, ſemperque ad medium ferri. Eſt autem & leue ſimili modo. Videmus enim, vti dictum eſt prius, terrea ipſa ſub omnibus eſſe collocata, atque ad medium ferri. At verò, mediū ipſum eſt definitum. Si igitur eſt quippiam, quod ſuper omnia eminet, vt ignis in ipſo aëre ſurſum ferri vi- D detur, aëre quieſcente, patet hunc ad ipſum extremum ferri: quare nihil ipſe pōderis habere poteſt: ſub alio enim collocaretur. At ſi hoc eſſet, aliquid aliud eſſet profectò, quod ad ipſum extremum moueretur, quódque ſuper omnia, quæ feruntur, collocaretur. Nunc autem nihil eſſe videtur. Ignis igitur nullum pondus habet, neque etiam terra leuitatem vllam habet: ſiquidem ſubſidet vniuerſis, idque quod ſubſidet, ad ipſum medium fertur. At verò medium eſſe, ad quod latio fit eorū quæ pondus habent, & ex quo leuia ſurſum feruntur, ex multis patet. Primò quidem ex eo quia nihil ferri in infinitum poteſt: vt enim nihil eſt impoſ- E ſibile, ſic neque fit impoſſibile. Latio verò è quopiam in quippiam generatio eſt. Deinde ignis quidem ſurſum, terra verò, & quicquid pondus habet, deorſum, ſimiles ad angulos fertur. Quare ad medium ipſum feratur neceſſe eſt. Vtrùm autem ad terræ medium, an vniuerſi feratur, cùm idem medium ſit ipſorum, alia ratio eſt. Cùm autem id quod omnibus ſubſtat, ad medium ipſum feratur, id, quod ſuper omnia natat, ad vltimum capedinis, in qua ſit motus, feratur neceſſe eſt.

Sunt enim contraria, medium & extremum, & ſubſtare atque natare. Quapropter & cum ratione duo ſunt, graue & leue: & loca enim ſunt duo, medium ipſum, atque extremum. Eſt igitur quid & id quod eſt inter hæc, quod ad vtrunque ipſorum alterum dicitur. Id enim quod eſt inter, extremum aliquo modo, & medium eſt amborum: quocirca eſt quid & aliud graue & leue, ceu aër & aqua. Dicimus autem id quidem quod continet, formæ eſſe: id autem quod continetur, materiei. Atque hæc differentia, vniuerſis in generibus eſt. In qualitate enim & quantitate, eſt aliud vt forma magis, aliud vt materies: & in loco ſimili modo. Superum enim, eſt definiti: inferum materiei. Quare & in ipſa materia, quæ eſt ipſius grauis & leuis, quo quidem tale eſt potentia, eo grauis materies eſt: quo verò tale eſt, eo leuis materies eſt. Atque eadem quidem eſt, eſſe autem non idem eſt, quemadmodum & ægrotabile ac ſanabile, idem eſt, eſſe verò non idem eſt.

CAPVT V.

Quòd neceſſe ſit eſſe elementa quatuor.

ID igitur quod talem materiam habet, leue eſt, ſempérque ſurſum fertur: id verò quod contrarium habet, graue eſt, ſempérque deorſum fertur. At ea quæ diuerſas quidem ab his habent, ſic verò inter ſeſe habentes vt hæ ſe habent, ſimpliciter & ſurſum & deorſum feruntur. Quapropter aër & aqua leuitatem habent, & pondus. Atque aqua quidem vniuerſis, terra excepta, ſubſtat. aër autem ſuper omnia eminet, igne excepto. Cùm autem vnum ſit ſolum, quod ſuper omnia natat, & vnum item, quod ſubſidet vniuerſis, duo alia eſſe neceſſe eſt, quæ & cuipiam ſubſtant, & ſuper aliquid collocantur. Quare & materias quot hæc ſunt, tot eſſe neceſſe eſt, quatuor, inquam, adeo verò quatuor, vt vna quidem ſit omnium communis, præſertim ſi ex ſeſe mutuò fiant: eſſe verò diuerſum ſit. Nihil enim vetat vt inter contraria vnum ſit, atque plura: quemamodum in coloribus. Multis enim modis dicitur id quod eſt inter, ac medium ipſum. Vnumquodque igitur eorum quæ pondus habent, leuitatémque, pondus habet ſuo in loco, leuitatem autem non habet, niſi in hiſce, ſuper quæ natat. Quapropter ſi ſubtrahatur, deorſum in id fertur, quod deinceps eſt collocatum. aër quidem in locum aquæ, aqua verò in locum terræ. Surſum autem in locum ignis, ſi ignis ipſe tollatur, aër non feretur niſi vi: ſicut & ipſa aqua trahitur, cùm ipſum planum fuerit vnũ: atque celeriùs quiſpiam traxerit aquam ſurſum, quàm ſit ea latio qua fertur ipſa deorſum. Neque aqua ſimiliter in aëris locum fertur, niſi vti nunc diximus. Terra autem hoc non patitur, quia planum non eſt vnum. Quapropter aqua quidem in vas ignitum trahitur, terra verò nõ trahitur. Vt autem terra non fertur ſurſum, ſic neque ignis deorſum fertur, ſi ſubtrahatur aër: nihil enim ponderis habet neque ſuo in loco, quemadmodum neque terra, vllius eſt particeps leuitatis. Feruntur autem duo deorſum, ſi infera ſubtrahantur: quia aliud eſt abſolutè graue, quod quidem omnibus ſubſidet: aliud ad aliquid graue, quod quidem ſuum in locum, aut in eorũ ſuper quæ natat, propter materiei ſimilitudinem, fertur. Eſſe autem neceſſarium, æquales facere differẽtias ipſis, patet.

A Nam ſi vna ſit omnium materies, aut vacuum, aut plenum, aut magnitudo, aut trianguli, aut vniuerſa ſurſum, aut vniuerſa deorſum ferentur, alte[illegible] latio non erit. Quare nihil erit ſimpliciter [illegible] cuncta inclinantur magis deorſum, ex eo [illegible] ex maioribus ſunt corporibus, aut ex pluribus [illegible] quia ſunt plena. Hoc autem & videmus, & [illegible] ſtratum eſt, ſimiliter (inquam) deorſum ſemper, & vbique, ac ſurſum corpora ferri. Si verò vacuum ſit, aut quippiã tale, quod ſurſum ſemper feratur, non erit id quod ſemper deorſum fertur: & mediorum aliqua celeriùs deorſum, quàm terra, ferentur. Magno enim in aëre, trianguli plures erunt, aut ſolida aut plana: at nulla pars aëris deorſum ferri videtur.
B Similiter & in leui, ſi illud fecerit quiſpiam excedere materia. Sin verò duæ ſunt materiæ: veluti ſi quiſpiam dixerit eſſe vacuum, atque plenum, ipſa media, aër, inquam, & aqua, quónam pacto facient ea quæ faciunt? Ignem igitur vacuum eſſe dicunt, quapropter & ſurſum fertur: terram autem plenũ, quocirca deorſum fertur: aërem verò plus ignis habere, & aquam plus terræ. Erit itaque quædã aqua, quæ plus ignis habebit, quàm paruus aer: & aer magnus plus terræ quàm parua aqua. Quare magnam aliquam aeris partem aqua parua deorſum ferri celeriùs oportebit: hoc autem nuſquam vnquam fieri videtur. Vt igitur & ignẽ ideo ſurſum ferri neceſſe eſt, quia hoc habet, vacuũ, inquam, cætera verò nõ,
C & terrã ideo deorſum ferri, quia plenum habet: ſic & aerem ideo ſuum in locum ferri, ac ſuper aquam collocari neceſſe eſt, quia hoc habet: & aquã ideo deorſum ferri, ac ſub ipſo aere collocari, quia hoc habet. Si verò aut vnũ quid ambo ſint, aut duo, ambo verò inſint vtriq;, erit aliqua multitudo vtriuſq; qua quidem aerem aqua parum excedet ſupero, & aer aquam infero, quemadmodũ ſæpe eſt dictum.

CAPVT VI.

Quòd figura ſit cauſa, vt velocior, aut tardior ſit motus, non tamen efficiat vt ſurſum aut deorſum tendat.

Figuræ autem cauſæ non ſunt, vt aut ſurſum aut deorſum abſolutè ferantur: ſed vt celeriùs tardiúſque ferantur. Propter quas autem cauſas, non
D eſt difficile videre. Dubitatur enim nunc, cur latum ferrum plumbúmque ſuper aquam natat, alia verò minora, minúſque grauia, ſi rotunda ſint, aut longa, vt acus, deorſum feruntur: & nonnulla ob paruitatem, vt arena auri, aliáque terrea, pulueriſque ſimilia, ſuper aerem natant. Cauſam igitur omnium horum eſſe putare, vti Democritus cenſet, non rectè ſe habet. Ille enim dicit, ea calida quæ ſurſum ex aqua feruntur, grauium ea quæ lata ſunt, ſuſtinere, anguſta verò delabi: pauca enim ea eſſe quæ ipſa offendunt. In aere autem magis etiam id ipſum fieri oportebat, vt obiicit ille ipſe: obiectione verò allata, molliter ſoluit. Dicit enim
E non in vnum motionem eorum corporum fieri, quæ ſurſum feruntur. Cùm autem continuorum alia facilè alia minùs facilè diuidi poſſint: & diuiſiua modo eodem, alia magis, alia minùs: has eſſe cauſas eſt putandum. Id igitur facilè diuiſibile eſt, quod facilè terminos ſuſcipere poteſt: & id magis quod magis. Aer autem magis eſt tale, quàm aqua, & aqua magis quàm terra. Minus etiam quoque in genere corpus, magis facilè diuiditur, faciliúſque diſrumpitur. Ea igitur quæ latitudinem habent, quia multum comprehendunt, ideo ſupra manẽt, propterea quòd non facilè illud diſrũpitur.

Ea verò quæ contrario modo ſeſe habent figuris, quia parum comprehendunt, ideo deorſum feruntur, propterea quòd facilè illud diuidunt: & in aëre multo magis, quo faciliùs quàm aqua, diuiditur. Cùm autem & pondus aliquas habeat vires, quibus deorſum fertur, & continua ſimili modo vt non diſrumpantur, hæc inter ſeſe conferre oportet. Si vires enim ponderis, eas vires quæ in cõtinuo ſunt, ad diſruptionem diuiſionémque exuperent, vim inferet ipſum graue, celeriúſque deorſum feretur: ſin imbecilliores ſint, ſupra manebit, atque natabit. De graui igitur atque leui, & de hiſce quæ circa ipſa accidunt, à nobis hoc modo ſit definitum.

De ortu autem ac interitu eorum quæ natura gignuntur intereúntque, vniuerſim de omnibus, tum cauſas tum rationes eorum diſtinguendo, dicamus oportet: præterea quid accretio quidque alteratio ſit: & eandémne alterationis atque generationis eſſe naturam exiſtimare liceat, an diuerſam, perinde vt ipſis quoque nominibus diſcretæ ſunt. Priſcorum igitur quidam generationem, ſimplicem abſolutámque alterationem eſſe inquiunt. Quidam, à generatione alterationem aliud eſſe. Nam qui vniuerſum ipſum aiunt vnum quippiam eſſe, & omnia ex vno oriri cenſent, ij generationem alterationem eſſe, & quod propriè generatur, id alterari dicant, eſt neceſſe. At qui plures quàm vnam eſſe materies aſtruunt, vti Empedocles, Anaxagogas & Leucippus: illas differre dicant oportet. quanquam Anaxagoras, ſuam profectò vocem ignorauit: quippe cùm oriri ac interire, idem eſſe quod alterari dicat. at multa eſſe rerum elementa, perinde atque alij, aſſerit. Nam Empedocles corporea quidem elementa, quatuor: omnia verò vnà cum hiſce quæ motu ciendi vim habent, numero ſex ait eſſe. Anaxagoras verò & Leucippus & Democritus, infinita. Etenim Anaxagoras ea facit elementa rerum, quæ ſimilaria ſunt, vt os, vt carnem, medullam, cæteráque, quorum cuiuſque pars eandem cum toto ſortita eſt appellationem. Democritus autem & Leucippus,

A ex indiuiſibilibus corporibus, quæ & multitudine & formis infinita ſunt, cætera componi dicunt: atque hæc inter ſeſe differre per illa, nimirum ſitu ac ordine eorum ex quibus conſtant. Porrò Anaxagoras & Empedocles contrario dicere modo videntur. Ille enim terram, aquam, aërem, & ignem, elementa quatuor, eáque ſimplicia magis quàm carnem, os, & id genus ſimilaria. Hic verò hæc quidem, ſimplicia elementáque: illa verò, terram, inquam, aquam, aërémque & ignem, compoſita: vtpote quibus gignendis, illa præſtent ſemina. Igitur qui ex vno omnia conficiunt, generationem & corruptionem eſſe dicant alteratione, eſt neceſſe: nam ſubiectum ipſum, ſemper idem atque vnum mane-B re dicant oportet: quod autem tale eſt, id dicimus alterari. Qui verò plura genera ſtatuunt, à generatione alterationem differre cenſeant neceſſum eſt. cùm enim ea coëunt aut diſſoluuntur, generatio corruptióve fit. Quocirca & Empedocles ad hunc canit modum:

---nullius eſt natura, ſed ipſa
Miſtio miſtorúmque prius diuulſio ſolum.

Patet igitur, ſermonem eorum ſuppoſitioni eſſe accommodatum, cùm hoc pacto dicunt: ac eos ad hunc dicere modum. At neceſſarium & illis quoque eſt vt alterationem dicant à generatione quippiam eſſe diuerſum: fieri tamen haudquaquam po-C teſt, iuxta ea quę ab eis dicuntur. Quòd autem hoc rectè dicamus, facile eſt perſpicere: nam quieſcẽte ſubſtantia, vt in ea mutationem in magnitudine, quæ vocatur accretio & decretio; ita & alterationem. Verumenim fieri nequit vt alteratio fiat per ea quæ dicunt, qui plura vno principia faciunt. Siquidem affectus ipſi iuxta quos id accidere dicimus, differentiæ ſunt elementorum. quod genus ſunt, caliditas, frigiditas, albedo, nigredo, ariditas, humiditas, mollities, durities, & ceteræ aliæ, vti & Empedocles ait:

Albentem penitus ſolem, calidúmque videri:
Aſt imbrem inter cuncta nigrum ſimul atque rigentem.

D Similiter & de reliquis quoque definit, pronuntiátque. Quare ſi fieri nequeat vt ex igni oriatur aqua, aut ex aqua terra: neque profectò ex albo quicquam nigrum fiet, aut è molli durum. Eadem & de cæteris quoque ratio eſt. Hoc autem eſt alteratio. Anne etiam perſpicuũ eſt, oportere ſemper contrariis ipſis vnam ſubiicere materiam, ſiue loco, ſiue accretione decretionéve, ſiue alteratione mutatio fiat? Præterea ſimiliter & hoc alterationem eſſe eſt neceſſe. Etenim ſi alteratio ſit, & ſubiectum eſt elementum vnum, & omnium quæ in ſeſe viciſſim mutantur, vna eſt materia. & ſi ſubiectum vnum ſit, alteratio eſſe ſolet. Empedocles igitur & hiſce E quæ apparent, & ipſe ſibi contraria dicere videtur. Nam & elementorum nullum ex alio fieri, ſed ex eis cætera omnia: & cùm vniuerſam naturam in vnum coëgit præter diſcordiam, ex illo vno rurſus quodque fieri aſſerit. Quare ex vno quodam, vt patet, eorum quæ differentiis quibuſdam ac affectibus diſtincta ſeparatáq; ſunt, aliud aqua, aliud ignis factum eſt. Quemadmodum ſolem ait album & calidum, terram verò grauem atque duram. Detractis igitur hiſce differentiis (detrahi enim poſſunt, nam genitæ ſunt) tum ex aqua terram tum ex terra aquam neceſſariò fieri conſtat. Eodem pacto & cæterorum quodque, nec tum ſolùm, verùm etiam nunc, ſi modò mutentur iuxta affectus.

A Nam de numero eorum ſunt quæ adeſſe & abeſſe rurſus poſſe dixit: præſertim adhuc inter ſeſe pugnantibus diſcordia & concordia. Quocirca & tum ex vno orta ſunt ac genita. non enim vniuerſum ipſum ignis, aër, aqua & terra, cùm adhuc vnum eſſent, erat. Sed & id quoque nequaquam liquet, vtrùm ſcilicet ille ipſum vnum principium ſtatuere debeat, an ipſa multa, ignem inquam & terram, & quæ cum hiſce eiuſdẽ ſunt ſeriei. Nam quo ipſum vnum, vt materia ſubiicitur, ex quo mutatione (quę motionis opera fit) terra & ignis fiunt, elementum eſt: at quo, hoc quidem ex compoſitionę fit, coeuntibus inquam illis, illa verò ex diſſolutione, hoc elementi appellatione digniora ſunt, naturáque B priora.

CAPVT II.

Platonis poſitio, Democriti poſitione minus idonea.

ΚΕΦΑΛ. β΄.

Ὅτι ἀδύνατον εἶναι τὴν γένεσιν σύγκρισιν, οἵαν δή τινές φασι.

Omnino itaque de generatione & corruptione ſimplici abſolutáque, verùm ſit nécne, & quo pacto ſit, & de cæteris abſolutis motibus, verbi cauſa, de accretione & alteratione, dicendum eſt. Plato igitur, de generatione ac corruptione quomodo rebus ipſis competant, conſiderauit ſolùm: nec id quidem de omni, ſed elementorum. quomodo ve- C rò carnes, aut oſſa, aut quippiam aliud tale gignatur, nequaquam. Inſuper nec de alteratione, nec de accretione, quonam pacto rebus ipſis contingant. Ad ſummam, de nulla mutatione niſi ſuperficie tenus, quicquam vllus definiuit: præterquam Democritus, cui omnia fuiſſe curæ videntur, ſed in hoc nempe, quia via ac ratione fiant, iam diſcrepat. Nam nec de accretione quiſquam quicquam definiuit, ſicuti diximus, quod non vel quiuis dicat. Dixerunt enim, res ipſas acceſſu rei ſimilis augeri. id autem quonam pacto fiat, nihil præterea dixere. Nec de miſtione, nec de aliorum prope dixerim vllo, verbi cauſa, de actione & paſſione, quónam mo- D do aliud agat; aliud patiatur in actione naturali. Democritus autem & Leucippus figuras concinnant, ex quibus alterationem faciunt atque generationem: congregatione quidem & ſegregatione, generationem atque corruptionem: ordine verò & poſitu, alterationem. Cæterùm quoniam quæ apparent, ea vera eſſe putabant, contraria autem & infinita ſunt quæ apparent, infinitas fecère figuras: ita vt per compoſiti tranſmutationes idem contrarium videatur alii atque alii, tranſmutetúrque inſerta re puſilla, & omnino permutato vno quopiam diuerſum quid appareat, quandoquidem tragœdia & comœdia eiſdem fiunt literis. At cùm generatio & corruptio diuerſum quid eſſe E omnibus ferè videantur, & ea quæ ſunt congregatione atque ſegregatione oriri ac occidere, & de mutatione affectuum alterari: de his contemplentur, qui hoc inſtituti habent, oportet. Hæc autem & multas, & quæ rationis fines non egrediuntur, dubitationes habent. Nam ſi generatio, congregatio ſit, multa ex eorum numero quæ fieri nequeunt, euenire ſolent. Sunt autem rurſus aliæ rationes quæ vrgent, quæque haud facilè ſolui poſſunt: quòd fieri non poteſt, vt quicquam aliter ſeſe habeat, ſi generatio, congregatio non ſit: aut quòd omnino generatio non eſt, aut eadem alteratio eſt. Atque id, quanquam difficile, enitendum eſt ſoluere.

Ὅλως τε δὴ περὶ γενέσεως καὶ φθορᾶς τῆς ἁπλῆς λεκτέον, πότερόν ἐστιν, ἢ οὐκ ἔστι, καὶ πῶς ἐστι· καὶ περὶ τῶν ἄλλων ἁπλῶν κινήσεων, οἷον περὶ αὐξήσεως καὶ ἀλλοιώσεως. Πλάτων μὲν οὖν μόνον περὶ γενέσεως ἐσκέψατο καὶ φθορᾶς, ὅπως ὑπάρχει τοῖς πράγμασι· καὶ περὶ γενέσεως οὐ πάσης, ἀλλὰ τῆς τῶν στοιχείων. πῶς δὲ σάρκες, ἢ ὀστᾶ, ἢ τῶν ἄλλων τι τῶν τοιούτων, οὐδὲν ἔτι· οὐδὲ περὶ ἀλλοιώσεως, οὐδὲ περὶ αὐξήσεως, τίνα τρόπον ὑπάρχουσι τοῖς πράγμασιν. ὅλως δὲ παρὰ τὰ ἐπιπολῆς περὶ οὐδενὸς οὐδεὶς ἐπέστησεν, ἔξω Δημοκρίτου. οὗτος δ' ἔοικε μὲν περὶ ἁπάντων φροντίσαι, ἤδη δὲ ἐν τῷ πῶς, διαφέρει. οὔτε γὰρ περὶ αὐξήσεως οὐδεὶς οὐδὲν διώρισεν, ὥσπερ λέγομεν, ὅ τι μὴ, κἂν ὁ τυχὼν εἴπειεν, ὅτι προσιόντος αὐξάνονται τοῦ ὁμοίου· πῶς δὲ τοῦτο, οὐκέτι. οὐδὲ περὶ μίξεως, οὐδὲ περὶ τῶν ἄλλων, ὡς εἰπεῖν, οὐδενὸς οἷον, τοῦ ποιεῖν, ἢ τοῦ πάσχειν, τίνα τρόπον τὸ μὲν ποιεῖ, τὸ δὲ πάσχει τὰς φυσικὰς ποιήσεις. Δημόκριτος δὲ καὶ Λεύκιππος ποιήσαντες τὰ σχήματα, τὴν ἀλλοίωσιν καὶ τὴν γένεσιν ἐκ τούτων ποιοῦσι· διακρίσει μὲν καὶ συγκρίσει, γένεσιν καὶ φθοράν· τάξει δὲ καὶ θέσει, ἀλλοίωσιν. ἐπεὶ δ' ᾤοντο τὸ ἀληθὲς ἐν τῷ φαίνεσθαι, ἐναντία δὲ καὶ ἄπειρα τὰ φαινόμενα, τὰ σχήματα ἄπειρα ἐποίησαν· ὥστε ταῖς μεταβολαῖς τοῦ συγκειμένου τὸ αὐτὸ ἐναντίον δοκεῖν ἄλλῳ καὶ ἄλλῳ, καὶ μετακινεῖσθαι μικροῦ ἐμμιγνυμένου, καὶ ὅλως ἕτερον φαίνεσθαι ἑνὸς μετακινηθέντος. ἐκ τῶν αὐτῶν γὰρ τραγῳδία γίνεται καὶ κωμῳδία γραμμάτων. ἐπεὶ δὲ δοκεῖ σχεδὸν πᾶσιν ἕτερον εἶναι γένεσις καὶ ἀλλοίωσις, καὶ γίνεσθαι μὲν καὶ φθείρεσθαι συγκρινόμενα καὶ διακρινόμενα, ἀλλοιοῦσθαι δὲ μεταβαλλόντων τῶν παθημάτων· περὶ τούτων ἐπιστήσασι θεωρητέον. ἀπορίας γὰρ ἔχει ταῦτα καὶ πολλὰς καὶ εὐλόγους. Εἰ μὲν γάρ ἐστι σύγκρισις ἡ γένεσις, πολλὰ ἀδύνατα συμβαίνει. εἰσὶ δ' αὖ ἕτεροι λόγοι ἀναγκαστικοὶ, καὶ οὐκ εὔποροι διαλύειν, ὡς οὐκ ἐνδέχεται ἄλλως ἔχειν εἴτε μή ἐστι σύγκρισις ἡ γένεσις, ἢ ὅλως οὐκ ἔστι γένεσις, ἢ ἀλλοίωσις· ἢ εἰ καὶ τοῦτο διαλῦσαι* χαλεπὸν ὄν, πειρατέον.

Δημόκριτος δ' ἂν φανείη οἰκείοις καὶ φυσικοῖς λόγοις πεπεῖσθαι. δῆλον δ' ἔσται ὃ λέγομεν, προϊοῦσιν. ἔχει γὰρ ἀπορίαν, εἴ τις θείη σῶμά τι εἶναι καὶ μέγεθος πάντῃ διαιρετὸν, καὶ τοῦτο δυνατόν. τί γὰρ ἔσται ὅπερ τὴν διαίρεσιν διαφεύξεται; εἰ γὰρ πάντῃ διαιρετὸν, καὶ τοῦτο δυνατὸν, κἂν ἅμα εἴη τοῦτο πάντῃ διῃρημένον, * εἰ μὴ ἅμα τοῦτο διῄρηται. κἂν εἰ τοῦτο γένοιτο, οὐδὲν ἂν εἴη ἀδύνατον. οὐκοῦν καὶ κατὰ τὸ μέσον ὡσαύτως. καὶ ὅλως δὲ εἰ πάντῃ πέφυκε διαιρετὸν, κἂν *διαιρεθῇ, οὐδὲν ἔσται ἀδύνατον γεγονός. ἐπεὶ οὐδ' ἂν εἰς μυρία μυριάκις διῃρημένα ᾖ, οὐδὲν ἀδύνατον, καίτοι ἴσως οὐδεὶς ἂν διέλοι. ἐπεὶ τοίνυν πάντῃ τοιοῦτόν ἐστι τὸ σῶμα, διῃρήσθω. τί οὖν ἔσται λοιπόν; μέγεθος; οὐ γὰρ οἷόν τε. *ἔσται γάρ τι οὐ διῃρημένον. ἦν δὲ πάντῃ διαιρετόν. ἀλλὰ μὴν εἰ μηδὲν ἔσται σῶμα μηδὲ μέγεθος, διαίρεσις δ' ἔσται, ἢ ἐκ στιγμῶν ἔσται, καὶ ἀμεγέθη ἐξ ὧν σύγκειται, ἢ οὐδὲν πάμπαν. ὥστε κἂν γίνοιτο ἐκ μηδενὸς, κἂν εἴη συγκείμενον, καὶ τὸ πᾶν δὴ οὐδὲν, ἀλλ' ἢ φαινόμενον. ὁμοίως δὲ κἂν ᾖ ἐκ στιγμῶν, οὐκ ἔσται ποσόν. *ὁπότε γὰρ ἥπτοντο καὶ ἓν ἦν μέγεθος, καὶ ἅμα ἦσαν, οὐδὲν ἐποίουν μεῖζον τὸ πᾶν. διαιρεθέντος γὰρ εἰς δύο καὶ πλείω, οὐδὲν ἔλαττον οὐδὲ μεῖζον τὸ πᾶν τοῦ *προτέρου. ὥστε κἂν πᾶσαι συντεθῶσιν, οὐδὲν ποιήσουσι μέγεθος. οὐ μὴν ἀλλὰ καὶ εἴ τι διαιρουμένου, οἷον ἐκπρίσμα γίνεται τοῦ σώματος,

A Principium autem horum omnium eſt, vtrùm ea quæ ſunt, generentur hoc pacto, accreſcant alterentúrque, & hiſce contrarias ſubeant mutationes, magnitudinibus primis nullam diuiſionem admittentibus: an nulla ſit magnitudo indiuiſibilis. Hoc enim intereſt quàm plurimùm. Et rurſum, ſi magnitudines ſint inſectiles, vtrùm hæ corpora ſint vt Democrito placet atque Leucippo: an plana, vt in Timæo ſcribitur. Hoc igitur ipſum, fieri inquam diſſolutionem ad plana vſque, cancellos egreditur rationis: id quod alio quoque loco iam diximus. Iccirco magis conſentaneum rationi fuerit, corpora non poſſe diuidi. Verùm & hæc quoque perab- B ſurda ſunt: ſed tamen hiſce alterationem generationemque, vti dictum eſt, facere, conuerſione & attactu atque figurarũ varietate permutando, idem contingit, quod ſanè Democritus facit. Quocirca non eſſe colorem aſſerit: nam res ipſas per conuerſionem colore tingi cenſet. at illis, qui in plana diuiſionem faciunt, minimè. Nihil enim planis compoſitis, præterquam ſolida fit: quando nulla ex eis qualitas affectuſve gigni poteſt. Sed cur parum valeant, quæ conſentanea ſunt perſpicere, cauſam habet ipſa experientiæ vacuitas. Quamobrem quotquot diutiùs circa rerum naturalium ſpeculationem verſati ſunt, ij eiuſmodi principia quæ inter ſe cohæreant conſentiántque quàmplurimum, ſup- C ponere magis poſſunt. At qui è multis rationibus quænam veræ ſint, haudquaquam expendere conſueuerunt, paucis inſpectis facilè pronunciãt. Porrò ex hiſce perpendere etiam quis poteſt, quàm inter eos intersit, qui naturaliter, quique via rationali quampiam exercent conſiderationem. Nam de eo quod eſt magnitudines eſſe indiuiſibiles, nonnulli quidem inquiunt: quod ipſe idealiſque triangulus, plures erit. At Democritus rationibus propriis, naturæque accommodatis perſuaſus eſſe profectò videbitur. Quod autem dicimus, in progreſſu euadet apertum. Nam res ipſa dubitationem habet, ſi quis corpus aliquod magnitudinemque omnino atque omni ex parte diuiſibilem eſſe ſtatuat, atque D fieri poſſe vt penitus diuidatur. Quid enim erit quod effugiat diuiſionem? Nam ſi omni ex parte atque omnino ſit diuiſibile, & ita diuidi queat, ſiue ſimul erit hoc omni ex parte diuiſum (& ſi non ſimul diuidatur) ſiue id fiat, nihil accidet impoſſibile. Igitur & ſecundùm medium haud ſecus. Et in ſumma, ſi omni ex parte ac omnino diuidi aptum ſit, ſi diuidatur, nullum emerget impoſſibile: quando ne vllum quidem oritur impoſſibile, ſi in decies millies dena millia diuiſum ſit, quamuis fortè nemo vnquam diuidet. Itaque cùm corpus ipſum omnino tale ſit, diuidatur. Quid ergo erit reliquũ? magnitudo? Id enim fieri non poteſt: eſſet enim E quippiam haud diuiſum: at erat omni ex parte, omninoq; diuiſibile. At verò ſi nec corpus nec magnitudo relinquatur, diuiſio tamen ſit: aut corpus ex punctis conſtabit, & ea ex quibus componitur, magnitudine carebunt, aut nihil omnino erit. Quare, ſiue factum ex nihilo, ſiue compoſitum ſit: profectò totum ipſum nihil præterquam apparens erit. Similiter ſi ex punctis conſtari dicatur, quantum non erit. Nam cùm vna in magnitudine ſeſe tangunt, & magnitudo vna perpetuaque eſt, atque illa ſimul ſunt, nihilo maius totum ipſum reddunt. quoniam ſi totum in duo aut plura diuidatur, nihilo ipſum minus quàm priùs euadit. Quia de re puncta etiamſi omnia coagmentata ſint, nullam efficiunt magnitudinem. Veruenimvero ſi quid tale inter diuidendum corpus fiat, quale eſt ramentum illud quod excidit dum quippiam ſerra ſecatur,

atque hoc pacto corpus aliquod è magnitudine abſcondat; idem ſermo recidit, quomodo inquam diuiſibile illud ſit. Quòd ſi id quod abſcedere ſolet, corpus non ſit, ſed forma quædam affectiúſve ſeparabilis, ſitque magnitudo ipſa puncta vel tactus ſic affecti: magnitudinem ex non magnitudinibus cõſtare incongruum atque abhorrẽs eſt. Adhæc puncta ipſa ſiue à motu vacent, ſiue eundem ſubeant, vbinam erunt? vnus enim ſemper duorum quorundam tactus eſt, tanquam re quapiam alia præter tactum punctúmque atque diuiſionem exiſtente. Si quis ergo quoduis aut quantumlibet corpus, eſſe omni ex parte atque omnino diuiſibile ponat, hæc accidunt vniuerſa. Præterea ſi lignũ aut quippiam aliud iam diuiſum rurſum componas: iterum æquabile pariter atque vnum euadit. Igitur ad hunc modum res ſeſe habet, vt patet etiam ſi illud quolibet in puncto incidat. Potentia ergo, omni ex parte ac omnino diuiditur. Quid igitur præter diuiſionem erit? Nam ſi eſt affectio quædam, at quonam pacto diſſoluitur in hæc, ſitque ex his, aut qualiter hæc ſeparari queunt? Itaque ſi fieri nequeat vt magnitudines ex punctis aut tactibus conſtent, indiuiſibilia ſint corpora magnitudineſque neceſſe eſt. At verò & iis quoque qui hæc aſtruunt, non minùs accidit impoſſibile: de quibus quanquam alias fuit à nobis conſideratum, tamen ea ipſa ſoluere eniti oportet. Quamobrem iterum ab initio dicenda dubitatio eſt. Igitur omne corpus ſenſibile, quouis in pũcto eſſe diuiſibile atque indiuiſibile, nihil eſt abſurdũ: potentia ſiquidẽ diuiſibile exiſtit, actu indiuiſibile. At vt ſimul ſit omni ex parte potentia diuiſibile, fieri non poſſe videatur. Nã ſi fieri poſſit, & fiat: haudquaquam ad hũc fiet modum vt ſimul ambo ſint actu, indiuiſibile inquam atque diuiſum, ſed quolibet in pũcto diuiſum. Nihil igitur erit reliquũ: atque corpus ipſum corruptione abibit in incorporeum, & rurſum, aut ex punctis, aut prorſus ex nihilo fiet. At id qui fieri poteſt? At verò quòd in ſeparabiles & ſubinde minores atque inter ſe diſtãtes ſeparatáſque magnitudines diuidatur corpus, certũ eſt. Itaque nec per partes diuidenti ſectio quæ in minutula fit, infinita occurret: nec inſuper continget, vt omni in ſigno (non enim eſt poſſibile) ſed quadantenus diuidatur. Indiuiduas igitur ineſſe magnitudines quæ oculi aciem fugiant, neceſſe eſt: & præſertim ſi generatio congregatione, & corruptio ſegregatione fieri debeat. Quæ igitur ratio magnitudines eſſe indiuiſibiles neceſſariò colligere videbatur, hæc eſt. Sed quòd clanculo peruerſa ratiocinatione vtatur, & quatenus lateat, exponamus oportet. Nam quia punctum puncto non hæret, magnitudines partim ſunt, & partim nõ ſunt omni ex parte diuiſibiles. Sed cùm hoc poſitum aſſertúmque eſt, punctum vbiuis ac omni in parte videtur eſſe: ita vt in puncta diuidi magnitudinem ſit neceſſe: quippe cùm omni in parte punctum ſit. quo fit vt ea vel tactibus vel punctis conſtet. At omni in parte diuiſibilis eſt: quia vbivbi vnum eſt, & omnia, vt ſingulum quodque. Vno autem plura non ſunt. non enim ſunt deinceps. Quare non omni in parte diuiſibilis eſt. Nam ſi per medium diuiſibilis ſit, & per punctum adhærens erit diuiſibilis. At id haudquaquam fit. ſiquidem nec ſignum ſigno, nec punctum puncto hæret. Hoc autem eſt, diuiſio & compoſitio. Quare tam congregatio quàm ſegregatio eſt: ſed non ex inſectilibus & in inſectilia (complura enim inde emergunt abſurda) nec hoc pacto vt omni ex parte fiat diuiſio (id enim eueniret, ſi punctum puncto hæreret)

Ὅτι οὐδέν ἐστι γινόμενον ἁπλῶς καὶ φθειρόμενον, ἀεὶ δὲ ἔκ τινος.

Διωρισμένων δὲ τούτων, πρῶτον θεωρητέον, πότερόν ἐστί τι γινόμενον ἁπλῶς καὶ φθειρόμενον, ἢ κυρίως μὲν οὐδὲν, ἀεὶ δ' ἔκ τινος, καὶ τι. λέγω δὲ, οἷον ἐκ κάμνοντος ὑγιαῖνον, καὶ κάμνον ἐξ ὑγιαίνοντος· ἢ μικρὸν ἐκ μεγάλου, καὶ μέγα ἐκ μικροῦ. καὶ τἆλλα πάντα τοῦτον τὸν τρόπον. Εἰ γὰρ ἁπλῶς ἔσται γένεσις, ἁπλῶς ἂν γίνοιτο ἐκ μὴ ὄντος. ὥστ' ἀληθὲς ἂν εἴη λέγειν, ὅτι ὑπάρχει τισὶ τὸ μὴ ὄν. τὶς μὲν γὰρ γένεσις ἐκ μὴ ὄντος τινός· οἷον ἐκ μὴ λευκοῦ, ἢ μὴ καλοῦ· ἡ δὲ ἁπλῆ ἐξ ἁπλῶς μὴ ὄντος. τὸ δ' ἁπλῶς ἤτοι τὸ πρῶτον σημαίνει, καθ' ἑκάστην κατηγορίαν τοῦ ὄντος· ἢ τὸ καθόλου, καὶ τὸ πάντα περιέχον, εἰ μὲν οὖν τὸ πρῶτον, οὐσίας ἔσται γένεσις ἐκ μὴ οὐσίας. ᾧ δὲ μὴ ὑπάρχει οὐσία, μηδὲ τόδε, δῆλον ὡς οὐδὲ τῶν ἄλλων οὐδεμία * κατηγορειῶν, οἷον οὔτε ποιὸν, οὔτε ποσὸν, οὔτε * τὸ πού. χωριστὰ γὰρ ἂν εἴη τὰ πάθη τῶν οὐσιῶν. εἰ δὲ, τὸ μὴ ὂν ὅλως, ἀπόφασις ἔσται καθόλου πάντων· ὥστε ἐκ μηδενὸς ἀνάγκη γίνεσθαι τὸ γινόμενον. Περὶ μὲν οὖν τούτων ἐν ἄλλοις τε διηπόρηται, καὶ διώρισται τοῖς λόγοις ἐπὶ πλεῖον· συντόμως δὲ καὶ νῦν λεκτέον, ὅτι τρόπον μέν τινα ἐκ μὴ ὄντος ἁπλῶς γίνεται, τρόπον δὲ ἄλλον, ἐξ ὄντος ἀεί. τὸ γὰρ δυνάμει ὂν, ἐντελεχείᾳ δὲ μὴ ὂν, ἀνάγκη προϋπάρχειν λεγόμενον ἀμφοτέρως. ὃ δὲ καὶ τούτων διωρισμένων, ἔχει θαυμαστὴν ἀπορίαν, πάλιν ἐπαναποδιστέον, πῶς ἐστιν ἁπλῆ γένεσις, εἴτε ἐκ δυνάμει ὄντος οὖσα, εἴτε καὶ πως ἄλλως. ἀπορήσειε γὰρ ἄν τις ἆρ' ἐστὶν οὐσίας γένεσις, καὶ τοῦ τοῦδε, ἀλλὰ μὴ τοῦ τοιοῦδε, καὶ τοῦ τοσοῦδε, καὶ τοῦ πού. τὸν αὐτὸν τρόπον καὶ περὶ φθορᾶς. εἰ γάρ τι γίνεται, δῆλον, ὡς ἔσται δυνάμει τις οὐσία, ἐντελεχείᾳ δ' οὔ, ἐξ ἧς ἡ γένεσις ἔσται, καὶ εἰς ἣν ἀνάγκη μεταβάλλειν τὸ φθειρόμενον. πότερον οὖν ὑπάρξει τι τούτῳ τῶν ἄλλων ἐντελεχείᾳ; λέγω δ' οἷον ἆρ' ἔσται ποσὸν, ἢ ποιὸν, ἢ ποῦ τὸ δυνάμει μόνον τόδε καὶ ὂν, ἁπλῶς δὲ μὴ τόδε, μηδὲ ὄν;

A ſed ſegregatio in parua & minora, & congregatio ex minoribus fit. At ſimplex perfectáque generatio, congregatione & ſegregatione definita non eſt, quemadmodum nonnullis placet: qui & eam quæ in continuo fit mutationem, alterationem eſſe aſſerunt. Verùm id ipſum eſt, in quo prorſus errant. non enim generatio ſimplex atque corruptio, congregatione ſegregationeve fit: ſed cùm ex hoc in hoc mutatio fit. Alij verò omnem eiuſmodi mutationem, alterationem eſſe putant. At in hoc diſcrimen ſubit. nam hæc ratione, illa materia, in ſubiecto exiſtit. Igitur cùm in hiſce fuerit mutatio, generatio erit vel corruptio; cùm in affectibus, & iis quæ per B accidens alicui competunt, alteratio. Sed quæ congregantur, ægrè: quæ verò ſegregantur, facilè corruptioni redduntur obnoxia. Nam ſi aqua in minores aquæ particulas ſit diſcerpta, in aërem ocyus mutari ſolet: ſi verò collecta ſit, ſegniùs. quod in luce quæ poſteriùs dicentur, apertiùs fiet. Nunc verò ſit hactenus definitum, fieri non poſſe, vt generatio ſit eiuſmodi congregatio, qualem nonnulli eſſe aſſerunt.

CAPVT III.

An ſimpliciter aliquid generetur.

C His autem determinatis pertractatiſque, primò contemplari oportet verùm ſimpliciter quippiam, an propriè nihil generetur corrumpatúrve, ſemper autem ex quodam quiddam fiat. vt ex ægro ſanum, & ex ſano ægrum: aut puſillum è magno, & magnum è puſillo. & reliqua omnia, ad hũc modum. Nam ſi generatio ſimpliciter ſit, quippiã profecto è nõ ente ſimpliciter abſolutéque fiet. Quare verum erit dicere, quibuſdam non ens competere: quippe cùm generatio quædam è quodã non ente, ceu è non albo vel non bono fiat. At ſimplex generatio è nõ ente ſimpliciter, fit. Porrò ſimpliciter abſolutéque non ens, aut id quod, ex omnibus entis prædicamẽtis primũ eſt, aut quod eſt vniuerſale, & cuncta ambit cõtinétque, ſignificat. Igitur ſi primũ, D è non ſubſtantia erit ſubſtantiæ generatio. At cui ſubſtantia non cõpetit, nec ei cæterorũ prędicamẽtorum vllũ, velvti qualitatem, quantitatẽ, aut vbi, cõpetere poſſe palàm eſt. nam alioqui affectus ipſi à ſubſtantia ſeparari poſſent. Quod ſi ita res habeat, omnino ipſum nõ ens, vniuerſaliter omniũ erit abnegatio. Quare id quod generatur, ex nihilo gignatur erit neceſſe. Sed de hiſce in aliis libris latiùs addubitatũ, ſimul atque definitũ fuit: verùm compendioſè in præſentia quoque dicamus oportet, è non ente ſimpliciter aliquo modo fieri generationẽ, & alio ex ente ſemper. nãque ens potẽtia, ſed actu nõ ens, præexiſtat eſt neceſſe. quod ſanè, vt patet, vtro- E que dicitur modo. Determinatis autẽ hiſce, id rurſum exactè diſquiramus oportet, quod mirã habet ambiguitatẽ: quónã inquã pacto generatio ſimplex ſit, ſiue ex ente potẽtia, ſiue etiã alio quouis modo fiat. Dubitauerit nãque quiſpiã verùm ſubſtãtiæ ac rei huiuſce, ſed non qualitatis, quantitatis, aut vbi, generatio ſit. eodẽ modo & de corruptione. Nam ſi quid oriatur, quandã potentia, non actu ſubſtantiã eſſe, dilucidũ eſt: ex qua fiat generatio, & in quã id mutari neceſſe ſit quod corruptionẽ ſubit. Verùm igitur ex cæteris quæ actu ſunt, quippiã huic cõpetet? verùm inquã id quod potentia dũtaxat hoc aliquid atque ens eſt, ſimpliciter autẽ neque hoc aliquid neque ens, quãtitas erit, aut qualitas, aut vbi?

nam ſi actu nihil ſit, ſed omnia potentia, eueniet & id quod ita eſt nō ens, eſſe ſeparabile, & inſuper (id quod ſemper maximè ſunt veriti, qui primi in Philoſophia verſati ſunt) nihilo præexiſtente quippiam gigni. Quod ſi verum non ſit, hoc quidem ſubſtantiam & hoc aliquid eſſe, ſed è cæteris prædicamentis aliquid, continget (vt iā diximus) affectus ipſos à ſubſtantiis poſſe ſeparari. De hiſce igitur quo ad fieri poteſt, & quænam ſit cauſa cur generatio tam quæ ſimpliciter quàm quæ ſecundum partem fit, ſemper ſit, diſſerendum eſt. Sed cùm vna quidem cauſa ſit vnde motus eſſe principium dicimus, altera verò ipſa materies, de tali cauſa dicamus oportet. Nam de illa quidem priùs eſt dictum, cùm de motu ageremus: eſſe inquam aliud quod omni tempore perdurat immobile, & aliud quod in motu ſemper eſt. Sed de principio illo quod mutationi non eſt obnoxium, primæ philoſophiæ eſt determinare ac pertractare. At de eo quod cætera iccirco mouet, quia continuè moueatur: quidnam eorum quæ ſingularia vocantur eiuſmodi cauſa ſit, poſteriùs erit aſſignandum. Nunc autem eam quæ velut in materiæ ſpecie ſita eſt cauſam, per quam generatio & corruptio nunquam natura deficiūt, dicamus oportet. Nam ſimul forſitan & hoc emerget, & id quo de nuper dubitauimus: quónam inquam pacto de generatione & corruptione ſimplici dicere conueniat. Inueliit autem & id quoque magnum abunde dubium, quænam cauſa ſit vt generatio generationi ſemper cohæreat, & altera altera ſubinde ſequatur: ſi quidem quod corruptionem ſubit, ad id proficiſcitur quod nequaquam in ratione rerum exiſtit: quod autem in ratione rerum exiſtit, nihil eſt. Nam quod haud eſt, neque ſubſtantia eſt, neque qualitas, neque quantitas, neque vbi. Igitur ſi ſemper quippiam eorum quæ ſunt in ratione rerum abeat, cur non dudum vniuerſum ipſum conſumptum fuit atque inane euaſit: cùm id ex quo fit genitorum quodque finitū ſit? non enim propterea quòd id ex quo quid fit, infinitum ſit, non deficit. id enim eſſe nequit. nihil enim actu infinitum eſt, ſed potentia tantùm, nempe diuiſione ipſa. Quare hāc ſolam cauſam eſſe oportebat, cur numquam deficiat: quia ſemper quippiam fiat minus. nunc autem hoc fieri minimè cernimus. Ergo propterea quòd interitus huius alterius eſt ortus: & contrà ortus huius, alterius interitus: neceſſariò accidit vt mutatio irrequieta ſit, & ſubſiſtere nequeat. Cur igitur generatio & corruptio ſimiliter, ſemper ſit circa vnumquodque eorum quæ ſunt, hanc apud omnes cauſam ſatis eſſe putandum eſt. Sed quamobrem alia ſimpliciter, alia non ſimpliciter oriri ac interire dicantur, rurſum conſideremus oportet: ſiquidem idē eſt generatio huius & illius corruptio, atque huius corruptio & illius generatio. Id enim quandam poſtulat rationem. Dicimus enim quippiam ſimpliciter nūc, & non ſolùm hocce, corrumpi. atque hæc generatio, generatio ſimpliciter: & hæc corruptio, corruptio ſimpliciter eſt. Fit autem & hocce quidem aliquid, nō autem ſimpliciter: etenim eum qui diſcit, ſcientem fieri dicimus, non autē ſimpliciter fieri. Quia igitur quædam (id quod definiendo ſæpe diximus) hoc aliquid ſignificant, quædam, non: hac ſanè de cauſa, quod in quæſtione verſatur, euenit. Refert enim haud parum, in quod mutetur id quod mutationem ſubit. verbi cauſa, quæ ad ignem fit tranſitio, ea forſitan generatio ſimplex eſt, & alicuius, ceu terræ, corruptio. At terræ generatio, generatio quædam eſt: cæterùm generatio ſimpliciter non eſt, ſed corruptio ſimpliciter, puta ignis. ſicuti Parmenides aſſerit, qui duo, ens inquam & non ens, ignem & terram eſſe dicit.

A Verùm hæc an alia eiuſmodi ſupponantur, intereſt nihil, quandoquidem modum quærimus, non ſubiectum. Quæ igitur ad non ens ſimpliciter fit migratio, corruptio ſimplex eſt. Quæ verò ad ens ſimpliciter, ſimplex generatio. Quibus igitur illæ, ſiue igni & terra, ſiue quibuſdam aliis definitæ ſunt: horum profectò alterum ens, alterum non ens erit. Vno igitur modo ſimpliciter quippiam generari ac corrumpi, & non ſimpliciter, hoc inter ſe differunt. Altero, materiæ qualitate conditionéve. Cuius enim differentiæ potiùs hoc aliquid ſignificant, ea magis ſubſtantia eſt. Contra, cuius differentiæ priuationem magis ſignificant, ea magis non ens eſt. Vt calor prædicamentum quoddam & ſpecies eſt: B frigiditas, priuatio: his autem differentiis, ignis & terra differunt. At pleriſque videtur, illa potiùs ſenſibili & inſenſibili differre. Nam cùm ad ſenſibilem materiam mutatio fit, tum gigni quippiam aiunt: cùm ad eam quæ ſub ſenſum non cadit, corrumpi. Quandoquidem ens & non ens, ſentiendo & non ſentiendo definiunt. quemadmodum quod ſcibile eſt, ens eſſe aſſerunt: quod ſciri non ſolet, non ens, quippe cùm ſenſus ipſe, ſcientiæ vim obtineat. Igitur hi veres ipſas viuere, quia ſentiant aut ſentire poſſint: itá eadem eſſe, quia ſub ſenſum cadant, arbitrantur: veritatem modo quodam ſectantes, ſed hoc falſi dicentes. Itaque generari quippiam C ſimpliciter, atque corrumpi, iuxta opinionem alio atque veritatem accidit modo. Nam ſpiritus & aër, ſenſu quidem minus ſunt. & proinde illi, quæ ſimpliciter corrumpuntur, mutatione ad illa tendente corrumpi dicunt: atque generari, cùm in rem tangibilem terrámque mutantur. Reuera verò hoc aliquid, & ſpecies, magis ſunt quàm ipſa terra. Cur igitur ſit aut non ſit ſimplex generatio, quæ eadem alicuius corruptio eſt, & corruptio ſimplex quæ itidem generatio alicuius eſt, cauſam diximus. Nam id ob materiæ diſcrimen euenit: nempe aut quòd ea ſubſtantia ſit, vel non ſit: aut quòd hæc magis, illa minùs: & non, quia materia ex qua mutatio venit, & ad quam proficiſcitur, alia magis, alia minùs D ſenſu percipi queat. Dicuntur autem quædam ſimpliciter, quædam ſolùm aliquid fieri: non ob mutuam generationem, ſed iuxta eum quem nuper diximus modum. Nam hoc tantùm nuper definitũ determinatúmq; fuit, curná cùm omnis generatio ſit alterius corruptio, & omnis corruptio cuiuſpiam alius generatio, tam oriri quàm interire nõ ſimiliter tribuamus hiſce quæ in ſeſe viciſſim mutari ſolent. At quod poſtremo loco fuit dictum, hoc idem minimè in quæſtionem reuocat: ſed quam ob rem quod diſcit, non ſimpliciter fieri, ſed fieri ſciens: quod verò naſcitur, fieri dicatur. Hæc autem prædicamentis diſtincta ſunt. Nam alia ſubſtantiam, E alia qualitatem, alia quantitatem, ſignificant. Quæcumque igitur ſubſtantiam non ſignificant, ea non ſimpliciter ſed quippiam fieri dicuntur. Verumenimvero in omnibus generatio ſimpliciter, iuxta ea quæ in altera ſunt ſerie, dicitur. vt in ſubſtantia, ſi ignis ſtat, ſed non ſi terra: & in qualitate, ſi ſcium, ſed non ſi inſcium. Quòd igitur quædam ſimpliciter oriantur, quædam non, etiam omnino in ipſis ſubſtantiis, dictum eſt: & quòd vt generatio continuè ſit, cauſa vt materia id quod ſubiicitur eſt, quia in contraria mutatiuum eſt, atque in ſubſtantiis ſemper vnius generatio, alterius eſt corruptio: & vnius corruptio, generatio alterius. at verò nec dubitaſſe conuenit, quam ob cauſam corruptis quibuſdam ſemper generatio fiat. Nam vt corrumpi ſimpliciter quippiam dicunt, cùm illud ad inſenſibile & id quod haud eſt, proficiſcitur: ſic & ortum ſubire ex eo quod haud eſt, cùm ex inſenſibili fit.

Siúe igitur ſubiecto quopiam exiſtente, ſiue non: ex eo fit quod haud eſt. Quare ſimili modo & ex eo quod haud eſt, generatur, & in id quod haud eſt, corrumpitur. Meritò igitur generatio non deficit: quippe cũ generatio, corruptio ſit eius quod haud eſt: atque corruptio, generatio eius quod haud eſt. Sed quæret aliquis, vtrùm hoc ipſum quod ſimpliciter non eſt, è contrariis ſit alterum? verbi cauſa: vtrùm non ens ſit terra, & id quod graue eſt; ens verò ignis & quod leue eſt: an non: ſed ens terra, non ens verò terræ materies atque ignis ſimiliter? Et vtrùm materies vtriuſque diuerſa ſit: an nec ex ſeſe mutuò fierent, nec ex contrariis: nam hiſce, igni, inquam, terræ, aquæ & aëri, contraria inſunt. An partim eſt eadem, partim diuerſa? quod enim aliquando cùm ſit, ſubiici ſolet, eſt idem: at ratio, non item eadem eſt. Sed de hiſce hactenus.

CAPVT IV.

Generationem & alterationem transformatione ꝫ eſſe diuerſas.

DE generatione autem atque alteratione, quo inter ſe diſcrepent, agendum: nam haſce mutationes inter ſeſe diuerſas eſſe dicimus. Cùm igitur ſubiectum quippiam ſit, & affectio atque qualitas quæ de ſubiecto nata eſt dici, ab eodem diuerſa ſit, ſitque vtriuſque horum mutatio: alteratio ſanè eſt, quando ſenſibile ſubiectum permanens, in ſuis mutatur affectibus, qui aut contrarij, aut inter contrarios medij ſunt, ſicuti corpus idem permanens viciſſim modò ſanum, modò ægrum eſt, atque æs, quanquam idem, aliàs teres atque rotundum eſt, aliàs anguli ſpeciem præ ſe fert. at cùm totum mutatur, nec ſenſibile quicquam vt ſubiectum, idem permanet, ſed perinde euenit vt cùm ex toto ſemine ſanguis, aut ex tota aqua aër, aut ex aëre toto aqua fit: iam quod eſt tale generatio huius eſt, & illius corruptio. Et maximè, ſi ex inſenſibili ad id quod aut tactu aut ſenſibus vniuerſis ſenſibile eſt, mutatio fiat, aut contrà, vt cùm ex aëre gignitur aqua, aut eadem in aërem corrumpitur: etenim aër propemodum inſenſibilis eſt. Cæterùm in hiſce ſi qua è contrarietate affectio eadem remaneat in eo quod ortum eſt, quæ priùs in eo quod interiit, erat: ceu ſi cùm ex aëre fit aqua, aëris perſpicuitas aut frigus in aqua, remaneat: affectionum alterutram eius eſſe in quod mutatio fiat, minimè oportet. Sin minùs, erit alteratio: verbi cauſa, muſicus homo corrumpitur, & homo non muſicus gignitur: homo verò, idem perſeuerat. Si ergo muſica, atque muſicę vacuitas non eſſet affectio per ſe hominis, generatio profectò foret alterius, & alterius corruptio. Quapropter hæc hominis quidem affectiones ſunt: hominis verò muſici, hominiſque non muſici, generatio atque corruptio. Nunc autem id eius quod permanet, affectus eſt. Proinde circa ea quæ eiuſmodi ſunt, alteratio exiſtit. Cùm igitur contrarietatis mutatio in quantitate eſt, accretio eſt atque decretio: cùm in loco, latio: cùm in affectu atque qualitate, alteratio. at cùm id non remanet, in quo affectuum alter aut omnino accidens exiſtit: tum generatio vnius eſt, & alius corruptio. Porrò ſubiectum ortus & interitus ſuſceptiuum, maximè quidem ac propriè materies eſt. quodam autem modo & id quoque quod cæteris aliis mutationibus ſubiici ſolet, propterea quòd ſubiecta omnia, quarundam cõtrarietatum ſuſceptiua ſunt. De generatione igitur ac corruptione, ſitne an non, & quo pacto ſit: item de alteratione, hoc modo ſit definitum atque determinatum.

CAPVT V.

An à cæteris motibus differat augmentatio.

REſtat de accretione dicamus, quónam à generatione & alteratione differat, & quo pacto vnumquodque eorum quæ ſuſcipiunt incrementum, augeatur, & quoduis eorum quæ decreſcunt, diminuatur. Primo itaque conſiderare oportet, vtrùm mutua earum inter ſe differentia in eo ſolùm ſita ſit, circa quod verſari ſolent: verbi gratia: vtrùm eo ſolùm inter ſe diſſideant, quòd ea mutatio quæ ex hoc in hoc tendit, puta ex ſubſtantia potentia, in ſubſtantiam actu, generatio ſit: quæ verò circa magnitudinem verſatur, accretio & decretio: quæ autem circa affectum, alteratio: atque earum quæ poſteriore loco dictæ ſunt, vtraque etiam ex hiſçe quę potentia ſunt, ad ea quæ ſunt actu, mutatio ſit, an etiam mutationis modus differat? Nam nec id quod alterationem ſubit, nec id quod generatur, neceſſariò mutari loco cernitur: quod autẽ accreſcit aut decreſcit, cernitur: at alio quàm quod fertur modo. quod enim fertur tota mole, locum mutat: quod autẽ accreſcit, perinde atque quod diſtẽdi producique ſolet. Hoc enim manente, partes aliò, non ſicuti globi partes, migrant, ſuúmque deſerunt locum. nam globi partes toto manente æquali in loco, locum ex loco mutãt: at partes eorũ quæ augentur, ſemper in ampliorem locum vergere ſolent: & eorum quæ decreſcunt, in minorem. Generationem igitur, alterationémque & accretionem, non ſolùm obiecto, ſed ipſo item mutationis modo differre perſpicuum eſt. Ad id autem circa quod accretio decretióve verſari ſolet (verſari autem videtur circa magnitudinem) vtro modo accretionem decretionémve ſubire exiſtimandũ eſt? vtrùm inquam ex potentia quidem magnitudine ac corpore, ſed actu nec corpore nec magnitudine, corpus fieri an non putandũ eſt? Atque cùm hoc bifariàm dici contingat, vtro modo fit accretio? vtrùm ex ſeparata ipſa per ſe materia: an exiſtente in alio corpore, an neutro modo fieri queat? Nam ſi ſeparata ſit, aut nullum occupabit locum, velut punctus quidam aut vacuum, vel corpus non ſenſibile erit. Horum autem alterum non contingit, alterum neceſſe eſt in aliquo eſſe. quod enim ex eo oritur, id ſemper alicubi erit: quare & illud aut per ſe aut per accidens. At verò ſi ſit in aliquo, & ita quidem ſeiunctum ſit vt nihil illius aut per ſe aut per accidens ſit, multa profectò vel quæ fieri nequeant, euenient. Dico autem, vt ſi ex aqua fiat aër: idem non erit, aqua mutationem ſubeunte, ſed quia in aqua vt in vaſe materies eius eſt. Nihil enim vetat, infinitas eſſe materias: quare & actu fieri. adde quod nec ita aër ex aqua oriri videtur, vt permanente aqua, aër inde egrediatur. Satius igitur fuerit, inſeparabilem omnibus materiam tribuere: vt pote quæ vna numero eadémque ſit, ratione non vna. at verò nec puncta, nec lineas, corporis materiam ponere iiſdem de cauſis oportet. ſed cuius vltima ſunt hæc, id materies eſt: quæ nec ſine affectu vnquam, nec ſine forma eſſe poteſt. Gignitur igitur abſolutè aliud ex alio: id quod alio quoque loco iam definitum eſt. atque ab aliquo actu exiſtente, quod eiuſdem ſit aut generis aut ſpeciei: vt ignis ab igni, aut ab homine homo. aut ab actu: durum enim à non duro fit. Cùm autem & corporeæ ſubſtantiæ materies ſit corporis iam talis,

(nullum enim eſt cõmune corpus) eadem & à magnitudine & ab affectu, ratione quidẽ non itẽ loco ſeparabilis eſt, niſi & ipſi quoque affectus ſeparabiles ſint. Patet igitur ex his quæ addubitauimus, accretionem non eſſe mutationem, è potentia quidem magnitudine, actu verò nullam habente magnitudinem. quandoquidem quod commune eſt, ſeparabile eſſet. hoc autem eſſe non poſſe, dictum iam eſt. Præterea talis mutatio, accretionis propria non eſt, ſed generationis. Nam accretio, magnitudinis quæ in quopiã ineſt, augmẽtatio eſt. decretio verò, eiuſdem diminutio. Quamobrem id quod accreſcit, magnitudinem quandam habeat oportet. Proinde nequaquam conuenit, accretionem è materia quæ magnitudinis ſit expers, ad actum magnitudinis eſſe: potiùs enim eſſet generatio corporis, non accretio. Potiùs itaque ſumamus oportet, quaſi tractantes ab initio quæſtionem, qualis accretio decretióve, cuius cauſas quærimus, exiſtat. Igitur eius quod accrementum ſuſcipit, pars quæuis augeri videtur; atque pari modo in decretione, minor euadere. præterea accedente quopiam accreſcere, & abeunte decreſcere. Itaque aut incorporeo aut corpore augeri illud neceſſe eſt. Si igitur incorporeo, quod commune eſt, ſeparabile erit. At à magnitudine materiam eſſe ſeparabilem, quemadmodum priùs eſt dictum, impoſſibile eſt. Sin verò corpore, duo corpora, id inquã quod augetur, & quod auget, in eodem erunt loco, quod etiam fieri nequit. At verò nec accretionem decretionémve perinde fieri, atque cùm ex aqua fit aër (tunc enim moles fieri maior aſſolet) dicere contingit. non enim id accretio, ſed eius quidem in quod mutatio fit, generatio, contrarij verò corruptio erit: neutrius autem accretio: immo aut nullius: aut ſi quid vtriſque, ei inquam quod oritur & ei quod interit, commune eſt, velvti corpus eius erit. Et nec aqua nec aër accreſcit, verùm illa interit, hic oritur: ſed corpus, ſi quid augeatur. at hoc quoque fieri nequit. Nam ea ſeruare oportet, quæ ei quod accreſcit, decreſcitve, ratione competunt. Hæc autem tria ſunt: quorum primum eſt, magnitudinis quæ accreſcit, partem quamlibet maiorem effici: verbi gratia, ſi caro, carnis. alterum, accedente quopiam: tertium, ſeruato pariter atque manente eo quod accretionem ſubit. Nam cùm quippiam ſimpliciter abſoluteque gignitur aut interit, non permanet. At cùm alteratur, aut accreſcit decreſcitve: quod alteratur aut incrementa ſuſcipit, id permanet. verùm illic affectio, hîc magnitudo eadem non manet. Quòd ſi mutatio illa quam diximus, eſſet accretio: contingeret profectò quippiam nulla re accedente permanentéve accreſcere, nullâque abeunte decreſcere, & id non manere quod ſuſcipit accretionem. At hoc ſeruare oportet: quippe cùm accretio talis eſſe ſupponatur. Sed quæret aliquis, quid eſt quod accreſcit, vtrùm id cui nonnihil additur? verbi cauſa: ſi quid crus augeat, crúſne maius euadit, quod autem incrementum præſtat, ipſum inquam alimentum, minime? Sed cur non ambo incrementa ſuſcipiunt? Nam tam quod additur, quàm cui additio fit, maius reddi aſſolet: haud ſecus atque cùm aquæ vinum miſcueris: pari enim ratione vtrũque maius eſt. An quia huius ſubſtantia maneat: illius verò, puta cibi, haudquaquam? Quando & illic quoque quod euincit ac ſuperat, in ipſa miſtione augeri dicitur, ceu vinum. Nam vniuerſa mixtura, vini non aquæ functionem exercet. In alteratione quoque ſimiliter, ſi caro & ſubſtantia ipſa maneat: eorum verò affectuum qui per ſe competunt, quiſpiam inſit, qui priùs non inerat, hoc ſane alteratum eſt.

A Id autem quod alteratum eſt, interdum nihil patitur, interdum & illud quoque pati ſolet. Verùm quod alterat, atque motus principium, in eo eſt quod alteratur, & eo quod accreſcit. quod enim mouet, in hiſce eſt. Quandoquidem & quod ingeri ſolet, fieri aliquãdo maius poteſt, & corpus quod eo fruitur: vt ſi quod ingeritur, ſpiritus fiat. Verùm cùm hoc patitur, corrumpi ſolet, nec in eo eſt id quod mouendi vim obtinet. Cùm autem de hiſce ſit abundè addubitatum, dubitationis ſolutionem inuenire enitamur oportet, illud ſeruantes, permanente inquam eo quod augetur, atque adueniente aliquo, fieri accretionem, & abeũte, decretionem. B & inſuper, quodvis ſenſibile ſignum maius minúſve reddi, & neque corpus eſſe inane, neque eodem in loco duas eſſe magnitudines, neque incorporea re quicquã augeri. Sumenda autem erit cauſa vno quidem priùs à nobis definito: diſſimilaria inquam augeri, cùm ſimilaria accreſcũt. ex his enim quodque componitur. Deinde carnem, & os, & id genus partium quanque, perinde atque cæterarum quæ formam habẽnt in materia, duplicem eſſe. nam materies atque forma, caro dicitur aut os. Partem igitur quamlibet augeri, & accedente aliquo ſecundùm formam quidem, eſt poſſibile: at ſecundùm materiam, haudquaquam. Intelligere autem perinde oportet, atque ſi quis aquam menſura eaC dem metiatur. quod enim fit, aliud atque aliud ſemper eſt. Ad hunc itaque modum & carnis materies augetur: & non cuiuis parti eius quippiam additur, ſed alia dilabitur, alia accedit. At cuiuis figuræ ac formæ parti, fit acceſſio. Id autem magis conſtat in hiſce quæ diſſimilium ſunt partium, vt in manu, quòd iuxta proportionis rationem aucta ſit. quandoquidem materies cùm diuerſa eſt, faciliùs dignoſcitur hic quàm in carne, & hiſce quæ ſimilium ſunt partium. Iccirco & cùm mortuum eſt quippiam, magis adhuc caro & os quàm manus & brachiũ eſſe videtur. Quare partim augetur carnis quælibet particula, partim non augetur. Nam ſeD cundùm formam quidem, cuiuis parti quippiã adiungitur: ſecundũ materiam verò, haudquaquam. Totum tamen maius euadit, accedente quopiam, quod nutrimentum, atque contrarium, nominatur, & in eandem formam tranſeunte. vt ſi humidum ſicco accedat: & cùm iam acceſſerit, mutationem ſubeat, fiàtque ſiccum. Nam partim ſimile ſimili, partim diſſimile diſſimili accreſcit. Dubitauerit autem quiſpiam, quale id eſſe oporteat quo quid augetur. Palàm itaque eſt hoc, potentia illa quod augetur eſſe oportere. vt ſi caro accretionẽ ſubeat, id quo illa accreſcit, potentia carnem eſſe, actu autem aliud. quod ſanè vbi corrumpitur, caro fieri ſolet. Non igitur ipſum per ſe, ſolúmque eſt (nam E alioqui generatio eſſet, non accretio) ſed id quod augetur, cum eo eſt. Qualiter igitur hoc affecto, illud augeri ſolet, an miſtũ, haud ſecus atque ſi quis vino aquam infundat, & idem id quod admixtum eſt, efficere vinum poſſit? An ſicut ignis tactũ cremabile adurit, ſic & id cui augendi facultas delegata eſt, in eo exiſtens quod accreſcit, quódque actu caro eſt, quod acceſſit è potentia carne, actu carnem facere conſueuit? Illo igitur ſimul exiſtente, idipſum accidit. quoniam ſi ſeorſum eſſet, generatio ſanè foret. Nam ignem ad hunc facere modum contingit, videlicet iniectis in eum qui iam eſt lignis. Verùm ita quidem, accretio eſt: at cùm ligna ipſa incenduntur, generatio. Quantitas autem vniuerſalis nulla fit, ſicuti nec animal, quòd nec homo ſit, nec ſingularium aliquod. ſed vt hic vniuerſale, ſic & illic quantitas. Caro igitur & os & neruus & ſimilares partes, accedente quidem quanto aliquo,

ſed non carne quanta augeſcunt. Quo igitur potentia ſimul vtrunque exiſtit, videlicet caro quanta: hoc quidem auget. nam carnem quantam fieri oportet. Quo verò ſolùm caro, hoc alit. hoc enim nútritio & accretio ratione differunt. Quocirca quamdiu ſaluum manet animal, etiam ſi decretionem ſubeat, alitur: ſed non ſemper accreſcit. Atque nutritio idem quod accretio exiſtit: ratio tamen eſt diuerſa. Quo enim id quod adiungitur atque additur, potentia caro quanta eſt, hoc carnem augere poteſt: quo verò caro potentia ſolùm, hoc nutrire. Hoc autem forma ſine materia eſt: vt tibia, potentia quædam in materia eſt: ſimiliter & quoduis aliud inſtrumentum. Quòd ſi materies aliqua accedat, quæ potentia ſit tibia, & potentia quantitatem habeat: hæ tibiæ maiores euadent. Sin verò nihil preterea agere poſſit, ſed res perinde habeat vt cùm vino ſubinde plus aquæ immiſcetur, quæ tandem vinũ aqueum reddit, facitq; aquã: tum quantitatis decretio fit, forma autẽ remanet.

CAPVT VI.

De agere & pati, deque tactu.

CVm autem de materia, & hiſce quæ nuncupantur elementa, primò dicere oporteat, an ſint necne: & vtrùm vnumquodque eorum ſempiternum ſit, an ortum ſubeat aliquo pacto: & ſi generentur, vtrùm ex ſeſe mutuo generentur eodem modo omnia, an inter ipſa vnum aliquod primum ſit: priùs vtique de hiſce diſſeramus neceſſe eſt, de quibus nũc dicitur indefinite. Omnes enim, tã qui elementa ipſa, quàm qui ea quæ conſtant ex elemẽtis, generant, ſegregatione & congregatione, atque actione & paſſione vtuntur. Eſt autẽ congregatio, miſtio. Sed quónam pacto quippiã miſceri dicatur, planè ac dilucidè haud quaquam eſt definitum. At verò nec alterari quicquam, nec ſegregari congregarive, nullo patiente aut agẽte, poteſt. Etenim qui plura faciunt elementa, actione & paſſione mutua generationem fieri cẽſent. quanquam ex vno facta omnia dicant neceſſe eſt. atque hoc rectè quidem dicit Diogenes, niſi ex vno eſſent omnia, non poſſe viciſſim agere & pati: ceu calidum frigefieri, & idẽ rurſum calefieri. nõ enim calor & frigus in ſeſe mutuò tranſeunt, ſed ipſum (vt patet) ſubiectum mutationem ſuſcipit. Quare horũ quibus actio competit, vnam eſſe ſubiectam materiam neceſſe eſt. Dicere igitur vniuerſa eſſe eiuſmodi, non eſt verum: ſed ea quibus mutuò à ſeſe pati & agere inſitũ eſt. at verò ſi de actione paſſioneve, & de miſtione contemplãdum ſit, & de tactu ſpeculemur eſt neceſſe. Nam neque agere & pati ea poſsũt propriè, quæ ſe mutuò tangere nequeunt: neque fieri poteſt vt miſceantur, quæ non quodẽmodo ſeſe tangunt priùs. Quare de hiſce tribus, videlicet quid tactus, quid miſtio, & denique quid actio, determinandum videtur. Hinc autem ſumatur initium. Nam ex entibus ea quibus miſtio competit, eſſe apta vt ſeſe mutuò tangant, eſt neceſſe. atque ſi quid agat & aliud patiatur propriè, ſimili itidem modo atque illa afficientur. Quocirca de tactu priùs dicendum eſt. Ferè igitur vt & cætera quæque alia nomina pluribus dicuntur modis, & partim vniuocè, partim altera ab alteris prioribúſque: ſic & de tactu quoque res ſeſe habet. Sed tamen quod propriè dicitur, ad ea accommodari ſolet quæ ſitum habẽt. Situs autem hiſce, quibus & locus competit. etenim perinde, vt Mathematici, de tactu & loco reddam⁹ oportet, ſiue eorũ quodq; ſeparatũ ſit, ſiue alio modo habeat.

A Si ergo tangere ſit, quemadmodum antea eſt definitum, extrema ſimul eſſe: ea profectò ſe mutuò tangent, quæ cùm diſcretas magnitudines ſitúmque habeant, extrema ſimul habent. Porro cùm ſitus omnibus quibus & locus competat: atque ſuprà & infrà & id genus oppoſita, prima loci differentia ſint: omnia ſanè quæ ſeſe mutuò tangunt, pondus leuitatémque, aut vtraque aut alterum habebunt: quæ autem talia ſunt, actiua ſunt & paſſiua. Vnde conſtat, ea ſuapte natura mutuo ſeſe tangere, quorum cùm viciſſim mobilia ſint atque motiua, diſcretis ſeparatiſque magnitudinibus extrema ſunt ſimul. Cæterùm cùm id quod mouet, nequaquam ſimiliter id moueat quod motũ ſubit,
B ſed neceſſe ſit vt idem aliud moueat motum & ipſum, aliud immobile perſiſtens: haud aliter de ipſo quoque agente dicendum eſſe in aperto eſt. Nam id quod mouet, agere quippiam: & contrà quod agit, mouere dicunt. Verùm differentiam ſubeunt: & proinde ea diſtinguamus oportet. Non enim fieri poteſt vt quoduis mouens agat ſi patienti agens opponamus. patiens autem ſit, cui motus ſecundùm affectum competit, affectus verò, ſecundùm quem ſolum alteratio fit: vt albedo & color. Sed mouere latiùs quàm agere patet. Illud igitur palam eſt, ea inquam quæ mouent, partim mobilia tangere, partim minimè. Verùm ea tangere vniuerſaliter definiuntur, quæ ſitum habent, &
C quorum alterum motiuum eſt, alterum mobile, idque viciſſim, quibus agere atque pati competit. Magna igitur ex parte id quod tangitur, id tangit à quo tangi ſolet. Etenim omnia ferè quæ apud nos ſunt cùm mouentur, mouent: per quæ eſſe neceſſe videtur, vt id quod tangitur, id tangat à quo tangi ſolet. Interdum autem dicimus mouens, ſolum tangere id quod motu cietur: & contrà quod tangitur, id non tangere à quo tangitur. Verùm quia quæ eiuſdem ſunt generis, cùm motum ſubeunt, mouent: vt quod tangitur, tangat, neceſſarium eſſe videtur. Quare ſi quid motus expers moueat, id profectò tanget mobile, nihil autem illud. Interdum enim dicimus eum qui nos moleſtia af-
D ficit, tangere nos, non nos illum. De tactu igitur rerum naturalium, hoc pacto determinatum ſit.

CAPVT VII.

De elementorum actione & paſſione opiniones diuerſæ.

DEinceps de actione & paſſione dicendum eſt, cùm de hiſce ſententias inter ſeſe ſubcontrarias à maioribus noſtris acceperimus. Plurimi enim vno ore hoc aſtruunt, à ſimili inquam ſimile nullum pati: quod neutrum altero potius actiuum ſit, aut paſſiuum, quippe cùm eadem omnia, ſimilibus ſimiliter inſint. At quæ diſſimilia differentiáque ſunt, ea mutuò agant patian-
E túrque, aptiſſima eſſe aſſerunt. Nam cùm minor ignis à maiori corrumpitur, ob contrarietatem illum id ipſum pati inquiunt. dicunt enim, multum pauco eſſe contrarium. Democritus verò, ſolus præ cæteris peculiariter dixit. Nam agens & patiens, idem ac ſimile eſſe aſſerit: non enim fieri poſſe arbitratur, vt differentia atque diuerſa à ſeſe viciſſim patiantur. Sed & ſi quæ diuerſa ſunt, quippiam in ſeſe mutuò agant: hoc illis euenire, non quo diuerſa ſunt, ſed quo idem quippiam habent. Quæ igitur dicuntur, talia ſunt.

Qui autem hoc pacto dicunt, ſubcontraria dicere videntur. Contradictionis verò cauſa eſt hæc: nam cùm totum quippiam contemplari oporteat, de parte quadam loquuntur vtrique. Nam quod ſimile eſt, & omni ex parte nullam prorſus habet differentiam, nihil à ſimili pati, rationi conſentaneum eſt. Cur enim potius alterum altero erit paſſiuum? Item ſi fieri queat vt quippiã patiatur à ſimili, illud quoq; à ſe pati poterit. Atqui his ad hunc modum ſeſe habentibus, nihil aut corruptibile aut mutationis expers fuerit, ſi quidem ſimile quatenus ſimile exiſtit, actiuum ſit. Nam corpus omne, ſeſe interno proprióque motu mouebit. Et quod prorſus B diuerſum & nullatenus idẽ eſt, ſimiliter: nam neq, albedo à linea, neque linea ab albedine quicquam patietur, niſi fortè per accidens: ceu ſi lineã eſſe albam aut nigram acciderit. Non enim ea quæ neq; contraria ſunt, neque ex contrariis conſtant, ſeſe extrudũt propelluntq; à natura. At cùm non quoduis agere ac pati natum ſit, ſed quæ aut contraria ſunt, aut habent contrarietatẽ: tam agẽs quam patiens genere quidem ſimile ac idẽ, ſed ſpecie diſſimile atque cõtrarium eſſe eſt neceſſe. Nam corpus à corpore, & ſapor à ſapore, & color à colore: & in ſumma quod eiuſdem eſt generis, ab eo quod eiuſdem itidem generis eſt, pati aptum eſt. Cuius cauſa C eſt, quòd contraria in eodem genere ſunt omnia. Contraria verò, inter ſeſe viciſſim agunt patiunturque. Quare & agens & patiens partim eadem ſint, partim diuerſa, atque inter ſeſe diſſimilia, neceſſe eſt. Cùm autem agens & patiens genere quidem eadem ſimiliaque ſint, ſpecie autem diſſimilia, contraria verò ſint eiuſmodi: tum contraria tum quæ inter ea media ſunt, inter ſe mutuo actiua & paſſiua eſſe conſtat. Etenim omnino generatio atque corruptio in hiſce conſiſtunt. Quamobrem & ignẽ calfacere, & frigidum frigefacere, & omnino actiuum id quod patitur ſibi ſimile reddere, iam rationi conſentaneum exiſtit. nam agens & patiens contraria ſunt: & generatio, in contrarium tendit. D Quare neceſſe eſt vt patiens in id mutetur, quod agendi vim obtinet. hoc enim pacto, in contrarium erit generatio. Itaque tametſi verbo tenus eadem non dicunt, vtroſque tamen naturam ipſam attingere contingit. Dicimus enim interdum ſubiectum ipſum pati, vt hominem ſanari & calefieri ac frigefieri, & cætera ad hunc modum, interdum verò frigidum calefieri, & ægrum ſanari. atque vtraque vera ſunt. Eodem modo & de agente dici ſolet. nam interdum hominem, interdum calidum, calfacere dicimus. Partim enim materies ipſa patitur, partim contrarium. Igitur qui ad illam reſpexerunt, agens & patiens quippiam idem habere E oportere putarunt, qui ad alterũ, contra. Cæterùm haud aliam eſſe rationẽ de ipſo agere ac pati, quam de ipſo mouere ac moueri, exiſtimandum eſt. Etenim ipſum quoque mouens, bifariam dicitur. Nã & id in quo motus principium ineſt, mouere videtur: quippe cùm principium prima cauſarum ſit: & rurſum quod vltimum eſt, ad id quod mouetur, & generationem. Simili modo de ipſo agente eſt dicendum. Nam & medicũ & vinũ, ſanare dicimus. Nihil igitur vetat in motu, quominus primum mouens immobile ſit. immo in nonnullis etiã neceſſarium exiſtit, at vltimum ſemper ſubeundo motum, moueat neceſſe eſt. In actione autem, ipſum quidẽ primum nihil patitur, vltimum verò patitur. Quæ cùm eandem materiam non habẽt, ea circa paſſionem agunt: ceu medendi ars. hæc enim ſanitatẽ efficit,

& nihil ab eo patitur quod ſanari ſolet. At cibus dum agit, ipſe quoque quippiam patitur. aut enim caleſit, aut frigeſit, aut aliud quippiam patitur, & ſimul agit. Eſt autem medendi ars, veluti principiū: cibus verò, vltimum ac tangens. Quæcūque igitur actiua, in materia formam non habent, ea pati nequeunt: quæcunque habent, queunt. Nos enim ſimiliter propè dixerim omnes oppoſitorum vtriuſvis eandem eſſe materiam, ſicuti genus vnum, dicimus. Atque quod calidum eſſe poteſt, id propius admoto præſentéque calefactiuo incaleſcat neceſſe eſt. Iccirco, ſicuti diximus, ex iis quæ agendi vim habent, quædam pati non ſolent, quædam pati ſolent. Atque quo modo in motione res ſeſe habet, ſic & in actione. Nam vt illic quod primo mouet, motus expers eſt: ita & hic quod primo agit, pati nequit. Nam cauſa, vt vnde principium motus exiſtit, actiua eſt. Cuius autem gratia cætera fiunt, actiua non eſt. Quapropter ſanitas ipſa non eſt actiua, niſi per tranſlationem. Etenim cùm ea, aliquo quidem agente, adeſt: patiens fit quippiam. ſed cùm habitus ipſi adſunt, nihil præterea fit, ſed iam eſt. formæ autem atque fines habitus quidam ſunt. At materies, vt materies, paſſiua eſt. Igitur ignis, in materia calorem habet. Quòd ſi calor ſeparabile quippiam eſſet is nimirum pateretur nihil. Sed fortaſſe fieri nequit vt is ſeparabilis ſit. Quòd ſi ſint nonnulla eiuſmodi, in eis profectò verum fuerit, quod dicimus. Quid igitur ſit agere ac pati, & quibus competat, & qua de cauſa, & quemadmodum, hoc pacto ſit definitum.

CAPVT VIII.

De modo agendi & patiendi, quatuor opiniones.

QVo autem pacto id euenire queat, dicamus rurſum. Quibuſdam igitur pati quodque videtur, vltimo principaliſſimoque agente per quoſdam meatus ſeſe intrudente; atque nos hoc pacto & videre & audire, cæteriſque aliis ſenſibus ſentire aiunt. Tum etiā per aerē & aquā & ea quæ perſpecta atque trāslucida ſunt, res ipſas videri: propterea quòd meatus habeāt inuiſibiles quidē ob paruitatem, ſed tamen frequētes, & ſerie quadam ac ordine diſpoſitos: & magis quæ magis perſpicua dilucidáq; ſunt. Quidam igitur, quemadmodū & Empedocles, hoc pacto in nonnullis definierunt, non ſolùm in agentibus patientibúſq;: ſed & ea miſceri aiunt, quorum pori atque meatus cōmenſiles inter ſeſe ſunt. Vna autē ratione ac via maximè de omnibus definiêre Leucippus & Democritus, principiū facientes, quod quidem ſecundùm naturam eſt. Nonnullis enim ex veteribus, id quod eſt, neceſſariò eſſe vnum atque immobile viſum eſt. Vacuum enim ipſum, non eſſe. Nihil autem moueri poſſe, ſi vacuum ſeparatum in ratione rerum non ſit. Nec rurſus eſſe multa, ſi ipſum non ſit id quod ea diſtinguit. Cæterùm putare vniuerſum ipſum non eſſe continuum, ſed ea quibus conſtat diuiſim ſeſe tangere, idem profectò eſſe atque ipſum multa, & non vnum eſſe & vacuum dicere. Nam ſi omni ex parte diuiſibile ſit, nullum vnum eſſe: quare nec multa, ſed vacuum, vniuerſum. Sin verò partim diuiſibile ſit, partim non diuiſibile, hoc figmento cuidam eſſe perſimile. Nam quatenus quamque ob cauſam pars alia vniuerſi hoc pacto ſeſe haberet plenáque eſſet, alia diuiſa?

Præterea ſic eſſe neceſſarium, motum non eſſe. Ob haſce igitur rationes nonnulli ſenſum prætereuntes deſpicientéſque, quaſi rationem ſequi ducem oporteat, vniuerſum ipſum vnum & immobile & infinitum eſſe aſſerunt. Nam alioqui (inquiunt) finis ad vacuum finiret. Quidam igitur ad hunc modum, & ob cauſas haſce, de ipſa veritate dixerunt. Sed cùm in rationibus hæc videantur euenire, in ipſis verò rebus minimè hoc pacto ſentire, inſaniæ perſimile exiſtit. nemo enim ex hiſce quos inſania malè habet, à mente eò vſque diſcedit, vt ignem & glaciem vnum eſſe putet, ſed ſolùm quæ bona honeſtáque ſunt, & quæ per conſuetudinem talia eſſe apparent, ea quibuſdam ob inſaniam nihil differre videntur. Leucippus verò rationes habere arbitratus eſt, quæ ſenſui conſentanea dicentes, nec generationem, nec corruptionem, nec motum, nec entium pluralitatem è medio tollant. Conſentaneè autem hiſce quæ apparent, hæc quidem locutus. Illis verò qui ipſum vnum conficiunt, quia ſine vacuo non ſit motus, & vacuum eſſe non ens, & eius quod eſt, nihil non ens eſſe ait. quod enim propriè eſt, plenum eſſe. ſed quod eſt eiuſmodi, non vnum eſſe, ſed numero infinita, & inuiſibilia ob molis paruitatem. Atque hæc in vacuo ferri, vacuum enim eſſe. Item cùm coaleſcunt coëúntque, generationem: cùm diſſoluuntur, corruptionem efficere. Atque agere & pati, quatenus ſeſe tangunt. nam eatenus non vnum eſſe. Et generare cùm componuntur complicantúrque. Et ex eo quod verè vnum eſt, non gigni multitudinem: neque ex hiſce quæ verè multa ſunt, vnum: ſed hoc eſſe impoſſibile. Sed quemadmodum Empedocles & quidam alij aiunt, per meatus pati: ſic omnem alterationem paſſionémque hoc fieri modo, cùm per vacuum fiat diſſolutio & corruptio: ſimiliter autem & accretio, intro ſubeuntibus ſolidis. Ferè autem perinde dicat Empedocles atque Leucippus ait, eſt neceſſe: eſſe inquam ſolida quædam, cæterùm indiuiſibilia, niſi meatus omni ex parte continui ſint. quod ſanè fieri nequit. Nam ſolidum nihil aliud præter poros, ſed totum vacuum eſſet. Quæ igitur ſeſe tangunt, indiuiſibilia eſſe, & quæ inter hæc media ſunt vacua, quos ille poros meatúſque appellat, eſt neceſſe. Ad hunc modum Leucippus de actione & paſſione dicit. Modi igitur quibus alia agunt, alia patiuntur, ferè dicuntur, & de hiſce quidem, & quo pacto dicant, perſpicuum eſt. Et ad poſitiones quibus ipſi vtuntur, ferè conſentaneè accidere videtur: cæteris autem minùs: verbi gratia: Empedocli qualiter generatio, corruptio, & alteratio fiant, nequaquam liquet. Nam his prima corpora indiuiſibilia ſunt, figura tantùm inter ſe diſcrepantia, ex quibus primis entia componuntur, & in quæ vltima diſſolui ſolent. Empedocli verò cætera quidem, vt patet, vſque ad elementa ipſa, generationem habent atque corruptionem. At horum ipſorum aceruata congeſtáque magnitudo, quo pacto oriatur ac intereat, neque perſpicuum eſt, neque fieri poteſt vt ipſe dicat, niſi & ipſius ignis elementū eſſe dixerit: ſimiliter & aliorum omnium, vti Plato in Timæo ſcripſit. Tantum enim abeſt vt eo quo Leucippus modo dicat: quòd hic ſolida, ille plana eſſe indiuiſibilia, & hic infinitis figuris, ille finitis, indiuiſibile quodque definiri aſſerit: quandoquidem indiuiſibilia vtrique, & figuris definita dicunt.

A Ex his itaque generationes & ſegregationes fiunt. Nam Leucippo quidem duo modi eſſe poſſunt, & per vacuum,& per tactum. hac enim ratione diuiſibile quodque exiſtit. Platoni verò duntaxat per tactum. nam vacuum non eſſe inquit. Et de planis quidem indiuiſibilibus, in hiſce quæ priùs dicta ſunt, diximus. de ſolidis verò itidem indiuiſibilibus, quod præterea conſiderari poteſt, in præſentia omittatur. Vt autem paululum digredientes dicamus, quodque eorum quæ indiuiſibilia ſunt, impatibile eſſe (non enim fieri poteſt vt quicquam patiatur, niſi per vacuum) nullámque paſſionem efficere (nam vacuum, neque durum neque frigidum eſſe poteſt) neceſſe eſt. Atqui hoc abſurdum eſt,
B ſolum inquam rotundæ figuræ calorem tribuere. neceſſe enim eſt, & contrarium, frigus ſcilicet, alicui alij competere figuræ. Abſurdum etiam eſt, ſi hæc quidem, caliditas inquam & frigiditas, inſint, pondus autem ac leuitas & duritia mollitiéſque non inſint. Atqui Democritus, indiuiſibilium quodque per exceſſionem grauius eſſe aſſerit: quare, vt patet, & calidius. At fieri non poteſt, vt quæ talia ſunt, mutuò à ſeſe non patiantur. ceu à calore admodum exuperante, id quod lentè calidum eſt. At verò ſi durum, & molle. Molle autem dicitur, quia pati quippiam ſoleat: quod enim cedit, molle eſt. At verò & abſurdum quoque fuerit, ſi nihil niſi figura ſolùm inſit. item ſi quid inſit, ſed vnum ſo-
C lùm: vt ſi hoc durum ſit, illud calidum: neque enim eorum natura vna aliqua eſſe poteſt. Pari modo impoſſibile fuerit, & ſi plura vni inſint. nam cùm ſit indiuiſibile, in eodem affectus habebit. Quare ſi patitur quatenus frigeſit, eatenus nimirum & aliud quippiam aget aut etiam patietur. Ad hunc autem modum, de cæteris quoque paſſionibus eſt dicēdum. Siquidem hoc ipſum eodem modo accidit, tam iis qui ſolida, quàm qui plana eſſe indiuiſibilia dicunt. Nam ſi vacuum in hiſce quæ indiuiſibilia ſunt, non inſit: neque rariora neque dēſiora fieri poſſunt. Ad hæc illud quoque præter rationem exiſtit, parua inquam eſſe indiuiſibilia, magna verò minimè. Nunc enim haud ſine ratio-
D ne, quæ maiuſcula ſunt, faciliùs quàm quæ parua, frangi ſolent. hæc enim, magna ſcilicet, facilè diſſoluuntur: quippe quæ in multa impingāt. Sed quæ prorſus indiuiſibilia exiſtunt, cur paruis potiùs quā magnis competunt? Inſuper vtrùm illorum omniū ſolidorum vna ſit natura, an inter ſe differant, perinde atque ſi mole alia ignea, alia terrea eſſent: (nam ſi vna ſit omnium natura, quidnā id eſt quod ea diſtinxit ſeparauitque?) aut cur cùm ſe tangunt, non in vnum coaleſcunt, haud ſecus quàm aqua cùm aquam tangit? nihil enim poſterius à priori differt. Sin verò diuerſa, qualiánam hæc ſunt? Atque perſpicuum eſt, ea potiùs quàm figuras ipſas poni oportere principia, causáſque eorum quæ e-
E ueniunt. Præterea ſi natura differāt, & agent & patientur, cùm mutuò ſeſe tangent. Præterea quidnā eſt id quod mouet? Nam ſi aliud ſit, affectioni erunt obnoxia. Sin verò quodque ſeſe moueat, aut erit diuiſibile, ita vt altera parte moueat, altera moueatur: aut in eodē inerunt contraria, & materies non modò numero vna, ſed & potentia erit. Qui igitur ob meatuum motionē paſſiones accidere inquiūt, ſi oppletis quoque meatibus id euenire dicant, meatus ſuperuacanei ſunt. Nam ſi paſſio ad hunc fiat modum, vniuerſum ipſum etiam ſi foramina non habeat, ſed continuum ſit, eodem pati modo poteſt. Inſuper quî fieri poteſt, vt trāſpiciatur, vti aiunt?

Nâm neque ſecundùm tactus per perſpicua tranſitio fieri poteſt, neque per meatus ſi ſinguli pleni ſint. Quid enim meatus habere, an non, referet? totum enim ſimiliter erit plenum. At verò ſi & hæc quidem vacua ſint, ſed corpora in ſe neceſſariò habeant, idem rurſum accidet. Quòd ſi magnitudine tantilla ſint, vt nullum corpus admittere queant: putare quod paruum eſt, vacuum eſſe, quod magnum, non vacuum, ne quantulumcunque quidem: aut dicere, ſeſe putare vacuum eſſe quippiam aliud præter corporis locum, ridiculum eſt. Quare, vt patet, vacuum omni corpori mole æquabile erit. In ſumma, meatus facere, ſuperuacaneum. Nam ſi per tactum agat nihil, neque per meatus ſeſe inſinuando aget. Sin verò quippiam ex eo quia tangit, etiamſi meatus nulli ſint, eorum quæ inter ſe agere ac pati nata ſunt, alia agent, alia patientur. Perinde igitur meatus aſtruere, vt quidam exiſtimant, aut falſum eſſe, aut certè vanum, ex hiſce conſtat. Porrò cùm corpora omni ex parte diuiſibilia ſint, meatus facere ridiculum exiſtit. nam quo diuiſibilia ſunt, hoc ſeparari queunt.

A οὔτε γὰρ κατὰ τὰς ἁφὰς ἐνδέχεται διιέναι διὰ τῶν διαφανῶν, οὔτε διὰ τῶν πόρων, εἰ πλήρης ἕκαστος. τί γὰρ διοίσει τοῦ μὴ πόρους ἔχειν; πᾶν γὰρ ὁμοίως ἔσται πλῆρες. ἀλλὰ μὴν εἰ καὶ κενὰ μὲν ταῦτα, ἀνάγκη δὲ σώματα ἐν αὑτοῖς ἔχειν, ταὐτὸ συμβήσεται πάλιν. εἰ δὲ τηλικαῦτα τὸ μέγεθος, ὥστε μὴ δέχεσθαι σῶμα μηδέν, γελοῖον, τὸ μικρὸν μὲν οἴεσθαι κενὸν εἶναι, μέγα δὲ μή, μηδ' ὁπηλικονοῦν· ἢ τὸ κενὸν ἄλλο τι οἴεσθαι λέγειν, πλὴν χώραν σώματος. ὥστε δῆλον ὅτι παντὶ σώματι τὸν ὄγκον ἴσον ἔσται κενόν. ὅλως δὲ τὸ πόρους ποιεῖν, περίεργον. εἰ μὲν γὰρ μηδὲν ποιεῖ κατὰ τὴν ἁφήν, οὐδὲ διὰ τῶν πόρων ποιήσει διιόν· εἰ δὲ τῷ ἅπτεσθαι, καὶ μὴ πόρων ὄντων, τὰ B μὲν πείσεται, τὰ δὲ ποιήσει, τῶν πρὸς ἄλληλα τοῦτον τὸν τρόπον πεφυκότων. ὅτι μὲν οὖν οὕτως τοὺς πόρους λέγειν, ὥς τινες ὑπολαμβάνουσιν, ἢ ψεῦδος, ἢ μάταιον, φανερὸν ἐκ τούτων ἐστί. διαιρετῶν δ' ὄντων πάντῃ τῶν σωμάτων, πόρους ποιεῖν, γελοῖον· ᾗ γὰρ διαιρετά, δύναται χωρίζεσθαι.

CAPVT IX.

Actionis & paſſionis proprietates aliquot.

QVónam autem modo ea quæ ſunt, generent, agántque ac patiantur, ſumpto initio ſæpe iam dicto, declaremus oportet. Si enim aliud potentia, aliud actu tale eſt, atque natum eſt non partim pati, partim non pati: ſed vniuerſim quatenus eſt tale, magis autem & minùs quatenus magis & minùs tale eſt: ſic profectò meliùs quiſpiam meatus ineſſe dicet, ſicuti in metallicis venæ quædam rei affectui obnoxiæ porrigi ſolent. Continuum igitur quodque & vnum exiſtens affectionis expers eſt. Similiter & ea quæ tametſi agere & pati nata ſunt, tamen neque ſeſe tangunt, neque alia. Intelligi volo, vt ignis non modo cùm tangit, ſed etiam ſi procul ſit, calfacit. Nam ignis aerem, aer corpus excalfacit, cui vt agat patiatúrque, eſt inſitum. At fieri non poſſe vt quicquam parte altera patiatur, altera non patiatur: qui id ipſum initio definiêre, dicant oportet. Si enim magnitudo non omnino omníque ex parte ſit diuiſibilis, ſed corpus aut latitudo indiuiſibilis ſit: non erit profectò quicquam omni ex parte patibile, ſed ne continuum quidem. Quòd ſi hoc falſum eſt, & omne corpus eſt diuiſibile: diuiſúmne ſit, ſed tangat, an diuiſibile, nihil refert. Nam ſi per tactus ſegregari poſſit, perinde vt quidam affirmant: etiam ſi nondum ſit diuiſum, poterit tamen eſſe diuiſum. nullum enim emergit impoſſibile. Omnino autem generationem ad hunc fieri modum, nempe diſciſſis corporibus, cancellos egreditur rationis. Etenim ſermo iſte alterationem è medio tollit. At idem corpus, quanquam continuum, aliàs liquidum, aliàs concretum, videmus, non diuiſione aut compoſitione hoc paſſum, neque conuerſione aut attactu, ſicuti Democritus aſſerit. Nam neque tranſpoſitione neque naturæ demutatione, ex liquido concretum euadere ſolet. Neque nunc dura concretáque indiuiſibilia mole ſunt, ſed ex æquo quoduis, nunc liquidum, interdũ verò durum ac concretum exiſtit. Præterea fieri nõ poteſt vt accretio decretióve ſit. nõ enim quoduis fiet maius, ſi accretio adiectio ſit, & non totum mutetur, vel admiſto aliquo, vel ipſo per ſe mutato.

* γ. τῷ κηρῷ

A Quòd igitur generare ac agere,& generari ac pati inter ſeſe mutuò ſit, & quónam pacto id fieri queat, & quónam quidam fieri dicant, non tamen fieri poſſit, hoc modo ſit definitum.

CAPVT X.

De miſtione ac miſcibili.

REſtat vt de miſtione contemplemur, iuxta eundem doctrinæ modum. nam ex hiſce quæ initio propoſuimus, hoc erat tertium. Conſiderandum autem eſt, quid miſtio, quid miſtile, quibus B entibus & quo pacto competat: & inſuper vtrùm ſit miſtio, an id falſum ſit. Nam fieri non poteſt, vt quid alterum alteri miſceatur, ſicuti quidam aiunt. Etenim cùm ea quæ miſta ſunt, adhuc ſint, nec alterationem ſubierint: non magis nunc quàm priùs eſſe miſta, ſed ſimiliter ſeſe habere dicunt. Porro ſi alterum ſit corruptum, non eſſe miſta: ſed alterum eſſe, alterum non eſſe. miſtionem autem, eorum eſſe quæ ſimiliter ſeſe habent. Eodem autem modo, etſi poſtea quàm in vnum ambo venerint, vtrumque eorum quæ miſcētur, corruptum ſit. non enim ea eſſe miſta, quæ omnino in ratione rerum nō ſunt. Hæc igitur ratio poſtulare videtur, vt quo miſtio à generatione & corruptione, & quo miſtile C à generabili & corruptibili differat, definiamus. Perſpicuum enim eſt, miſtionem, ſi quidem ſit, ab illis differre oportere. Quo fit vt hiſce cognitis, quæ addubitata fuerunt, ſolui queant. At verò neque materiam igni miſtam eſſe, neque miſceri dum comburitur aut ipſam ſuis partibus, aut igni: ſed ignem gigni, & materiam corrumpi, dicimus. Eodem autem modo neque corpori alimentum, neque figuram quæ ceræ molem efformat, ceræ miſceri dicimus. nec corpori albedinem, nec omnino affectus habitúſque rebus ipſis miſceri poſſibile eſt, quippe cùm ipſi ſalui cernantur. At verò nec albedinem & ſcientiam, nec aliud quicquam inſeparabile miſceri contingit. Quinimmo nec id probè D dicunt, qui omnia aliquando & ſimul eſſe & miſceri inquiunt. non enim omnibus omnia miſceri queunt, ſed eorum quæ miſcentur, vtrumque ſeparabile quid eſſe oportet: affectuum autem nullus ſeparabilis exiſtit. Cùm autem eorum quæ ſunt, alia actu ſint, alia potentia: quæ miſta ſunt, eſſe quodammodo & non eſſe contingit, actu quidem aliud exiſtente eo quod ex eis factum eſt, potentia verò quippiam vtriuſque eorum quæ erant antequam miſcerentur, & non perdita. id quod ratio priùs addubitabat. Nam quæ miſcentur, & priùs ex ſeparatis coiſſe, & poſſe rurſum ſeparari videmus. Igitur neque permanent actu, vti corpus & albedo: neque corrumpuntur, aut ambo, aut alterum. nam eorum virtus atque potentia, ſalua manet. E Idcirco hæc omittantur. Dubitationem autem hiſce continuā, ediſſeramus oportet: vtrùm miſtio quippiam ad ſenſum ſit. verbi gratia: cùm ea quæ miſcentur, ita in parua diuiſa fuerint, & hoc pacto iuxta ſeſe poſita, vt nullū ſenſu dignoſcatur, túncne miſta ſunt an nō? ſed fit vt eorū quæ miſta ſunt particula quælibet iuxta quālibet ſit? Illo igitur modo miſta eſſe dicuntur, vt ordeacea grana frumētaceis, cùm quodlibet iuxta quodlibet poſitū eſt. At ſi omne corpus ſit diuiſibile, ſi corpus corpori miſtū ſimilare ſit, partē quālibet ſecus quālibet eſſe opor-

teb4t. Atq; cùm fieri nequeat, vt in partes minimas diuiſio fiat, & cõpoſitio non idẽ ſit quod miſtio, ſed alitd: nõ oportere dicere, quæ miſcentur eſſe miſta ſecundùm partes exiguas quæ ſuã adhuc retineant naturam, perſpicuũ eſt: compoſitio enim eſſet, non tẽperatura aut miſtio: nec pars eandẽ cum toto haberet rationẽ. Dicimus autẽ ſi quid miſceri debeat, quod miſtũ eſt, ſimiliũ eſſe partiũ. & quemadmodũ aquæ pars aqua eſt: ita & temperati temperatum. Quòd ſi miſtio ſit cõpoſitio ſecundùm partes exiguas, nihil horũ accidet, ſed ſolùm eſſe miſta ad ſenſum. atq; idem huic quidẽ, ſi acutè non videat, eſſe miſtũ, Lynceo verò non eſſe miſtũ videbitur. Neq; diuiſione, adeò vt quæuis particula iuxta quamuis poſita ſit, miſtio ſit. nam fieri non poteſt vt corpora ſic diuidatur. Aut igitur non eſt miſtio, aut hoc rurſum eſt dicendum, quo pacto inquam fieri poſſit. Sunt itaque (vti diximus) eorum quæ ſunt, quædã actiua, quædã quæ ab hiſce pati ſolent. Quædã igitur conuertuntur, ſuntque inter ſe mutuo actiua & paſſiua: quorũ videlicet eadẽ eſt materies. Quædã vero agũt & non patiũtur, nimirũ quibus materies eadem non eſt. Horũ igitur non eſt miſtio. Quare nec medendi ſciẽtia ſanitatẽ, nec ſanitas eandẽ, miſta corporibus efficiunt. Eorũ vero actiuorũ & paſſiuorum quæ facilè diuiſibilia ſunt, multa quidẽ paucis, & magna paruis cõpoſita miſtionẽ non faciunt, ſed accretionem eiuſce quod euincit. Nam alterũ in id quod euincit, verti ſolet: vt gutta vini, decies millenis aquæ mẽſuris non miſcetur. etenim forma vini perit, atq; vinũ in totã aquã vertitur. ARISTOTELIS STAGIRITÆ, DE GENERATIONE & corruptione,

LIBER II.

CAPVT I.

De principio materiali Priſcorum opiniones aliquot.

DE miſtione igitur & tactu,& actione & paſſione,quo pacto hiſce competant quæ natura mutationem ſubeunt; & inſuper de ortu & occaſu B ſimplici abſolutóque, qualiter har[um] cuius ſit,& quam ob cauſam: tum etiam de alteratione, quid ſit alterari & quam quodque co[rum] habet differentiam, dictum eſt. Reſtat vt circa ea, quæ elementa corporum appellantur, contemplemur. Nam generatio & corruptio, ſubſtãtiis omnibus quæ natura conſtant, haud ſine ſenſibilibus corporibus competunt. Quorum ſubiectam materiam quidam vnam eſſe aiunt, eam aërem, aut ignem, aut quippiam inter hæc medium, quod & corpus ſit & ſeparabile, ponentes. Quidam numero plures vna. alij enim, ignem & terram: alij & hæc, & tertium aërem: alij & aquam inter hæc C quartam, vti Empedocles: ex quibus concretionem ſecretionemve aut alterationem ſubeuntibus, ortum atque occaſum rebus ipſis contingere dicunt. Quòd igitur prima ipſa principia elementáque probè dicantur, ſit in confeſſo: ex quibus ſi aut congregatione ſegregationéve, aut alia mutatione transmutentur, generationem fieri contingat atque corruptionem. Sed qui vnam vltra ea quæ ſunt dicta, materiam faciunt, eámque corpoream atque ſeparabilem, errant. Nam fieri non poteſt vt corpus hoc cùm ſenſibile ſit, ſine contrarietate exiſtat. Etenim infinitum hoc, quod nonnulli principium eſſe dicunt: aut leue aut graue, aut calidum aut frigidum ſit, neceſſe eſt. Quod D autem in Timæo eſt ſcriptum, nihil habet certi definitique. Nam nec ille planè dixit, an id quod omnia ſuſcipit, ab ipſis ſeparetur elementis: nec vllo vti ſolet, cùm tamen priùs dixerit, illud vocatis elementis, vt aurum aureis operibus, eſſe ſubiectum, quanquam id non rectè dicitur, ſi hoc dicatur modo. Sed quorum eſt alteratio, ea ita ſeſe habent: quorum verò generatio atque corruptio, ea ex nomine eorum ex quibus fiunt, appellari impoſſibile eſt. Atqui longè veriſſimum eſſe inquit dicere quodque aurum eſſe. Verùm cùm ſolida ipſa elementa ſint, ad plana vſque reſolutionem facit. At primam materiam eſſe plana ipſa, de numero eorum eſt quæ fieri nequeunt. Nos E autem ſenſibilium corporum quandam eſſe materiam dicimus, ſed eam ſeparari non poſſe, ſed ſemper eſſe cum contrarietate, ex qua elementa vocata fiunt. de quibus alibi exactiùs eſt definitum atque pertractatum. Verumenimvero cùm ad hunc modum ex materia corpora prima conſtent, de hiſce quoque determinemus oportet: ſupponentes materiam inſeparabilem quidem, ſed contrariis ſubiectam, principium atque primum eſſe. non enim calor frigori, nec frigus calori: ſed quod ſubiicitur, vtrique materia exiſtit. Quare primò, quod potẽtia ſenſibile corpus exiſtit, principiũ eſt:

Deinde contrarietates ipſæ, ceu calor & frigus. Poſtremò ignis & aqua, & quæ ſunt eiuſmodi. hæc enim in ſeſe tranſmutari ſolent. Nec res perinde habet, vt Empedocles & cæteri aſſerunt. non enim eſſet alteratio. At contrarietates ipſæ tranſmutari in ſe non ſolent. Verùm nihilominus & vt corporis ſunt, qualia & quot principia ſint, dicamus oportet. Nam cæteri ſuppoſitis vtuntur: nec cur talia ſint, aut tot numero, dicunt.

A δεύτερον δέ, αἱ ἐναντιώσεις· λέγω δέ, οἷον θερμότης καὶ ψυχρότης· τρίτον δὲ ἤδη πῦρ καὶ ὕδωρ, καὶ τὰ τοιαῦτα· ταῦτα μὲν γὰρ μεταβάλλει εἰς ἄλληλα, καὶ οὐχ ὡς Ἐμπεδοκλῆς καὶ ἕτεροι λέγουσιν· οὐδὲ γὰρ ἂν ἦν ἀλλοίωσις· αἱ δ' ἐναντιώσεις, οὐ μεταβάλλουσιν. ἀλλ' οὐδὲν ἧττον καὶ ὡς σώματος, ποίας καὶ πόσας λεκτέον ἀρχάς· οἱ μὲν γὰρ ἄλλοι ὑποθέμενοι χρῶνται, καὶ οὐθὲν λέγουσι, διὰ τί αὗται ἢ τοσαῦται.

CAPVT II.

De elementorum principiis & differentia.

B CVM igitur corporis ſenſibilis, hoc eſt, tangibilis, principia diſquiramus, ſenſibile autem ſit quod tactu ſenſum facit: conſtat, non corporis contrarietates, ſpecies & principia facere, ſed eas ſolùm quæ ſub tactum cadunt. Nam contrarietate, eâque tangibili, differunt. Quocirca nec albor nec nigror, nec dulcedo, nec amaritudo, nec item cæterarum quicquam contrarietatum, elementum facit. Atqui viſus tactu prior eſt, quare & quod ei obiicitur, prius erit. Verùm non eſt corporis tangibilis affectio, quatenus tangibile exiſtit, ſed per aliud: quanquam natura prius eſt. Porro ipſorum tangibilium qualesnam ſint primæ differentiæ & contrarietates, diſtinguamus oportet. Sunt autem tangibiles contrarietates hæ: calidum frigidum, C ſiccum humidum, graue leue, durum molle, viſcoſum aridum, ſcabrum glabrum, craſſum tenue. Ex quibus graue & leue neque actiua ſunt neque paſſiua. non enim quòd alterum quippiam agat, patiatúrve ab altero, dicuntur. At elementa ipſa inter ſe mutuò actiua ſint & paſſiua, oportet. nam miſcentur, & in ſeſe viciſſim mutantur. Calidum autem frigidúmque, & humidum ac ſiccum: illa quidem quod actiua ſint, hæc verò quòd paſſiua, dicuntur. Calidum enim eſt, quod ea congregat quæ eiuſdem ſunt generis. Nam ſegregare (id quod ignem facere aiunt) eſt, cognata & quæ eiuſdem ſunt generis, congregare: accidit enim vt aliena eximat. Frigidum verò, quod ex æquo cogit ac congregat, tam quæ eiuſdem ſunt generis, quàm quæ diuerſi. D Humidum autem, quod cùm facilè terminos ſuſcipiat, proprio non definitur. Siccum verò, quod proprio termino bellè definitur, alieno ægre. Tenue autem & craſſum, viſcoſum & aridum, durum & molle, & cæteræ differentiæ, ex hiſce ſunt. Nã cùm quod repletiuum exiſtit, ad humidum ex eo pertineat, quia non ſit definitum, ſed promptè terminari poſſit, & ſequatur id quod ipſum tangit, tenue autem ſit repletiuum (nam paruarum eſt partium: & quod eſt eiuſmodi, repletiuum eſt, totum enim totum tangit: tenue autem, maximè eſt tale) tenue ſub humido, & craſſum ſub ſicco fore, conſtat. Rurſum viſcoſum ab humido comprehendetur. nam E viſcoſum, humidum cum quadam affectione exiſtit, velut oleum. Aridum autem, à ſicco. Aridum enim eſt, quod perfectè ſiccum eſt, adeò vt ob humiditatis defectum etiam concreuerit. Inſuper molle, humidum comitari ſolet: & durum, ſiccum. Molle enim eſt, quod in ſeſe refugit ceditque, & non reſiſtit, id quod humidum facere aſſolet. Quãobrem & humidum molle non eſt. ſed molle ſub humido, & durum ſub ſicco collocatur. Durum ſiquidem eſt, quod concretum ſeu congelatum eſt. Quod autem eſt concretum, ſiccum eſt. Porro ſiccum & humidum, multis dicuntur modis.

* κ. τὸ π. πειόμ.

A nam & humidum & madens, ſicco aduerſantur: & rurſus ſiccum & concretum, humido. Hæc autem omnia ad humidum & ſiccum, quæ prima dicta ſunt, attinent. Nam cùm madenti ſiccum aduerſetur, & madens ſit quod ſuperficie tenus externam admiſit humiditatem, & humectum quod introrſus, ſiccum autem id quod hac vacat: madens ſub humido, & ei oppoſitum ſiccum, ſub primo ſicco fore conſtat. Rurſum humidum & concretum, eodem modo. Humidum enim eſt, quod in penitiore parte propriam habet humiditatem. Concretum verò, quod hac priuatum eſt. Et proinde ex hiſce alterum humidi, alterum ſicci erit. Conſtat igitur, cæteras omneis differentias ad qua- B tuor primas, & has, non ampliùs in pauciores reduci: neque enim calidum id eſt quod humidum, aut quod ſiccum eſt: neque humidum, quod calidum, aut quod frigidum eſt: neque frigidum & ſiccum ſubalterna ſunt, neque ſub calido & humido ſtruuntur. Quare quatuor eſſe has neceſſe eſt.

CAPVT III.

Quatuor eſſe elementa.

CVM autem elementa ſint quatuor, & eorum quæ ſunt quatuor, ſex ſint copulæ, contraria autem ſimul copulari non poſſint (calidum enim & frigidum, & rurſum ſiccum & humidum idem C eſſe, eſt impoſſibile) conſtat quòd elementorum copulæ quatuor erunt, nempe calidum & ſiccum, calidum & humidum, rurſum frigidum & ſiccum, frigidum & humidum, atque hæc, corpora ea quæ ſimplicia videntur eſſe, ignem inquam & aërem, aquam & terram, ſecundum rationem comitari ac ſequi ſolent. Nam ignis calidus ſiccúſque eſt: aër verò, frigidus & humidus (nam aër, velut vapor eſt:) aqua frigida humidáque: terra, frigida atque ſicca. Vnde fit vt differentiæ illæ non iniuria primis corporibus diſtribuantur, & iuxta rationem eorum numerus conſtet. Omnes enim & qui ſimplicia corpora elementa faciunt, alij vnum, alij duo, alij tria, alij quatuor eſſe volunt. Qui igi- D tur tantùm vnum eſſe dicunt, deinde denſitate & raritate cætera generant, hiſce duo principia facere, rarum inquam & denſum, aut calidum & frigidum accidit: hæc enim opificis munus obeunt: vnum autem ſubiici ſolet, ſicuti materies. Qui verò continuò duo, vt Parmenides, ignem & terram, faciunt: quæ inter hæc media ſunt, ceu aërem & aquam, horum miſturas eſſe aſtruunt. Eodem modo & qui eſſe tria inquiunt, quemadmodum Plato in diuiſionibus, medium ſiquidem, miſturam congeriemque facit. Atque eadem ferè dicunt, qui duo & qui tria faciunt: verùm illi medium in duo ſecant, hi vero vnum faciunt medium. Porrò non- E nulli ſtatim quatuor eſſe aiunt, vt Empedocles. Cogit autem & hic illa, in duo: nam igni, cætera omnia contraponit. Ignis autem & aër, & vnumquodque eorum quæ dicta ſunt, haudquaquam ſimplex eſt, ſed miſtum. Quæ verò ſunt ſimplicia, talia quidem ſunt, non tamen eadem, vt quod igni ſimile eſt, igneum, non ignis: & quod aëri, aëreum, non aër exiſtit. ſimili modo & de cæteris quoque dicendum eſt. Ignis etiam, caloris eſt exceſſus: perinde vt glacies, frigoris. Nam congelatio & feruor, exceſſiones quædam ſunt: illa quidem frigoris, hic vero caloris. Igitur ſi glacies, humidi & frigidi congelatio ſit: & ignis, calidi & ſicci feruor erit.

Quam-

Quamobrem nec ex glacie gigni quicquam, nec A ex igni poteſt. Cùm autem ſimplicia corpora ſint quatuor, è duobus vtrumque vtriuſque locorum eſt. Ignis enim & aër, eius qui ad ſuperficiem terminúmque vergit: terra verò & aqua, eius qui ad medium. Atque ignis & terra extrema quidem ſunt, & ſynceriora: aqua verò & aër, media & miſta magis. Et vtraque etiam vtriſque contraria ſunt. Nam igni aqua, aëri verò terra aduerſatur. hæc enim contrariis affectibus conſtant. Verumenimvero cùm ſimpliciter quatuor ſint, quodque vnius eſt. Terra ſiquidem, ſicci potiùs eſt quàm frigidi: aqua verò, frigidi magis quàm humidi: aer, humidi magis quàm calidi: ignis, calidi magis quàm ſicci. B

CAPVT IV.

De elementorum ad inuicem generatione, corruptione, tranſmutatione.

CVm autem priùs ſit definitum, ſimplicia corpora mutuam ſubire generationem, & ea inſuper gigni ad ſenſum videantur (nam alioqui non eſſet alteratio: quippe cùm ea in rerum tangibilium affectibus ſita ſit) quiſnam mutuæ generationis ſit modus, & vtrum quoduis ex quouis gigni poſſit, an aliqua & aliqua non dicendum videtur. Quod igitur vniuerſa in ſe inuicem tranſmutari C nata ſint, palàm eſt. Nam generatio in contrarium, & è contrario fit. Omnia autem elementa inter ſe contrarietatem ex eo habent, quia differentiæ ipſæ contrariæ ſunt. Nam aliis, ceu igni, & aquæ, ambæ ſunt contrariæ. ille enim calidus ſiccúſque eſt, hæc verò humida & frigida. Aliis verò, vt aëri & aquæ, altera ſolùm. nam ille quidem humidus calidúſque eſt, hæc vero frigida & humida. Quare in vniuerſum quidem patet, quoduis è quouis gigni natum eſſe. Iam vero quo pacto ex omnibus omnia fient, ſingulatim percipere haudquaquam eſt difficile. Different tamen. nam celeriùs & tardiùs, item faciliùs difficiliúſque alia aliis tráſmuta- D tionem ſubeunt. Quæ enim ſymbolum inter ſe habent, horum celeris eſt migratio: quæ vero non habent, tarda: quòd facilius ſit vnum quàm multa mutari. Verbi cauſa: ex igni fiet aër, altero mutationem ſubeunte. nam ille quidem calidus ſiccúſque eſt, hic vero calidus & humidus: quare ſi ſiccitas vincatur ab humiditate, orietur aër. Rurſum ex aere aqua fiet, ſi calorē frigus euincat: ſiquidem àer humidus calidúſque eſt, aqua vero frigida & humida: quare mutato calore, fiet aqua. Eodem modo ex aqua quoque fiet terra, & ex terra ignis. nam vtraque ad vtraque, ſymbola habent. aqua enim, humida frigidáque eſt: terra vero, frigida & ſicca. quare ſi humiditas vincatur, emerget terra. E Et rurſum cùm ignis calidus ſit & ſiccus, terra vero frigida & ſicca, ſi frigiditas intereat, ignis è terra fiet. Quare patet, circularem generationem ſimplicibus competere corporibus. Atque hic mutationis modus promptiſſimus eſt, propterea quod quæ deinceps ſunt, ſymbolum habent. Aqua autem ex igni, & terra ex aere, & rurſum ex aqua ignis, & aer ex terra gigni quidem poſſunt, ſed difficiliùs, quod plurium mutatio ſit. Nam ſi ex aqua oriatur, ignis, frigiditatem & humiditatem corrumpi priùs eſt neceſſe. Et rurſum frigiditatem & ſiccitatem, ſi ex terra fiat aer. Eodē modo & ſi ex igni & aere, aqua & terra fiant, vtraſque mutari qualitates eſt neceſſe.

A Hæc igitur generatio tardior eſt. Sin vero vtriuſque altera qualitatum intereat, horum migratio facilius quidem, ſed non in ſeſe mutuo, fiet, ſed ex igni quidem & aqua, terra & aër: ex aëre vero & terra, ignis & aqua ortum ſubibunt. Cùm enim aquæ frigiditas fuerit corrupta, & ignis ſiccitas, fiet aër. nam huius quidem caliditas, illius vero ſimiliter humiditas relinquitur. At cùm calor ignis, & aquæ humiditas interierint, terra: propterea quòd huius frigiditas, & illius ſiccitas, remanent. eodem modo ex aëre terráque, ignis & aqua. nam cùm aëris calor & terræ ſiccitas interitum ſubierint, fiet aqua: quandoquidem illius humiditas, huius frigiditas relinquitur. cùm vero aëris quidem B humiditas, terræ vero frigiditas, ignis: quia illius caliditas remanet, huius ſiccitas; quæ nimirum igni competunt. Ignem autem gigni, etiam ſenſus ipſe approbat. maximè enim flamma, ignis eſt: hæc autem, eſt fumus ardens: fumus vero, ex aëre atque terra fit. Porro in hiſce quę ſunt deinceps, ſi in vtroque qualitas altera corrupta ſit: haudquaquam elementorum migratio in vllum corpus fieri poteſt, eo quod in vtriſque aut eadem aut contraria relinquantur, ex quibus nullum profectò corpus oriri poteſt. vt ſi ſiccitas ignis, & aëris humiditas ſit corrupta, calor in vtriſque remanet. Si vero ab vtroque calor abierit, contraria, ſiccum inquam & humi- C dum relinquuntur. Similiter autem & in cæteris. Nam in omnibus quæ ſunt eiuſmodi, qualitatum altera eadem, altera contraria ineſt. Vnde ſimul perſpicuum euadit, quæ ex vno in vnum mutantur, vno corrupto: quæ ex duobus in vnum, corruptis pluribus gigni. Quòd igitur ex omnibus omnia gignantur, & quónam pacto in ſeſe viciſſim commigrent, dictum eſt.

CAPVT V.

Elementa rerum naturalium non eſſe materiam, neque infinita.

D Attamen adhuc & hîc quoque de eis contemplemur. Si enim aqua & aër, & id genus naturalium corporum materies ſint, ſicuti nonnullis quoque placet: aut vnum, aut duo; aut plura eſſe hæc neceſſe eſt. Itaque vt vnum, ſcilicet aër, vel aqua, vel ignis, vel terra, omnia ſit, fieri nequit: ſi tranſmutatio in contraria ſit, atque id tranſmutetur. Nam ſi aër ſit, ſi remanet, alteratio erit, & non generatio. Inſuper nec ita videtur, vt ſimul aër, & ignis, aut quoduis aliud ſit. Eſſet enim aduerſantia quædam, differentiáque: cuius partem alteram, ceu calorem, ignis haberet. At vero nec ignis aër calidus erit. nam quod eſt eiuſmodi, alteratio eſt, & nō E generatio. Adhæc ſi ex igni aër oriatur, calore in cōtrarium mutato fiet. hoc ergo inerit aëri, eritque aër frigidū quid. Quare fieri non poteſt vt ignis aër calidus ſit. ſimul enim idem calidum eſſet, atq; frigidum. Erit ergo aliud quid præter vtrumque idē, & alia quædam communis materies. Eadem autem & de omnibus ratio eſt, non eſſe inquam inter hæc vnum ex quo vniuerſa ſint. Sed neque aliud quippiam præter hæc, veluti medium quoddam aëris & aquæ, aut aëris & ignis, aëre quidem & igni craſſius, ſed cæteris ſubtilius. Nam illud, aër & ignis, cum contrarietate eſſet. ſed è contrariis alterum, priuatio eſt. Quare fieri non poteſt vt illud vnquam per ſe ſit: quemadmodum quidam aiunt infinitum,

& id quod comprehendit atque continet. Similiter ergo horum quoduis, aut certè nullum. Si igitur nullum ſenſibile hiſce priuſ ſit, hæc profectò erunt prima. Aut igitur ea ſemper manere, & in ſeſe viciſſim tranſmutari non poſſe, aut poſſe, & aut omnia aut aliqua, & aliqua non, quemadmodũ in Timæo Plato prodidit, eſt neceſſe. Quod igitur neceſſe ſit ea inuicem in ſe mutari, demonſtratum eſt priùs. Quòd verò non æquè celeriter aliud ex alio naſcatur, quòd quæ communem nacta ſunt qualitatem, celeriùs ex ſeſe mutuò oriantur, quæ verò non ſunt nacta, tardiùs, dictum iam eſt. Ergo ſi vna ſit aduerſantia per quam mutationem ſubeant, duo ſint neceſſe eſt. nam inſenſibilis inſeparabiliſque materies, medium eſt. Porrò cùm plura eſſe videantur, duæ ad minimum contrarietates erunt. Sed cùm duæ ſint, eſſe tria non poſſunt, ſed quatuor, vt patet. Tot enim ſunt coniugationes. Nam cùm ſint ſex, duæ ex eis fieri non poſſunt. propterea quòd inter ſeſe contrariæ ſunt. Sed de hiſce diximus priùs. Cùm autem mutuò in ſeſe tranſmutentur, fieri nõ poſſe vt principium quoddam ſit eorum, vel in extremo vel in medio, ex hiſce palàm fiet. In extremis igitur non erit principium, quia ignis aut terra eſſent omnia. idémque ſermo eſt, atque ſi ex igni aut terra conſtare omnia dicamus. Præterea neque medium principium erit: ſicuti quidam aërem quidẽ & in ignem & in aquam, aquam verò & in aërem & in terram, vltima autem non ampliùs in ſeſe viciſſim tranſmutari putant. Nam ſtet hoc, nec in infinitum rectà vtraque ex parte abeat, oportet. in vno enim, contrarietates eſſent infinitæ. Sit t terra, l lympha ſeu aqua, a aër, i ignis. Itaque ſi a in i & l mutetur, vna erit contrarietas, nempe ipſorum a i. ſint hæc, albor & nigror. Rurſum ſi i in l & a mutetur, erit altera. non enim l & i idem ſunt. ſint autem ſiccitas & humiditas, s quidem ſiccitas, h verò humiditas. Igitur ſi albor maneat, humida & alba erit aqua: ſin minùs, nigra. quandoquidem in cõtraria mutatio eſt. Aquam igitur aut albam eſſe, aut nigram, neceſſe eſt. Sit primum. Pari ergo ratione s inerit i. Tranſmutabitur igitur & ipſe ignis in aquam contraria enim ſunt. nam ignis primò niger erat, & dèinde ſiccus: aqua verò humida, & poſtea alba. Liquet itaque, omnia in ſeſe viciſſim tranſmutari: atque etiam in hiſce, ipſi terræ reliqua duo ſymbola, nigrorem inquam & humiditatem, competere. hęc enim nećdum copulata fuere. Sed quòd fieri nequeat in infinitum abitio (quod quidem cùm eſſemus demonſtraturi, in hoc antè incidimus) ex hiſce emerget. Si enim rurſum i, id eſt, ignis, in aliud ceu in m tranſmutetur, nec regreſſio fiat, aduerſantia quædã ab hiſce quas diximus alia, i & m inerit. nam m, nulli ipſorum t l a i eſſe idem ſupponitur. Sit itaque κ ipſi i, & o ipſi m. κ itaque, omnibus t l a i inerit. nam ea in ſeſe mutuò tranſmutari ſolent. Sed hoc quidem nondum ſit oſtenſum. illud tamen in aperto eſt, quod ſi m in aliud rurſum tranſmutetur, alia in m & in i contrarietas inerit. atque ita ſemper primis cum ſequentibus aliqua inerit aduerſantia. CAPVT VI.

Contra Empedoclis, de elementis, augmentatione, generatione, motu, ſententiam.

Mirabitur porrò aliquis, eos qui elemẽta corporum vno plura eſſe dicunt, ita vt in ſe non tranſmutentur, ſicuti Empedocles inquit, quo pacto ipſi elementa eſſe comparabilia dicere queant. Atqui ille ad hunc modum ait: nam æqualia ſunt hæc omnia. Si igitur ſecundùm quantitatem, idem quid omnibus ineſſe comparabilibus quo metiantur, eſt neceſſe, vt ſi ex aquę ſextario vno, aëris decem fiant: ergo idem quid vtraque ſunt, ſi menſurantur eodem. Sin verò nõ hoc pacto ſecundùm quantitatem, vt è quanto quantum, ſed quantum poſſint: velut ſi aquæ ſextarius æquè frigefacere atque aëris decem poſſit, atque ita ſecundùm quantitatem, non quatenus quantitas eſt, ſed quatenus poſſunt aliquid, comparabilia ſunt: fiet ſanè, vt etiam non quantitatis menſurâ ſecundùm potẽtias atque vires, ſed proportione comparentur. verbi cauſa: vt hoc calidum, hoc album. ſed vt hoc, in qualitate quidem ſimilitudinem ſignificat, in quãtitate verò æqualitatẽ. Videtur itaque eſſe abſurdum, ſi corpora illa quæ tranſmutari nequeunt, proportione comparabilia non ſint, ſed potentiarũ menſura, & eo quod tantum ignis, æquale vel ſimile calidum ſit atque aëris multo plus. Idẽ namque cùm maius eſt, ex eo quia vnius eſt generis, hanc habebit rationem. At verò neque accretio fuerit ſecundùm Empedoclem, præterquam quæ additione fit. nam igni ignem augeri cenſet. inquit enim:

Auget terra quidem proprium genus æthcráque æther.

Hæc autem adiiciuntur, apponuntúrque. At ea quæ incrementa ſuſcipiunt, non ad hunc modum augeri videntur. Longè autem difficilius fuerit eidem, de generatione quę natura ſit, rationem aſſignaſſe. Nam omnia quæ natura gignũtur, aut ſemper ſic aut plerunque fiunt. Quę verò non ſemper aut plerunque fiunt, à caſu & fortuna fieri aſſolent. Quænam igitur cauſa eſt, vt ex homine homo, aut ſemper aut plerunque, & è tritico triticum, ſed non oliua, oriatur? An ſi ita componatur os? non enim vtcunque, quemadmodum inquit ille, ſed ratione quadam coeuntibus fit aliquid. Quænam igitur horum cauſa eſt? non enim ignis vel terra, cauſa exiſtit. At verò neque concordia aut diſcordia: etenim hæc ſegregationis, illa verò congregationis ſolùm cauſa eſt. Hoc autem eſt cuiuſque eſſentia, ſed non,

Miſtio miſtorúmque priùs diuulſio ſolùm:

quemadmodum inquit ille. In hiſce namque fortuna nominari ſolet, non ratio. fieri enim poteſt vt aliqua, vt contingit, ac temere, miſceantur. Itaque ſic ſeſe habere eorum quæ natura conſtant, cauſa exiſtit. atque cuiuſque natura hæc eſt, de qua nihil meminit. Nihil ergo de natura dicit. At verò hoc ipſum bonum exiſtit. Porrò ille ſolam miſtionem collaudat. Atqui diſcordia haudquaquam ſecernit elementa ipſa,

quæ natura deo priora ſunt: ſed concordia. dij autem & hæc quoque ſunt. Præterea de motu ſimpliciter dicit: non enim ſatis eſt dicere concordiã & diſcordiam mouere, niſi hæc concordiæ ratio ſit, motu inquam tali ciere, & diſcordiæ tali. Igitur aut definiuiſſe aut ſuppoſuiſſe, aut exactè vel molliter vel alio quolibet modo demõſtraſſe oportebat. Inſuper cùm vi & præter naturã moueri corpora videantur, per naturam quoque mouētur. vt ignis ad ſuperum quidē locum nõ vi, ſed ad inferũ vi fertur. Vi autem & natura cõtraria ſunt. Cõtingit autē vi moueri: ergo & natura quoq; motu cieri contingit. Concordia igitur illo motu mouet, aut non mouet. Nã terrã deorſum ferri, concordiæ contrariũ eſt, & ſegregationi ſimile exiſtit: potiuſque diſcordia naturalis motus cauſa eſt, quam concordia. Vnde fit vt omnino concordia potius præter naturã exiſtat. Simpliciter autem, niſi concordia aut lis moueat, ipſorum corporum nullus motus ſtatuſve eſt. At, hoc abſurdum eſt. Ad hæc videmus corpora motu cieri, nam diſcordia ſegregauit. Æther autē in ſublime ſubuectus non à diſcordia fuit, ſed interdum illum velut à fortuna ſublatum aſſerit: ſic dicens,

Nam plerumque aliter, ſed tum ſi forte cucurrit.

Interdum ignem ſurſum ferri aptiſſimum eſſe: inquit enim,

At æther longis ſub humum radicibus ibat.

Et inſuper ipſum quoque mundum ſimiliter hũc tempore diſcordiæ, vt prius tēpore concordiæ, habere dicit. Quid igitur mouens primum, motionisque cauſa exiſtit: non enim diſcordia & concordia, verùm hæc alicuius motus cauſæ ſunt. Quod ſi ſint, illa principium erit. Porrò abſurdum eſt, animam ex elementis conſtare, aut elementorum vnum aliquod eſſe. Quomodo enim animæ alterationes, ceu muſicum eſſe, & rurſum non muſicum, aut memoria, aut obliuio erunt. Perſpicuũ enim eſt, quòd ſi anima ignis ſit, eædem illi quæ igni, vt ignis eſt, affectiones competent. ſi verò ex elementorum miſtura conſtet, corporeæ. At harum nulla corporea exiſtit. Verum de hiſce conſiderare, alterius contemplationis eſt officium. De ipſis autem elementis, ex quibus corpora conſtant, iis quidem qui commune quid eſſe, aut ea inter ſe tranſmutari putant: ſi ex hiſce alterum, & alterum quoque cõtingat eſt neceſſe: qui verò generationem mutuam non faciunt, nec è ſingulis ſingula, ſed velut è muro lateres gigni volunt, abſurdum quid dicunt. Nam qui carnes, oſſa & cæterorũ quoduis ex illis erũt? Quod autē dicitur, dubitationem habet, etiam apud eos qui generationem mutuã aſtruunt, quonam pacto ex ipſis diuerſum quid ab eis oriatur. Verbi cauſa: ex igni aqua fit & ex aqua ignis. nã ſubiectum commune quid exiſtit: ſed & caro atque medulla ex eis fiunt: at hæc quomodo? Etenim illis qui perinde vt Empedocles dicunt, quiſnam erit modus? Nã compoſitionem eſſe quomodo è lateribus atque lapidibus fit murus, neceſſe eſt. & hæc miſtura ac congeries ex conſeruatis quidem, ſed ſecundùm exiguas portiones iuxta ſeſe compoſitis erit elementis. Ad hunc itaque modum, caro & cæterorum quodque fiet. Accidit autem, vt non ex qualibet carnis parte ignis & aqua gignantur (ſicuti ex cera, ex hac parte pila, ex aliqua alia meta fieri poteſt) ſed ex vtraque vtrunque fieri queat. Hæc itaque hoc gignuntur modo ex carne, ex quauis parte vtrunque. At hiſce qui illo modo dicunt, ex quauis vtrumque gigni non poteſt,

Atque hoc quidem pacto miſtio, illo verò materia, id quod gignitur, exiſtit. Præterea & ipſa contraria pati ſolent, quemadmodum antè præfinitum eſt. Etenim actu calidum, potentia frigidum eſt; & actu frigidum, po- C tentia calidum. Quare niſi ad æqualitatem redacta ſint, in ſe mutuò tranſmutantur. Simili modo & in cæteris contrariis. Atque primò quidem elementa ipſa ita tranſmutantur: deinde ex hiſce carnes & oſſa & eiuſmodi fiunt, cùm illa calido quidem in frigidum & frigido in calidum tranſeunte, ad mediocritatem venerint. hic enim neutrum eſt. mediocritas autem multiplex eſt, & nequaquam indiuiſibilis. Similiter humidum & ſiccum & talia, carnem oſſaque & cætera id genus mediocritate efficiunt.

Omnia autem mixta corpora, quæ circa locum qui medio vniuerſi tribuitur, collocata ſunt, ex ſimplicibus conſtant omnibus. Præterea quòd & terra ſine humiditate conſiſtere non poſſit: ſed humiditas id ſit, quod continendi vim ac coercendi habeat. nam ſi humiditas à terra prorſus eximatur, ea diffluet profectò. Terra igitur & E aqua has ob cauſas inſunt. item aër & ignis, quòd terræ & aquæ contraria ſint. Nam aëri terra, & aqua igni contraria eſt: quantum ſubſtantiam ſubſtantiæ contrariam eſſe contingit. Cùm igitur generationes è contrariis ſint, & contrariorum extremum alterum inſit, alterum quoque ineſſe eſt neceſſe. Quare in omni compoſito ſimplicia omnia inerunt. Sed & id cuiuſque rei nutricatio comprobare videtur. omnia enim eiſdem aluntur, quibus conſtant. omnia ſiquidem pluribus aluntur. Nam quæcumque vno ſolo ali maximè videntur, vt plantæ aqua, pluribus aluntur. terra enim aquæ admixta eſt. Quamobrem ipſi quoque agricolæ miſcentes, irrigare conantur.

CAPVT IX.

Generationis cauſa an materia, aut elementorum qualitates.

CVm autem nonnulla generabilia corruptibiliáque ſint, & generatio in eo qui circa mundi medium eſt loco ſit: de omni generatione ſimiliter, & quot & quę ſint eius principia, dicendum eſt. ſic enim faciliùs ſingularia contemplabimur, cùm de vniuerſalibus priùs ſumpſerimus. Sunt igitur tot numero, & genere eadem, quæ in æternis primiſque. Nam alterum vt materia, alterũ vt forma exiſtit. oportet autem & tertium inſuper adeſſe. Nam duo haudquaquàm ſatis ſunt ad generandum, ſicvti nec in ipſis primis. Igitur quod eſſe & non eſſe poteſt, generabilibus cauſa vt materies exiſtit. Nam quædam neceſſario ſunt, ceu æterna: quædam neceſſario non ſunt. Quorum illa quidem non eſſe, hæc verò eſſe eſt impoſſibile; eo quòd fieri non poſſit vt neceſſarium aliter ſeſe habeat. Nonnulla & eſſe poſſunt, & non eſſe, de quorum numero generabile exiſtit, atque corruptibile. hoc enim interdum eſt, interdum non eſt. Quare neceſſe eſt, vt generatio atque corruptio circa id ſit, quod eſſe & non eſſe poteſt. Quocirca & hoc cauſa, vt materies generabilibus exiſtit. At forma ſpeciéſque, vt cuius gratia. hæc autem eſt ſubſtantiæ cuiuſque ratio. Oportet autem & tertium quoque adeſſe, quod omnes quidem ſomniãt, nemo tamen dicit. Sed alij ſpecierum naturam cauſam eſſe ſufficientem ad generandum arbitrati ſunt, quemadmodũ in Phædone Socrates. Nam vbi ille cæteros increpuit, tanquam nihil locutos, eorũ quæ ſunt quædam ſpecies eſſe, quædam quæ ſpecies participent, & eorum quodque per ſpeciem eſſe dici, ſuſceptione verò oriri & abiectione interire ſupponit. Quare ſi hæc vera ſunt, ſpecies eſſe cauſas generationis & corruptionis neceſſariò putat. Alij ipſam materiam, nimirum à qua ſit motus. At neutri rectè dicunt. Nam ſi ſpecies cauſæ ſunt, cur non ſemper gignunt continenter, ſed quandoque & quandoque non, cùm ſemper tum ſpecies tum quæ eas participant, in ratione rerum ſint? Præterea in nonnullis aliam quandam eſſe cauſam ſpectamus. Nam medicus in corpore ſanitatem efficit, & ſcientiam ſciens, exiſtente & ipſa ſanitate, & ſcientia, & hiſce quæ eas participant: eodem modo & in cæteris, quæ facultate quadam fiunt. Quod ſi qui materiam ipſam ob motum generare dicant, naturaliùs profectò dixerint, quàm qui ita dicunt. Etenim quod alterat, quódque transfigurationem facit: cauſæ vt quippiam oriatur, rationem ſibi vendicat magis. Et in omnibus, ex æquo, tam hiſce quæ natura conſtant, quàm quæ ab arte proficiſcuntur, hoc agens dicere conſueuimus, quod mouendi vim obtinet.

A Verumenimvero & hi quoque non rectè dicunt. Pati namque & moueri, materiæ eſt, agere verò & mouere, alterius potentiæ. Palàm autem eſt, cùm in iis quæ arte, tum iis quæ natura fiunt. nam neque aqua ex ſe animal facit ſed natura: neque lignum lecticam, ſed ars. Quare & iſti ob id, & quia potiorem omittunt cauſam, haud rectè dicũt. quidditatem enim formamque exterminant. Præterea potentias atque vireis corporibus tribuunt, per quas admodum inſtrumentaliter generant, eam quæ à ſpecie ſumitur cauſam auferentes. Etenim quoniã, vt aiunt, calidum ſegregare, & frigidum congregare natum eſt: & cæterorum quodque, aliud agere, B aliud pati: ex his & per hæc gigni & corrumpi cætera omnia dicunt. At ipſe quoque ignis, moueri ac pati videtur. Præterea perinde faciunt, ac ſi quis ſerræ & inſtrumentorum cuique, eorum quæ generantur cauſam tribuat. Nam cùm quis ſerra ſecat, diuidi quippiam: & cùm corradit, leue fieri neceſſe eſt. & in cæteris ſimili modo. Quare ſi quàm maximè agit mouetque ignis, quomodo tamen moueat, non vltra contemplantur, nempe quòd deteriùs quàm ipſa inſtrumenta. Sed & priùs à nobis vniuerſaliter de cauſis dictum eſt, & nunc de materia & forma pertractatum atque determinatum.

CAPVT X.

C

Perpetuam eſſe generationis & corruptionis ſeriem.

Præterea cùm demonſtratum ſit, motum eum eſſe perpetuum, qui lationi accõmodatur: his exiſtentibus, & generationem quoque continenter eſſe neceſſe eſt. Latio namque continuè generationẽ ideo faciet, quia admouet & abmouet id quod gignendi vim obtinet.* Inſuper & priora eſſe dicta rectè, lationem, inquam, mutationum primam eſſe, & non generationem, dilucidum eſt. Nam multo magis conſonum eſt rationi, id quod eſt ei quod non eſt, vt naſcatur cauſam eſſe, quàm id quod non eſt ei quod eſt vt ſit. Sed quod lationem ſubit, eſt: D quod verò oritur, non eſt. Idcirco & latio generatione prior eſt. Cùm autem ſupponatur, & demonſtratum ſit, continuam rebus ipſis generationem corruptionémque competere, & lationem generationis cauſam eſſe dicamus: patet, quòd ſi vnica latio foret, fieri non poſſet vt ambæ fierent, propterea quòd contrariæ ſunt. Nam idem eodémque modo ſemper habens, idem facere natum eſt. Quare aut generatio ſemper eſſet, aut corruptio. Multos autem eſſe motus, contrarióſque aut latione aut inæqualitate conuenit: contrariorum enim, contrariæ ſunt cauſæ. Quocirca & prima latio, ortus ac interitus cauſa non eſt: ſed obliqui circuli latio. E ea namque & continua eſt, & duobus motibus fit. Nam ſi generatio corruptióve futura ſit ſemper cõtinua, ſemper quippiam quidẽ moueri neceſſe eſt, vt ne mutationes iſtæ deficiant: ſed duobus, vt ne altera duntaxat eueniat. Continuitatis igitur cauſa eſt, latio vniuerſi: acceſſus verò & receſſus, ipſa decliuitas. accidit enim vt interdũ procul, interdum propè exiſtat. Atq; cũ interuallũ ſit inęquale, motus erit inęqualis. Quare ſi ex eo generat, quia accedit & prope eſt: & quia abſcedit & procul exiſtit: hoc idẽ corrũpit. Atq; ſi quia ſæpenumero accedit, generat: & quia plerunq; recedit, corrũpit. contrariorum enim cauſę ſunt contrariæ. Et generatio atque corruptio ſecundùm naturã æquali in tẽpore fiũt.

Quocirca & cuiuſque tempus & vita numerũ habent, numeróque præfiniuntur. omnium enim ordo eſt. Et omne tempus ac vita circuitu menſuratur. verùm non eodem omnis, ſed alia minori, alia maiori menſuratur. alij ſiquidem annus, alij maior, alij minor circuitus, menſura eſt. Apparent autem & ad ſenſum, hiſce quæ dicimus conſentanea. Accedente namque ſole generationem fieri, & recedente, corruptionem, & in tempore æquali vtrumque videmus. Nam corruptionis & generationis naturalis tempus æquabile exiſtit. Sed plerunque accidit vt in minori corruptio fiat, ob mutuam inuicem conſpirationem. Si enim materies inæqualis ſit, nec omni ex parte eadem: generationes quoque inæquales, & quaſdam celeriores, quaſdã tardiores eſſe neceſſe eſt. Vnde fit vt ob horum generationem alia corrumpi accidat. Semper autem, ſicuti dictum eſt, generatio & corruptio continentes erunt, nec vnquam deficient, ob eam quam diximus cauſam: idque ratione optima euenit. Nam cùm in omnibus quod præſtabilius eſt natura ſemper expetere dicatur, præſtabilius autem ſit eſſe quàm non eſſe, & quot modis eſſe dicamus alibi dictum ſit, hoc verò in omnibus ineſſe impoſſibile ſit, propterea quòd longè ab ipſo principio diſtent: reliquo modo Deus ipſe vniuerſum compleuit, continua facta generatione. Nam ita maximè ipſum eſſe continenter erit, propterea quòd illud, ſemper inquam generationem fieri, ad ſubſtantiam proximè accedit. Cuius rei, vt ſæpe diximus, cauſa circularis latio eſt. ſola enim continens eſt. Quocirca & cætera alia quæ in ſeſe ſecundùm affectus atque vireis tranſmutari ſolent, ceu corpora ſimplicia circularem imitantur lationem. nam cùm ex aqua gignitur aër, & ex aëre ignis, & rurſum ex igni aër, & ex aëre aqua: in orbem ire generationem ideo dicimus, quia rurſum eòdem redit reciprocatúrq;. Quare & recta horum latio circularem imitata lationem continens exiſtit. Ad hæc ex hiſce colliquet id quod nonnulli addubitant: cur cùm corporum quodque ad ſuum feratur locum, in tempore infinito corpora diducta ſeparatáque non fuerunt. Nam mutua in ſeſe migratio, huiuſce rei cauſa exiſtit. Si enim in ſuo quodque loco manſiſſet, nec à vicino fuiſſet tranſmutatum: iam ſeparata forent atque diſcreta. Tranſmutantur igitur ob lationem, quæ duplex eſt. & quia tranſmutationem ſubeunt, fieri non poteſt vt ex ipſis vllum aliquo in loco ſtato maneat. Quòd igitur generatio ſit atque corruptio, & quam ob cauſam, & quid generabile & corruptibile, ex hiſce quę diximus manifeſtum eſt. Cùm autem ſit neceſſe, quippiam eſſe mouens, ſi futurum eſt vt ſit motus, quemadmodum antea dictum eſt in aliis, & ſi motus ſemper ſit, ſemper eſſe quippiam mouens, & ſi continuus, vnũ idemque & immobile, & ab alteratione generationéve immune: & ſi plures ſint motus circulares, plura quidem, ſed omnia hæc quodammodo ſub vno eſſe principio neceſſe ſit, & cùm tempus ſit continuum, motum eſſe continuum, ſiquidem fieri nequit vt ſit tempus ſine motu: tempus profectò continui cuiuſpiam numerus erit. Eius igitur qui in gyrum ſit, ſicuti in hiſce quæ initio diximus, præfinitum eſt. Sed vtrùm motus ideo ſit continuus, quia id quod motum ſubit, continuum ſit, an quia id in quo ſit motus, locus inquam aut affectus? palàm ſanè eſt, motum ideo continuum eſſe, quia id quod mouetur, continuum eſt. Nam quo pacto conti-

CAPVT XI.

De generatione & tranſmutatione quæſtiones aliquot.

B Cvm autem in hiſce quæ per ortum alterationémve, aut omnino tranſmutationem continenter mouentur, hoc poſt hoc deinceps eſſe ac oriri in tantum vt non deficiant, videamus: vtrùm quippiam ſit, quod erit neceſſariò, an nihil, ſed omnia non fore contingat, conſiderandum eſt. palàm enim eſt, quòd nonnulla. Atque continuo fore & eſſe futurum, hac de cauſa diuerſa ſunt. Nam de quo verum eſt dicere ipſum fore, de eo tandem hoc, ipſum inquam eſſe, verum ſit oportet: de quo vero nunc verum eſt dicere, ipſum eſſe futurum, hoc non fore nihil vetat. Nam tametſi futurum eſt vt quiſpiam ambulet: tamen fieri poteſt vt non ambulet. Omnino autem cùm ex entibus nonnulla, &
C eſſe & non eſſe contingat: quod & ea quæ gigni ſolent, ita ſeſe habebunt, & non neceſſario erunt, apertum eſt. Vtrùm igitur vniuerſa ſint eiuſmodi, an non, ſed aliqua ſimpliciter fore neceſſarium ſit: & ſicut in ipſo eſſe fit vt quædam non poſſint non eſſe, quædam poſſint non eſſe: ſic & in ipſa quoque generatione. verbi gratia, ſolſtitia fore neceſſe eſt, nec fieri poteſt vt non contingant. Si igitur prius fore neceſſe eſt, ſi poſterius erit, vt ſi domus, fundamentum, ſi vero fundamentũ, lutum: nónne ergo ſi fundamentum factum eſt, domum quoque fore neceſſe eſt? an non adhuc, niſi & eam fore ſimpliciter neceſſe ſit? quòd ſi hoc ſit, facto fundamento fore domum neceſſe eſt. Nam ſic prius ſeſe ha-
D bet ad poſterius. Qua de cauſa ſi hoc erit, antè fore illud eſt neceſſe. Si itaque eſt neceſſe fore poſterius, prius quoque neceſſe eſt: & ſi prius, & poſterius. Verùm non ob illud, ſed quia neceſſariò futurum ſupponebatur. In quibus ergo poſterius eſſe neceſſe eſt, in hiſce recurrit: ſemperque ſi prius eſt factum, poſterius fore neceſſe eſt. Quòd ſi deorſum verſùs in infinitum abeant, haud quaquam ex poſterioribus hocce fore ſimpliciter, ſed ne ex ſuppoſitione quidem, erit neceſſe. nam ſemper aliud antè neceſſario erit, quocirca & illud fore, neceſſarium erit. Quare ſi infiniti non ſit pricipium: nec primum quicquam erit, ob quod fore erit neceſſa-
E rium. At verò nec in hiſce quidem quæ finem habent, atque terminum, hoc verè dici continget: ſimpliciter inquam fore quippiam, ceu domum, cùm factum fuerit fundamentum. Nam cùm fuerit factum: niſi ſemper eam fieri ſit neceſſe, ſemper id eſſe quod poteſt non eſſe, eueniet. At generatione ſemper ſit, eſt neceſſe: ſi ipſius generatio neceſſariò ſit. nam neceſſariò & ſemper, ſimul ſunt. quod enim eſſe eſt neceſſe, non poteſt non eſſe. Quare ſi quid neceſſariò eſt, ſempiternum eſt: & ſi ſempiternum eſt, neceſſariò eſt. Si itaque huiuſce generatio neceſſariò eſt, ſempiterna eſt: & ſi ſempiterna, neceſſariò. Si igitur generatio cuiuſpiam neceſſariò ſimpliciter ſit, in orbem eat eodémque reuertatur neceſſe eſt. Nam generationem aut ter-

minum habere, aut non habere, neceſſe eſt. Et ſi non habeat: aut in rectum, aut in circulum. Horum autem, ſi ſempiterna ſit, in rectum minimè poſſibile eſt: quia nequaquam ſit principium, neque deorſum vt in futuris accipimus, neque ſurſum vt in hiſce quæ iam facta ſunt. At eſſe principium, ſi finita non ſit, atque eam ſempiternam eſſe neceſſe eſt. Quocirca circularis ſit, eſt neceſſe. Igitur regreſſum fieri neceſſe erit. vt ſi hoc neceſſario ſit, ergo & prius. at vero ſi hoc, & poſterius fore erit neceſſe. Atque hoc ſemper continuè: nihil enim refert, per duo an plura hoc dicamus. Igitur neceſſario ſimpliciter circulari motui atque generationi competit. Et ſi in orbem fiat generatio, fore quodque & eſſe factum neceſſe eſt: & ſi neceſſe ſit, horum generatio circularis erit. Hęc itaque non ſine ratione accidunt, poſteaquam motus ille circularis atque cœleſtis perpetuus eſt. nam hæc neceſſario fiunt & erunt, quæcumque huiuſce motiones ſunt, & quæcumque propter hunc fiunt motum. Nam ſi id quod in orbem mouetur, aliqua ſemper moueat, eorum quoque motum circularem eſſe neceſſe eſt. vt ſi ſupera latio orbita ſit, ſol orbita mouetur. Quoniam autem hoc pacto mouetur, hac ſane de cauſa anni tempora in circulum fiunt, redeúntque. Quæ cùm ita fiant, omnia profectò quæ ſub ipſis ſunt, haud ſecus fient. Cúrnam igitur quędam ita fieri videntur, nempe circulatim oriri, vt pluuia & aër (nam ſi nubes erat, pluat etiam oportet: & ſi pluet, nubem quoque fore conuenit) homines verò & animalia in ſeſe non redeunt remeantque, ita vt idem rurſum oriatur? Non enim ſi pater ſit, te fore: ſed illum ſi tu ſis, neceſſe eſt. Hæc autem generatio in rectum proficiſci videtur. Rurſum autem hoc conſiderationis initium ſumatur: ſimiline modo vniuerſa redeant an non, ſed quædam numero, quædam ſpecie ſolùm? Quorum igitur ſubſtantia motum ſubiens incorruptibilis eſt, ea omnia, vt patet, etiam numero eadem redire ſolent. nam motus id comitari ſolet quod motu cietur. Quorum verò non, ſed corruptibilis: ſpecie, non item numero, reuerti neceſſe eſt, quocirca cùm ex aëre aqua fit, & ex aqua aër, aër ſpecie idem, non numero, redit. Quod ſi & eadem numero aliqua redeant, non tamen eá quorum ſubſtantia ortum ſubit, eiuſcemodi exiſtens, quæ non eſſe poſſit.

CAPVT II.

De continentiæ inter cælum & terram diuerſitate.

CVm enim antea definitum ſit à nobis, vnum quidem principium de numero illorum corporum eſſe, ex quibus natura eorum conſtat quæ in orbem commeant: & alia corpora quatuor ob principia totidem eſſe: quorum duplicem eſſe motum, alterum à medio, alterum ad medium dicimus: atque cùm hæc ſint quatuor, nempe, ignis, B aër, aqua & terra: quod ſuper hæc omnia inuehitur eſſe ignem, quod ſubſidet, terram: duo etiam eſſe quæ perinde vt illa inter ſeſe habeant: (nam aër igni inter cætera proximus exiſtit, aqua terræ) totus profectò mundus terræ vndique incumbens, ex hiſce conſtat corporibus: circa quem quæ contingere ſolent affectiones, ſumi oportere cenſemus. Eſt autem neceſſariò mundus iſte ſupernis lationibus ferè continuus, vt inde vis eius vniuerſa regatur. Ea ſi quidem cauſa prima putanda omnibus eſt, vnde motus principium exiſtit. Ad hæc quæ perpetua eſt, nec motus finem ratione loci habet, ſed in fine ſemper eſt. Quinetiam hæc C omnia corpora certis diſcreta ſunt ſpatiis. quare ignem & terram, & quæ hiſce cognata ſunt, eorum quæ in inferiore mundo contingunt, vt in genere materiæ eorum quæ fiunt, cauſas exiſtimare addecet. quod enim ſubiicitur patitúrque, hoc nuncupare modo conſueuimus. Sed quod ita cauſa eſt, vt vnde principium motus, ad eorum vim, quæ aſſiduè mouentur, referendum eſt.

Ὅτι ὅλου τοῦ περὶ τὴν γῆν κόσμου ἡ δύναμις κατὰ τὴν ἄνωθεν φορὰν κυβερνᾶται.

ΕΠεὶ γὰρ διώρισται πρότερον ἡμῖν, μία μὲν ἀρχὴ τῶν σωμάτων * ἐξ ὧν συνέστηκεν ἡ τῶν * ἐγκυκλίως φερομένων σωμάτων φύσις· ἄλλα δὲ τέτταρα σώματα διὰ τὰς τέτταρας ἀρχάς, ὧν δὴ τὴν εἶναι φαμὲν τὴν κίνησιν, τὴν μὲν ἀπὸ τοῦ μέσου, τὴν δ' ἐπὶ τὸ μέσον· τεττάρων δ' ὄντων τούτων, πυρὸς, καὶ ἀέρος, καὶ ὕδατος, καὶ γῆς· τὸ μὲν τούτοις πᾶσιν ἐπιπολάζον, εἶναι πῦρ· τὸ δ' ὑφιστάμενον, γῆν· δύο δ', ἃ πρὸς αὐτὰ, καὶ τοῖς ἀνάλογον ἔχει· ἀὴρ μὲν γὰρ πυρὸς ἐγγύτατον τῶν ἄλλων· ὕδωρ δὲ, γῆς· ὁ δὴ περὶ τὴν γῆν ὅλος κόσμος ἐκ τούτων συνέστηκε τῶν σωμάτων· * περὶ ὃν τὰ συμβαίνοντα πάθη φαμὲν εἶναι ληπτέον. ἔστι δ' ἐξ ἀνάγκης συνεχὴς πως οὗτος ταῖς ἄνω φοραῖς, ὥστε πᾶσαν αὐτοῦ τὴν δύναμιν κυβερνᾶσθαι ἐκεῖθεν· ὅθεν γὰρ ἡ τῆς κινήσεως ἀρχὴ πᾶσιν, ἐκείνην αἰτίαν νομιστέον πρώτην. πρὸς δὲ τούτοις, C ἡ μὲν ἀΐδιος καὶ τέλος οὐκ ἔχουσα τῷ τόπῳ τῆς κινήσεως, ἀλλ' ἀεὶ ἐν τέλει. ταῦτα δὲ τὰ σώματα πάντα πεπερασμένους διέστηκε τόπους ἀλλήλων· ὥστε τῶν συμβαινόντων περὶ αὐτὸν, πῦρ μὲν, καὶ γῆν, καὶ τὰ συγγενῆ τούτοις, ὡς ἐν ὕλης εἴδει, τῶν γιγνομένων αἴτια χρὴ νομίζειν· τὸ γὰρ ὑποκείμενον καὶ πάσχον, τοῦτο προσαγορεύομεν τὸν τρόπον. τὸ δ' οὕτως αἴτιον, ὡς ὅθεν ἡ τῆς κινήσεως ἀρχὴ, τὴν τῶν ἀεὶ κινουμένων αἰτιατέον δύναμιν.

ΚΕΦΑΛ. γ'.

Πῶς τέτακται ἀὴρ καὶ πῦρ πρὸς τὴν τοῦ πρώτου σώματος θέσιν καὶ διὰ τί ἐν αὐτῷ οὐ γίνεται νέφη, μηδ' εἰς ὕδωρ σύγκρισις.

ΑΝαλαβόντες οὖν τὰς ἐξ ἀρχῆς θέσεις καὶ τοὺς εἰρημένους πρότερον διορισμοὺς, λέγωμεν περί τε τῆς τοῦ γάλακτος φαντασίας καὶ περὶ κομητῶν, καὶ τῶν ἄλλων ὅσα τυγχάνει τούτοις ὄντα συγγενῆ. φαμὲν δὲ πῦρ, καὶ ἀέρα, καὶ ὕδωρ, καὶ γῆν γίνεσθαι ἐξ ἀλλήλων, καὶ ἕκαστον ἐν ἑκάστῳ ὑπάρχειν τούτων δυνάμει· ὥσπερ καὶ τῶν ἄλλων οἷς ἕν τι καὶ τὸ αὐτὸ ὑπόκειται, εἰς ὃ καὶ ἀναλύονται ἔσχατον. πρῶτον μὲν οὖν ἀπορήσειεν ἄν τις περὶ τὸν καλούμενον ἀέρα, τίνα τε χρὴ λαβεῖν αὐτοῦ τὴν φύσιν ἐν τῷ περιέχοντι κόσμῳ τὴν γῆν, καὶ πῶς ἔχει τῇ τάξει E πρὸς τἆλλα τὰ λεγόμενα στοιχεῖα τῶν σωμάτων. ὁ μὲν γὰρ τῆς γῆς ὄγκος, πηλίκος ἄν τις εἴη πρὸς τὰ περιέχοντα μεγέθη, οὐκ ἄδηλον· ἤδη γὰρ ὦπται διὰ τῶν ἀστρολογικῶν θεωρημάτων ἡμῖν, ὅτι πολὺ καὶ τῶν ἄστρων ἐνίων ἐλάττων ἐστίν. ὕδατος δὲ φύσιν συνεστηκυῖαν καὶ ἀφωρισμένην οὔθ' ὁρῶμεν, οὔτ' ἐνδέχεται κεχωρισμένην [εἶναι] τοῦ περὶ τὴν γῆν ἱδρυμένου σώματος· ἔστι τοῦ τε φανεροῦ, θαλαττίου καὶ ποταμίου, κἄν εἴ τι κατὰ βάθος ἄδηλον ἡμῖν ἐστι. τὸ δὲ δὴ μεταξὺ τῆς γῆς τε καὶ τῶν ἐσχάτων ἄστρων, πότερον ἕν τι νομιστέον εἶναι σῶμα τὴν φύσιν, ἢ πλείω, κἂν εἰ πλείω, πόσα, καὶ μέχρι ποῦ διώρισται τοὺς τόπους. ἡμῖν μὲν οὖν εἴρηται πρότερον περὶ τοῦ πρώτου στοιχείου, ποῖόν τι τὴν δύναμίν ἐστι, καὶ ὅτι πᾶς ὁ περὶ τὰς ἄνω φορὰς κόσμος,

ἐκείνου τοῦ σώματός πλήρης ἐστί. καὶ ταύτην τὴν δόξαν οὐ μόνον ἡμεῖς τυγχάνομεν ἔχοντες· φαίνεται δ᾽ ἀρχαία τις ὑπόληψις αὕτη καὶ τῶν πρότερον ἀνθρώπων. ὁ γὰρ λεγόμενος αἰθὴρ, παλαιὰν εἴληφε τὴν προσηγορίαν, ἣν * Ἀναξαγόρας μὲν τῷ πυρὶ ταὐτὸν ἡγήσασθαί μοι δοκεῖ σημαίνειν· τά τε γὰρ ἄνω πλήρη πυρὸς εἶναι· κἀκεῖνος τὴν ἐκεῖ δύναμιν, αἰθέρα καλεῖν ἐνόμισε· τοῦτο μὲν ὀρθῶς νομίσας· τὸ γὰρ ἀεὶ σῶμα θέον, ἅμα τε θεῖόν τι τὴν φύσιν ἐοίκασιν ὑπολαβεῖν, καὶ διώρισαν ὀνομάζειν αἰθέρα τὸ τοιοῦτον, ὡς ὂν οὐθενὶ τῶν παρ᾽ ἡμῖν τὸ αὐτό. οὐ γὰρ δὴ φήσομεν ἅπαξ, οὐδὲ δὶς, οὐδ᾽ ὀλιγάκις τὰς αὐτὰς δόξας ἀνακυκλεῖν γινομένας ἐν τοῖς ἀνθρώποις, ἀλλ᾽ ἀπειράκις. ὅσοι δὲ πῦρ καθαρὸν εἶναί φασι τὸ περιέχον, καὶ μὴ μόνον τὰ φερόμενα σώματα· τὸ δὲ μεταξὺ γῆς καὶ τῶν ἄστρων, ἀέρα, θεωρήσαντες ἂν τὰ νῦν δεικνύμενα διὰ τῶν μαθημάτων ἱκανῶς, ἴσως ἂν ἐπαύσαντο ταύτης τῆς παιδικῆς δόξης. λίαν γὰρ ἁπλοῦν τὸ νομίζειν μικρὸν τοῖς μεγέθεσιν εἶναι τῶν φερομένων ἕκαστον, ὅτι φαίνεται θεωροῦσιν ἐντεῦθεν ἡμῖν οὕτως. εἴρηται μὲν οὖν καὶ πρότερον ἐν τοῖς περὶ τὸν ἄνω τόπον θεωρήμασι· λέγωμεν δὲ τὸν αὐτὸν λόγον καὶ νῦν. εἰ γὰρ τά τε διαστήματα, πλήρη πυρὸς, καὶ τὰ σώματα συνέστηκεν ἐκ πυρὸς, πάλαι φροῦδον ἂν ἦν ἕκαστον τῶν ἄλλων στοιχείων. ἀλλὰ μὴν οὐδ᾽ ἀέρος γε μόνου πλήρη· πολὺ γὰρ ἂν ὑπερβάλλοι τὴν ἰσότητα τῆς κοινῆς ἀναλογίας πρὸς τὰ σύστοιχα σώματα, κἂν εἰ δύο στοιχείων πλήρης ὁ μεταξὺ γῆς καὶ οὐρανοῦ τόπος ἐστίν. οὐθὲν γὰρ, ὡς εἰπεῖν, μόριον ὁ τῆς γῆς ἐστιν ὄγκος, ἐν ᾧ συνείληπται πᾶν καὶ τὸ τοῦ ὕδατος πλῆθος πρὸς τὸ περιέχον μέγεθος. ὁρῶμεν δ᾽ οὐκ ἐν τοσούτῳ μεγέθει γινομένην τὴν ὑπεροχὴν τῶν ὄγκων, ὅταν ἐξ ὕδατος ἀὴρ γένηται διακριθέντος, ἢ πῦρ ἐξ ἀέρος. ἀνάγκη δὲ τὸν αὐτὸν λόγον ἔχειν ὃν ἔχει τὸ τοσονδὶ καὶ μικρὸν ὕδωρ πρὸς τὸν ἐξ αὐτοῦ γινόμενον ἀέρα, * καὶ τὸν πάντα πρὸς τὸ πᾶν ὕδωρ. διαφέρει δ᾽ οὐθὲν, οὐδ᾽ εἴ τις φησὶ μὲν μὴ γίνεσθαι ταῦτα ἐξ ἀλλήλων, ἴσα μέν τοι τὴν δύναμιν εἶναι· κατὰ τοῦτον γὰρ τὸν τρόπον ἀνάγκη τὴν ἰσότητα τῆς δυνάμεως ὑπάρχειν τοῖς μεγέθεσιν αὐτῶν, ὥσπερ κἂν εἰ γινόμενα ἐξ ἀλλήλων ὑπῆρχεν. ὅτι μὲν οὖν, οὔτε ἀὴρ οὔτε πῦρ συμπεπλήρωκε μόνον τὸν μεταξὺ τόπον, φανερόν ἐστι. λοιπὸν δὲ διαπορήσαντας εἰπεῖν πῶς τέτακται τὰ δύο πρὸς τὴν τοῦ πρώτου σώματος θέσιν· λέγω δὲ ἀέρα καὶ πῦρ. καὶ διὰ τὴν αἰτίαν ἡ θερμότης ἀπὸ τῶν ἄνωθεν ἄστρων γίνεται τοῖς περὶ τὴν γῆν τόποις. περὶ ἀέρος οὖν εἰπόντες πρῶτον, ὥσπερ ὑπεθέμεθα, λέγωμεν οὕτω καὶ περὶ τούτων πάλιν. εἰ δὴ γὰρ *ὕδωρ ἐξ ἀέρος, καὶ ἀὴρ ἐξ ὕδατος, διὰ τίνα ποτ᾽ αἰτίαν οὐ συνίσταται νέφη κατὰ τὸν ἄνω τόπον; προσῆκε γὰρ μᾶλλον ὅσῳ πορρώτερος ὁ τόπος τῆς γῆς καὶ ψυχρότερος, διὰ τὸ μήτε οὕτως πλησίον εἶναι τῶν ἄστρων θερμῶν ὄντων, μήτε τῶν ἀπὸ τῆς γῆς ἀνακλωμένων ἀκτίνων, αἳ κωλύουσι πλησίον τῆς γῆς συνίστασθαι, διακρίνουσαι τῇ θερμότητι τὰς συστάσεις. γίνονται γὰρ αἱ τῶν νεφῶν ἀθροίσεις, οὗ λήγουσιν ἤδη διὰ τὸ σχίζεσθαι εἰς ἀχανὲς αἱ ἀκτῖνες.

* γρ. ἢ τὸ πᾶν ὕδωρ πρὸς τὸν πάντα.

A illo corpore diſſertus eſt. Quæ opinio non modò noſtra eſt, ſed priſca quædam maiorúmque exiſtimatio eſſe videtur. Nam quem vocamus æthera, antiquam ſibi adoptauit appellationem, quam Anaxagoras idem quod ignis vocabulum ſignificare putaſſe mihi videtur. quippe qui & ſuperas mundi partes igni plenas eſſe, & vim quæ inibi eſſet, æthera vocare cenſuit: quod quidem adprobè fecit. Nam corpus quod aſſiduè currit, ſimul & diuinum natura exiſtimaſſe viſi ſunt: & quod eſſet eiuſmodi, æthera nuncupare, tanquam nulli eorum qui hic viſuntur, idem foret, definierunt. Non enim oportet opiniones mortalium eaſdem ſemel aut iterum, aut iuxta quempiam paruum numerum redire dicamus, ſed infinities. Qui B autem id quod ambit, & non corpora ſolùm quæ lationem ſubeunt, eſſe purum ignem aiunt, quod vero inter terram ſtellaſque intercedit, aerem: ij, ſi quæ nunc Mathematicis rationibus abundè demonſtramus, fuiſſent ſpeculati, forſitan ab hac puerili opinione deſtitiſſent. Eſt enim animi perquam ſimplicis, putare, ſingula quæ motu cientur, ideo puſilla eſſe magnitudine, quòd nobis hinc aſpicientibus appareant eiuſmodi. Ergo tametſi vel antea in de ſupero loco contemplationibus hac de re dictum ſit, eandem tamen rationem in præſentia quoque dicamus. Nam ſi & interualla ipſa forent opplera igni, & corpora ex eodem conſtarent, dudum cætera alia euanuiſſent periſſéntque elementa. At verò nec aëre ſolo C plena ſunt interualla. nam tum aër communis rationis æqualitatem ad corpora eiuſdem ſeriei, haud paruo exuperaret: etiamſi locus, qui inter cœlum terramque interhiat, elementis duobus ſit oppletus. quandoquidem terræ moles quæ totam etiam aquæ copiam complexa eſt, nullius (prope dixerim) particulæ rationem ſubit, ad ambientem magnitudinem. At molis exceſſum in tanta fieri magnitudine haudquaquam videmus, vbi ex aqua ſecretionem ſubeunte aer conſit, aut ex aëre ignis. Sed quam tantilla ac perexigua aquæ portio rationem habet ad aerem qui ex ea cooritur, eandem & tota aqua ad totum aerem habeat eſt neceſſe. Nihil autem intereſt, ſi quis D ea non ex ſeſe viciſſim gigni, æquas tamen vireis habere dicat. Nam hoc pacto virium æqualitatem magnitudinibus eorum competere perinde eſt neceſſe, atque ſi ex ſeſe mutuò gignerentur. Patet igitur, neque aerem ſolum, neque ignem interpatentem oppleuiſſe locum. Reliquum eſt autem, allatis antè dubitationibus dicamus, quónam pacto elementa duo, aer inquam ac ignis, ad primi corporis poſitum ſita ſint. Et quam ob cauſam calor à ſupernis ſtellis ad loca quæ ſunt circa terram, profluat. De aere igitur priùs locuti, ſicuti admonuimus, dicamus deinceps etiamnum de hiſce rurſum. Itaque ſi ex E aere aqua cooritur, & ex aqua aer, quánam de cauſa nubes ſupero in loco non conſiſtunt? Nam eo magis interibi nubes conſiſtere addecebat, quo longiùs à terra locus ille diſtat, & algidior eſt: propterea quòd neque adeò prope ſtellas exiſtat, quibus calorifica vis ineſt, neque prope radios à terra refractos, qui quòd feruore caloris conſtitutiones ſegregent, vapores in nubem cogi prope terram vetant. Etenim nubium aſtrictiones ibidem fieri ſolent, vbi iam radij propterea deſinunt, quòd in vaſtum aerem effundantur diſpergantúrque.

Igitur aut non ex quouis aëre aqua fieri aſſolet: aut ſi ex quouis ſimiliter fiat, qui circa terram eſt, non modò aër, ſed veluti vapor exiſtit, proinde in aquã rurſum cogitur. At vero ſi vniuerſus aer tantus exiſtens ſit vapor, aëris natura & aquæ multum excedere videbuntur, ſi ſupera interualla corpore quodam plena ſint, nec fieri poſſit vt igni, propterea quòd aſſiccata iam forent cætera omnia, ſed reliquum ſit vt aere oppleta ſint, & quòd telluri vndiquaque adiacet aqua. nam vapor, non niſi aquæ ſecretio exiſtit. Ad hunc igitur modum de hiſce addubitatum ſit. Nos autem quæ ſimul & ad mox dicenda, & ad nunc dicta conducant, definientes dicamus. Quod enim ſupero in loco conſiſtit, & ad lunæ globum vſque porrigitur, corpus eſſe diuerſum ab igni & aere dicimus. Verumenimvero in eo aliud magis, aliud minùs purum eſſe ac ſincerum, differentiáſque ſortiri, & imprimis qua deſinendo, ad aerem mundúmque terræ circunquaq; incumbentem pertingit. Cùm autem primum elementum, & corpora quæ in eo ſunt, in orbem feruntur, ſemper id quod ex infero mundo ac corpore illi continuum eſt, vi motus diſgregatum accenditur, atque calorem efficit. Sic autem mente concipiamus addecet, hinc item ſumpto exordio. Nã corpus quod ſuperæ conuerſioni ſubeſt, veluti materia quædam, quæ potentia ſit calida, frigida, arida, & humecta, cæteráſque alias omneis affectiones quæ has comitantur ſubeat, fit ac eſt eiuſmodi, ratione motus & immobilitatis, cuius cauſam principiúmque diximus antea. Grauiſſimum igitur corpus atque frigidiſſimum, terra inquam & aqua, in medio & circa medium ſegregata exiſtunt. Circa quæ illa quoque ſunt quæ hiſce hærent, aer ſcilicet, atque id quod quamuis ignem aſſueuimus appellare, ignis tamen haudquaquam eſt. Siquidem ignis, caloris exuperantia ac veluti feruor exiſtit. Verùm aduertere oportet, eius quod à nobis aer dicitur, vocatúrque, quod vaporem referat, terræque exhalationem habeat, partem vnam quæ circa terram eſt, veluti calentem humidámq; eſſe: alteram quæ ſuperior eſt, calidam iam eſſe atque aridam. Nam vaporis natura, humecta calidáque eſt: exhalationis, calida & arida. Eſtque vapor, potentia vt aqua: exhalatio, potentia vt ignis. Cur igitur nubes ſupero in loco non conſiſtant, hãc eſſe cauſam exiſtimandum eſt: inibi non aerem ſolùm, ſed potiùs ignem eſſe. Nihil autem vetat, per lationem quoque orbicularem præpediri nubes, quominus ſupero in loco conſiſtant. Nam circumfundens aer vniuerſus, quicunque non intra eam capitur circunferentiam quæ efficit vt tellus tota rotunda ſit: fluat eſt neceſſe. Videmus enim nunc quoque in ſtagnantibus terræ locis ventos cooriri, qui etiam montes altiſſimos haudquaquam tranſcendunt. Diffluit autem in orbem, prolabitúrque aer, quòd eum ipſius vniuerſi conuerſio ſecum trahat rapiatque. Nã ignis ſupero elemento, aer autem igni continens eſt. Ex quo etiam fit vt motus inhibeat, quo minus in aquam cõcreſcat aer. Verùm ſemper quæcunque aeris particula pondus habere cœperit, extruſo in ſuperum locũ calido, deorſum ruit. & alia in parte ſurſum, vnà cum exhalante igni emicat. ac ita continuè, aere aliud, aliud igni oppletũ perſeuerat: & eorũ quodque, aliud ſubinde atq; aliud euadit. Quòd igitur nec nubes ſupero in loco fiant, nec in aquam concretio, item quonam pacto de loco inter ſtellas terrámque medio ſentire oporteat,

A & quonam ſit locus ille corpore diffarctus, tot dicta ſint. at de calore genito, quem ſol præſtare ſolet, magis quidem per ſe & exactè conuenit in commentario de ſenſu dicere. Nam calor, affectio quædam ſenſus exiſtit, ſed quam ob cauſam oriatur calor, cùm corpora illa cœleſtia haudquaquam eiuſmodi ſuapte natura ſint, dicendum nunc quoque. Videmus itaque motum poſſe aërem ſegregare, atque incendere in tantum, vt ſæpius & quæ motu cientur, liquefieri videantur. Vt igitur tepor gignatur atque calor, ſolis latio duntaxat ſatis eſt efficere. nam & celerem eſſe lationem, nec longiùs abeſſe oportet. Stellarum igitur latio celeris eſt, ſed abiuncta procul: lunæ verò deorſum B quidem eſt, pigra tamen. at ſolari lationi vtraque hæc abundè competunt. Porrò calorem vnà cum ipſo ſole potiſſimùm gigni, conſentaneum eſt rationi, ſumpta ab hiſce quæ hîc fiunt ſimilitudine. Etenim cùm quædam hîc vi feruntur, vicinus aër maximè calidus effici ſolet: id quod haud ſine ratione contingit. Nam ſolidæ rei motio aërem imprimis ſegregare poteſt. Igitur tum hanc ob cauſam caloris feruor ad hunc pertingere locum aſſolet: tum quòd ignis aërem complexus, motionis ratione crebriter ſegregetur diſſipetúrque, atque vi deorſum feratur. Quòd autem ſuperus locus nec calidus ſit, nec ignitus, vel ſtellarum diſcurſus ſufficienti ſunt indicio. illic enim non fiunt, ſed C infero in loco. quanquam quæ validiore motu cientur, vt ocyus, ita pleniùs igneſcere ſolent. Adhæc, ſol ipſe qui calidus cumprimis eſſe videtur, candidus apparet, non igneus.

CAPVT IV.

Flammarum in ſummo aëre apparentium cauſa.

His autem pertractatis, quam ob cauſam flammæ ardentes, & ſtellæ diſcurrentes, & vocati à quibuſdam torres, & capræ circa cœlum viſantur, dicamus. hæc enim omnia idem ſunt, D atque eadem de cauſa, intenſione tamen ac remiſſione diſparantur. Horum autem & aliorum complurium principium eſt hoc. Incaleſcente namque à ſole terra, halitum fieri non ſimplicem, vti quidam putant, ſed geminum, neceſſarium eſt: alterum vaporoſum magis, alterum magis ſpiritoſum. humidi quidem halitum, quod in terra & ſuper terram exiſtit, vaporem: terræ verò præaridæ exiſtentis, anhelitum fumidum. è quibus qui ſpiritoſus eſt, eum caloris beneficio inuehi: qui verò humentior, ſubſidere ob grauitatem. Et propterea id omne quod à lunari ambitu terræ circumfunditur vndique, eleganter hoc pacto digeſtum eſt. E Nam ſtatim ſub ipſa cœli conuerſione ſitum eſt, quod calidum aridúmque eſt, quem nuncupamus ignem. ſiquidem nomine vacat, & cuilibet fumidæ ſecretioni competit. Attamen quia quod tale eſt, ex omni corporum genere maximè ſuccendi ac conflagrare ſuapte natura poteſt, ideo ſic vti nominibus eſt neceſſe. Sub hac verò natura collocatus eſt aër. Noſſe autem oportet hanc veluti ſuccenſionem, quam nunc ignem diximus, circa eius ſphæræ extremum, quæ terram ambit, extenſam eſſe. quo fit vt cùm exiguum forte fortuna motum nacta fuerit, ſæpe fumi modo inardeſcat. Nam flamma feruor eſt ſpiritus aridi.

Talis igitur conſtitutio, cùm à circulari motu aliquo pacto agitata fuerit: qua potiſſimùm parte ardori concipiendo idonea accommodáque eſt, eatenus ſuccenditur. Succenſionis itaque poſitu aut multitudine diſcrimen obuenire ſolet. Nam ſi longitudinem latitudinémque habeat ſuccenſio, ſæpius videtur flamma collucens, propemodum ita vt in aruis fit ſuccenſis calamis. Sin autem longitudinem dumtaxat habeat, tum fiunt quos vocant torres, necnon capræ & vagæ vtcunque ſtellæ. atque ſi in longitudinem magis quàm in latitudinem ſuccenſio porrigatur, cùm quaſdam veluti ſcintillas diſpuere videtur, & interim ardet: quod quidem ideo contingit, quia minutatim quidem, ſed priore parte ignem obiter excipit: id eſt quod capra nominatur: cùm verò hac affectione caret, torris. Sin verò exhalationis longitudo in multas ſimul & exiguas parteis diſſeminata ſit, & latitudo atque craſſitudo ſe conſimiliter habeant, tum fiunt quæ creduntur vulgò vagari ſtellæ. Interdum igitur exhalatio motionis opera deflagrans, ea ipſa gignit. Interdum ab aëre ob refrigerationem conſiſtente, calidum ſecernitur extruditurque. Vnde etiam fit vt eorum delatio proiectioni magis quàm incenſioni aſſimiletur. Dubitauerit enim quiſpiam vtrùm ſtellarum excurſus haud aliter proueniant, quam lucernæ ſubdita exhalatio è flamma ſupera inferam lucernam reaccendit (mira enim eſt eiuſce rei celeritas, ac iactui aſſimilis: nec perinde fieri videtur, quaſi alius ac alius ſubinde oriatur ignis) an corporis cuiuſpiam eiuſdem proiectiones exiſtant? Mihi ſanè videtur, eos propter vtrunque fieri. Nam & perinde fiunt, vt flammæ ardentis lucernæ per fumum in extinctam irruptio lucernam efficitur. & nonnulla quòd extrudantur, ideo proiici ſolent, ceu nuclei qui è digitis elabuntur diſſiliúntque: adeò vt in terram maréque deferri, tum noctu tum interdiu, cùm ſudum fuerit, videantur. Sed in partem elabuntur infernam, propterea quòd denſatio propellens, ea deorſum versùs excutiat. Proinde ipſa quoque fulmina in præceps ferri ſolent. hæc enim omnia ſecretio quæ extruſionis ratione committitur, non incenſio gignere ſolet: quippe cùm natura calidum omne inſitum habeat, vt ſurſum versùs feratur. Quæcunque igitur ſuperiore in loco conſiſtunt, conflagrante fiunt exhalatione. at quæcunque in inferiore, ſecretione exhalationis proueniunt: quòd ea cùm ſit humidiuſcula, frigeſiat atque coagmentetur. Nam hæc cùm coit ſpiſſatúrque deorſum vergendo, id propellit ac contorquet infernè, quod caloris eſt particeps. Ratione verò poſitus vtcunque exhalatio ſuo in ſitu forte fortuna latitudinem habuerit atque altitudinem: ita demum aut ſurſum, aut deorſum, aut ad latus commeat, ſed magna ex parte in obliquum, quòd duabus cieatur lationibus: vi quidem infernè, natura autem supernè. cuncta enim eiuſmodi per dimetientem lineam ferri ſolent. Quocirca & diſcurrentium ſtellarum delatio, magna ex parte obliqua redditur. Omnium igitur horum cauſa tanquam materia eſt, exhalatio. at tanquam mouens, interdum ſupera latio, interdum aëris concreſcentis coagulatio. Hæc autem omnia infra lunam fiunt. Argumento eſt ipſorum celeritas, eorum motui perſimilis quæ à nobis iaciuntur, lacertiſque noſtris contorquentur: quæ videntur planè multo ſtellis, luna, ſole meare celeriùs: quòd non procul à nobis diſtent.

CAPVT V.

Phaſmatum cauſæ.

PORRO multa in cœlo quandoque phaſmata viſaque conſiſtere cernuntur, nec niſi nocte ſerena: velut, hiatus, foueæ, colores ſanguinei, quorum omnium eadem quoque cauſa exiſtit. Nam cùm palam ſuperus aër adeo conſiſtat, vt flagret & incendium quandoque emergat eiuſmodi vt flammam ardere, quandoque vt quaſi torres aut ſtellas procurrere arbitremur: nihil eſt abſurdi, ſi aër idem concreſcens varios præferat colores. Nam tam lumen minus per denſius tranſparens corpus, quàm aër refractionem ſuſcipiens, colorum varias ac multiplices faciet viſiones. In primis verò punicei & purpurei, quòd hi potiſſimùm miſtura ignei candidique altero alteri ſuperindito, temperari ſoleant. Indicio ſunt ſtellæ, quæ ſi oborientes occidenteſque per æſtum aut alioqui per fumum ſpectentur, puniceæ apparent. Idem quoque refractione efficient, cùm ſpeculum fuerit eiuſmodi, vt nequaquam figuram ſed colorem ſuſcipiat. Sed cur hæc paruo temporis ſpatio edurent, cõſtitutio quæ cito abſumitur, in cauſa eſt. Hiatus autem lumine interrupto, cærulei atrive coloris interuentu efficit vt aliqua videatur ineſſe profunditas. Atque ex eiuſmodi etiam torres frequenter excidunt, nimirum vbi ampliùs concreuerit, ſed cùm adhuc coit, hiatus viſionem ingerit. In ſumma atrum candido permiſtum, ceu flamma fumo, multas colorum varietates committit. Interdiu igitur ſol eos fieri prohibet. At noctu cæteri, præter puniceum, quia concolores ſint, viſum defugiunt. Igitur ſtellarum tranſcurrentium, eorum quæ incendio fiunt, & omnium inſuper oſtentorum quæ ſunt eiuſmodi vt repentinas ingerant viſiones, has eſſe cauſas putare operæpretium eſt.

CAPVT VI.

Priſcorum de cometis opiniones aliquot, earumdémque ſolutiones.

PORRO de cometis & vocato lacte diſſeramus, allatis priùs ad ea quæ ab aliis dicta ſunt, dubitationibus. Anaxagoras igitur atque Democritus, cometas eſſe aſſerunt, ſtellarum errantium coapparitionem, cùm quia propiùs acceſſerint, ſeſe tangere mutuò videntur. At eorum nonnulli qui Italiam habitant, Pythagoreique vocitantur, cometen è ſtellis errantibus vnam eſſe dicunt: verùm, non niſi longo interpoſito tempore comparere in cœlo, & parum ab ſole digredi, id quod etiam Mercurij ſtellæ obuenit. Nam quia non admodum ab ſole recedit, ſæpe cùm ſe viſendam præſtare deberet, occultatur. Proinde non niſi longo tempore interiecto cerni ſolet. Hippocrates autem ille Chius, & eius diſcipulus Æſchylus, non ſecus quàm hi dixere: verùm non à ſeſe habere comam, ſed dum errat interdum, eam ratione loci aſſumere dicunt, nimirum cùm ab humore quem ad ſe attrahit, ſolem versùs aſpectus noſter refrangitur: quia verò inter cætera ſidera tardiſſima à ſole relinquitur, non niſi plurimo tempore interiecto, ita demum apparere, vt cum codẽ ex loco, toto ſuo circulo relictum ab ſole cernitur:

ac ipſum ab ſole deſeri, & ad auſtrum, & ad ſeptentrionem. In intermedio igitur tropicorum loco aquam ad ſeſe non attrahere, quòd ea ibi ob ſolis lationem feruore caloris abſumpta ſit: cùm verò ad auſtrum accedit, talis humoris copia perfrui. Verùm quia ſupera circuli portio parua eſt, infera longè maior, non poſſe aſpectum hominis refractum, ad ſolem peruenire, ſiue is auſtrino tropico propinquus feratur, ſiue in æſtiuo ſolſtitio exiſtat. Quocirca nec in hiſce quidem locis cometen ipſum gigni. At cùm ab ſole ad aquilonem digreſſus fuerit, comam accipere. quia circuli portio quæ ſupra horizontem eſt, magna ſit: quæ verò ſubter, exigua: tunc enim aſpectum hominis ad ſolem facilè pertingere. Hiſce autem omnibus euenit, quædam communiter, quædam ſeparatim impoſſibilia dicere. Primò igitur, qui cometen è ſtellis errantibus vnam eſſe aſtruunt, impoſſibilia dicunt. Nam ſtellæ vagæ omnes ab ſole in ſignifero relinquuntur. At cometæ non pauci extra ſigniferum viſi ſunt. Deinde & plures vno ſæpe ſimul facti ſunt. Adhæc ſi ob refractionem comam haberent, quemadmodum Hippocrates & Æſchylus aiunt: aliquando ſidus hoc etiam citra vllos crines apparere oportuit. quandoquidem & ad alia loca ab ſole digreditur, cæſariem autem non vbique geſtat. Nunc autem, præter quinque illas ſtellas, nulla in cælo viſa eſt. Sed hæ frequentes ſimul omnes ſupra horizontem eleuatæ viſuntur. Nec minùs cometæ, cùm omnes hæ quinque apparent, quàm cùm non apparent, ſed quædam ſolem ſubeunt, plerumque facti conſpiciuntur. At verò ne id quidem verum eſt, cometen ſub ipſo ſeptentrione ſolùm fieri: inſuper & ſole circa æſtiuum ſolſtitium exiſtente. Nam & magnus ille cometes qui haud ita multo antè factus eſt quàm Achaia terræ motu quateretur, & in eam maris inundatio introrumperet, ab occaſu æquinoctiali emicuit. Et in auſtrina cœli regione multi iam facti ſunt.

Porro magiſtratū gerente Athenis Eucleo, Molonis filio, menſe Ianuario, ſole circa ſolſtitium hybernum exiſtente in regione cœli ſub ſeptentrionibus, crinitum ſidus apparuit, quamuis & ipſi affirment fieri non poſſe vt tanta refractio fiat. Commune autem eſt hiſce & illis qui cometen ſtellarum errantium coniunctionem atque contactum eſſe aſtruunt, primò quidem, è numero ſtellarum cælo adhærentium nonnullas comam accipere. Qua in re non Ægyptiis modò præſtanda fides eſt (nam illi id aiunt) ſed & nos vidimus. Nam ſtella quædam ex hiſce quæ in caniculæ coxa ſunt, comam habuit, languidam tamen atque obſcuram. Qui enim eam intentis oculis aſpectabant, ſplendorem agnoſcebant exiguum: qui verò ſenſim conſpectum in eam quaſi obiter iactabant, maiuſculum. Adhæc quotquot noſtra tempeſtate viſi ſunt, ſine occaſu ſupra horizontem euanuerunt, paulatim ita emarceſcentes atque abſumpti, vt nec vnius ſtellæ corpus, nec plurium reliquerint. Nam & magnum illud ſidus, quo de ſuprà mentionem fecimus, tempore hyberno, rigente gelu, atque cœlo ſereno, veſperi, Ariſtæo prætore, apparuit. Ac prima quidem die viſum non eſt, quòd ante ſolis occaſum delituerit: poſtera autem apparuit. nam quàm minima fieri poteſt diſtantia, ſolem reliquit, & mox occubuit.

CAPVT VII.

De cometis, & eorundem diuerſitate.

C CVM autem de hiſce quæ ſenſui peruia non ſunt, ſatis eſſe iuxta rationem demonſtratum putemus, ſi ad id quod fieri poſſit, ea reduxerimus, ex hiſce quæ in præſentia dicuntur, exiſtimauerit quiſpiam de hiſce maximè ad hunc modum vſuuenire. Supponimus enim mundi terræ circunfuſi primam eam omnem partem, quæ orbiculari ſubeſt lationi, exhalationem eſſe calidam aridámque. Eam autem, & inſuper aëris, quem ſuo in ſinu fouet ac ambit, haud parum circularis latio ac motus ſecum circa terram raptat verſatque. At interim dum illa fertur ac mouetur hoc pacto, quà forte fortuna fuerit bene temperata, ſæpe incenditur: ob quod & illos ſparſorum ſiderum D diſcurſus fieri dicimus. Cùm igitur ob ſuperiorum corporum conuerſionem in eiuſmodi denſitatem igneum inciderit principium, neque tam vehementer multum vt continuo & diu exurere queat, neque porrò tam debile vt ſtatim extinguatur, ſed validius, & quod diutiùs poſſit permanere, ſimúlque contingat vt ſubvolet in eum locum probè temperata exhalatio, aptáque vt incendatur, tum id ſidus crinitum fit, quamcunque figuram ſurrecta exhalatio contraxerit. Nam ſi vndique ſimilis fuerit, cometes (id eſt, ſtella crinita, & comarum modo in vertice hiſpida) nuncupatur. Sin autem oblonga, pogonias (quaſi dicas barbata, & cui inferiore ex parte in ſpeciem E barbæ longæ promittitur iuba) vocitatur. Vt autem huiuſmodi latio, ſtellæ latio: ſic & ſtatio, ſtellæ ſtatio videtur eſſe. Idem enim propemodum fit, ac ſi quiſpiam torrem aut paruum ignis principium, in palearum cumulum aceruúmque immiſerit atque iniecerit. Nam & ſtellarum diſcurſus huic rei perſimilis apparet. Citò namque ob ſuccenſæ materiæ accommodantiam in longitudinem ſequela quadam ſerpit. Itaque ſi id edurarit, nec transeundo emarcuerit, qua potiſſimùm parte ſucceſſio denſet, lationis profectò initium, excurſionis fiet finis. Tale eſt & crinitum ſidus, vtpote quod non aliter quàm ſtellæ diſcurſus, principium in ſe finémq; habeat.

Cùm igitur conſtitutionis principium in ipſo inferiore loco exiſtit, per ſe cometes apparet. Cùm autem ſub aliqua ſtella aut errantium aut cælo affixarum, motionis opera conſtiterit exhalatio, tum ex hiſce quæpiam fit cometes. Nec enim coma ipſis adhæret ſtellis, ſed ſicuti coronæ circa ſolem ac lunam apparent, ſidera ipſa quamuis aliò demigrent, ſequentes, vbi aër adeò denſatus eſt, vt hæc affectio ſub ſolis itinere fieri queat, ſic & aſtris ipſis coma ceu corona exiſtit. Verùm corona tali colore ob refractionem inſignitur: at comæ colorem quem præferunt, in ſeſe habent. Cùm igitur iuxta ſtellam aliquam talis concretio facta fuerit, cometes eodem quo ſtella motu ferri videatur, eſt neceſſe: cùm verò per ſe conſtiterit, tum ſubſidens & relicta videtur. Nam latio mundi, qui circa terram eſt, agnoſcitur eiuſmodi. Hoc autem maximè inſinuat, cometen non eſſe perinde vt coronam, refractionem quandam quæ in ſuccenſione pura ac nitida ad ſidus ipſum, aut quemadmodum Hippocrates affirmat, ad ipſum ſolem fiat: quòd & plerumque cometes per ſe, & ſæpius quàm circa ſtellas quaſdam definitas fieri ſoleat. Sed de area, hoc eſt, corona, poſteriùs cauſam dicemus. Quòd autem ignea ſit cometarum conſtitutio, hinc coniectare licet. Nam ſi plures fiant, flatus & ſqualores portendunt. perſpicuum enim eſt eos ideo gigni, quòd eiuſmodi ſecretio redundet in tantùm, vt neceſſariò aër aridior efficiatur, & ſublatum humidum copia exhalationis feruidæ adeò diſcutiatur ac diſſoluatur, vt non facilè conſiſtere ac denſari in liquorem poſſit. Sed de hac item affectione dilucidiùs ſumus dicturi, cùm loquendi de flatibus tempus affuerit. Cùm igitur crebri ac plures apparent, ſicuti dicimus, aridus admodum & flatuoſus redditur annus. Cùm verò rariores, & magnitudine non perinde inſigni conſpiciuntur: haudquaquam ex æquo tale quippiam fieri ſolet. verumenimvero exceſſus quidam flatuum vel in duratione vel in magnitudine magna ex parte committitur. Quandoquidem & cùm lapis ille qui apud Ægopotamos oſtenditur, ex aëre cecidit: vento ſublatus excidit interdiu, comete quoque illis noctibus flagrante. atque circa id temporis quo magnum illud crinitum ſidus apparuit, ſicca fuit hyems & aquilonia. Nec non æſtus ille maris qui Achaiam inuaſit, ob flatuum contrarietatem factus eſt. Nam ſinum ipſum aquilo occuparat, & extrà ingens ſpirabat auſter. Præterea Nicomacho Athenis imperante, circa æquinoctialem circulum paucis diebus cometes apparuit, exortu ſuo nequaquam veſperi facto. quo adhuc regnante, ventum illum qui circa Corinthum debacchatus eſt, factum eſſe accidit. Cur autem plures non fiant cometæ, nec ſæpe, cúrque extra tropicos potiùs fiant quàm intra, in cauſa eſt ſolis aſtrorúmque latio: quæ non modò calidum ſecernit, verumetiam id ſegregat quod conſiſtit. In primis verò cauſa exiſtit, quòd in lactei circuli regionem, maxima exhalationum copia congregatur.

Quæ autem ſtellæ à ſole non aſpiciuntur, ſemper diuerſæ ſunt, propterea quòd ſol haudquaquam in eodem maneat loco. Oportebat igitur migrante ſole, transferri & ipſum lac. nunc verò hoc fieri minimè videmus. Ad hæc ſi quemadmodum in cœleſtium rerum contemplationibus demonſtratum eſt, ita res ſeſe habeat, & ſolis magnitudo maior ſit quàm terræ, & diſtantia ſtellarum à terra multiplicato maior ſit quàm ſo-

D lis ab eadem: quemadmodum ſolis à terra quàm lunæ maior eſt, alicubi non procul à terra turbo ille qui à ſole initium ſumit, radios committet coniungetque. nec terræ vmbra, quam noctem appellitant, ad aſtra pertinget: ſed ſolem ſidera omnia circumſpicere, & eorum nulli terram obſiſtere neceſſe eſt. Eſt autem præterea de lacte, tertia quædam opinio. Quidam enim lac ipſum perinde atque crinitum ſidus, eſſe refractionem noſtri aſpectus ad ſolem dicunt. Sed & hoc fieri nequit. Nam ſi & videns & ſpeculum, & totum id quod conſpectui obuiam eſt, quieſcant, in eadem ſpeculi parte eadem viſio-

E nis portio apparebit. Sin verò ſpeculum & res conſpecta in eadem ad id quod videt ac quieſcit diſtantia, ſed inter ſe nec æquè celeriter nec eodem ſemper interuallo moueantur, fieri profectò non poterit vt eadem viſio in eadem ſpeculi parte conſpiciatur. At ſtellæ quæ in lacteo circulo feruntur, & ſol quem versùs refractio fit, & ſimiliter & ex æquo à nobis diſtantes, à ſeipſis autem minimè, manentibus nobis mouentur. Interdum ſiquidem media nocte, interdum diluculo exoritur Delphin. Lactis autem partes eædem in vnaquaque manent. Atqui non oporteret,

ſi lac emphaſis atque viſio eſſet, imò ne in eis quidem locis hæc foret affectio. Præterea, noctu in aqua & id genus ſpeculis, lac ſpectantibus apparet. Sed quî fieri poteſt, vt tum aſpectus in aduerſum ſolem verſus refrangatur? Patet igitur ex hiſce, lacteum circulum neque meantium vllius viam, neque ſtellarum quæ non videntur iubar, neque refractionem eſſe. Hæc autem ſola ferè ſunt, quæ ad hoc vſque æui ab aliis tradita ſunt.

Nos verò reſumpto quod ſubiecimus principio, dicamus. Dictum enim eſt priùs, extremam aeris particulam vim ignis habere, vt aëre motus opera diſcreto, conſtitutio ſecernatur eiuſmodi, qualem crinita item ſidera eſſe dicimus. Operæpretium autem eſt intelligamus, tale quippiam fieri quod in illis, cùm ipſa talis ſecretio haudquaquam per ſe, ſed ſub aliqua ſtella aut cœlo adfixa, aut errante fuerit facta. Tum enim eiuſmodi cometæ cernuntur, propterea quòd ſtellarum lationem ſequatur, perinde atque ſolem talis ſecretio, in qua per refractionem apparere coronam dicimus, vbi fortè fortuna fuerit ita temperatus aër. Quod autem circa vnam ſtellam contingit, id circa totum cœlum, ſuperamque lationem vniuerſam, fieri accipiamus oportet. Nam ſi vnius ſtellæ motus ſuccendere queat, non etiam fuerit abſurdum, cunctarum lationem tale quid committere, ac ignem excitare: præſertim in qua cœli parte denſiſſimæ & plurimæ & maximæ ſunt ſtellæ. Igitur ſignifer ob ſolis & erronum lationem, huiuſmodi conſtitutionem tenuat ac diſſoluit. Proinde plerique cometæ extra tropicos fiunt. Præterea neque circa ſolem, neque circa lunam coma fieri ſolet. Nam ocyùs eiuſmodi concretionem diſcernunt, quàm vt conſiſtere queat. Ipſe autem circulus in quo lac ſpectantibus apparet, & maximus eſt, & ita ſitus vt poſitu tropicos haud parum excedat. Ad hæc locus ipſe maximis ſplendidiſſimiſque ſtellis & inſuper hiſce quas ſparſas nuncupant, oppletus eſt (quod & oculis cernere licet) adeò vt his de cauſis aſſiduè ac ſemper tota hæc coaceruetur concretio. Cuius rei ſignum eſt. Nam in huius circuli parte altera quæ candorem duplicato maiorem præfert, maius lumen eſt. in hac enim maiores denſioreſque ſtellæ ſunt, quàm in altera: quaſi non alia vlla de cauſa iubar, quàm ob ſtellarum lationem fiat. Nam ſi hoc in circulo fiat, in quo plurimæ ſunt ſtellæ, & huius ipſius circuli magis in ea parte quæ multis ac magnis ſtellis diſſarcta apparet: hanc eſſe cauſam affectionis familiariſſimam exiſtimare par eſt. Sed tum circulum, tum ſtellas quæ in eo ſunt, ex deſcriptione contemplemur. Quas autem ſparſas vocitant, non licet in pilam ad hunc intrudere modum, quòd nullam vlla vnquam habeat poſitionem quæ oculo notari poſſit. id quod in cœlum aſpectantibus dilucidum eſt. in hoc enim circulo ſolo, quæ inter latera iacent, ſtellis plena ſunt eiuſmodi. in aliis verò circulis, ſtellis (vt patet) huiuſmodi vacant. Quare, ſi cauſam cur cometæ appareant, quaſi mediocriter dictam recipiamus: & de lacteo candore haud aliter habere ſentiendum eſt. Quæ enim ibi affectio circa vnam ſtellam exiſtit, hanc eandem circa circulum quempiam effici contingit.

B *De cauſis pluuiæ, nubiſque & caliginis differentia.*

DE loco verò ab iſto poſitione ſecundo, à terra verò primo (hic enim promiſcuus aquæ & aëris locus exiſtit) & hiſce quæ in ſuperiore eius parte contingunt, agendum eſt. Oportet autem & horum principia ſumamus, & cauſas omnium ſimiliter. Principium igitur vt mouens, præcipuúmque, & omnium primum, circulus ille eſt, in quo manifeſtè ſolis latio, quæ ſegregat congregátque, eo quod terræ propiùs remotiúſve fiat, generationis atque corruptionis cauſa exiſtit. Manente autem terra, humor qui circa eam eſt, in vaporem à C ſolis radiis & ab alio calore ſuperno conuerſus, in ſublime tendit. Calore verò, cuius opera ſurrigebatur, vaporem deferente, atque altero in ſuperum locum diſperſo, altero etiam extincto, quòd longius in aërem qui ſuper terram eſt, euehatur, vapor frigore contracto, ob caloris deſtitutionem atque loci naturam rurſum conſiſtit, & ex aëre fit aqua: quæ poſtea quàm genita eſt, rurſum in terram defertur. Eſt autem halitus, qui ex aqua ortum habet, vapor. qui verò ex aëre in aquam mutari ſolet, nubes. Nebula autem, nubis in aquam concretæ ſuperfluitas, proinde ſerenos dies potiùs quàm pluuios portendit: quippe quæ veluti nubes infœcunda, & ſemine exhauſta exiſtat. Circulus D autem iſte, ſolis circulum imitatur: ſimul enim ille ad latera, & iſte ſurſum & deorſum mouetur. Atque conſideraſſe oportet hunc veluti fluuium aëris & aquæ promiſcuum, in orbem ſurſum ac deorſum fluere. Nam cùm ſol prope terram fertur, vaporis fluuius in ſublime effluit: cùm verò ſe dimouit, aquæ fluuius in terram defluit: quod citra vllam intercapedinem haud abſque ordine fieri ſolet. Quare ſi priores Oceani nomine, inuolucri cauſa vtebantur, hunc fortaſſis fluuium dixerint, qui circa terram fluit. Humore autem ſemper in altum vi caloris ſcandente, & rurſus deorſum ad terram ob refrigerationem ruente, contingentibus affectibus & eorum quibuſdam differentiis, pro- E priè nomina poſita ſunt. Nam cùm minutatim deſcendit, ſtillæ: cùm per partes maiuſculas, pluuia nuncupari ſolet.

CAPVT X.

De roris & pruinæ cauſis.

EX eo autem quod interdiu euaporat, quantumcunque attolli in ſublime nequiuerit, ob caloris ipſum eleuantis ad vaporem qui ſurrigitur, paruitatem, cùm rurſum deſcendit, concepto,

A concepto per noctem frigore, ros & pruina vocitatur. pruina quidem, cùm vapor fuerit antè conglaciatus, quàm rurſum in aquam concreuerit. fit autem per hyemẽ, & potiſſimùm frigidioribus in locis. Ros verò cùm in aquam vapor fuerit denſatus, & nec tepor tantas vireis habuerit, vt quod ſublatum ſit, aſſiccare, nec itidem frigus, vt ipſum vaporem gelare, propter vel loci vel temporis naturam calentiorem quiuerit. Ros enim, per temperiem maximè, inque temperatioribus locis naſci ſolet. pruina, vti dictum eſt, contrà. Conſtat enim, vaporem, aqua eſſe calidiorem: quippe qui ſubleuantem adhuc ignem habeat. Quare pruinæ concretio, ad frigiditatem pertinet maiuſculam: fiunt autem am B bo, non niſi ſerena nocte, & à ventis ſilente. Nam neque cùm ſudum ſerenúmque non fuerit, attolletur quicquam, neque ſpirante vento conſiſtere poterit: quæ ideo fieri, quia vapor non longè à terra ſurrigatur, indicio eſt, pruinam in montibus non gigni. Huius rei duæ ſunt cauſæ. Vna hæc eſt, quòd è locis humilibus & aquoſis in ſublime attollitur. Proinde calor euehens, quaſi qui pondus ferat maius quàm ſuis congruat viribus, in locum admodum altum ſurrigere illud nequit, ſed haud procul à terra rurſum dimittit. Altera, quòd aër qui in locis editioribus eſt, maximè fluitat agitatúrque, atque conſtitutionem eiuſmodi diſſoluit ac diſſipat. C Fit autem vbique ros flante auſtro, non aquilone, præterquam in Ponto, vbi contrà vſu euenit. Nam ſpirante aquilone ros fieri ſolet, auſtro, non ſolet. Cauſa autem ſimiliter habet atque illud, quòd temperatis non hybernis temporibus ros gignitur. Etenim temperiem auſter importat, aquilo hyemem, algidus enim eſt: quare exhalationis calorem ſuo frigore extinguit. At in Ponto non tantam temperiem committit auſter, vt vapor cooriri queat. Sed aquilo frigore ſuo circumobſiſtens, calorem congregat: adeo vt calor maior, vehementiùs vaporem eliciat. Quod etiam extra Pontum fieri ſæpenumero cernere licet. Nam putei flante aquilone quàm auſtro largiùs vaporem euomunt. Verùm D aquilonij flatus antè calorem præfocant, quàm vt vlla vaporis copia conſiſtat, at auſtrini exhalationem aſtringi ſinunt. Porro aqua non perinde hic concreſcit, atque eo in loco qui nubes complectitur.

Nix namque & pruina, item pluuia & ros, ſunt idem. verùm illud, multum: hoc paucum exiſtit. Nam pluuia fit ex multo vapore frigeſcente. Cuius cauſa eſt tum loci, tum temporis amplitudo, in quo & ex quo colligitur. Ros verò paucum quid exiſtit. nam conſtitutio ſingulorum dierum, & locus paruus exiſtit: quod & ortus celeritas, & parua multitudo ſignificant. Conſimiliter pruina & nix ſeſe habent. Nam cùm nubes fuerit congelata, nix: cùm vapor, pruina emergit. Quocirca vel temporis vel regionis frigidæ indiciũ exiſtit. non enim, niſi frigus dominaretur, congelaſceret, cùm multam adhuc retineat caliditatem.

Δεῖ δὲ λαβεῖν ἅμα καὶ τὰ συμβαίνοντα περὶ τὴν γένεσιν αὐτῆς, τά, τε μὴ παρακρούοντα, καὶ τὰ δοκοῦντα εἶναι παράλογα. ἔστι μὲν γὰρ ἡ χάλαζα, κρύσταλλος, πήγνυται δὲ τὸ ὕδωρ, τοῦ χειμῶνος· αἱ δὲ χάλαζαι, γίνονται ἔαρος μὲν καὶ μετοπώρου μάλιστα, εἶτα καὶ τῆς ὀπώρας, χειμῶνος δὲ ὀλιγάκις, καὶ ὅταν ἧττον ᾖ ψῦχος. καὶ ὅλως δὲ γίνονται χάλαζαι μὲν ἐν τοῖς εὐδιεινοτέροις τόποις, αἱ δὲ χιόνες ἐν τοῖς ψυχροτέροις. ἄτοπον δὲ καὶ τὸ πήγνυσθαι ὕδωρ ἐν τῷ ἄνω τόπῳ· οὔτε γὰρ παγῆναι δυνατὸν πρὶν γενέσθαι ὕδωρ, οὔτε τὸ ὕδωρ οὐδένα χρόνον οἷόν τε μένειν μετέωρον ὄν. ἀλλὰ μὴν οὐδ' ὥσπερ αἱ ψακάδες, ἄνω μὲν ὀχοῦνται διὰ μικρότητα, * ἐνδιατρίβουσι δὲ ἐπὶ τοῦ ἀέρος ὥσπερ καὶ ἐπὶ τοῦ ὕδατος γῆ καὶ χρυσὸς διὰ μικρομέρειαν πολλάκις ἐπιπλέουσιν· οὕτως ἐπὶ τοῦ ἀέρος τὸ ὕδωρ. συνελθόντων δὲ πολλῶν μικρῶν, μεγάλαι καταφέρονται ψακάδες. τοῦτο γὰρ οὐκ ἐνδέχεται γενέσθαι ἐπὶ τῆς χαλάζης. οὐ γὰρ συμφύεται τὰ πεπηγότα, ὥσπερ τὰ ὑγρά. δῆλον οὖν ὅτι ἄνω τοσοῦτον ὕδωρ ἔμεινεν· οὐ γὰρ ἂν ἐπάγη τοσοῦτον. τοῖς μὲν οὖν δοκεῖ τούτου τοῦ πάθους αἴτιον εἶναι τοῦτο καὶ τῆς γενέσεως, ὅταν ἀπωσθῇ τὸ νέφος εἰς τὸν ἄνω τόπον μᾶλλον ὄντα ψυχρὸν, διὰ τὸ λήγειν ἐκεῖ τὰς ἀπὸ τῆς γῆς τῶν ἀκτίνων ἀνακλάσεις, ἐλθὸν δὲ ἐκεῖ πήγνυσθαι τὸ ὕδωρ. διὸ καὶ θέρους μᾶλλον καὶ ἐν ταῖς ἀλεειναῖς χώραις γίνεσθαι τὰς χαλάζας, ὅτι ἐπὶ πλεῖον τὸ θερμὸν ἀπωθεῖ ἀπὸ τῆς γῆς τὰς νεφέλας. συμβαίνει δὲ ἐν τοῖς σφόδρα ὑψηλοῖς ἥκιστα γίνεσθαι * χάλαζαν. καίτοι ἔδει, ὥσπερ καὶ τὴν χιόνα ὁρῶμεν ἐπὶ τοῖς ὑψηλοῖς μάλιστα γιγνομένην. ἔτι δὲ πολλάκις ὦπται νέφη φερόμενα μετὰ ψόφου πολλοῦ παρ' αὐτὴν τὴν γῆν, ὥστε φοβερὸν εἶναι τοῖς ἀκούουσι καὶ ὁρῶσιν, ὡς ἐσομένου τινὸς μείζονος. ὅτε δὲ καὶ ἄνευ ψόφου τοιούτων ὀφθέντων νεφῶν, χάλαζα γίνεται πολλή, καὶ τὸ μέγεθος ἄπιστος, καὶ τοῖς σχήμασιν οὐ στρογγύλη, διὰ τὸ μὴ πολὺν χρόνον γίνεσθαι τὴν φορὰν αὐτῆς, ὡς * πλησίον γενομένης τῆς πήξεως τῆς γῆς, ἀλλ' οὐχ ὥσπερ ἐκεῖνοί φασιν. ἀλλὰ μὴν ἀναγκαῖον ὑπὸ τοῦ μάλιστ' αἰτίου τῆς πήξεως, μεγάλας γίνεσθαι χαλάζας· κρύσταλλος γὰρ ἡ χάλαζα, καὶ τοῦτο παντὶ δῆλον. μεγάλαι δ' εἰσὶν αἱ τοῖς σχήμασι μὴ στρογγύλαι. τοῦτο δὲ σημεῖον τοῦ παγῆναι πλησίον τῆς γῆς· αἱ γὰρ φερόμεναι πόρρωθεν, διὰ τὸ φέρεσθαι μακρὰν, περιθραυόμεναι γίνονται τό, τε σχῆμα περιφερεῖς, καὶ τὸ μέγεθος ἐλάττους. ὅτι μὲν οὖν οὐ τῷ ἀπωθεῖσθαι εἰς τὸν ἄνω τόπον τὸν ψυχρὸν ἡ πῆξις συμβαίνει, δῆλον. ἀλλ' ἐπεὶ ὁρῶμεν ὅτι γίνεται ἀντιπερίστασις τῷ θερμῷ καὶ τῷ ψυχρῷ ἀλλήλοις·

A In nube namque multus adhuc calor ineſt, qui ex eo ſupereſt igni, qui à tellure humorem in vaporem conuerſum ſuſtulit. At grando illic quidem fit: in quo autem loco vapores non longè à terra inuehuntur, hæc deficit. Nam (ſicuti diximus) vt illic nix, ita hîc pruina: item, vt illic pluuia, ita hîc ros enaſci aſſolet. Sed vt illic grando, ita hîc ſimile nullum è regione aſſignari poteſt. cuius cauſa, cùm de grandine dixerimus, erit perſpicua.

CAPVT XII.

De grandine.

B SVmere autem ſimul oportet, & quæ circa eius ortum contingant: & quæ haudquaquam ſeducant, quæque haud præter rationem eſſe videantur. Grando namque glacies eſt. concreſcit autem aqua per hyemem. Ipſæ verò grandines vere & autumno potiſſimùm fieri ſolent, deinde & æſtate, hyeme autem rarenter, & tum cùm non admodum magnum fuerit frigus. Atque in totum grandines, in locis temperatioribus fiunt: niues, frigidiuſculis. Metas autem egreditur rationis & illud, aquam ſupero in loco congelari. Nam neque fieri poteſt, vt aqua antè conglaciata ſit quàm ortum ſubierit, aut vt per vllum temporis ſpatium in ſublimi
C ſuſpenſa maneat. At verò neque prout ſtillæ ob paruitatem ſupernè inſident, atque in aëre verſantur, perinde vt ipſi quoque aquæ, ſæpe terra & aurum ob partium ſubtilitatem innatant: ſic in aëre pluuia inuehitur. Coëuntibus autem compluribus paruis, magnæ ſtillæ decidunt: quod grandini obuenire nequit. non enim concreta liquidorũ more, coaleſcere queunt. Quòd igitur aqua tanta in alto manſiſſet, liquet. nam alioqui haudquaquam tanta fuiſſet conglaciata. Sunt igitur, quibus huiuſce affectus ac generationis cauſa, hæc eſſe videatur: nubem, cùm in ſuperiorem locum, qui ideirco frigidior eſt, quòd ſolarium radiorum à terra refractio-
D nes inibi deſinant, fuerit propulſa, perueneritque illuc, in aquam denſari. Quocirca & æſtate, inque æſtuantibus locis, grandines gigni potiùs volunt, quòd tum calor longiùs à terra nubes ſurſum verſùs propellat. Contingit autem in locis admodum æditis, grandinem nequaquam fieri, quanquam illic fieri oportebat, vti & niuem in altis fieri locis maximè videmus. Præterea ſæpe viſæ ſunt nubes circa terram cum ingenti ſono ferri, adeò vt id terrorem incuteret hiſce qui audiebant videbántque, quaſi maius quippiam eſſet futurum. Interdum autem & poſteaquam eiuſmodi nubes abſque ſono apparuerunt, fit grando multa, & magnitudine incredili, & figura nequaquam globoſa. proptereà
E quòd eius delatio tempore paruo abſumatur, tanquam prope terram facta cõcretione, & non perinde vt illi aiunt. At verò neceſſarium eſt, potiſſimam concretionis cauſam magnas efficere grandines. ſiquidem grando glacies eſt, id quod cuiuis perſpicuum exiſtit. Magnæ autem ſunt, quæ nequaquam rotundam habent figurã, quod argumento eſt grãdines non procul à terra cõcreuiſſe. Nam quæ eminus decidunt, circumfractæ, quòd per longum ferãtur interuallũ, vt figura rotũdæ, ita magnitudine minores euadere ſolẽt. Patet igitur, cõcretionẽ nõ ideo euenire, quòd nubes in ſuperiorem locum, qui multo frigore riget, propellãtur. At cùm hîc mutua calidi ac frigidi pugna, antiperiſt... fieri videamus:

(ob quod, vt æſtuante tempore ſubterranea loca, frigida ſunt, ita gelāte, calida) hôc ipſum in ſupero quoque loco fieri putandum eſt. Proinde frigus tempore calidiuſculo, introrſum per antiperiſtaſin coactum ob circundantem calorem, interdum celeriter aquam è nube facit. Quocirca & multo maiores ſtillæ, & aquæ impetuoſiores æſtuantibus diebus, quàm hyberno tempore, fiunt. Impetuoſiores namque dicuntur, cùm denſiores ex alto ruunt. quod profectò euenire ſolet ob concretionis celeritatem. Hoc autem ipſum contrà fit, quàm Anaxagoras dicat. Is etenim nubem, cùm in frigidum aſcendit aërem, hoc pati aſſerit. Nos verò, vbi deſcendit in calidum: & tum maximè, cùm in maximè calidum. Cùm autem frigus adhuc magis in profundum coactum fuerit ab exteriore calore, quàm fecerit, aquam cōglaciat magis, emergitque grando: quod accidit, vbi aquæ in imum lationem congelatio anteuerterit. Nam ſi aqua tanto in tempore deſcendat, & frigus cùm ſit vehemens in minori conglaciauerit: nihil vetat, aquam cùm adhuc erat in ſublimi, fuiſſe gelatam, ſi gelatio breuiori quàm delatio tempore abſoluatur. Item quo propiùs ac repentè magis concretio facta fuerit, eo & aquæ impetuoſiores, & ſtillæ atque grandines maiores euadunt, quòd per breuem ferantur locum. Grandéſque ſtillæ, non denſæ, cadunt eadem de cauſa. Minùs autem grando æſtate, quàm vere aut autumno, magis tamen quàm hyeme fieri ſolet: quòd aër per æſtatem ſit aridior, verno tempore adhuc humidus, autumno iam humeſcat. Fiũt autem (quemadmodum diximus) grandines etiam circa æſtatis calcem, haud alia de cauſa. Nonnihil autem facit ad concretionis celeritatem, præcedens aquæ cōcalfactio. Quandoquidē quę priùs incaluit, ocyùs refrigerari aſſolet. Quocirca multi cùm calidā celeriùs refrigerare volunt, priùs inſolant. Item accolæ Ponti cùm ſupra glaciem domunculas extruunt, quo piſcium venatui incumbant (venantur enim interſciſſa glacie) aquā calidam arundinibus circunfundunt, quo celeriùs duretur in gelu. Nam glacie vt plumbo vtuntur, quo immotæ perſiſtant arundines. Conſiſtens autem aqua calida celeriter efficitur in feruidis regionibus, temporibúſque. Fiũt etiam circa Arabiam & Æthiopiam per æſtatem, & non per hyemem aquæ, eæque impetuoſæ, ac eodem die ſæpe eandem ob cauſam. Nam per antiperiſtaſin, quæ ob vehementem regionis æſtum committitur, cito riget. Sed de pluuia, rore, niue, pruina, grandine, quam ob cauſam fiant, quænam item ſit eorum natura, tot à nobis dicta ſint.

CAPVT XIII.

De ventis, fluuiiſque & fontibus.

DE ventis autem, flatibúſque omnibus, & inſuper de fluuiis ac mari, allatis priùs de hiſce aduerſus nosipſos dubitationibus, dicamus. Nam vt de cæteris aliis, ſic & de hiſce nihil eiuſcemodi à maioribus dictum accepimus, quod non vel quiuis dicere queat. Sunt autem qui aërem motum ſubeuntem, fluitantémque, eſſe ventum, & hunc eundem conſiſtentem nubem rurſum aquámque, tanquam eadem ſit flatus & aquæ natura, necnon ventum motionem aëris aſſerant. Quocirca & ex eorum numero qui doctè loqui volunt, quidā ventos omneis vnum eſſe ventum aiunt: quia omnem

A aërem qui motum ſubeat, eundem atque vnum eſſe contingit. Sed cùm nullam ſubeat differentiam, videri tamen differre, propter loca vnde ſemper fluit: perinde dicentes, ac ſi quis omnia quoque flumina vnum eſſe flumen putet. Quocirca, plerique citra inquiſitionem meliùs dicunt, quàm qui diſquiſitione adhibita ad *hunc dicunt modum. Nam ſi tam amnes quàm flatus vniuerſi ab vno corriuarentur primordio, forſitan qui ita dicunt, quippiam dicerent. Sin verò hîc & ibi ſimiliter res habeat, lepidè quidem hoc dictum eſſe, non tamen verè perſpicuum exiſtit. Quandoquidem hoc congruam habet conſiderationem, nempe B quid ſit ventus, quo pacto naſcatur, quid ventum moueat, vndè ſit venti exordium, & vtrùm haud ſecus quàm è vaſe quodam effluere ventum accipere oporteat, idque tantiſper fieri dum vas ſit inanitum, quaſi ex vtre diſſilitet: an perinde vt ipſi quoque pictores ventos depingunt, ex ſeipſis flatus initium emittentes. De fluuiorum autem generatione haud diſſimilem quidam habent opinionem. Etenim aquam ſolaribus radiis leuatam in ſublime, cùm plurima rurſum aggregata congeſtáque fuerit in terræ viſceribus, tanquam ex aluo prægrādi erũpere, & aut fluuios omneis ex vna, aut alium ex alia ſcaturire, nec vllam gigni aquam, ſed quæ hybernis mēſibus in huiuſmodi conceptacula col- C lecta fuerit, hanc in amnium euadere multitudinem arbitrantur: & ob id putant maiores ſemper hyeme quàm æſtate profluere: & quoſdam perennes eſſe, quoſdam minimè. Quorum enim congeſta aqua ob conceptaculi magnitudinem adeò multa exiſtit vt ſufficiat, nec priùs abſumatur quàm tempore hyberno rurſum pluuia aqua ſuperueniat, abſque vlla intercapedine fluere dicunt. Contrà, qui minora habent conceptacula, hos ob aquæ paucitatem antè aſſiccari, euacuato nimirum vaſe, quàm cœleſtis ſuperueniat aqua. Atqui liquet, quòd ſi quis velit ficto antè conſpectum velvti ſuſceptaculo, quod per ſingulos dies fluentam conti- D nenter aquam capiat, aquæ multitudinem contemplari: tota quæ effluit in annum aqua recepta, magnitudine molem terræ exuperabit, aut certè parum deficiet. attamen complura eiuſmodi in pleriſque terræ partibus euenire conſtat. Verumenimvero abſurdum fuerit, ſi quis non putet, eandem ob cauſam ex aëre aquam etiam in terræ viſceribus naſci, ob quam ſupra terram fieri, aſſolet. Quare ſi hîc aër ad vaporis naturam accedens, ob frigus in aquam deſcendit: idem hoc ab ea quoque quæ in terra eſt frigiditate euenire ac fieri, & non ſolùm aquam eam quæ in illa ſequeſtrata ſit, fluere, ſed continuè fieri cenſeamus operæpretium eſt. Præterea, dato quòd aqua quotidie ortum non ſubeat, E ſed in ratione rerum ſit, haudquaquã tale eſſe fluuiorum exordium, nimirum ſtagna quædam ſub terra ſemota, vt quidam aiunt, oportet: ſed vt in eo quoque qui eſt ſupra terram loco, exiguæ aſpergines coagmentãtur, quæ rurſum aliis coëunt, & tandem copioſus imber decidit: ſic etiam in terra grãdiores guttas ex paruis factas ſtillare primùm, necnon fluuiorum principia eſſe quaſdam velvti ſcaturigines aquarum, quę in vnam aliquam terræ partem concurrant. quod experientia ipſa declarat. Nam qui aquæ ductus ſtruũt, ſcrobibus atque cuniculis aquam deducere, tanquam ab excelſis ſudãte terra, ſolent. Quocirca & amniũ fluxus, è mõtibus corriuari cernuntur: atq; plurimi & maximi amnes

è maximis defluunt montibus. Pari modo & montibus locíſque excelſis, vicini ſunt fontes plurimi: in planis verò latíſque campis, pauci admodum ſine fluuiis fiunt. Montana ſiquidem & edita loca, tanquam ſpongia quædam locis incumbentia humilibus, pauxillatim quidem, ſed multis ex partibus effundunt, ſtillántque aquam. Nam & magnam aquæ ex alto cadentis copiam intra ſe admittunt (quid enim intereſt, cõcauane ſit, & ſupina, an deuexa & prona montium circumferẽtia? vtroque enim pacto æqualem corporis molem amplectetur) & vaporem egredientem in ſublime frigefaciunt, rurſúmque in liquorem cogunt. Quocirca amnium maximi (ſicuti diximus) è maximis profluere montibus videntur. quod hiſce qui terræ ambitus contemplantur, perſpicuum exiſtit. Etenim vniuerſi quos non contingit dicentes eoſdem & ſpectatores fuiſſe, ex hiſce quæ à ſingulis percontando acceperunt, eos ad hunc deſcripſêre modum. In Aſia igitur, è monte Paropamiſo plurimi maximíque amnes defluere viſuntur. Cæterùm hic communi conſenſu omnium eorum maximus eſt, qui ad hybernum vertuntur orientem. Nam eo iam ſuperato, exterum mare cernitur: cuius finem qui citrà incolunt, haudquaquam habent perſpectum. Ex hoc itaque, inter cæteros amneis, Bactrus & Choaſpes & Araxes defluunt: à quo Tanais, quæ pars eius eſt, in Mæotim lacum corriuatur. Fluit etiam & Indus ex eo monte maximum ex omnibus fluminibus aquarum agmen euoluens. Ex Caucaſo verò, & plerique alij tam numero quàm mole exuperantes defluunt, & Phaſis. Caucaſus autem mons eſt, eorum qui ad æſtiuum ſolis exortum vergunt, multitudine pariter atque celſitudine maximus. Celſitudinis autem argumentum inde colligi poteſt. Nam, tum ab eo loco quem Bathea (hoc eſt, profunda) Ponti vocant, tum ab hiſce qui Mæotici lacus oſtium nauigio ſubeunt, cernitur. Præterea ſummæ eius partes noctu, mane inquam & veſperi, ad tertiam vſque partem radiis illuſtrantur ſolaribus. Multitudinis verò, quia cùm multas ſedes habeat, in quibus & populos multos inhabitare, & lacus magnos eſſe dicant, attamẽ eas omneis ad ſummum vſque cacumen cognitas eſſe aſſerunt. A verùm teſtimonij gratia hoſce diximus. Quicunque enim amnes è paludibus fluere videntur, ex eiuſmodi profectò redduntur: quas ferè omneis ſub montibus, aut locis quæ molliter aſſurgunt, eſſe ſitas contingit. Quod igitur cenſendum non ſit, fluuiorum primordia haud ſecus quàm ex ſequeſtratis quibuſdam cauernis fieri, conſtat. Nec enim terræ locus, vt ita dixerim, ſufficeret: quemadmodum nec nubium, ſi eam duntaxat quæ eſt in ratione rerum, fluere oporteret: nec elaberetur vna quidem, & altera rurſum gigneretur, ſed ſemper ex ea quæ in rerum natura exiſtit *, promeretur. Item illud ad montium radices fonteis eſſe, teſtatur, locum B aquam propterea diſtributim reddere, quòd ea ad exiguum quid, ac paulatim ex multis confluat guttulis. Qua etiam ratione, amnium fontes effici conſueuere. Verumenimvero & talia eſſe loca ceu ſtagna, quæ aquarum multitudinem contineant, ſed non tanta vt illud accidere queat, haudquaquam magis fuerit abſurdum, quàm ſi quis fluuiorum fonteis manifeſtos eſſe putet. ferè enim è fontibus plurimi effluunt. Cenſere igitur ſtagna & itidem fontes, vniuerſum aquarum corpus eſſe, ſimile exiſtit. Quòd autem terra taleis habeat hiatus atque diſceſſiones, flumina ipſa quæ ſeſe condunt, declarant. quod quidem multis in locis terræ accidit, vt in Peloponneſo. plurima enim ſunt eiuſmodi circa C Arcadiam. Cauſa autem eſt. nam quia montoſa eſt, ex alueis in mare effluxum nullũ habet: oppleta nanque loca, & effluxum minimè habentia, amnibus tranſitum in imum inueniunt, vim afferente ea quæ ex alto aduenit aqua. In Græcia igitur parua admodum talia fiunt. At ſub monte Caucaſo ſtagnum exiſtit *, quod accolæ mare vocitant: id enim multis fluminibus, iiſque ingentibus receptis, manifeſtum non habens effluxum, terram ſubit: ac demum iuxta Coraxos circa vocata Bathea Ponti, acceptas euomit aquas. Hæc autem ſunt, immenſa quædam altitudo maris. nam nemo vnquam vadum demiſſo fune reperire quiuit. Hic itaque lon- D gè à continenti trecentis ferè ſtadiis, longo tractu, non tamen continuo, ſed tripartito, potulenta redditur aqua. Item amnis quidam haudquaquam Rhodano minor, in agro Liguſtico abſorbetur, rurſumque alio in loco emergit. Rhodanus autem fluuius eſt, qui non niſi nauigio tranſmitti poteſt.

CAPVT XIV.

De Cataclyſmis, & quare fluuiorum alij perennes, alij non.

POrro non ſemper eadẽ telluris loca vel aquoſa ſunt, vel arida ſed mutationem iuxta amnium ortum ac defectum ſubeunt. Et ideo quæ cõtinen- E ti vicina ſunt, & quæ mari, permutari ſolent. nec ſemper hæc, terra: illa, mare, omni permanent tempore, ſed vbi terra erat, illic mare naſcitur, & vbi nunc mare eſt, illic rurſum terra erit. ordine tamen quodam ac ambitu, fieri iſta exiſtimãdum eſt. Horum autem principium cauſaque exiſtit, quòd interiores quoque telluris partes, perinde atque animantium plantarúmque corpora, iuuentutem atque ſenectutem habeant. Verùm iſtis, hoc per partem ſubire nequaquam contingit, ſed ſimul totum iuueneſcat atque ſeneſcat neceſſe eſt. Terræ particulatim hoc idem, ob frigus atque calorem accidit. Hęc igitur accreſcere ſimul atq; decreſcere propter ſolis calorem conuerſionémque aſſolent.

Qua etiam de cauſa telluris quoque partes, vireis ſibi vendicant differentes. Proinde ad aliquod vſque tempus aquoſa permanere queunt, deinde aſſiccantur atque ſeneſcunt rurſum. Alia porro loca reuiuiſcunt, & ſecundùm partem aquoſa reddi ſolent. Sed cùm loca aridiora ſunt, fontes deleantur neceſſe eſt. quæ cùm accidũt, amnes primùm è magnis puſillos fieri, deinde tandem inareſcere oportet. Quinetiam cùm amnes aliò commigrant, & hinc quidem euaneſcunt, ſed aliis in locis pari magnitudine erumpunt, permutari mare neceſſariò accidit. Vbi enim mare fluuiorum auctu redundat, inibi cùm recedit, aridam committat neceſſarium exiſtit. contrà, vbi multis ſcatens fluxibus aſſiccatur, inibi rurſum, cùm accedit, ſtagnare. At quia omnis quæ circa terram fit generatio, non niſi ſucceſſione & tempore reſpectu vitæ noſtræ oppidoquam longo fieri ſolet, iſta nobis haudquaquam aduertentibus fiunt. Atque priùs gentes vniuerſę intereunt, pereúntque, quàm horum mutatio ab initio ad finem vſque memoria teneri queat. Maximas itaque celerrimáſque clades prælia aduehunt: alias, morbi: nonnullas, ſterilitates: & hæ quaſdam ſtatim magnas, quaſdam lentas adeò, vt talium quoque gentium tranſmigrationes nos lateant. propterea quòd alij regionem deſerunt: alij eò vſque ſuſtinent, quoad nullam ampliùs multitudinem alere regio queat. Inter primam igitur nouiſſimámque loci derelictionem, tempora interueniant adeò longa [illegible] eſt, vt nemo meminiſſe poſſit: immò incolumibus etiamnum hiſce qui remanſerint, longi temporis iniuria obliuio irrepſerit. Eodem autem modo latere quoque exiſtimandum eſt, quando primùm ſinguli populi quæ permutata eſſent, & arida è paluſtribus aquoſiſque facta, inhabitare cœperint. Hic enim incrementum paulatim multo in tempore fieri aſſolet, ita vt memoriam diffugiat, quinam primùm, quo tempore, & qualiter habentibus locis venerint. ſicvt & circa Ægyptum accidit. Etenim locus iſte totáque regio, quæ fluminis tantùm inuectu nata eſt, ſemper aridior effici videtur. At propterea quòd paulatim areſcentibus paludibus vicina loca incoli cœpere, temporis longitudo initium obliterauit. Omnia igitur Nili oſtia, præter vnum Canobicum, manu inſtituta, non ab amne facta videntur. Quinetiam antiquitus tota Ægyptus vrbe, quam Thebas vocant, conſtabat. id quod & Homerus declarat, qui non adeò multo (vt ita dixerim) poſt eiuſmodi mutationes floruit. Nam loci illius mentionem facit, tanquam necdum aut omnino, aut certè tanta exiſtente Memphi. Par eſt autem, id ad hunc contingere modum. Siquidem humilia loca mortales poſteriùs incolere cœperũt, quàm edita. Nam ea loca quæ cœno, quod amnis ſubinde conuehit, viciniora ſunt, diutiùs paluſtria ſint neceſſe eſt: propterea quòd ſemper extrema pleniùs allui ſolet. at id mutatur, atque rurſum in melius euadit. Nam quæ inareſcunt loca, ad bene habendum properant. At quæ priùs erant bene temperata, ſi inſuper aſſiccentur, tum deteriora fiunt. id quod Græciæ, & circa Argiuorum & Mycenæorum regionem vſu euenit. Etenim Troianis temporibus, Argiuorum regio, quòd paluſtris eſſet, pauculos alere poterat: contrà Mycenæorum ager pulchre habebat, ideóque honoratior habebatur. nunc autem è diuerſo, ob quam diximus cauſam. Nam hæc ſterilis facta eſt, atque admodum inaruit: illius quæ tunc erant ſterilia, quòd aquis eſſent obruta,

A nunc fertilia ſunt effecta. Quod igitur in illo loco qui paruus eſt, accidit, hoc idem etiam circa loca magna, regionéſque integras, accidere cenſeamus oportet. Sed qui pauca reſpiciunt, vniuerſi mutationem, quaſi cœlum ortum ſit, cauſam eſſe eiuſmodi affectuum arbitrantur. Quocirca & mare ipſum minus fieri, quatenus ſiccetur, aiũt: quòd nunc plura loca quàm priùs, ita ſeſe habere cernantur. At hoc partim verum eſt, partim non verum. Multa enim ſunt, quæ priùs erant aquoſa, nunc autem cõtinenti addita ſunt. Sed & contra res agitur. Nam ſi conſiderare velint, mare terram multis in locis occupaſſe comperient. Attamen huiuſce rei cauſa, ad mundi generationem haudquaquam referẽda eſt. B Ridiculum enim foret, ob paruas, breuéſque mutationes, vniuerſum moueri aſſerere. Porro terræ moles atque magnitudo, ad totum cœlum nihil profectò exiſtit. Verùm horum omnium cauſam exiſtimemus oportet, quòd vt elapſis certis temporum ſpatiis, inter anni tempora hyems: ita magno quodam circuitu hyems magna, & imbrium exceſſus fieri ſoleat. At hic non ſemper eiſdem in locis efficitur, ſed perinde vt vocatum diluuium, quod tempore Deucalionis accidit. Etenim hoc circa Græciam maximè, & eam potiſſimùm partem quam antiquam Hellada vocitant, factum eſt. hæc autem ea regio eſt, quæ circa Dodonem & Acheloum exiC ſtit. hic ſiquidem multis in locis defluxum mutauit. Habitabant etenim inibi Stelli: & qui tunc appellabantur Græci, nunc autem Hellenes. Cùm igitur talis imbrium exuperantia acciderit, ad longum tempus ſufficere cenſeamus oportet. Item, quemadmodum amplitudinem cauernarum, quæ ſub terra ſunt, cauſam eſſe affirmant, cur amnium alij perennes ſint, alij haudquaquam: ita nos ipſi excelſorum locorum magnitudinem, eorúmque denſitatem atque frigus, eiuſce rei cauſam eſſe dicimus. hæc enim aquæ plurimum receptant, tegunt, gignunt. Quibuſcumque autem fluuiis incumbentes montium productiones puſillæ ſunt, D aut fungoſæ, aut lapidoſæ, aut argilloſæ, hoſce hoc pacto antè deficere putemus oportet, quàm eos in quos humoris delatio fiat eiuſmodi, vt magis queat reddere perennes locorum humiditates. hi enim progreſſu temporis aſſiccari magis videntur: alteri nempe qui aquis abundant, minùs, quouſque circuitus eiuſdem conſtitutio redeat. Cùm autem ſit neceſſe quandam eſſe mutationem vniuerſi, non tamen ortum ac interitum, ſiquidem ipſum permaneat, neceſſarium eſt (ſicuti ipſi dicimus) non ſemper loca eadem mari aut amnibus humectari, atque ſicceſcere. quod re ipſa quæ fieri aſſolet, liquidò conſtat. Tota namque Ægyptiorum regio, quos hominũ antiquiſſimos eſſe diE cimus, facta, ac amnis opus eſſe, videtur: idque regionem ipſam diſpicienti palam eſt. Item quæ Rubro mari contermina ſunt, id abundè indicant. Nam quidam è regibus ex eo nauigabilem alueum perducere in Nilum tentauit. is enim, per totum quod inter flumen & Rubrum mare intereſt, ductus, non parua ipſis commoda adferret. quod primus veterum Seſoſtris aggreſſus fuiſſe memoratur: ſed excelſius mare Rubrum comperit, quàm terram Ægypti. Quamobrem ille priùs, & mox Darius fodere deſiit: vt ne immiſſo mari corrumperetur aqua Nili. Patet igitur hæc omnia vnum mare continuum fuiſſe. Quocirca & Libya regio illuſtrata Ammonis oraculo,

humilior videtur atque depreſſior, quàm ſubſidentis loci ratio poſtulet. Perſpicuum enim eſt, quòd quia limum aut quippiam eiuſmodi aquarum vis intulit, ſtagna facta ſunt, & tellus arida: quódque inibi relicta ſtagnánſque aqua ſucceſſu temporis aſſiccata, iam prorſus euanuit. At verò & quæ ad Mæoticum lacum pertingunt, amnium connectu in tantum excreuere, vt naues multo minores nunc quàm anno ab hinc ſexageſimo, quæſtus gratia ingrediantur. Quare ex hoc ratiocinari promptum eſt, quòd vt à prima ſtatim origine pleríque lacus, ita & hic quoque amnium opus ſit, quódque tandem vt totus aſſiccetur ſit neceſſe. Præterea Boſphorus aſſiduè fluit, quòd ille limo oppleatur. Atque quonam pacto hæc contingant, ipſis quoque oculis adhuc contueri licet. Nam poſtea quàm fluxus citra Aſiam littus fecerat, quod ab eo ad Aſiam interueniebat, paruum initio ſtagnum efficiebatur, mox inareſcebat: poſtea verò littus aliud citra littus illud, & citra ſtagnum emergebat, idque ſemper ad hunc modum eueniebat ſimiliter. Hoc autem cùm ſæpenumero fiat, neceſſe fuerit vt procedente tempore tanquam flumen euadat, quod tandem etiam exiccabitur. Patet igitur, cùm tempus nunquam deficiat, & vniuerſum ſempiternum ſit: nec amnem Tanaim, nec Nilum ſemper fluxiſſe: ſed loca vnde profluunt, fuiſſe olim arida. nam eorum opus, terminum habet, tempus non habet. Id quod ſimiliter & de cæteris quoque fluminibus dicere congruet. At verò ſi amnes ortum habeant atque occaſum, nec ſemper eadem terræ loca ſcateant aquis, ipſum quoque mare ſimili modo mutari oportet. quod cùm aſſiduè alia deſerat, alia inuadat: patet, non ſemper vniuerſæ terræ tractus eoſdem, hos mare, illos continentem eſſe, ſed tempore cuncta permutari. Igitur cur eædem telluris partes nec aridæ ſemper, nec iidem nauigabiles exiſtant, & quam ob cauſam iſta vſu eueniant, ſimiliter & cur amnium quidam perennes ſint, quidam haudquaquam, dictum eſt.

* κ. ἀπαντᾷ & πρῶτον.

A conuerſionéſque ſolis ac lunæ efficere: quod ſupereſt, eſſe mare. Vnde etiam fit, vt mare minus reddi aſſiccatione putent, tandémque fore vt aliquando prorſus inareſcat. Inter quos nõnulli mare eſſe velvti ſudationem terræ, quæ ſole recaleſcit, ſalsúmq; proinde haberi aiunt. etenim ſudor ſalſus eſt. Alij ſalſedinis cauſam terræ tribuunt. nam vt aqua per cinerem tranſmiſſa, ſalſa redditur: ſic etiam mare, propter terram eiuſmodi ſibi admiſtam, ſalſum eſſe volunt. Verùm fieri non poſſe vt fonteis mare habeat, iam per ea quæ vera ſunt, cõtemplemur oportet. Aquarum enim quæ circa terram ſunt, aliæ ſunt fluitantes, aliæ ſtagnantes. Fluitantes quidem omnes è fontibus dimanant, de quibus antea diximus, B intelligi oportere fontem eſſe principium, non à quo quaſi è vaſe quodam promatur aqua, ſed in quod primum quæ aſſiduè fit eodémque fluit, concurrere atque coagmentari ſoleat. Stagnãtium verò aliæ ſunt collectitiæ atque ſubſidentes, vt paluſtres & lacuſtres, quæ multitudinis ac paucitatis ratione inter ſe diſcrepant: aliæ fontanæ, quæ omnes manu productæ ſunt: verbi cauſa, quæ puteales nuncupantur. omnium enim fontem, quàm fluxum ſubliniorem eſſe conuenit. Ex quo fit vt quædam ſponte fluant, vt fontanæ & fluuiatiles: quædam artis auxilium deſiderent. Igitur aquarum differentiæ tot numero taléſque habentur. Quibus C ad hunc modum definitis, vt mare fonteis ſortiatur, fieri nequaquam poteſt. nam mare in horum generum altero eſſe nequit: quippe cùm nec effluidum ſit, nec manu factum. At fontanæ omnes alterum ex his ſubire conſueuerunt. Nec vllam tantam aquæ fontanæ copiam ſponte ſua ſtare videmus. Adhæc, cùm plura ſint maria, quæ nullo ipſa in loco inter ſe copulari ſiue permiſceri ſoleant (quorum Rubrum quidem cum eo quod extra Herculis columnas iacet, parum communicare videtur: Hyrcanum verò & Caſpium, & ab extero mari ſeiuncta eſſe, & circumquaque accolas habere) fontes profectò haud quaquam latere D poſſent, ſi quo in loco ea haberent. In anguſtiis autem fluere mare videtur, ſicubi ratione terræ ambientis in arctum ex amplo coeat, propterea quòd vltro citróque ſæpe libratur: quod in magna æquorum vaſtitate deprehendi non poteſt. At ſi anguſto meatu ſit, quia non longè refugiant terræ: quæ in vaſto parua eſt, illic magna cernatur aquæ libratio neceſſe eſt. Totum autem id mare, quod intra Herculis columnas concluditur, ſectando terræ cauitates atque amnium multitudinem, profluere ſolet. Nam Mæotis, in Pontum influit: Pontus, in Ægæum. cætera verò ab iſtis maria id minùs apertè faciunt. Hoc autem illis accidere ſolet, tum ob amnium multitudinẽ (amnes enim plures Pontum Euxinum atque Mæotin ſubire ſolent, quàm maris E interni tractum multo maiorem) tum ob altitudinis breuitatem. Nam mare vt incedit, ſemper altius eſſe cernitur. ſiquidem Pontus Mæotide altior exiſtit, Ponto Ægæum, Ægæo Siculum: omnium altiſſima, Tyrrhenum atque Sardoum. At æquora extera, vt breuia ſunt ob lutum, ita flatibus non ſollicitantur, quòd mare in cauo ſit. Igitur vt per partes telluris è locis excelſis amnes fluere cernuntur: ita etiam è totius terræ locis editioribus, quæ ad ſeptentriones vergunt, plurimum aquarum agmen cooriri aſſolet. Quamobrem & extera maria quædam minimè alta ſunt, quòd aliò ſuas refundant aquas: quædam altiuſcula habentur.

Quòd autem ea terræ portio, quæ ad ſeptentriones poſita eſt, excelſa ſit, indicio vel id eſſe poteſt, quòd non pauci ex hiſce qui olim ſublimium rerum ſtudioſi fuere, ſolem non ſubter terram ferri, ſed circa eandem atque locum iſtum crediderunt. diſparere autem atque noctem committere, quoniam terra ad vrſam excelſa ſit. Igitur quòd fieri nequeat, vt mare fonteis habeat, & quam ob cauſam ita fluere videatur, tot ac talia nobis dicta ſint.

CAPVT II.

De loco maris, & quare à fluminibus ipſum ingredientibus non reddatur maius.

DE generatione verò ipſius, num quando ortum ſubierit, atque ſapore, quænam cauſa ſit ſalſitudinis & amaritudinis, dicendum eſt. Cauſa quæ maiores noſtros compulit vt mare vniuerſæ aquæ corpus atque originem eſſe putarent, hæc eſt. Videbitur enim conſonum eſſe rationi, vt totius aquæ corpus quoddam ſit, a quo cùm detrahitur, abſcedit, & cæteris admiſcetur, perinde ac cæterorum quoque elementorum congeſta moles eſt, atque initium quod multitudine conſtat: vt ignis, in ſublimi: aëris, in loco ab igni ſecundo: terræ, in eo circa quem omnia iſthæc apertè ſita ſunt. Quare eadem quoque ratione, vt patet, de aqua quæramus neceſſe eſt. Tale autem corpus, nimirum quod perinde vt cæterorum quoque elementorum corpora, alicubi vniuerſum iaceat, præter mare, nullum eſſe videtur. amnium enim corpus neque totum alicubi ſitum eſt, neque ſtabile eſt, ſed quotidie ſemper fieri videtur. Ex hac itaque dubitatione mare tum humoris, tum aquę vniuerſæ principium eſſe viſum eſt. Quam ob cauſam & amneis ipſos quidam non modò in mare delabi, verùm etiam è mari fluere aſſerunt: ſalſam enim aquam cùm percolatur, potui idoneam reddi aiunt. Huic autem opinioni alia dubitatio aduerſatur: cur nam videlicet hæc aqua quæ conſiſtit, potulenta non eſt, ſed ſalſa, ſi ea totius aquæ origo ſit atque principium? Cauſa autem, pariter & huiuſce dubitationis ſolutio erit, & primam de mari exiſtimationem rectè accipi efficiet. Cùm enim aqua terram ambiat, perinde vt aquam aër, & aërem ignis (hic enim omnium vltimus tam aliorum, qui plurimi ſunt, quàm noſtra ſententia exiſtit) atque ſoliſto feratur modo, ob idque mutatio proueniat, & ortus ſimul atque interitus: quantum profectò aquæ leuiſſimum ſit dulciſſimúmque, aſſiduè eximi, in vaporem conuerti, & denique in altum ſeuocari videtur. quo in loco vbi frigoris beneficio conſtiterit, rurſum ad terram delabitur: quod ſemper eo modo, quo dictum iam eſt, natura ſolet efficere. Quibus fit vt etiam priores omnes ridendi ſint, quotquot ſolem humore ali exiſtimarunt. Ob quod nonnulli ſolem etiam conuerti aiunt, vtpote cui non ſemper eadem loca nutrimentum parare queant. id quod ſoli accidere, aut eum corrumpi, eſſe neceſſe volunt. nam ignem illum quem videmus, tamdiu ardere quamdiu habuerit alimentum dicunt, & ei alimentum humorem tantùm eſſe: quaſi humor ille qui ſubducitur, vſque ad ſolem pertingat, aut non ſecus atque flamma quæ fit, in ſublime feratur: à qua, ſumpta ſimilitudine, de ſole quoque ad hunc ſenſere modum. At id haudquaquam ſimile eſt.

* Lib. 1. cap. 9.

ἡ μὲν γὰρ φλὸξ, διὰ συνεχοῦς ὑγροῦ καὶ ξηροῦ μεταβαλλόντων γίνεται, καὶ οὐ τρέφεται· οὐ γὰρ ἡ αὐτὴ οὖσα διαμένει οὐδένα χρόνον, ὡς εἰπεῖν. περὶ δὲ τὸν ἥλιον ἀδύνατον τοῦτο συμβαίνειν· ἐπεὶ τρεφομένου γε τὸν αὐτὸν τρόπον, καθάπερ ἐκεῖνοί φασι, δῆλον ὅτι καὶ ὁ ἥλιος, οὐ μόνον καθάπερ ὁ Ἡράκλειτός φησι, νέος ἐφ' ἡμέρῃ ἐστὶν, ἀλλ' ἀεὶ νέος συνεχῶς. ἔτι δὴ, ἡ ὑπὸ τοῦ ἡλίου ἀναγωγὴ τοῦ ὑγροῦ, ὁμοία τοῖς θερμαινομένοις ὕδασίν ἐστιν ὑπὸ πυρός. εἰ οὖν μηδὲ τὸ ὑποκαιόμενον τρέφεται πῦρ, οὐδὲ τὸν ἥλιον εἰκὸς ἦν ὑπολαβεῖν, οὐδ' εἰ πᾶν θερμαίνων ἐξατμίσειε τὸ ὕδωρ. ἄτοπον δὲ καὶ τὸ μόνον φροντίσαι τοῦ ἡλίου, τῶν δ' ἄλλων ἄστρων παριδεῖν αὐτοὺς τὴν σωτηρίαν, τοσούτων καὶ τὸ πλῆθος καὶ τὸ μέγεθος ὄντων. τὸ δ' αὐτὸ συμβαίνει καὶ τούτοις ἄλογον, καὶ τοῖς φάσκουσι τὸ πρῶτον ὑγρᾶς οὔσης τῆς γῆς, καὶ τοῦ κόσμου τοῦ περὶ τὴν γῆν ὑπὸ τοῦ ἡλίου θερμαινομένου, ἀέρα γενέσθαι, καὶ τὸν ὅλον οὐρανὸν αὐξηθῆναι, καὶ τοῦτον πνεύματά τε παρέχεσθαι, καὶ τὰς τροπὰς αὐτοῦ ποιεῖν. φανερῶς γὰρ ἀεὶ τὸ ἀναχθὲν ὁρῶμεν καταβαῖνον πάλιν ὕδωρ· κἂν μὴ κατ' ἐνιαυτὸν ἀποδιδῷ, καὶ καθ' ἑκάστην ὁμοίως χώραν, ἀλλ' ἔν γε τισὶ τεταγμένοις χρόνοις ἀποδίδωσι πᾶν τὸ ληφθὲν, ὡς οὔτε τρεφομένων τῶν ἄνωθεν, οὔτε τοῦ μὲν μένοντος ἀέρος ἤδη μετὰ τὴν γένεσιν, τοῦ δὲ γιγνομένου καὶ φθειρομένου πάλιν εἰς ὕδωρ· ἀλλ' ὁμοίως ἅπαντος διαλυομένου καὶ συνισταμένου πάλιν εἰς ὕδωρ. τὸ μὲν οὖν πότιμον καὶ γλυκὺ, διὰ κουφότητα πᾶν ἀνάγεται. τὸ δ' ἁλμυρὸν ὑπομένει διὰ βάρος οὐκ ἐν τῷ αὐτοῦ οἰκείῳ τόπῳ· τοῦτο γὰρ οἰητέον ἀπορηθῆναί τε προσηκόντως (ἄλογον γὰρ εἰ μή τις ἐστὶ τόπος ὕδατος ὥσπερ τῶν ἄλλων στοιχείων) καὶ ταύτην εἶναι τὴν λύσιν· ὃν γὰρ ὁρῶμεν κατέχουσαν τόπον τὴν θάλατταν, οὗτος οὐκ ἔστι θαλάττης, ἀλλὰ μᾶλλον ὕδατος. φαίνεται δὲ θαλάττης, ὅτι τὸ μὲν ἁλμυρὸν ὑπομένει διὰ τὸ βάρος· τὸ δὲ γλυκὺ καὶ πότιμον ἀνάγεται διὰ τὴν κουφότητα, καθάπερ ἐν τοῖς τῶν ζώων σώμασι. καὶ γὰρ ἐν τούτοις τῆς τροφῆς εἰσελθούσης γλυκείας, ἡ τῆς ὑγρᾶς τροφῆς ὑπόστασις καὶ τὸ περίττωμα φαίνεται πικρὸν ὂν καὶ ἁλμυρόν· τὸ γὰρ γλυκὺ καὶ πότιμον ὑπὸ τῆς ἐμφύτου θερμότητος ἑλκυσθὲν εἰς τὰς σάρκας, καὶ τὴν ἄλλην* σύστασιν ἦλθε τῶν μερῶν, ὡς ἕκαστον πέφυκεν. ὥσπερ οὖν κἀκεῖ ἄτοπον, εἴ τις τῆς ποτίμου τροφῆς μὴ νομίζοι τόπον εἶναι τὴν κοιλίαν, ὅτι ταχέως ἀφανίζεται, ἀλλὰ τοῦ περιττώματος, ὅτι τοῦθ' ὁρᾷ ὑπομένον, οὐκ ἂν ὑπολαμβάνοι καλῶς. ὁμοίως δὲ καὶ ἐν τούτοις· ἔστι μὲν γὰρ ὥσπερ λέγομεν, οὗτος ὁ τόπος ὕδατος. διὸ καὶ οἱ ποταμοὶ ῥέουσιν εἰς αὐτὸν πάντες, καὶ πᾶν τὸ γιγνόμενον ὕδωρ· εἰς τε γὰρ τὸ κοιλότατον ἡ ῥύσις, καὶ ἡ θάλαττα τὸν τοιοῦτον ἐπέχει τόπον τῆς γῆς. ἀλλὰ τὸ μὲν ἀναφέρεται ταχὺ διὰ τὸν ἥλιον ἅπαν· τὸ δ' ὑπολείπεται διὰ τὴν εἰρημένην αἰτίαν. τὸ δὲ ζητεῖν τὴν ἀρχαίαν ἀπορίαν, διὰ τί τοσοῦτον πλῆθος ὕδατος οὐδαμοῦ φαίνεται· καθ' ἑκάστην γὰρ ἡμέραν ποταμῶν ῥεόντων ἀναριθμήτων καὶ τὸ μέγεθος ἀπλέτων, οὐδὲν ἡ θάλαττα γίνεται πλείων· τοῦτο ἤδη μὲν ἄτοπον ἀπορῆσαι τινὰς, οὐ μὴν ἐπιβλέψαντι γε χαλεπὸν ἰδεῖν· τὸ γὰρ αὐτὸ πλῆθος ὕδατος εἰς πλάτος τε διαταθὲν καὶ ἀθρόον, οὐκ ἐν ἴσῳ χρόνῳ ἀναξηραίνεται.

* κενώσαι ἐξ εἰσελθ. μερ.

A nam flamma per continuam humidi in ſiccum mutationem fieri, non ali ſolet. nullo enim (propè dixerim) tempore eadem manet. Hoc autem ſoli accidere non poteſt. quoniam ſi perinde nutriatur, vt illi aiunt, non ſolùm (vt patet) in dies, ſicvti Heraclitus aſſerit, ſed continuè ſemper nouus erit. Præterea ſubductio illa humoris quæ à ſole fit, aquis ignis opera incaleſcentibus perſimilis habetur. Si ergo ignis aquæ ſubditus, ea non nutriatur, nec ſolem aqua ali putare par eſt, etiamſi totam in vaporem calfaciendo verterit. Abſurdum quoque eſt, eos ſolis tantummodo curam habuiſſe: reliquorum autem ſiderum, quæ tot tantàque B numero ac magnitudine habentur, ſalutem neglexiſſe. Eodem autem à ratione aberrant hi atque illi, qui cùm ab initio terra eſſet humecta, incaleſcente à ſole ea mundi portione quæ circa terram eſt, aërem ortum eſſe, totúmque cœlum incrementa ſuſcepiſſe, atque nunc eundem flatus ſuppeditare, cœlique conuerſiones efficere dicunt. Semper enim aquam quæ ſuperna petierit, rurſum in terram delabi apertè cernimus: etiamſi nō quotannis & in quaque regione ſimiliter reddatur. Attamen ratis quibuſdam temporibus quicquid humoris diluti fuerit aſſumptum, reddi ſolet: quaſi corpora ſuperna minimè alantur, nec humoris pars altera aër iam inde à generatione permaneat, C altera rurſum in aquam euadat corrumpatúrque, ſed ſimiliter totus diſſoluatur, ac denuò in aquam conſiſtat. Igitur pars aquæ potu idonea dulciſque, tota ſurſum ob leuitatem trahitur: ſalſa præ pondere, vt ſuo in loco, ſubſidet. Id enim & decenter fuiſſe addubitatum (abſurdum enim fuerit, aquam perinde vt cætera elementa, locum non habere) & hanc eius eſſe ſolutionem, putare oportet. Quem enim occupare locum mare cernimus, is maris locus non eſt, ſed potiùs aquæ. videtur tamen locus eſſe maris: quia quod ſalſum eſt, ratione ponderis in imo manet: quod potulentum eſt atque dulce exiſtit, in ſublime propter ſuam leuitatem, ſcandere aſſolet. quo modo in D animantis corpore fieri nouimus. Nam tametſi cibus omnis, qui in animalis corpus ingeritur, dulcorem præferat, humiditatem ſubſidens excrementitiáque materia, amara ſalſáque deprehenditur. pars enim dulcis potúque idonea, quam natiuus calor ad ſe trahit, in carnes aliámque partium conſtitutionem pro cuiuſque natura tranſire & abſumi ſolet. Igitur vt in animantis corpore, ſi quis ventrem putet non eſſe humidi alimenti locum, quod citò euaneſcat: ſed excrementi, quoniam hoc remanere cernatur, haudquaquam probè exiſtimauerit: ſic & de ipſius aquæ loco dicendum eſt. hic enim, mea quidem ſententia, aquæ locus eſt. E Vnde fit vt amnes vniuerſi, & quicquid aquæ gignitur, eò influant. Nam & ad id quod cauiſſimum eſt, fluxio effici ſolet: & terræ locum eiuſmodi mare occupat. Verùm ipſius aquæ pars altera tota feruore ſolis attolli ſolet, altera relinqui ob eam quæ dicta iam eſt cauſam. Porro veterem illam quæſtionem mouiſſe, curnam videlicet tanta aquarum copia nuſquam compareat, cùm innumeri immenſique amnes quotidie in mare defluant, nec ipſum vllatenus accreſcat: quanquam metas non egreditur rationis, ſi quis tamen intendere velit, eiuſce rei cauſam facilè agnoſcet. Nam aquæ menſura eadem, longè latéque diffuſa collectáque, haudquaquam æquabili tempore reſiccatur:

quin-

quinimo hoc an illo diſponatur modo tantopere refert, vt hæc diem integram edurare queat, illa perinde ac ſi quis aquæ cyathum vnum ſuper menſam ingentem extenderit, tota interim dum eam contemplantur, euaneſcat. quod amnibus etiam accidere ſolet. Nam cùm aſſiduè amnes toti ac vniuerſi fluant, ſemper ea aquarum portio, quæ ad locum immenſum latiſſimúmque peruenit, citò nec apertè coareſcit. Quod autem de mari & amnibus ſcriptum in Phædone eſt, fieri non poteſt. Inquit enim Socrates, pleraſque cauitates eſſe quæ omnes ſub terra ſibi inuicem obuiant irrumpúntque: eſſe verò aquarum omnium fontem atque principium, vocatum Tartarum, quandam nimirum circa medium aquarum multitudinem, à quo tam profluentes quàm ſtabiles aquæ omnes emanant. In ſingulos autem amnium riuos influere, propterea quòd aſſiduè quod primum eſt atque principium, fluctuet. Nam nec fundamentum habere, nec firmamentum, ſed ſemper circa medium ſpiras agere, atque cùm mouetur ſurſum deorſúmque, in amnium riuos exundare atque influere. Nonnullas item pleriſque in locis ſtagnare, cuiuſmodi noſtrum etiam mare eſſe. Omnes autem ad principium, vnde fluere cœperint, in orbem relabi, multas quidem, per partem eandem, quaſdam verò per contrariam, quàm elapſæ fuerint: verbi cauſa, ſi ab ima fluere cœperint, in ſuperam illabi, eſſe verò ad medium vſque deſcenſum. vlteriorem enim prolapſum, omnibus fore aſcenſum. porro aquam ſapores coloréſque retinere, pro terrarum qualitate per quas fluxerit. Fit autem hac ratione, vt amnes non ad eundem ſemper locum fluant. Si enim ad medium confluant, à quo ſanè effluunt, non potiùs infernè quàm ſupernè fluent: ſed ad vtramlibet partem Tartarus fluctuans inclinarit. Atqui ſi hoc contingat, id quod aiunt, eueniet, ſurſum versùs incedere flumina: quod fieri nequit. Præterea vndenam erit aqua quæ ortum ſubit, quæque ruſus in altum rapitur? totam enim eam eximere neceſſe eſt, ſi ſemper idem aquarum modus ſeruetur. Quantum enim aquæ effluit, tantumdem ad principium relabitur. Atqui flumina omnia quotquot in alia non influunt, in mare deſinere viſuntur: in terram, nullum: ſed quanquam ſeſe condunt, tamen ruſum emergere ſolent. Amnium autem ij magni euadunt, qui per caua longo itinere labuntur: multos enim amneis quorum vias loco ac longitudine intercipiunt, recipere ſolent. Quam ob rem Iſter & Nilus, amnium qui in hoc mare exeunt, maximi habentur. Atque de amnium cuiuſque fontibus alias alij cauſas aſtruunt: quoniam in eundem multi immittunt. Itaque hæc omnia effici non poſſe, apertum eſt: præſertim cùm etiam inde originem mare habeat. Quòd igitur locus iſte aquæ, non maris locus ſit, item quam ob cauſam pars altera, nempe quæ potui idonea eſt, haudquaquam niſi cùm fluit, manifeſta ſit, altera remaneat: denique cur mare aquæ finis potiùs quàm principium exiſtat, perinde vt in corporibus excrementa, nutrimenti omnis & maximè humidi, finis ſunt, tot nobis dicta ſint.

Ἡ ἁλμυρότης τῆς θαλάττης πόθεν γίγνεται.

Περὶ δὲ τῆς ἁλμυρότητος αὐτῆς λεκτέον, καὶ πότερον ἀεί ἐστιν ἡ αὐτή, ἢ οὔτ' ἦν, οὔτ' ἔσται, ἀλλ' ὑπολείψει· καὶ γὰρ οὕτως οἴονταί τινες. τοῦτο μὲν οὖν ἐοίκασι πάντες ὁμολογεῖν, ὅτι γέγονεν, εἴπερ καὶ πᾶς ὁ κόσμος· ἅμα γὰρ αὐτῆς ποιοῦσι τὴν γένεσιν. ὥστε δῆλον, ὡς εἴπερ ἀΐδιον τὸ πᾶν, καὶ περὶ τῆς θαλάττης οὕτως ὑποληπτέον. τὸ δὲ νομίζειν ἐλάττω τε γίγνεσθαι τὸ πλῆθος, ὥσπερ φησὶ Δημόκριτος, καὶ τέλος ὑπολείψειν, τῶν Αἰσώπου μύθων οὐθὲν διαφέρειν ἔοικεν ὁ πεπεισμένος οὕτως. καὶ γὰρ ἐκεῖνος ἐμυθολόγησεν, ὡς δὶς μὲν ἡ Χάρυβδις ἀναρροφήσασα, τὸ μὲν πρῶτον τὰ ὄρη ἐποίησε φανερά, τὸ δεύτερον τὰς νήσους· τὸ δὲ τελευταῖον ῥοφήσασα, * ξηρὰν ποιήσει πάμπαν. ἐκείνῳ μὲν οὖν ἥρμοττεν ὀργιζομένῳ πρὸς τὸν πορθμέα τοιοῦτον εἰπεῖν τὸν μῦθον· τοῖς δὲ τὴν ἀλήθειαν ζητοῦσιν, ἧττον· δι' ἣν γὰρ αἰτίαν ἔμεινε τὸ πρῶτον, εἴτε διὰ βάρος, ὥσπερ τινὲς καὶ * τούτων φασίν· ἐν προχείρῳ γὰρ τούτου τὴν αἰτίαν ἰδεῖν· εἴτε καὶ δι' ἄλλο τι· δῆλον ὅτι διὰ τοῦτο διαμένειν ἀναγκαῖον καὶ τὸν λοιπὸν χρόνον αὐτήν. ἢ γὰρ λεκτέον αὐτοῖς, ὅτι οὐδὲ τὸ ἀναχθὲν ὕδωρ ὑπὸ τοῦ ἡλίου ἥξει πάλιν· ἢ εἴπερ τοῦτ' ἔσται, ἀναγκαῖον ἤτοι ἀεί, ἢ μέχρι οὗπερ ἂν ᾖ τοῦτο, ὑπολείπεσθαι τὴν θάλατταν, καὶ πάλιν ἀναχθῆναι ἐκεῖνο πρότερον δεήσει τὸ πότιμον. ὥστε οὐδέποτε ξηρανθήσεται· πάλιν γὰρ * ἐκεῖνο φθήσεται καταβὰν εἰς τὴν αὐτὴν τὸ προανελθόν· διαφέρει γὰρ οὐθὲν ἅπαξ τοῦτ' εἰπεῖν, ἢ πολλάκις. εἰ μὲν οὖν τὸν ἥλιον παύσει τις τῆς φορᾶς, τί ἔσται τὸ ξηραῖνον; εἰ δὲ ἐάσει εἶναι τὴν περιφοράν, ἀεὶ πλησιάζων, τὸ πότιμον καθάπερ εἴπομεν, ἀνάξει· ἀφήσει δὲ πάλιν * ἀποχωρῶν. ἔλαβον δὲ ταύτην τὴν διάνοιαν κατὰ τῆς θαλάττης, ἐκ τοῦ πολλοῖς τόποις φαίνεσθαι ξηροτέρους [ὄντας, νῦν ἢ πρότερον· περὶ οὗ τὴν αἰτίαν * εἴπομεν, ὅτι τῶν κατά τινα χρόνον ὑπερβολῶν γιγνομένων, ὑδάτων τοῦτ' ἐστὶ τὸ πάθος· ἀλλ' οὐ διὰ τὴν τοῦ παντὸς γένεσιν, καὶ τῶν μορίων· καὶ πάλιν γ' ἔσται τοὐναντίον· καὶ ὅταν γένηται, ξηρανεῖται πάλιν· καὶ τοῦτ' οὕτω κατὰ κύκλον ἀναγκαῖον ἀεὶ βαδίζειν. μᾶλλον γὰρ οὕτως εὔλογον ὑπολαβεῖν, ἢ διὰ ταῦτα τὸν οὐρανὸν ὅλον μεταβάλλειν. ἀλλὰ περὶ μὲν τούτων πλείω τῆς ἀξίας ἐνδιατέτριφεν ὁ λόγος.

CAPVT III.

De maris ſalſedine.

DE maris autem ſalſitudine, & idémne ſemper mare ſit, an aliquando non fuerit, & aliquando non erit, ſed deficiet (ſic enim quidam opinantur) dicamus oportet. Id igitur omnes fateri videntur: nempe quòd factum ſit, ſi totus etiam mundus ortum habeat. pariter enim cum eo maris ortum faciunt. Quare perſpicuum exiſtit, ſi vniuerſum ſempiternum ſit, de mari quoque haud aliter eſſe ſentiendum. Qui autem mare decreſçere (ſicuti Democritus aſſerit) tandémque B defecturum cenſet, atque ita ſibi perſuaſit, nihil ab Æſopi fabulis diſſentire videtur. Is enim Charybdin, cùm bis aquas exorbuiſſet, primo quidē mōteis, mox inſulas aperuiſſe, & ad poſtremum vbi ſorbuerit, terram prorſus aſſiccatum iri commentus eſt. Verùm Æſopo in nautam irato, eiuſmodi fabulam dixiſſe congruebat: hiſce autem qui veritatem rimantur, minùs. Quam enim ob cauſam prius remanſit, ſiue hoc propter pondus acciderit, quomodo etiam quidam horum aiunt (in promptu enim eſt eiuſce rei cauſam perſpicere) ſiue etiam propter aliud quippiam, patet eſſe neceſſarium, vt eandem ob cauſam ipſum reliquo tempore permaneat. Dicant enim oportet, C aut quòd aqua à ſole ſublata nunquam deſcendet, aut ſi deſcendet, neceſſe erit vt vel ſemper, vel quandiu illud accidet, mare remaneat, rurſúmque illud quod potulentum, eſt priùs eſſe ſublatum oportebit: quare nunquam aſſiccabitur. quod enim in cœlum prius aſcendit, id in mare deſcendere anticipabit: nihil enim refert, ſemélne an pluries hoc fieri dicatur. Si quis igitur ſolis lationem interquieſcere ſtatuat: quidnam id erit quod vim habeat aſſiccandi? Sin verò eam eſſe ſinat, ſemper ille ſuo acceſſu partem potabilem (vti diximus) educet, rurſúmque ſuo receſſu dimittet. Hanc autem de mari ſententiam ex eo ſumpsêre quòd multa loca ſicciora nunc quàm priùs appareant. D Cuius rei cauſam diximus, nempe quòd hic affectus propter aquæ exuperantias, quæ ſtato quodam tempore obuenire ſolent, non propter vniuerſi partiúmve generationem accidit. Rurſúmque contrà eueniet, & cùm facta fuerit aqua, rurſum exiccabitur: atque id ita per circulum ſemper ire neceſſe eſt. ſic enim exiſtimare rationi magis conſentaneum eſt, quàm ob id, totum cœlum permutari. Sed de hiſce plura, quàm par erat, diximus.

De maris autem ſalſugine dicendum, fieri non poſſe, vt qui mare ſemel generarint, aut omnino ipſum generant, ſalſum eſſe ſtatuant. Nam ſiue mare reſiduum extet, omnis eius humoris qui circa terram exiſtit, & à ſole ſubuehi ſolet, ſiue in a- E qua multa & prædulci tanta vis ſaporis propter terræ cuiuſpiam eiuſmodi ammiſtionem inſit, non minus ipſum, vbi aqua in vaporem cōuerſa rurſum deſcenderit, quàm priùs ſalſum eſſe, cùm multitudo æquabilis habeatur, neceſſe eſt. & ſi non prius, nec poſterius quoque. Quòd ſi etiam priùs ſalſum erat mare, continuò erat dicendum quidnam in cauſa ſit: & inſuper, cur ſi tunc in altum aſcenderit, nunc quoque idem minimè patiatur. At verò & hiſce qui ſalſuginis cauſam terræ tribuunt (eam enim dū ammiſcetur, multos habere ſapores aiunt,

adeò vt ab omnibus conuecta mare ſalſum ob admiſtionem reddat) non item flumina ipſa ſalſa eſſe abſurdum exiſtit. Qui enim fieri poteſt vt eiuſmodi terræ miſtio, affectum adeo euidentem conſpicuúmque efficere in tanta aquarum multitudine queat, in quaque autem parte nequeat? Conſtat enim, mare, totam fluuiatilem aquam eſſe. nihil enim à fluuiis differre, niſi quòd ſalſum ſit, videtur. quod idem illis obuenit eo in loco, in quem confluunt vniuerſi. Pari etiam modo ridiculum fuerit, ſi quis cùm mare terræ ſudorem eſſe dixerit, dilucidum quippiam dixiſſe putet, perinde vt Empedocles. Is enim ita locutus, quoad poëſin, ſatis forſitan dixit (quippe cùm translatio poëtis amica ſit:) quo ad cognoſcendam naturam, non ſatis. Hic enim minimè conſtat apertúmve eſt, quonam pacto è dulci potu ſalſus ſudor proueniat, vtrùm abeunte quodam, ceu parte dulciſſima ſolummodo, an permiſto, quomodo in aquis per cinerem colatis euenit. Cauſa eadem & excrementorum generi, quod in veſicam colligi ſolet, competere videtur: quippe quod amarum ſalſúmque euadat, cùm tamen qui bibitur humor, & quem cibus continet, dulcis ſit. Itaque ſi vt aqua quæ per cinerem tranſmittitur, amara fit, ſic & vrina atque ſudor amarorem contrahunt: vrina quidem, quòd facultas eiuſmodi vna cum ea deſeratur, qualis eſt ſalſilago illa quæ etiam in vaſis ſubſidere videtur: ſudor verò, quia facultas illa pariter cum eo è carnibus ſequeſtretur, humore ſcilicet qui ſeſe foras promit, quod tale eſt, è corpore abluendo detrahente: perſpicuum eſt, quòd in ipſo quoque mari, quod in terra cum humore miſcetur, ſalſitudinis cauſa eſt. Verùm in corpore, tale eſt pars ea cibi quæ ſubſidet propter concoctionis vacuitatem. At in terra quonam pacto hoc ipſum inſit, dicendum erat, atque omnino qui fieri potuit, vt tanta aquarum copia è terra dum ſiccaretur calefieretque, excreta ſit. eam enim partem quandam eſſe exiguam, reſpectu eiuſce quæ in terra relicta eſt, conuenit. Præterea cur non etiam nunc terra, ſiue maior ſiue minor, ſudare cùm reſiccatur, ſoleat? humiditas enim & ſudor amara fiunt. Nam ſi tunc, & nunc quoque oportebat: at id nequaquam accidere videmus. immò terra cùm humida eſt, reſiccatur: cùm verò ſicca, nihil tale pati ſolet. Qui igitur fieri potuit, vt terra cùm circa primam ſui generationem humecta eſſet, ſudorem obareſcendo emiſerit? Quin potius par eſt (ſicuti nonnulli aiunt) humore plurimo abeunte, & ſolis beneficio in cœlum ſcandente, quod reliquum fuit, eſſe mare. Nam fieri non poteſt, vt tellus cùm humecta eſt, ſudet. Quæ igitur ſalſitudinis cauſæ narrantur, rationem videntur effugere.

Nos autem eodem quo & prius ſumpto initio dicamus. Cum enim halitum eſſe duplicem, alterum humidum, alterum ſiccum poſitum ſit, eum eiuſmodi affectuum principium eſſe arbitrari oportere conſtat. Quinimo & de quo quæſiſſe prius neceſſe, vtrum etiã mare permaneat ſemper eiſdẽ numero partibus conſtãs, an ſpecie & quantitate ſubinde mutans, perinde vt aër, aqua potabilis, ignis? horũ enim quodque aliud & aliud ſubinde euadit: multitudinis tamẽ eorũ ſpecies haud aliter ac flammæ, & profluentiũ aquarũ fluxus, manet. Hoc itaq; apertum atque probabile exiſtit: fieri inquam non poſſe, vt non eãdẽ hæc omnia habeant rationem,

A & mutationis celeritate tarditatéque inter ſe diſtent, gignantúrque, ac intereant: quod tamen non abſque certo quodam ordine, hiſce omnibus eueniat. Quæ cùm ita habeant, de ſalſore quoque cauſam reddere enitendum eſt. Itaque eiuſmodi ſaporem ob commixtionem quandam prouenire multis conſtat indiciis. Quod enim in corpore minimè concoctum eſt, id ſalſum amarúmque habere, quod idem etiam priùs diximus. Nam cibi humidi excrementum minimè concoctum eſt. Eiuſmodi ſunt ſedimenta omniā, ſed præcipuè illud quod in veſicam delabitur. Cuius rei indicium eſt, quòd tenuiſſimum ſit. quæ autem concoctionem admiſére, conſtant craſſaque ſunt. Deinde ſudor, in quibus B idem illud corpus quod hunc ſaporem parit, vnà cum ſuperuacaneo humore excernitur. Pari modo & in hiſce quæ exuruntur, res habet: quod enim calor non euicerit, id omne in corporibus excrementum fit, in exuſtis cinis. Quamobrem & mare è terra peruſta factum eſſe, nonnulli aſſerunt. Cæterùm ita quidem dicere abſurdum eſt: eſſe tamen ex tali factum, à veritate nequaquā abhorret. Nam vt & in hiſce quæ diximus, ita in ipſo quoque vniuerſo (quod ex iis quæ naſcuntur, atque per naturam fiunt, non aliter quàm ex iis quæ ignem ſenſiunt, relinqui ſolet) eſſe terram talem animaduertendum ſemper eſt. Quinimmo & omnem aridæ telluris halitum eſſe eiuſmodi, putandum eſt. ea C enim hanc ingentem halituum copiam ſuppeditat. Cum autem halitus vapidus cum arido permiſtus (vt diximus) in nubē & aquā cogitur, neceſſariò accidit vt ſemper quædā non parua huiuſce facultatis portio intercipiatur, & rurſum pariter cum pluuia deorſum feratur, idque ſemper fiat ordine quodam, quantū fieri poteſt vt quæ apud nos ſunt, ordinem participet. Vnde igitur in aqua ſalſitudo proueniat, dictū eſt. Ob idque imbres, tam quos auſter affert, quàm qui autumnaliū primi ſunt, ſalſiuſculi ſunt. auſter enim tam vehementia ſua quàm flatu æſtuoſiſſimus ventus eſt, & à calidis ſiccíſque locis ſpirat: quare parum vaporis ſibi aſciſcit, & proinde feruidus extat. Nam & ſi eiuſmodi nō ſit, ſed vnde D ſpirare incipit, frigidus habeatur: nihilo minus dū ſe longius protrahit, propterea quod multum ſicci halitus è vicinis locis ſecum rapit, calidus eſt. at aquilo, vt qui ab vliginoſis flare locis ſoleat, vapidus eſt: ideoque frigidus. Hic tamen, quòd nubes propellat, ſerenus eſt: in locis oppoſitis, pluuius. Pari modo & auſter Afris ſudus eſt, nobis pluuiam importat. Talis igitur facultatis non parum aqua quæ deorſum ruit, ſecum aduehit. atque per autumnum ſalſi imbres fiunt. quæ enim plus ponderis obtinent, ea priora deferantur neceſſe eſt. Quare quibus eiuſmodi terræ copia ineſt, ij celerrimè deſcendunt. ob idque mare calidum eſt. Nam aduſta omnia potentia in ſe aliquid E habent caliditatis: calcem, cinerem, ſedimenta animalium, humidum inquam ſimul & aridum intueri licet. Et animalium quæ ventres habent calidiſſimos, ſedimenta calidiſſima eſſe vſu euenit. Igitur mare hac de cauſa ſubinde ſalſius reddi ſolet. ſemper enim ipſius portio quædam vnà cum parte dulci attollitur. verùm tanto minor eſt quanto in ipſa quoq; pluuia, pars dulcis ſalsā exuperat. Ex quo fit vt ſemper æquale (quod in totū dixerim) habeatur. Quòd autem aqua maris quæ in vaporem conuertitur, potulenta euadat, quodque pars ea quæ naturam induit vaporis, cum rurſum concreuerit, nequaquā in liquorem cogatur, qui maris naturā retineat,

dicere conemur. Hoc idem in cæteris quoque aliis euenit. Nam & vinum & cætera ſuccorũ genera, quotquot in vaporem mutati, in humorem rurſum concreſcere ſolent, aqua fiunt. Affectus enim cæteri aquæ propter quandam commiſtionẽ competunt. & qualecunque id fuerit quod ei permiſcetur, talem in ea parere ſaporem aſſolet. Sed de hiſce aliàs, cùm opportunior dabitur occaſio, erit conſiderandum. Nunc eatenus dicamus oportet: nempe quòd cùm mare in rerum natura ſit, aſſiduè quippiam ab eo in altum ſcandit, potúque idoneum ac dulce redditur: quódque per imbreis ex alto in imum labitur, iam aliud effectum, nec id præterea exiſtens quod fuerat ſublatum: quod denique mare potulentæ parti ratione ponderis ſubſidet. Ob idque nec ipſum inſtar amnium deficere, niſi locorum ratione aſſolet: quod idem pari vtriſque modo accidere neceſſum eſt. Nec ſemper eædem, nec terræ, nec maris partes permanent, ſed tota dumtaxat moles. Etenim in hũc modum de ipſa quoque terra exiſtimare par eſt. Nam pars alia aſcẽdit, alia rurſum deſcẽdit. Quinetiam loca tommutant, quæ per ſumma innatare, quæque in ima rurſum deferri aſſolent. Porrò ſalſitudinem in rei cuiuſpiam admiſtione conſiſtere palàm eſt, non ex iis tantùm quæ dicta ſunt, verumetiam ſi quis vas è cera efformatum in mare demittat, obturato priùs re tali oſculo, vt nihil interhiet per quod mare introfluat. quæ enim ſeſe vaſi per cereos parietes inſinuat aqua, potulenta euadit. nam vt terrena portio, ita & quod ſalſitudinẽ ſua admiſtione committit, ſequeſtrari cùm percolatur aqua, aſſolet, id enim tum ponderis (ſalſa enim quàm dulcis grauior eſt) tum etiam craſſitudinis cauſa extat. Etenim aquæ craſſitudo corpulentiáque tantam afferre differentiam poteſt, vt nauigia æquo rerum quæ conuehũtur onere preſſa, in amnibus ferè demergi videantur, in mari modicè ſeſe atque ad nauigandum peropportunè habeant. Quamobrem nonnulli eorum qui in amnibus naueis onerarant, ob eam ipſam ignorationem damnum ſubière grauiſſimũ. Quòd autem quippiam admiſtum ſit, illud argumẽto eſſe poteſt, quod eius moles craſſiuſcula eſt. nam mare, propè quaſi lutum eſt, tantam rei corpulentæ copiam continet. ſi quis enim aquam indito ſale vehementer ſalſam fecerit, in ea oua, etiamſi plena ſint, innatant. Hoc idem circa ipſa quoque ſalſamenta moliri ſolent. Quòd ſi in Palæſtina ſit (vt quidam ferunt) lacus eiuſmodi, in quem ſi à quoquam homo vinctus aut iumentum iniciatur, per ſumma natat, nec in aquis mergitur: is profectò teſtimonio fuerit hiſce quæ iam dicta ſunt. aiũt enim adeò amarum ſalſumq; eſſe lacum, vt piſcis nullus innaſcatur: & veſtimenta purget, ſi quis madefacta concuſſerit. Quæ omnia eorum quæ diximus ſigna ſunt, nempe quòd corpulentum quiddam ſalſitudinem pariat, & quòd id quod ineſt, terrenum ſit. Etenim in Chaonia, fons quidam aquæ ſalſiuſculæ habetur, qui haud longè ab ortu in amnem dulcem quidem, at piſcibus vacantem influit. Nam vt aiunt incolæ, facta ab Hercule optandi poteſtate, cùm is ab Erythia vaccas abigẽs rediret, ſalẽ pro piſcibus elegerunt, qui ipſis è fonte fieri ſolet. huius enim aquæ portionem quandam poſtea quàm decoxere, quieſcere ſinũt: quæ frigefacta, vbi vnà cum calore humor euaporauit, in ſalẽ non denſum grumoſumque, ſed niuis modo laxũ atque ſubtilẽ verti ſolet.

Περὶ αἰτιῶν καὶ γενέσεως πνευμάτων.

Περὶ δὲ πνευμάτων λέγωμεν, λαβόντες ἀρχὴν τὴν εἰρημένην ἡμῖν ἤδη πρότερον. ἔστι γὰρ δύο εἴδη τῆς ἀναθυμιάσεως, ὥς φαμεν· ἡ μὲν ὑγρὰ, ἡ δὲ ξηρά. καλεῖται δ' ἡ μὲν ἀτμὶς, ἡ δὲ τὸ μὲν ὅλον ἀνώνυμος. τῷ δ' ἐπὶ μέρους ἀνάγκη χρωμένους καθόλου, προσαγορεύειν αὐτὴν οἷον καπνόν. ἔστι δ' οὔτε τὸ ὑγρὸν ἄνευ τοῦ ξηροῦ, οὔτε τὸ ξηρὸν ἄνευ τοῦ ὑγροῦ· ἀλλὰ πάντα ταῦτα λέγεται κατὰ τὴν ὑπεροχήν. φερομένου δὲ τοῦ ἡλίου κύκλῳ, καὶ ὅταν μὲν πλησιάζῃ, τῇ θερμότητι ἀνάγοντος τὸ ὑγρὸν, πορρωτέρω δὲ γιγνομένου διὰ τὴν ψύξιν, συνισταμένης πάλιν τῆς ἀναχθείσης ἀτμίδος εἰς ὕδωρ· διὸ χειμῶνός τε μᾶλλον γίγνεται τὰ ὕδατα, καὶ νύκτωρ ἢ μεθ' ἡμέραν· ἀλλ' οὐ δοκεῖ, διὰ τὸ λανθάνειν τὰ νυκτερινὰ τῶν μεθ' ἡμέραν μᾶλλον. τὸ δὴ κατιὸν ὕδωρ διαδίδοται πᾶν εἰς τὴν γῆν· ὑπάρχει δ' ἐν τε τῇ γῇ πολὺ πῦρ, καὶ πολλὴ θερμότης, καὶ ὁ ἥλιος οὐ μόνον τὸ ἐπιπολάζον τῆς γῆς ὑγρὸν ἕλκει, ἀλλὰ καὶ τὴν γῆν αὐτὴν ξηραίνει θερμαίνων. τῆς δ' ἀναθυμιάσεως, ὥσπερ εἴρηται, διπλῆς οὔσης, τῆς μὲν ἀτμιδώδους, τῆς δὲ καπνώδους, ἀμφοτέρας ἀναγκαῖον γίγνεσθαι. τούτων δ' ἡ μὲν ὑγροῦ πλεῖον ἔχουσα πλῆθος ἀναθυμίασις, ἀρχὴ τοῦ ὑετίου ὕδατός ἐστιν, ὥσπερ εἴρηται πρότερον·

CAPVT IV.

Ventorum cauſa & generatio.

DE ventis autem initio quod iam priùs diximus ſumpto, dicamus. D Duæ enim ſunt noſtra quidem ſententia halitus ſpecies: alter humidus eſt, alter ſiccus. Ille vapor nuncupatur, hic in totum nomine caret. particulari tamen vtentes, vniuerſaliter eum, veluti fumum vocemus neceſſe eſt. Cæterùm nec humidum ſine arido, nec aridum ſine humido eſſe poteſt. verùm hæc omnia ita ſecundùm exuperationem vocari ſolent. Itaque cùm ſol ipſe orbita feratur, & vbi propiùs accedit, humorem vi caloris ſubuehat: vbi autem longiùs dimouet ſeſe, vapor qui ſublatus fuerat, rurſum in aquam refrigerationis beneficio concreſcat: qua de cauſa imbres hyeme potiùs quàm æſtate fiunt, & nocte quàm interdiu: ſed non videtur, E propterea quòd imbres nocturni magis quàm diurni lateant. aqua autem illa quæ ad ima deferri ſolet, tota in terram diſtribuitur. terra verò ipſa multum ignis atque caliditatis in ſeſe habet: atque ſol non ſolùm eum humorem qui per ſumma telluris reſidet, attrahit, verumetiam terram ipſam calfaciendo aſſiccat. cúmque halitus (id quod iam dictum eſt) duplex ſit, alter vapidus, alter fumidus, vtrunque profectò halitum fieri neceſſariũ eſt. quorum qui humorem continet largiorẽ, imbrium primordium (quemadmodũ antea dictum eſt) exiſtit:

qui aridus eſt, flatuum omnium principium atque natura. Hæc autem ad hunc eueniant modum eſſe neceſſe, ex ipſis etiam effectibus certū eſt. Etenim halitum differentiam recipere neceſſum eſt. Atque ſolem & terræ caliditatem ea ipſa efficere non modò poſſibile, verùm etiam neceſſarium exiſtit. Cùm autem ſpecies vtriuſque diuerſa ſit, patet quòd inter ſe diſcrepant. Nec venti eadem ac imbrium natura exiſtit, perinde vt quidam aiunt. eundem enim aerem ſi moueatur, ventum: ſi concreſcat, aquam eſſe volunt. Verùm ex hiſce aër (quemadmodum antea diximus) gigni ſolet. Vapor enim humidus algidúſque eſt. nam facilè terminos ſuſcipit, vt humidus: at quia aquæ eſt, ſuapte natura, vt aqua non calefacta, frigidus exiſtit: fumus verò, calidus & aridus. Quare ex hiſce tanquam ex ſymbolis conſtituitur aer, qui humidus calidúſque eſt. Etenim abſurdum fuerit, ſi aer iſte qui quemque ambit, dum motu cietur, flatus fiat, & vndeuis fuerit agitatus, ventus exultet: & non amneis eſſe exiſtimamus, non qualitercunque profluente aqua, etiamſi multa ſit: ſed quod profluit, id à fonte ortum ducat oportet. ſic de ipſis quoque ventis res habere dicatur. Nam ab aliqua ingenti ruina magna aeris copia, quæ nec principium habeat nec fontem, moueri poteſt. quæ autem fieri aſſolent, ea quæ diximus, approbant. Nam quia continuè quidem, ſed plus ac minus fieri, & maior minórve halitus aſſolet, ſemper nubes ac ſpiritus per ſingula anni tempora pro cuiuſque natura efficiuntur. At quia interdum vapidus, interdum ſiccus & fumidus altero longè amplior aſſurgit: aliquando pluuij & humecti redduntur anni: aliquando flatuoſi & ſqualibundi. Quandoque igitur ſqualores imbréſque multos ſimul & per magnum continuúmque tractum fieri, quandoque per parteis euenit. Sæpe enim regio quæ circumquaque adiacet, temporarios recipit imbres, aut etiam plureis, at in huiuſce parte aliqua ſqualor eſt. Quandoque è diuerſo res agitur. nam cùm tota quæ in circuitu eſt regio, aut modicis potiatur aquis, aut potiùs ſqualore fatiſcat, vna quædam portio immenſam aquarum copiam recipit. Cuius rei cauſa eſt, quòd magna ex parte eandem affectionem longè latéque diffundi ac ſerpere conſentaneum eſt, quia vicina loca ſitum ad ſolem retinent conſimilem, niſi peculiarem quandam ſortita ſint differentiam. At verò interdum hac in parte ſiccus anhelitus, in altera vapidus, vberior gigni ſolet: nonnunquam vice verſa accidit. Huius autem ipſius cauſa eſt, quòd halitus vterque in proximæ ſibique continuæ regionis halitum incidit: verbi cauſa, ſiccus per ſuam fluit regionem: humectus ſibi proximum inuadit, vel etiam ad locum quendam remotiorem vi ventorum propulſus accedit. Interdum ille manet: & idem qui ei contrarius eſt, agit. Atque ſæpenumero illud euenit, nempe quòd quemadmodum in corpore hominis, ſi aluus ſuperior ſicceat, inferior contrario habitu eſt: & è diuerſo ſi inferior ſicca ſit, ſuperior humecta frigidáque eſt: ſic & in ipſis quoque locis antiperiſtaſis fit, & exhalationum genera commutantur. Præterea vt poſt imbrem flatus magna ex parte oriri eo in loco ſoliti ſunt, in quo illum fieri contigerit: ita ſuperueniente imbre conſternuntur. Hæc enim propter principia quæ dicta ſunt, euenire neceſſum eſt. Nam ab imbribus terra dum calore tam ſuo quàm ſuperno reſiccatur,

A halitum profundit, qui nimirũ venti materies eſſe ſolet. Atque vbi ſecretio eiuſmodi in rerum natura fuerit, obtinent venti: quibus ponentibus, propterea quòd pars calida ſeuocari atque ſuperum in locum efferri ſemper aſſolet, vapor refrigeratus conſiſtit ſpiſſeſcitque, atque in humorem vertitur. Quinetiam vbi eundem in locũ pulſæ nubes ſunt, & frigus intrò ſe colligens circumfuſo calori obluctatur, oritur aqua, cuius beneficio ſiccus anhelitus refrigerari ſolet. Ergo vt imbribus venti ſopiuntur, ita vbi venti deſiſtũt, imbres gigni propter has cauſas aſſolent. Adde quòd non aliud cauſæ eſt, cur à ſeptentrione & meridie flatus potiſſimùm oriantur. Omnium namque ventorum plurimi Aquilones & Auſtri ſpirare ſolent. Nam ſol hæc vna loca B non adit, ſed ad ea ſeſe applicat, ab eiſq; dimouet, ad occaſum verò & exortum aſſiduè fertur. Quamobrem nubes in curſus ſolis lateribus conſiſtere ſolent. atque ſole accedente, humor exhalat, aduerſam in partem abeunte, hyemes imbreſque excitantur. Itaque ob ſolis lationem qua ſolſtitia petuntur deſeruntúrque, æſtas hyemſque ſiunt, & aqua in altum rapi, rurſumque in imbrem conijcii ſolita eſt. At cùm aquæ plurimum in hiſce locis deſcẽdat, ad quæ ſol vergit, & à quibus ſeſe remouet (hæc autem ſunt, quæ ſeptentriones versùs atque meridiem poſita ſunt) atque vbi tellus aquas recipit vberrimas, ampliſſimam inibi halituum copiam fieri neceſſum ſit (perinde vt è viridi ligno fumum C depromi copioſiſſimum videmus) halitus autem ipſe ventus ſit: ratione euenit optima, vt inde flatuum plurimi principaliſſimique exoriantur. Qui autem à ſeptentrionibus mittuntur, Aquilones: qui à meridie, Auſtri dicuntur. Porrò ſpiritus tramite ferri obliquo aſſolent. nam circa terram ſpirant, cùm tamen halitus ipſe per directum feratur, quòd totus circumfundens aer flatuum lationem conſectetur. Quocirca quæret quiſpiam, vtro ex loco ſuperóne an infero flatibus initium ſit. Nam deſuper ventorum motio eſt, & antequam ſpirent, illuſtratur aer, ſi nubilus caliginoſúſve ſit: quippe cùm nubis motio, flatus initium priuſquam apertè ad nos venerit, portendat, tanquam flatu deſuper originẽ habente. Cùm autem ventus, quædam ſicci hali- D tus, quem tellus profundit, copia per terram currens ſit, motionis initium ab alto peruenire, materiei & ortus ab imo, planũ eſt. Nam qua parte quod aſcẽdebat, inclinarit, inde ſui curſus cauſam ſortitur. Nam latio eorum quæ à terra remotiora ſunt, potior ac domina exiſtit. Et inſuper exhalatio ab imo ſurſum versùs recta linea fertur, cunctaq; plus roboris habent, cùm in propinquo ſunt. At ortus principium ad terram referri debere in aperto eſt. Porro flatuum initia multis exhalationibus ſenſim coeuntibus exultare, quomodo amniũ fontes terra humorem fundente fiunt, experientia quoque ipſa conſtat. Omnes enim venti ibi minimi ſunt, vnde E ſinguli ſpirare cœperint. At vbi longiùs ſe protraxerint, ingenui venire ſolent. Præterea regio quæ ſeptentrionibus ſubdita eſt, per hyemem tranquillatur, nec vllum flatum ſentit. At quod paulatim expirat, atque eodem illo in loco latet, id vbi præterit, iam ſpiritus euadit illuſtris. Igitur natura venti quænam ſit, & quo pacto oriatur, tum etiam de ſqualore & imbrium abundantia: item quam ob cauſam poſt imbreis flatus & ſurgant & ſternantur, & cur Aquilo & Auſter ſæpiſſimè ſpirent, ad hæc de ventorum curſu, dictum iam eſt.

CAPVT V.

Ventorum ceſſationis & commotionis cauſæ: item quinque zonarum declaratio.

POrrò ſol & comprimit, & excitat flatus. Etenim exhalationes cùm imbecillæ ſunt atque paruæ, tabefacit: & ampliore ſuo calore, earum calorem qui minor eſt, diſcernit atque diſſipat. Adde quòd terram priùs aſiccat, quàm ſecretio vniuerſa orta ſit. haud aliter ac magnus ignis paruum cremabile, ſi quod inciderit, antequam fu- B mum edat, deurit. Ob has igitur cauſas, non minùs ſol flatus compeſcere, quàm quominus ab initio oriantur, obſiſtere ſolet: nam quia halitus emacerat, ventos ponere facit: quia celeriter terram aſſiccat, fieri prohibet. Quapropter circa Orionis exortum & ab eo vſque ad anniuerſarios & præuios aer maximè conſileſcit. Ad ſummam, venti tranquillitas duabus de cauſis prouenire ſolet. Nam aut quia exhalatio frigoris beneficio extinguitur (vt fit, cùm validum gelu coortum eſt) aut quia æſtus opera elangueſcit. Mediis autem temporibus creberrimè cœlum à ſpiritu ſilet: aut quia nondum quicquam exhalat, aut quia hali- C tus iam abiit, necdum alius affluit. At Orion & cùm oritur, & cùm occidit, incertus ac difficilis eſſe propterea videtur, quòd eius exortus & occaſus tum cùm tempora euariant commutantúrque, ille æſtate, hic hyeme, accidant, idque propter ſideris magnitudinem diebus edurat pluribus. Omnium autem mutationes turbulentæ propter varietatem exiſtunt. at anniuerſarij poſt ſolſtitium & caniculæ exortum, & non tum cùm ſol maximè accedit receditve, aſpirare ſolent: atque interdiu ſpirant, noctu deſiſtunt. Cauſa, quòd ſol cùm proximè eſt, terram priùs aſſiccat quàm vt vlla oriatur exhalatio. at cùm paululum receſſit, iam modicus exultat calor, adeò vt con- D glaciatæ aquæ deliqueſcant, & dum terra cùm ſuo tum ſolis calore inareſcit, in quendam veluti fumum & exhalationem tranſeant. Noctu verò deſinunt flare: quoniam tum congelata omnia liquefieri ceſſant, propter noctium frigus. Cæterùm, nec id quod gelu induratum eſt, nec id quod ſiccitatis habet nihil, exhalat: ſed quod cum ſiccitate coniunctam obtinet humiditatem, id cùm recaleſcit, anhelitum reddere ſolet. Nonnulli autem addubitant, quamobrem Aquilones conſtantiùs perflant poſt æſtiuum ſolſtitium, quos Eteſias (id eſt, anniuerſarios) vocant: Auſtri verò, poſt hybernum nequaquam. Hoc autem minimè alie- E num à ratione eſt. nam tempore oppoſito appellati Leuconoti fiunt, non tamen adeò continui. Iccirco latentes occaſionem præbent inquirendi. Cauſa, quòd Aquilo à locis ſub ſeptentrionibus poſitis veniat, quæ aquarum & niuis copioſa plena ſunt, quibus à ſole colliquatis poſt æſtiuum ſolſtitium potiùs quàm in ipſo ſolſtitiò anniuerſarij flare ſoliti ſunt. Nam & ipſi quoque æſtus ita fieri ſolent: non cùm ſol proximè ad ſeptentriones accedit, ſed cùm diutius concaleſecit, & adhuc in propinquo eſt. Pari etiam modo Auiculares (quos Græci Ornithias, ab aduentu auium, vocant) poſt hybernum æquinoctium ſpirare ſoliti ſunt. hi enim, anniuerſarij imbecilli ſunt, minores tamen atque tardius quàm anniuerſarij flare ſolet.

Διὰ τί τὰ πνεύματα ποτὲ μὲν πνεῖ, ποτὲ δὲ διαλείπει, καὶ πόθεν καὶ πότε πνέουσιν ἕκαστα τῶν ἀνέμων.

ὉΔ' ἥλιος, καὶ παύει καὶ συνεγείρει τὰ πνεύματα. ἀσθενεῖς μὲν γὰρ καὶ ὀλίγας οὔσας τὰς ἀναθυμιάσεις, μαραίνει τῷ πλείονι θερμῷ τὸ ἐν τῇ ἀναθυμιάσει ἔλαττον ὄν, καὶ διακρίνει. ἔτι δ' αὐτὴν τὴν γῆν φθάνει ξηραίνων, πρὶν γενέσθαι ἔκκρισιν ἀθρόαν, ὥσπερ εἰς τὸ B πολὺ πῦρ, ἐὰν ὀλίγον ἐμπέσῃ ὑπέκκαυμα, φθάνει πολλάκις, πρὶν καπνὸν ποιῆσαι, κατακαυθέν. Διὰ μὲν οὖν ταύτας τὰς αἰτίας καταπαύει τε τὰ πνεύματα, καὶ ἐξ ἀρχῆς γίνεσθαι κωλύει, τῇ μὲν μαράνσει καταπαύων, τῇ δὲ ταχυτῆτι τῆς ξηρότητος γίνεσθαι κωλύων. διὸ περὶ Ὠρίωνος ἀνατολὴν μάλιστα γίνεται νηνεμία, καὶ μέχρι τῶν ἐτησίων καὶ προδρόμων. ὅλως δὲ γίγνονται αἱ νηνεμίαι διὰ δύο αἰτίας· ἢ γὰρ διὰ ψῦχος ἀποσβεννυμένης τῆς ἀναθυμιάσεως, οἷον ὅταν γένηται πάγος ἰσχυρός· ἢ καταμαραινομένης ὑπὸ τοῦ πνίγους. αἱ δὲ πλεῖσται καὶ ἐν ταῖς C ἀνὰ μέσον ὥραις, ἢ τῷ μήπω ἀναθυμιᾶσθαι, ἢ τῷ ἤδη ἐξεληλυθέναι τὴν ἀναθυμίασιν, καὶ ἄλλην μήπω ἐπιρρεῖν. ἄκριτος δὲ καὶ χαλεπὸς ὁ Ὠρίων εἶναι δοκεῖ, καὶ δύνων, καὶ ἐπιτέλλων, διὰ τὸ ἐν μεταβολῇ ὥρας συμβαίνειν τὴν δύσιν καὶ τὴν ἀνατολήν, θέρους ἢ χειμῶνος, καὶ διὰ τὸ μέγεθος τοῦ ἄστρου, ἡμερῶν γίνεταί τι πλῆθος. αἱ δὲ μεταβολαὶ πάντων ταραχώδεις διὰ τὴν ἀοριστίαν εἰσίν. οἱ δ' ἐτησίαι πνέουσι μετὰ τροπὰς καὶ κυνὸς ἐπιτολήν, καὶ οὔτε τηνικαῦτα ὅτε πλησιάζει μάλιστα ὁ ἥλιος, οὔτε ὅτε πόρρω. καὶ τὰς μὲν ἡμέρας πνέουσι, τὰς δὲ νύκτας παύονται. αἴτιον δ', ὅτι πλησίον μὲν ὤν, D φθάνει ξηραίνων πρὶν γενέσθαι τὴν ἀναθυμίασιν· ὅταν δ' ἀπέλθῃ μικρόν, συμμετρὸς ἤδη γίνεται ἡ ἀναθυμίασις καὶ ἡ θερμότης, ὥστε τὰ πεπηγότα ὕδατα τήκεσθαι, καὶ τῆς γῆς ξηραινομένης ὑπό τε τῆς οἰκείας θερμότητος, καὶ ὑπὸ τῆς τοῦ ἡλίου, οἷον τύφεσθαι καὶ θυμιᾶσθαι. τῆς δὲ νυκτὸς λωφῶσι, διὰ τὸ τὰ πεπηγότα τηκόμενα παύεσθαι διὰ τὴν ψυχρότητα τῶν νυκτῶν. θυμιᾶται δ' οὔτε τὸ πεπηγός, οὔτε τὸ μηδὲν ἔχον ξηρόν. ἀλλ' ὅταν ἔχῃ τὸ ξηρὸν ὑγρότητα, τοῦτο θερμαινόμενον θυμιᾶται. ἀποροῦσι δέ τινες διὰ τί βορέαι μὲν γίνονται συνεχεῖς, οὓς καλοῦμεν ἐτησίας, μετὰ τὰς E θερινὰς τροπάς· νότοι δὲ οὕτως οὐ γίνονται μετὰ τὰς χειμερινάς. ἔχει δ' οὐκ ἀλόγως. γίνονται μὲν γὰρ οἱ καλούμενοι λευκόνοτοι τὴν ἀντικειμένην ὥραν, οὐχ οὕτω δὲ γίνονται συνεχεῖς. διὸ λανθάνοντες ποιοῦσιν ἐπιζητεῖν. αἴτιον δ', ὅτι ὁ μὲν βορέας ἀπὸ τῶν ὑπὸ τὴν ἄρκτον πνεῖ τόπων, οἳ πλήρεις ὕδατος καὶ χιόνος εἰσὶ πολλῆς· ὧν τηκομένων ὑπὸ τοῦ ἡλίου μετὰ τὰς θερινὰς τροπὰς μᾶλλον ἢ ἐπ' αὐταῖς, πνέουσιν οἱ ἐτησίαι· οὕτω γὰρ καὶ τὰ πνίγη γίνεται, οὐχ ὅταν μάλιστα πλησιάζῃ πρὸς ἄρκτον, ἀλλ' ὅταν πλείων μὲν ᾖ χρόνος θερμαίνοντι, ἔτι δ' ἐγγύς. ὁμοίως δὲ καὶ μετὰ τὰς χειμερινὰς τροπὰς πνέουσιν οἱ ὀρνιθίαι· καὶ γὰρ οὗτοι ἐτησίαι εἰσὶν ἀσθενεῖς· ἐλάττους δὲ καὶ ὀψιαίτεροι τῶν ἐτησίων πνέουσιν·

A nam ſeptuageſimo die aſpirare incipiunt: propterea quòd ſol cùm procul abeſt, roboris minus habeat. Non autem ſimiliter continui perflant. quoniam quæ in ſumma telluris parte iacent, [illegible] cillaque ſunt, ea per id tempus ſecerni atque [illegible] ſolent: quæ verò magis conglaciata ſunt, plus [illegible] loris deſiderant. Quamobrem hi intermi[illegible] flare tantiſper ſoliti ſunt, quoad rurſum anni[illegible] ſarij in ſolſtitio æſtatis ſpirent. quandoquidem ab eo tempore ſemper ventus quàm maximè conſtanter flare ſolet. Auſter autem ab æſtiuo ſolſtitio, & non ab altera vrſa ſpirat. Nam cum terræ habitabilis ſegmenta duo ſint, & altera ad ſublimiorem verticem qui apud nos eſt, altera ad alterum

B & meridiem poſita ſit, atque tympani ſpeciem præferat, talem profectò terræ figuram lineæ à centro ipſius ductæ diſſecant, atque turbines duos efficiunt: quorum alter apud tropicum, alter apud ſemper conſpectum verticem, baſin, ſed vterque in meditullio terræ mucronem o[illegible]. Eodem pacto ad inferiorem verticem, a[illegible] turbines telluris diſſectiones faciunt. h[illegible]bitari ſolæ queunt. Nec fieri poteſt vt quiſquam vltra ſolſtitium incolat. non enim in ſeptentrionem vmbræ iacerentur. nunc autem loca priùs inhabitabilia redduntur, quàm aut abſumantur vmbræ, aut mutent ſemet in meridiem. Pars autem orbis ſeptentrionibus ſubdita, præ rigore habita-

C ri nequit. Fertur etiam Corona quoque ipſa circa huncce locum. nam nobis ſupra verticem eſſe videtur, cùm ad meridiei lineam peruenit. Quo fit etiam vt hoc tempore telluris ambitus ridiculè depingant. Nam parti orbis terrarum habitatæ figuram tribuunt orbicularem. At hoc fieri non poſſe, ratione pariter atque experientia cognitum. Nam quòd in latitudinem definita ſit, circulum tamen continentem præferre per temperiem queat, tum ratio ipſa commonſtrat (quippe cùm non per longitudinem, ſed in latum nimio rigore atque incendio prematur, adeò vt niſi mare non nuſquam loci prohibeat, peruia tota ſit) tum ea quæ circa nauigationes & itinera videmus.

D Nam longitudo à latitudine haud parum differt. quod enim à columnis Herculis ad terram Indicam vſque porrigitur, eo quòd ab Æthiopia ad Mæotin vſque & extremas Scythiæ parteis pertingit, maius quàm quinque ad tria eſt: ſi quis tam nauigationes, quàm vias, quatenus talium certitudo ſumi poteſt, metiri velit. Atqui partem orbis terræ habitatam, in latum ad lo[illegible]a vſque inhabitata exploratam habemus. Nam hic præ frigore, illic præ æſtu habitari præterea nequit. Quæ verò vltra Indiam & columnas Herculis iacent, coniungi perinde quaſi continens foret tota telluris habitatæ portio, haudquaquam videntur. Cum autem neceſſe ſit vt locus quidam ad alterum po-

E lum ſimiliter ſeſe habeat, atque is quem incolimus, ad eum qui ſupra nos eſt, conſtat quod vt cætera alia, ita ſpirituum quoque ſtatio proportione reſpondebit. Quare quemadmodum nobis Aquilo, ſic & illis ventus quidam ab ea quæ inibi eſt vrſa ſpirat, quem huc penetrare haudquaquam poſſibile eſt: quando ne iſte quidem Aquilo totam quę apud nos eſt partem orbis terrarum habitatam peruadat. Aquilonius namque flatus, ceu abterraneus eſt. At quia hæc habitatio ad ſeptētriones poſita eſt, ideo Aquilo frequentiſſimè ſpirat: ſed tamē & apud nos deficit, & progredi longè non poteſt.

Quandoquidem circa mare Auſtrale, quod vltra Africam iacet, vt hic Aquilo & Auſter ſpirant, ſic illic Vulturnus & Fauonius viciſſim abſque intercapedine ſemper flare ſolent. Itaque Auſtrum ab altero polo non venire apertum eſt, quando ne ipſe quidem ab hyberno ſolſtitio ſpiret. nam alium ab æſtiuo venire oporteret: ſic enim proportionis ratio redderet. nunc autem inde nullus aſpirat. ſolus enim vnus ſpirare ex illis locis videtur. Quare neceſſariò fit, vt ventus qui ab exuſta terrarum parte ſpirat, Auſter ſit. Locus autem ille propter ſolis viciniam, nullum habet humorem aut pabulum, quod per liquefactionem flatus anniuerſarios committat. Verùm quia multo amplior exiſtit, atque longè latéque patet, Auſter vehementior, crebrior & magis æſtuoſus quàm Aquilo eſt. atque ille huc magis, quàm hic illuc penetrare ſolet. Quænam igitur Auſtri & Aquilonis cauſa ſit, & quonam pacto ſeſe alteruter ad alterum habeant, dictum eſt.

Ventorum ſitus, natura, & complexiones.

DE ventorum autem ſitu, qui quibus aduerſentur, quos ſimul flare contingat, & quos non, tum etiam qui & quot ſint: adhæc de cæteris affectibus qui in Problematis particularibus dicti non ſunt, nunc agendum. Situs rationem ex deſcriptione contemplari oportet. Deſcribatur igitur, vt res ipſa clarior euadat, horizon circulus, & proinde rotundus. Intelligendum autem eſt alterum ipſius ſegmentum, quod ſub nobis eſt, habitari. nam & id ipſum ad eundem diuidere modum licebit. Supponatur autem primò, quæ plurimùm diſtant loco, loco contraria eſſe: quomodo quæ ſpecie plurimùm diſtant, ſpecie contraria ſunt. Diſtant autem plurimùm loco, quæ per dimetientem lineam è regione poſita ſunt. Sit igitur a, occidens æquinoctialis: b verò ei ex aduerſo reſpondens, oriens æquinoctialis. Sitque alia diameter quæ hanc ad rectos ſecet angulos: cuius pars altera quæ eſt g, ſit vrſa, altera è regione aduerſa, quæ eſt h, meridies. Item f, æſtiuus exortus: e, æſtiuus occaſus. Porrò d, hybernus exortus: c, hybernus occaſus. Ducatur autem diameter ab f, & c: item à d, ad e. Cùm igitur quæ plurimùm diſtant loco, contraria loco ſint, plurimùm autem diſtant quæ per diametrum: neceſſariò fit vt flatuum hi inter ſe contrarij ſint, quicunque per diametrum diſpoſiti ſunt. Flatus autem ipſi, iuxta locorum poſitum vocari hoc pacto ſolent. ab a, Fauonius. nam a, occidens æquinoctialis exiſtit. à b Subſolanus, huic contrarius. nam b, oriens æquinoctialis eſt. à g, Aquilo & Septentrio: quippe cùm hac in parte vrſa ſit. ab h Auſter, huic contrarius. nam & vnde ſpirat, meridies eſt: & h, & g, contraria ſunt, cùm per diametrum diſtent. ab f Cæcias. nam f æſtiuus exortus exiſtit. Contrarius autem ei eſt, non qui ab e ſpirat, ſed qui à c, nempe Africus. nam Africus ab occaſu brumali mittitur. hic autem illi contrarius eſt: nam ab eo per diametrum diſtat. à d Vulturnus: quippe qui ab exortu brumali venit, atque Auſtro vicinus eſt.

A ob idque ſæpenumero Euronoti aſpirare dicuntur. Huic autem aduerſatur non qui à c, nomine Africus, ſed qui ab e ſpirare ſolet: quem alij Argeſtem, Olympiam alij, alij Seirona vocant. hic enim ab occaſu æſtiuo adflat, & ſolus Vulturno per diametrum reſpondet. Igitur venti, tum qui per diametrum diſpoſiti ſunt, tum qui contrarios obtinent, hi ſunt. Sunt item alij, quibus contrarij flatus nulli ſunt. Ab i, quem Thraſciam nuncupant: is enim media regione inter Corum & Septentrionem ſpirat. à k, quem Meſen vocant: hic enim inter Septentrionem & Cæciam eſt. Cæterùm diameter k, iuxta polum ſemper conſpectum eſſe ſolet, non tamen exactè ſub eo exiſtit. His autem flatibus contrarij nulli ſunt, B Meſæ videlicet (nam à puncto m ſpiraret aliquis. id enim per diametrum diſtat) atque Thraſciæ. flaret enim à puncto n: quippe cùm id ex aduerſo respondeat. Niſi ab eo puncto veniat, & non longè progrediatur quidam ventus, quem accolæ Phœnician vocant. Venti igitur principaliſſimi definitiq; hi ſunt, atque hoc digeri ordine aſſolent. Cur autẽ à ſeptentrionali plaga plures venti quàm de partibus meridianis prodeãt, cauſa eſt, quòd pars orbis terræ habitata, ad ſeptentriones poſita eſt: quódC que in eam partem plus aquarum & niuis, quàm auſtrinam, propterea quòd hæc ſub ſole atque eius curſu iacet, depellitur, quibus in terram liqueſcentibus, & à ſole ac terra incaleſcentibus, neceſſariò accidit vt exhalatio amplior & quæ latiùs diffundi queat, hac eadem de cauſa oriatur. Sunt autem è flatibus, quos iam diximus, Septentrio & Thraſcias principaliſſimè, Meſes, & Aquilo: Cæcias verò Subſolani & Aquilonis communis habetur. qui à meridie ſpirat, & Africus, Auſter. qui ab æquinoctiali exortu mittitur, atque Vulturnus, Subſolanus: Phœnicias verò, communiter ad Subſolanum & Auſtrum pertinet. Qui ab occaſu, & is quem Græci Argeſten, noſtri Corum vocant, Fauonius. D Omnino autem ex hiſce alij Aquilonij, Auſtrini alij nuncupari ſolent. Fauoniani aquiloni tribuuntur. frigidiuſculi enim ſunt, quòd ab occaſu veniãt. Subſolanij, auſtro. nam calidiuſculi ſunt, propterea quòd ab exortu aſpirant. Sumpta igitur à frigore & calore ac æſtu differentia, ſpiritus ad hunc nominarunt modum. ab ortu autem flantes calidiores ſunt ab occaſu flantibus. quia ſol diutiùs ſupra illos fertur, hos verò citiùs deſerit, tardiúſque eum ad locum accedit. Ventis hunc in modum diſpoſitis, conſtat fieri non poſſe vt aduerſi ſimul ſpirent. nam per dimetientem diſtant. Alter igitur alterius vi preſſus ceſſabit. At qui non ita fronte aduerſa E poſiti ſunt, eos ſimul flare nihil obſtat, vt f & d. atque ob id nonnunquam ſecundi ambo ad idem ſignum ſimul flare, non eodem ex loco, nec flatu eodem ſolent. Porrò contrariis temporibus flatus contrarij maximè ſpirant. Verbi cauſa, circa æquinoctium vernum Cæcias, & omnino qui vltra æſtiuum tropicum collocati ſunt: circa autumnale, Africus. Item circa ſolſtitium æſtiuum, Fauonius: circa hybernum, Vulturnus. Incidunt autem in alios maximè, atque compeſcunt, Septentrio, Thraſcias, & Corus: propterea quòd è propinquo veniunt. Quinetiam hi omnium maximè crebri ac validi ſpirare ſolent, & proinde inter reliquos maximè liquidi & illuſtres exiſtunt.

Nam cùm de prope maximè ſpirent, vi ſua reliquos flatus ſternunt, & diſcuſſis nubibus quæ coaleſcere cœperant, cœlum ſudum apertúmque reddunt. niſi fortè etiam impendiò frigidi ſint, tunc autem ſereni non ſunt. Nam ſi frigidi magis quàm vehementes fuerint, priùs nubes gelu indurant, quàm vt eas repellere poſſint. at Cæcias ſerenus nō eſt, quòd in ſe reflectatur: vnde & illud prouerbium dici ſolet: Vt Cæcias nubem, perinde ad ſe trahens. Porrò pro ſolis diſcurſu viciſſitudo ſpirituum agi, ipſis in ſibi proximos tranſeuntibus aſſolet: propterea quòd id quod primordio contiguum eſt, mouetur à ſole potiſſimùm: initium verò flatuum, vt ſol ambit. Flatus autem contrarij, aut idem, aut contrarium efficiunt. verbi gratia: humidi, Africus & Cæcias, quem aliqui vocant Helleſpontiam: ſicci, Corus & Vulturnus, quem Subſolanum. hic inter initia ſiccus eſt, ad poſtremum aquam mittit. niualis Meſes, & Septentrio maximè: nam hi frigidiſſimi ſunt. Grandines Septentrio importat, & Thraſcias, & Corus. Æſtuoſi Auſter, Fauonius & Vulturnus. Nubibus obducunt cœlum, denſioribus Cæcias, rarioribus Africus. Cæcias, quia & in ſe reciprocatur ac redit, & Aquilonis & Vulturni communis eſt. Quare, quia algidus eſt, vaporem compingendo nubes conſtituit. quia verò ratione loci Subſolanus eſt, multum materiæ ac vaporis quem propellat, habet. Sereni, Septentrio, Thraſcias, & Corus. Cauſa dicta priùs eſt. Fulgura præ cæteris aduehunt & hi quos diximus, & Meſes. Nam quia haudquaquam de longè veniunt, frigidi ſunt. Frigoris autem opera fulgur gignitur: coeuntibus ſiquidem nubibus excerni aſſolet. Quocirca & ex his ipſis nonnulli grandinem afferunt. citò enim in glaciem aquam vertunt. Procellæ autem (hoc eſt, venti, qui excuſſi nubibus ſæuiūt, Ecnephias Græci vocant) autumno maximè, mox vere, & præcipuè Septentrio, Thraſcias & Corus fieri ſolent. Cauſa verò, quòd procellæ potiſſimùm fiunt, cùm aliis flantibus ventis alij ingruunt. Id quod iſti maximè facere ſolent. cauſa etiam huiuſce rei antea dicta eſt. Porrò flatus anniuerſarij (qui vocantur à Græcis Eteſiæ) tranſire apud Occidentalis plagæ incolas ex Septentrionalibus in Thraſcias Coros & Fauonios (Septentrio nanque Fauonius eſt) conſueuere, incipientes ab vrſa, deſinentes autem in eos qui longè abſunt. Apud Orientaleis ad Subſolanum vſque ambire ſolent.

Sed de ventis, & primaria eorum generatione & eſſentia, atque affectibus tam priuatis quàm communibus, hactenus.

CAPVT VII.

Tres de terræ motu opiniones.

DE concuſſione autem ac motu terræ poſt hæc agèdum. Nam huiuſce affectionis cauſa huic eidem generi hæret. Quæ autē de eo ad hoc vſque temporis tradita ſunt, tria numero ſunt, & à totidem autoribus prodita. Nam Anaxagoras Clazomenius, & ante eum Anaximenes Mileſius, & poſt vtrunque Democritus Abderita, de terræmotu diſſeruere. Anaxagoras igitur, ætherem, qui ſurſum ferri aptiſſimus eſt, cùm ſe in venas & cauernas terræ condit, motitare terram affirmat. Nam ſuperas telluris partes coaleſcere imbriū beneficio aſſerit.

A quandoquidem natura totam ſimiliter fungoſam laxámque eſſe terram prędicat: perinde quaſi totius pilæ pars altera ſupera, altera infera ſit: ac ſupera, in qua habitamus: infera, altera. Verùm aduerſus hanc cauſam, tanquam parum admodum conſideratè dictam, nihil dicere fortaſſe congruit. Nam ſtultum eſt arbitrari ſurſum ac deorſum ita habere, vt non corpora grauia ad terram vndique ferantur, & leuia ac ignis in ſuperum concedant locum: idque cùm cernamus circulum illum, quo pars orbis terrarum habitata, quanta nobis cognita eſt, definitur, nobis locum ex loco mutãtibus diuerſum ſubinde fieri, quia terra gibboſa ſit, & in ſphærę faciem conglobetur. B Dicere quoque ratione magnitudinis ſuſpenſam librari medio aëris tellurem: quati verò, cùm ab imo ſurſum versùs vi percuſſionis, quę per totam meet, impellitur. Præterea nihil meminerunt eorum quæ circa terræ motus contingere ſolent. non enim regiones quæuis, aut tempora, id ſentiũt affectionis. Democritus autem, terram cùm aqua referta eſt, & multam inſuper pluuiam aquã recipit, ab ea moueri dicit. nam vt quæ amplior aduenit vim afferendo, propterea quòd cauernis capi non poteſt, terram quatere: ita quæ locum demutat, atque aliò transfertur, irrumpendo terram agitare quæ aſſiccetur, atque è locis plenioribus in vacua trahat, aſſerit. Anaximenes verò, terram tam C cùm madet quàm cùm reſiccatur, rumpi, & ab hiſce fragmentis ingentibus quę incidere ſolent, quati dicit. Ideóque terræmotus per ſqualores, & rurſum tempore pluuio fieri. nam tellurem (vti diximus) per ſqualores ſiccẽtem rumpi, & per imbreis ab aquis præterea madefactam incidere affirmat. At ſi hoc accidat, humum refugere in ſeſe, pleriſq; in locis cerni oportuit. Præterea quam ob cauſam hæc affectio quibuſdam in locis ſæpenumero fieri ſolet, quæ ab aliis nullo tali exceſſu diſſident? Atqui ea diſſidere oportuit. Denique neceſſe eſt vt qui ita exiſtimant, ſemper minùs terræmotum fieri, tandemque aliquando terram quati deſituram dicant. quod enim decutitur, talem obtinet naturam. D Quare ſi id fieri nequeat, perſpicuum eſt fieri non poſſe vt terræmotus cauſa eiuſmodi habeatur.

CAPVT VIII.

Terræmotus cauſæ & accidentia, itémque exhalationis ſigna.

Verùm cùm conſtet neceſſarium eſſe, vt ab humido & à ſicco halitus prodeat, id quod antea diximus: neceſſariò fit vt hiſce in rerum natura exiſtentibus terra intremiſcat. E Nam terra per ſe quidẽ arida exiſtit, at ratione imbriũ multũ in ſe continet humoris: adeo vt cùm ipſa tam feruore ſolis quàm ſuo incaleſcit, multũ ſpiritus intra extráque gignatur. Atque is interdum quidem extrà totus continenter effluit, interdum autem intrò influit, nonnunquam verò & in parteis diſtribui ſolet. Itaque ſi hoc aliter habere nequeat, quod conſequens eſt, conſiderandum fuerit, nempe qualénam ex omni corporum numero vim mouendi præcipuam obtineat. Neceſſe eſt enim, vt id quod longiſſimè progredi natum eſt, atque vehementiſſimum exiſtit, potiſſimùm tale ſit. Quod igitur celerrimè fertur, id neceſſariò vehementiſsimum exiſtit: quippe cùm præ celeritate maximè percutiat.

Quod verò tranſire per totum maximè poteſt, id longiùs progredi aptum eſt. eiuſmodi autem eſt, quod tenuiſſimum eſt. Quare ſi natura ſpiritus talis ſit, omnium corporum maximè ſpiritus facultatem obtinet mouendi. Etenim ignis vbi ſpiritui admiſcetur, fit flamma, atque celeriter fertur. Igitur neque aqua neque terra cauſa tremoris eſſe poteſt, ſed ſpiritus, vbi ſcilicet quod extrà exhalat, intrò fluit. Vnde fit vt plurimi maximique terræmotus cœlo tranquillo fiant. nam exhalatio quæ continens ac perpetua exiſtit, vtplurimum initij motum ſectari ſolet. quare tota ſimul aut intrò aut extrà contendit. Quod autem aliqui terræmotus flante etiam vento fiant, nihil abſurdum (nam interdum plureis ventos ſimul flare videmus: quorum vbi alter terram ſubierit, terræmotus ſpirante vento accidet) minores tamen euadunt hi, propterea quòd eorum cauſa atque principium diuiſum diſtractúmque ſit. Porrò noctu ſæpius validiúſque terra quatitur. Cùm autem interdiu, id circa meridiem accidere ſolet. nam vt plurimùm meridies partium diei tranquilliſſima exiſtit. quippe ſol cùm maximè euincit, exhalationem in terram diſſoluere ſolitus eſt. euincit autem maximè circa meridiem. Item noctes diebus tranquilliores, propter ſolis abſentiam exiſtunt. Quare rurſum intrò ſpiritus influit: quomodo aquarum influxus in contrariam atque effluxus partem fieri aſſolet. Et propinqua luce creberrimè. etenim ſpiritus tunc incipere flare nati ſunt. Si ergo flatuum initium intrò Euripi more commigret, propter copiam validiſſimum excitat terræmotum. Præterea validiſſimi terræmotus circa ea loca fiunt, vbi mare fluidum eſt, aut regio fungoſa eſt, atque ſubterraneis cauernis abundat. Quamobrem & circa Helleſpontum, Achaiam, Siciliam, & Eubœam, tellus vehementiſſimè quatitur. nam circa ea loca mare, terram fiſtulis veluti quibuſdam ſubire videtur. Quocirca & calidæ balneæ, quæ circa Ædepſum poſitæ ſunt, à tali cauſa prouenere. Circa prædicta autem loca terræmotus maximè fiunt ob anguſtiã. Nam ſpiritus vehementior factus qui profectò è terra efflare natus erat, in terram rurſum propelli, ob occurrentis maris copiam aſſolet. Atque regiones omnes quæ ſubterraneas parteis inaneis atque fiſtuloſas obtinent, cùm magnam ſpiritus copiam admittant, crebriùs mouentur. Et autumno ac vere maximè, item per imbreis & ſqualores haud alia de cauſa fiunt. Hæc enim inter anni tempora flatuoſiſſima ſunt. Nam æſtas & hyems, aëris immobilitatem: hæc rigoris cauſa, illa æſtus, aduehunt. etenim hyems, perquam algida eſt: æſtas, impendio arida. Atque per ſqualores aër ſpirantior eſt. nam tum demum ſqualor eſt, cùm ſiccus terræ halitus humido copioſior exultat. Tempore autem pluuio terra quatitur, tum quia exhalatio in terra amplior reddi ſolet: tum quia talis ſecretio vt loco anguſtiore capitur, ita minorem in locum protrudi, repletis nimirum aqua terræ cauernis, aſſolet. Cùm enim vincere cœperit, propterea quòd licet ampla ſit, in exiguum tamẽ locum impacta eſt, tum ventus fluens, ac terræ ſeſe applicans, eam validè motitat. Noſſe enim oportet, vt noſtro in corpore flatus incluſi vis tam tremorum quàm pulſuum cauſa exiſtit: ita & in ipſa quoque terra flatum ſimiles præſtare effectus: atque è terræ motibus alium eſſe veluti tremorem, alium veluti pulſum. Et qualia per corpus ſæpe contingere reddita vrina ſolent,

A (ſit enim veluti tremor quidam, nimirum vniuerſo ſpiritu extrinſecus intrò ſeſe condente) talia etiam circa terrā fieri. Sed quantas ſpiritus vireis habeat non ſolùm ex hiſce quæ in aere fiunt contemplari oportet (nam hìc ſpiritum ſua magnitudine talia committere poſſe exiſtimauerit quiſpiam) verùm etiam ex hiſce quæ in corporibus animantium fieri ſolent. Nam & conuulſiones & diſtentiones neruorum, ſpiritus motiones ſunt: tantum autem roboris habent, vt etiamſi multi ſimul conentur allata vi reprimere ægrotantium motum, tamen euincere nequeant.* Idem in terra quoque ipſa fieri (vt rem magnam paruæ conferam) intel-
B ligendum eſt. Harum autem rerum indicia, vel ad oculum pleriſque in locis facta fuêre. Iam enim motus terræ quibuſdam in locis factus, non antè deſiit, quàm ventus ille qui permouerat facta eruptione in locum terra ſublimiorem, apertè procellæ modo exierit. Id quod etiam circa Heracleam Ponti nuper accidit: & priùs circa Hieram inſulam, quæ vna eſt ex iis quas Æolias inſulas appellitant: in hac enim pars terræ intumeſcebat aſſurgebátque cum ſono in tumuli ſpeciem: quo tandem diſrupto multum ſpiritus prodiit, qui ſcintillam cineremque ſuſtulit, ac Liparæorum vrbem (quæ haud procul aberat) totam in cineres redegit, & ad quaſdam Italiæ vrbes acceſ-
C ſit. atque iſto etiamnum tempore vbi illa ignium euomitio contingit, apertum eſt. Etenim hanc eſſe cauſam ignium, qui in terra fieri ſolent, arbitrandum eſt: nempe ſpiritus colliſi incenſionem, diſcerpto priùs in exigua fruſta aëre. Quòd autem ſpiritus ſub terram fluant, argumento velid eſſe poteſt, quod circa haſce inſulas fieri ſolet. Cùm enim flaturus eſt auſter, priùs quàm cœperit,* denuntiat: nam loca ea è quibus illæ flammarum eructationes fiunt, reſonare ſolent: quòd è longinquo propelli iam mare cœperit, & ab eo id quod è terra efflaturum erat, rurſum intrò compellatur. Quà autem mare accedit, hac ſonum
D ſine motu facit, tum propter locorum amplitudinem (nam intro ſubiens in immenſum diffunditur) tum propter aëris repulſi exiguitatem. Præterea ſolis caligo & obſcuritas ſine nube perueniens, & venti tranquillitas atque frigus acre, quæ nonnunquam ante matutinos terræ motus accidere ſolent, cauſæ prædictæ indicio ſunt. Nam & ſolem caliginoſum obſcurúmque fieri, & cùm dies inſtat atque diluculum appetit, tranquillitatem atque frigus oboriri, incipiente condi in venas terræ ſpiritu, qui vim diſſoluendi diſcernendique aërem obtinet, neceſſum eſt. Quandoquidem trāquillitas parte plurima (quemadmodum etiam priùs diximus) accidit: quia
E ſpiritus intro veluti refluit. Et magis ante maiuſculos motus. nam cùm ſpiritus non partim intrò, partim extra diſtrahitur, ſed vniuerſam terram ſubit, neceſſariò plus roboris ac virium habere ſolet. frigus verò, propterea quòd exhalatio quæ per ſe ſuapte natura calida eſt, intrò conuertitur. Non videntur autem venti eſſe calidi, perinde vt neq; ſpiritus ille qui per eos efflari ſolet: quoniam aërem mouent, qui vapore frigido eóque multo refertus eſt. Is enim è propinquo quidē calidus eſt: qualis etiam eſt cùm exhalamus, verùm propter exiguitatem non æquè percipi poteſt. è longinquo verò frigidus, eadem qua venti cauſa. Deficiente igitur in terram tali virtute, vapida effluxio humiditatis ratione coiens, frigus importat

A In quibus locis eiuſmodi affectum fieri contingit. Hæc eadem etiam cauſa eſt & eius ſigni quod nonnunquam præcedere motu futuro conſueuit. aut enim interdiu, aut paulo poſt occaſum ſereno, ceu tenuis linea nubis in longum porrecta ſpatium viſitur: nimirum langueſcente ſpiritu propter demigrationem. Nec abſimile in ipſo quoque mari circa littora euenit. nam cùm mare fluctuoſum exundat, fluctus qui in littore frangi ſolent, admodum craſſi & obliqui reddũtur. cùm verò ſopitum eſt, propter exiguam ſecretionem, tenues ac recti. Quod igitur mare circa terram, id flatus circa caliginem quæ in aere eſt, efficit, adeò vt cùm cœlum tranquillum fuerit, nubes quæ velvti fluctus aëris exiſtit, modis B omnibus recta tenuiſque relinquatur. Hac eadem etiam de cauſa nonnumquam accidit, vt circa lunæ defectus terra quatiatur. Cùm enim iam terræ obiectus inſtat, & nondum prorſus lumen defecit, nec calor à ſole profectus ab aëre receſſit, ſed emarceſcere cœpit, tranquillitas oboritur, commigrante in terram ſpiritu, qui ante lunæ defectus motum terræ committit (nam venti quoque ſæpe ante lunæ defectus excitantur) initio quidem noctis, cùm defectus medio incipit noctis: medio verò, cùm mane. Id autem euenire propterea ſolet, quòd calor lunæ hebetatur, cùm curſus iam proximè eſt quo defectus exultet. Remiſſo C itaque calore quo retentus aër quieſcit, rurſum moueri ac ſpiritus reddi pro defectionis tarditate, tardiùs incipit. Cùm autem validus terræ extiterit motus, nec illico, nec funditus quatere deſinit, quinimmo non ante quadraginta dies ſiſtitur. plerumque & tardiùs, vtpote cùm quidam annuo & biennij ſpatio circa eadem loca vigeat duretque. Porro tam ſpiritus multitudo quàm forma cauernarum vel cuniculi per quem meat, magnitudinis terræ motus cauſa exiſtit. Qua enim ſpiritus reſultat, nec facilè penetrare poteſt, & maximè quatit, & in ſpecuum anguſtiis intercludatur aquæ modo quæ pertranſire non poteſt, neceſſariũ D exiſtit. Quocirca vt in corpore pulſus non repentè, nec ſubitò ſedari, ſed paulatim elangueſcente affectione ſolent: ita nec origo ipſa, à qua exhalatio prodiit. Quin in aperto quoque eſt ſpiritus delationem non protinus omnem abſumpſiſſe materiam, ex qua ventum illum concreauit, quem σεισμὸν, hoc eſt, terræ motum nuncupamus. Quoad igitur quantum ſpirituum ſupereſt, inſumptum ſit, terram quati, ſed leuiùs, & eò vſque dum id quod exhalat minus ſit, quàm vt ingenuè mouere queat, neceſſe eſt. Porro ſpiritus ſonos eos facit qui ſub terra fiunt, quique terræ motus præcedere ſolent. Quin & ſine motu iam alicubi ſub terra factus eſt ſonus. nam vt aër cùm flagellatur, E varios edit ſonos: ita etiam cùm ipſe percutit, multiplices ſonorum differentias affert. nihil enim intereſt, hoc an illo afficiatur modo: quippe cùm omne quod percutit, ſimul & ipſum percuti ſoleat. Præcedit verò motum ſonus: quoniam ſubtilis eſt, atque penetrare meliùs quàm ſpiritus poteſt. Cùm autem minor eſt quàm vt terra mouere propter ſuam tenuitatem queat, quia facilè percolatur tranſmittitúrque, mouere terram nequit: quia verò ferue contra ſolida cauáque corpora, & varias cauernarum figuras, varias edere voces aſſolet, adeò vt nonnunquam (id quod etiam portentorum ſcriptores aiunt) terra mugire videatur. Iam verò & aquę eruperunt, dum terra quateretur.

A ἐν οἷς συμβαίνει τόποις γίνεσθαι τοῦτο τὸ πάθος. τὸ δ' αὐτ' αἴτιον καὶ τοῦ εἰωθότος ἐνίοτε γίνεσθαι σημείου περὶ τοὺς σεισμούς· ἢ γὰρ μεθ' ἡμέραν, ἢ μικρὸν μετὰ δυσμάς, αἰθρίας οὔσης, νεφέλιον λεπτὸν φαίνεται διατεῖνον, καὶ μακρόν, οἷον γραμμῆς μῆκος εὐθύτητι διηκριβωμένον, τοῦ πνεύματος ἀπομαραινομένου διὰ τὴν μετάστασιν. τὸ δ' ὅμοιον συμβαίνει καὶ ἐν τῇ θαλάττῃ περὶ τοὺς αἰγιαλούς· ὅταν μὲν γὰρ κυμαίνουσα ἐκβάλλῃ, σφόδρα παχεῖαι καὶ σκολιαὶ γίνονται αἱ ῥηγμῖνες· ὅταν δὲ γαλήνη ᾖ, διὰ τὸ μικρὰν ποιεῖσθαι τὴν ἔκκρισιν, λεπταί εἰσι καὶ εὐθεῖαι. ὅπερ οὖν ἡ θάλαττα ποιεῖ περὶ τὴν γῆν, τοῦτο τὸ πνεῦμα περὶ τὴν ἐν B τῷ ἀέρι ἀχλύν. ὥσθ' ὅταν γένηται νηνεμία, πάμπαν εὐθεῖαν καὶ λεπτὴν καταλείπεσθαι, ὥσπερ ῥηγμῖνα οὖσαν ἀέρος τὴν νεφέλην. διὰ ταῦτα δὲ καὶ περὶ τὰς ἐκλείψεις ἐνίοτε τῆς σελήνης, συμβαίνει γίνεσθαι σεισμόν. ὅταν γὰρ ἤδη πλησίον ᾖ ἡ ἀντίφραξις, καὶ μήπω μὲν ᾖ παντελῶς ἀπολελοιπὸς τὸ φῶς, καὶ τὸ ἀπὸ τοῦ ἡλίου θερμὸν ἐκ τοῦ ἀέρος, ἤδη δ' ἀπομαραινόμενον, νηνεμία γίνεται, ἀντιμεθισταμένου τοῦ πνεύματος εἰς τὴν γῆν, ὃ ποιεῖ τὸν σεισμὸν πρὸ τῶν ἐκλείψεων. A At nequaquam ob id aqua motionis cauſa exiſtit, ſed ſiue in ſumma telluris parte fit, ſiue ab imo vi ſpiritus efferatur, ſpiritus id eſt, quod mouet. quo modo venti, fluctuum, non fluctus, ventorum cauſæ ſunt. Quandoquidem vel ſic quiſpiam terram eſſe huiuſce affectionis cauſam dicere poſſet. Siquidem terra dũ quatitur, aquæ modo ſubuerti ſolet: aquæ namque effluxio, non niſi ſubuerſio quædam exiſtit. Verùm ambo iſthæc, terra inquam & aqua, cauſæ vt materies ſunt: patiuntur enim, non agunt; ſpiritus verò, vt principium. Vbi autem inundatio ſimul cum terræ motu accidit, ſpiritus ex aduerſo flãtes in cauſa ſunt. Id verò fit, cùm ſpiritus qui terram quatit, mare ab alio ſpiritu delatum repellere B nequit omnino: ſed propellendo ac in vnum contrahendo, magnam vim maris colligit: tunc enim hoc ſpiritu euicto, vniuerſum à cõtrario ſpiritu pulſum erumpere, ac diluuium facere neceſſe eſt. id quod circa ipſam quoque Achaiam accidit. Extra namque flabat Auſter, intra Aquilo. cùm autem facta fuit tranquillitas, & ventus intrò fluere cœpit, vna cum inundatione etiam terræ extitit motus. & eo præſertim, quòd mare nullum ſpiritui ſub terra debacchãti reſpiraculum, nullámque difflationem concedebat, immo obſtipabat interſepiebátque. nam ſe mutuò oppugnando ſpiritus motum terræ fecit, fluctus diluuiũ. Fiunt etiam particulares qui- C dam terræ motus, & plerumque non vltra paruum procedentes tractum: venti verò nulli. Particulares, inquam, cùm exhalationes proprij viciniquelo- ci in vnum coierint: quo modo ſqualores imbreiſque particulatim fieri diximus. Et quidem terræ motus ad hunc fieri modum ſolent, venti minimè. Nam ſubterranea principatum obtinent, vt ad locum vnum omnes contendant exhalationes. Sol verò non æquè facere poteſt vt omnes, ſed magis quæ ſuſpenſæ in aëre ſunt, cùm iam principium ſui curſus à ſole pro locorum differentia ceperint, in vnum fluant. Quoties igitur ſpiritus eſt multus, terram in latum tremoris inſtar mouet. Fit autem & quibuſdã in locis terræ motus, ſed raro, velvti pul- D ſus, cùm aſſurgens intumeſcit, alternóque motu reſidet. Quocirca & rariuſculè ad hunc quatit modũ. haud enim facilè fit, vt adeò multum coëat principium. quippe cùm exhalatio in lõgum multo plus, quàm in craſſitiem digeri ſoleat. Vbi autem motus terræ factus eſt eiuſmodi, copia lapidum eorum in morem qui in cribris emergunt, per ſumma telluris iacet. Siquidem terræ motu ad hunc modum facto, Sipylus, vocatus Phlegræus ager, & regio Liguſtica euerſa fuerunt. Porrò inſulæ procul in alto poſitæ, minùs quàm quæ continenti vicinæ ſunt, quati ſolent. Nam maris copia exhalationes refrigerat, nec non ſuo pondere obſtat quòminus quatiantur, E vimque infert. Prætereą mare flatibus euictum fluit, non quatitur. Item quia mare magnum occupat locum, haud ad hoc, ſed ex hoc veniunt exhalationes, quas quæ è terra oriuntur, comitari aſſolent. Inſulæ autem illæ quæ continenti vicinę ſunt, continentis portio ſunt, & proinde quati ſolent: quando mare, quod inſulas illas continentémque interiacet, præ ſua exiguitate vireis nullas habet. At quę ſunt in medio mari poſitę, nequaquam abſque toto mari quo ambiuntur, moueri poſſunt.

Igitur de terræ motibus, & quænam ſit eorum natura, & quam ob cauſam fiant, item de cæteris quæ circa ipſos accidunt, iiſque maximis, dictum eſt.

CAPVT IX.

De tonitru & fulgure opiniones aliquot veterum.

DE tonitru autem & fulgure, & inſuper de vortice, qui typhon vocatur, id eſt, vibratus: & turbine accenſo quem Græci preſtera nuncupant, & denique de fulminibus dicamus oportet. nam horum omnium idem eſſe principium exiſtimandum eſt. Cùm enim (vti diximus) duplex ſit exhalatio, altera humida, altera ſicca, cùmque ipſa concretio hæc ambo potentia habeat, & in nubem conſiſtat (quemadmodum dictum eſt) & inſuper cùm nubium conſtitutio apud ſupremum B finem denſior euadat (qua enim calor ſequeſtratus ſuperiorem in locum deficit, hac conſtitutionem denſiorem eſſe frigidioremque neceſſe eſt. quocirca & fulmina & procellæ, & omnia generis eiuſdem deorſum feruntur. atqui calidum omne in ſubl[illegible] ſuapte natura ſcandit. verùm expreſſionem fieri in contrariam denſitati partem, neceſſarium exiſtit: quo modo nuclei qui è digitis elabuntur, exprimi ſolent. hi enim quamuis pondus habeant, tamen ſurſum plerumque feruntur) calor profectò qui excernitur, in ſuperum ſpargi locum aſſolet. quantum autem aridæ exhalationis in mutatione frigeſcentis aëris intercipitur, id C coëuntibus nubibus excernitur. quod cùm vi feratur, & ambientibus nubibus incurrat, ictum facit, cuius ſonitus tonitru nuncupari ſolet. Efficitur autem ictus haud aliter (vt paruæ affectioni magnam conferam) quàm qui in flamma fit ſonus, quem alij Vulcani riſum, alij Veſtæ, nonnulli horum minas vocant. Fit autem, cùm exhalatio in flammam conuerſa, diſrumpentibus ſeſe lignis atque ſiccentibus exilit. Sic enim & ſpiritus ſecretio, quæ in ipſis nubibus fieri ſolet, cùm nubium denſitati ingruit, tonitru excitat. Varij autem ac multiformes ſoni fiunt, tum propter nubium inæqualitatem, tum propter cauernas, quę intermediæ ſunt, D qua denſitatis continentia deficit. Tonitru igitur id eſt, atque ex hac cauſa fit. Spiritus autem qui extinguitur, ferè cõflagrat tenui & imbecilli ardore. atque id eſt quod vocant fulgetrum, quo ceu tinctus excidens ſpiritus videri poteſt. Fit autem poſt ictum tonitruum, ſed priùs cerni quàm tonitruum audiri aſſolet. quoniam aſpectus auditum anteuertit. Id quod remigatio triremium declarat. cùm enim iam rurſum remos nautæ referunt, primus remigij ſonus ad aureis peruenit. Quanquam quidam aiunt, haudquaquam ignem intra nubes gigni. Hunc autem Empedocles quidem id eſſe inquit, quod è ſolis radiis intus circũuenitur coercetúrque. Anaxagoras verò, quod è ſuperno æthere, quem ille ignem vocat, deorſum è ſublimi de- E fertur. Itaque ſplẽdorem huiuſce ignis, fulgetrum: ſonitum verò atque ſtridorem quem facit, cùm intra nubes extinguitur, tonitru eſſe dicunt: tanquam, ſicut priùs fulgetrum fieri quàm tonitruum videtur, ita etiam priùs fiat. At illa ignis intercluſio vtroque quidem modo à ratione remota eſt, ſed magis ſuperni ætheris detractio. Nam dicenda cauſa eſt [illegible] quod rurſum ferri aptiſſimum eſt, deorſum feratur: & quamobrem id in cœlo fiat tantummodo cùm nubilum eſt. nec id tamen aſſiduè cùm ita eſt affectum: cœlo verò ſereno non fiat. ſiquidem illud leuiter dictum modis omnibus videtur.
